Tiles, Wall and floor, and foundation sheets for tiles. Porcelain Tile Company. 283,220, May 19, 1931. Republished June 7.

Ventilators, Metal. Ellison Louvre Company, Inc. 510,542, June 7; Serial No. 530,748, published Feb. 8, 1949.

Wallboard. Smith & Kanzler Company. 510,709, June 7; Serial No. 551,487, published Feb. 22, 1949.

Waterproofing material. W. A. Collings. 250,677, renewed Dec. 11, 1948. O. G. June 7.

CLASS 13

Chains. Link-Belt Company. 220,199, Nov. 2, 1926. Republished June 7.

Chains. Link-Belt Company. 220,207, Nov. 2, 1926. Republished June 7.

Chains, Drive. Howe Chain Company. 178,179, Jan. 8, 1924. Republished June 7.

Nails. The Denison Company. 379,005, June 25, 1940. Republished June 7.

Washers, Lock. Eaton Manufacturing Company. 510,808, June 7; Serial No. 551,878.

CLASS 14

Alloys, Non-ferrous. United American Metals Corporation. 139,906, Feb. 22, 1921. Republished June 7.

Brass, copper, aluminum, etc., in various shapes and forms. Atlantic Brass & Copper Co., Inc. 510,791, June 7; Serial No. 523,279.

Metal, Babbitt. Syracuse Smelting Works. 108,579, Feb. 13, 1936. Republished June 7.

Metal, Babbitt. Syracuse Smelting Works. 113,312, Oct. 10, 1916. Republished June 7.

Metal, Babbitt. Syracuse Smelting Works. 124,054, Dec. 21, 1918. Republished June 7.

Solders comprised primarily of lead and tin. Alpha Metals, Inc. 510,617, June 7; Serial No. 557,579.

CLASS 15

Fluid, Shock absorber. Houde Engineering Corporation. 306,514–15, Sept. 19, 1933. Republished June 7.

Gasoline. Pate Oil Company. 510,579, June 7; Serial No. 535,606, published Feb. 22, 1949.

Gasoline, kerosene, fuel oil, etc. Seneca Oil Works. 250,602, renewed Dec. 11, 1948. O. G. June 7.

Greases, Lubricating. Quaker Oil Products Corporation. 260,144, renewed Aug. 20, 1949. O. G. June 7.

Oil, Non-soluble cutting. Sun Oil Company. 442,846, June 7; Serial No. 514,507, published Jan. 18, 1949.

Oil, Synthetic, and solid derivatives thereof. Union Carbide and Carbon Corporation. 442,861, June 7; Serial No. 524,836, published Feb. 22, 1949.

Oil, Upper cylinder lubricating. Sun Oil Company. 442,868–9, June 7; Serial Nos. 525,978–9, published Jan. 18, 1949.

Oils and greases, Lubricating. Jenkin-Guerin Inc. 510,522, June 7; Serial No. 527,420, published Feb. 22, 1949.

Oils and greases, Lubricating. The Pure Oil Company. 510,521, June 7; Serial No. 527,353, published Jan. 18, 1949.

Oils and greases, Lubricating. Topp Oil & Chemical Co. 510,606, June 7; Serial No. 538,199, published Jan. 18, 1949.

Oils and greases, Lubricating. Topp Oil & Chemical Co. 510,615, June 7; Serial No. 539,459, published Feb. 22, 1949.

Oils, Cutting. D. A. Stuart Oil Co., Limited. 510,570, June 7; Serial No. 534,690, published Feb. 15, 1949.

Oils, Lubricating. Cardinal Chemical Corporation. 510,588, June 7; Serial No. 536,496, published Feb. 22, 1949.

Oils, Lubricating. Premier Oil Refining Company of Texas. 510,613, June 7; Serial No. 539,347, published Feb. 22, 1949.

Oils, Lubricating. Quaker Petroleum Company. 510,526, June 7; Serial No. 528,509, published Jan. 18, 1949.

Waxes, Petroleum. The Atlantic Refining Company. 510,553, June 7; Serial No. 532,265, published Feb. 8, 1949.

CLASS 16

Chemicals and paints. Ste. Ame. des Industries Chimiques Wilaels. 166,546, renewed Sept. 5, 1942. O. G. June 7.

Coating compositions, Resinous. Better Finishes and Coatings, Inc. 425,521, Nov. 26, 1946. Republished June 7.

Coating materials. Better Finishes and Coatings, Inc. 425,247, Nov. 12, 1946. Republished June 7.

Enamel-paint. Ernecke and Salmstein. 71,334, Nov. 17, 1908. Republished June 7.

Paints, Bulletin color, and exterior house paints. R. N. Nason & Co. 510,677, June 7; Serial No. 546,861, published Jan. 11, 1949.

Paints, Ready-mixed, dry colors, asphalt paint, paint-oil, etc. The Pruett-Schaffer Chemical Company. 135,778, Oct. 19, 1920. Republished June 7.

Paints, Ready-mixed, liquid, semi-paste, and paste, paint enamels, varnishes, etc. Chilton Paint Company. 300,927, Feb. 14, 1933. Republished June 7.

Polishes and dressings. Yankee Polish Co. Inc. 230,115, Feb. 21, 1928. Republished June 7.

Varnish. Hall Hardware Company. 422,748, Aug. 13, 1946. Republished June 7.

CLASS 17

Cigarettes. The Axton Fisher Tobacco Co. 257,969, renewed June 25, 1949. O. G. June 7.

Cigars. H. Anton Bock Co. Inc. 510,640, June 7; Serial No. 544,035, published Mar. 1, 1949.

Cigars. M. A. Fernandez. 442,830, June 7; Serial No. 497,086, published Mar. 1, 1949.

Cigars. I. Lewis Cigar Manufacturing Company. 510,646, June 7; Serial No. 543,490, published Mar. 1, 1949.

Cigars. J. B. McGinty. 510,484, June 7; Serial No. 507,647, published Feb. 8, 1949.

Cigars. Wolf Bros. & Co. 510,654, June 7; Serial No. 544,401, published Mar. 1, 1949.

Stogies. Augustus Pollack, Incorporated. 510,644, June 7; Serial No. 542,679, published Mar. 1, 1949.

Stogies. Augustus Pollack, Incorporated. 510,663, June 7; Serial No. 545,301, published Mar. 1, 1949.

Tobacco, Chewing and smoking. The Bloch Brothers Tobacco Co. 510,619, June 7; Serial No. 539,636, published Mar. 1, 1949.

Tobacco, Smoking. Sutliff Tobacco Company. 510,678, June 7; Serial No. 546,884, published Mar. 1, 1949.

Tobacco, Smoking, and cigarettes. John Sinclair Limited. 427,153, Jan. 28, 1947. Republished June 7.

Tobacco, Smoking, and cigarettes. John Sinclair Limited. 431,415, July 22, 1947. Republished June 7.

Tobacco, Smoking, and cigarettes. John Sinclair Limited. 432,230, Aug. 26, 1947. Republished June 7.

Tobacco, Smoking, cigarettes, and cigars. John Sinclair Limited. 251,404, Jan. 8, 1929. Republished June 7.

CLASS 21

Apparatus consisting of an electrical transformer, an electrical control panel, and a tank unit. Fluid Systems, Incorporated. 510,780, June 7; Serial No. 564,480.

Apparatus for protection against shock caused by short circuits. Teco Société Anonyme. 442,829, June 7; Serial No. 404,168, published Feb. 22, 1949.

Attachments, Sound amplifying. The Flotatone Company. 510,563, June 7; Serial No. 533,671, published Mar. 1, 1949.

Batteries, Storage. Hester Battery Manufacturing Company, Inc. 510,671, June 7; Serial No. 546,222, published Mar. 1, 1949.

Batteries, Storage. Scranton Battery Corporation. 442,864, June 7; Serial No. 525,256, published Mar. 1, 1949.

Blower, Portable hand-manipulated electric. D. E. Campbell. 439,156, June 8, 1948. Republished June 7.

Brushes for use in electrical apparatus and electrical machines, granular carbon for use in telephone transmitters, etc. National Carbon Company, Inc. 442,867, June 7; Serial No. 525,925, published Feb. 24, 1948.

Components, Electrical. National Union Radio Corporation. 442,854, June 7; Serial No. 520,763, published Mar. 1, 1949.

Conduit or tube, Non-metallic cable. Eastern Tube and Tool Co., Inc. 510,617, June 7; Serial No. 539,503, published Feb. 15, 1949.

Control mechanism for radio-receiving sets, Portable. Boston Implement Co. 510,557, June 7; Serial No. 532,551, published Mar. 1, 1949.

Door opening mechanism, Combination mechanically and electrically operated. The Vendo Company. 510,489, June 7; Serial No. 513,955, published Mar. 1, 1949.

Electrical equipment and supplies, telephones and telephone supplies, etc. International Brotherhood of Electrical Workers. 442,827, June 7; Serial No. 491,329, published Feb. 8, 1949.

Electrical equipment and supplies, telephones and telephone supplies, household appliances. International Brotherhood of Electrical Workers. 442,826, June 7; Serial No. 491,323, published Feb. 3, 1949.

Electronic and lighting devices. Continental Electric Company. 510,481, June 7; Serial No. 502,886, published Feb. 15, 1949.

Fans, Electrical, and portable electrical knife sharpeners. G-M Laboratories, Inc. 510,645, June 7; Serial No. 543,173, published Mar. 1, 1949.

Fire alarm systems, Electrical, electrical police signalling systems, and electrical telephone systems, etc. The Gamewell Company. 300,644, Jan. 31, 1933. Republished June 7.

Fittings and alloys, Metallic. The Cleveland Heater Company. 510,482, June 7; Serial No. 502,946, published Mar. 1, 1949.
Fixtures, Electric-lighting. The Edwin F. Guth Company. 510,514, June 7; Serial No. 527,019, published Feb. 22, 1949.
Fixtures, Electric lighting. The Edwin F. Guth Company. 510,515, June 7; Serial No. 527,024, published Feb. 22, 1949.
Fixtures for electric lights. The Edwin F. Guth Company. 510,516, June 7; Serial No. 527,098, published Mar. 1, 1949.
Fixtures for electric lights. The Edwin F. Guth Company. 510,518, June 7; Serial No. 527,161, published Mar. 1, 1949.
Impregnating or filling compounds. The Okonite-Callender Cable Company, Incorporated. 510,536, June 7; Serial No. 530,114, published Feb. 22, 1949.
Irons, Electric pressing, electric steam irons, electric heating elements or refills, etc. Reimers Electric Appliance Company, Inc. 510,638, June 7; Serial No. 542,189, published Mar. 1, 1949.
Lamps and lighting fixtures, Fluorescent. Electro Manufacturing Corporation. 510,529, June 7; Serial No. 528,917, published Mar. 1, 1949.
Lamps, Incandescent electric. Sylvania Products Company. 254,018, renewed Mar. 12, 1949. O. G. June 7.
Light, Automobile. Wix Accessories Corporation. 510,605, June 7; Serial No. 538,059, published Mar. 1, 1949.
Lighting fixtures, Decorative. Noma Electric Corporation. 254,013, renewed Mar. 12, 1949. O. G. June 7.
Luminaires, Electric, and electric lighting fixtures. The F. W. Wakefield Brass Company. 510,532, June 7; Serial No. 529,509, published Mar. 1, 1949.
Motor and hydraulic coupling drives, Combined electric. Link-Belt Company. 426,024, Jan. 7, 1947. Republished June 7.
Motors, Electric. Urbana Manufacturing Company. 510,686, June 7; Serial No. 547,594, published Feb. 22, 1949.
Motors, generators, motor-generators, Direct and alternating current, etc. Electric Specialty Company Incorporated. 510,589, June 7; Serial No. 536,510, published Feb. 22, 1949.
Phonographs, Electric. Sandwick-Bowen Corporation. 510,497, June 7; Serial No. 523,029, published Mar. 1, 1949.
Plastic articles, Molded. Industrial Molded Products Co., Inc. 510,491, June 7; Serial No. 515,226, published Feb. 22, 1949.
Plugs, Electric attachment. Eagle Electric Mfg. Co., Inc. 342,027, Dec. 29, 1936. Republished June 7.
Radio receiving sets. The Aeolian Company. 510,487, June 7; Serial No. 510,922, published Mar. 1, 1949.
Radio receiving sets and parts thereof. Graybar Electric Company, Inc. 261,080, renewed Sept. 3, 1949. O. G. June 7.
Radio-receiving sets, radio-transmitting sets, television-receiving sets, etc. Eastern Amplifier Corporation. 442,824, June 7; Serial No. 489,950, published Feb. 22, 1949.
Sockets, receptacles, plugs and shade holders, etc. Pass & Seymour, Incorporated. 72,721, re-renewed Feb. 16, 1949. O. G. June 7.
Spark plugs. The Reflex Spark Plug Company. 442,842, June 7; Serial No. 507,937, published Feb. 22, 1949.
Starting apparatus for automobiles, Automatic. The Startomatic Corporation. 257,534, renewed June 11, 1949. O. G. June 7.
Suction cleaners and parts therefor, Electrical domestic and commercial. The Hoover Company. 510,519, June 7; Serial No. 527,225, published Mar. 1, 1949.
Tap clamps, Line, tap connections, grounding sets, etc. A. B. Chance Company. 510,621, June 7; Serial No. 540,383, published Feb. 15, 1940.
Telegraph key with automatic keying relay and monitor, Electronically timed. Electric Eye Equipment Corporation. 510,602, June 7; Serial No. 545,359, published Feb. 8, 1949.
Television receivers. Industrial Television, Inc. 510,680, June 7; Serial No. 547,126, published Feb. 22, 1949.
Television transmitting and receiving apparatus. Diamond Power Specialty Corporation. 510,611, June 7; Serial No. 539,035, published Feb. 22, 1949.
Units or tubes or coils, Electric resistance, electric rheostats, electric motor starters, etc. 510,593, June 7; Serial No. 536,825, published Feb. 15, 1949.
Vacuum cleaners, Electric. Sun Vacuum Stores. 439,814, July 27, 1948. Republished June 7.

CLASS 22

Chalk, Billiard. The Brunswick-Balke-Collender Company. 187,770, Aug. 12, 1924. Republished June 7.
Strings for rackets, Gut. Johnson Suture Corporation. 281,183, Mar. 10, 1931. Republished June 7.
Strings for rackets, Gut. Johnson Suture Corporation. 282,429, Apr. 21, 1931. Republished June 7.
Strings for rackets, Gut. Johnson Suture Corporation. 295,617, July 5, 1932. Republished June 7.
Strings, Racket. Johnson Suture Corporation. 340,345, Nov. 3, 1936. Republished June 7.
Toy horseshoe games. Walbert Manufacturing Company, Inc. 228,749, renewed June 7, 1947. O. G. June 7.

CLASS 23

Agricultural implements. Minneapolis-Moline Power Implement Company. 510,525, June 7; Serial No. 528,359, published Feb. 22, 1949.
Axes, hammers, hatchets, etc. The American Fork and Hoe Company. 510,483, June 7; Serial No. 506,222, published Feb. 22, 1949.
Blades, Razor. Rubie Blade Corporation. 254,440, renewed Mar. 26, 1949. O. G. June 7.
Chains and parts thereof, Power transmission, sprockets and sprocket wheels, etc. Diamond Chain Company, Inc. 510,501, June 7; Serial No. 526,532, published Feb. 22, 1949.
Cleaning machines, etc., Treadle, hand, air, and/or mechanically operated. Gray Company, Inc. 442,825, June 7; Serial No. 490,589, published Feb. 22, 1949.
Composing machines and repair part therefor, Office. R. C. Coshead Corporation. 510,548, June 7; Serial No. 531,653, published Feb. 22, 1949.
Concrete mixing and paving machines. Koehring Company. 510,539, June 7; Serial No. 530,518, published Feb. 22, 1949.
Construction machines. The Jaeger Machine Company. 510,544, June 7; Serial No. 530,937, published Feb. 22, 1949.
Crushers, Bottle. W. Carmel. 510,550, June 7; Serial No. 531,888, published Feb. 15, 1949.
Cutters, Milling. National Twist Drill & Tool Company. 510,575, June 7; Serial No. 535,255, published Feb. 15, 1949.
Deaerator and beverage mixer, Vacuum type liquid. Geo. J. Meyer Manufacturing Co. 412,519, Mar. 13, 1945. Republished June 7.
Devices and implements, Husking. The Boss Manufacturing Company. 42,225, Mar. 8, 1904. Republished June 7.
Dish washing machines and glass washing machines, Electrically powered, electrically powered food mixing machines, etc. G. S. Blakeslee & Co. 510,545, June 7; Serial No. 531,193, published Feb. 22, 1949.
Earth working, construction and industrial equipment. R. G. Le Thourneau, Inc. 510,584, June 7; Serial No. 535,972, published Jan. 25, 1949.
Fertilizer-distributors, stalk cutter and plows, cotton and corn planters, etc. King Plow Company. 352,214, Nov. 23, 1937. Republished June 7.
Fillers, Barrel. Pennsylvania Flexible Metallic Tubing Co. 94,664, Dec. 23, 1913. Republished June 7.
Fire extinguisher valves, Self-contained, valve reseating tools, rethreading dies, etc. The Bastian-Blessing Company. 510,527, June 7; Serial No. 528,680, published Feb. 22, 1949.
Flushing apparatus. Standard Utilities, Inc. 510,505, June 7; Serial No. 526,840, published Feb. 22, 1949.
Frames for carrying printing plates and index tabs. Addressograph-Multigraph Corporation. 510,549, June 7; Serial No. 531,874, published Feb. 22, 1949.
Frames, Hack-saw, hack-saw blades, nail pullers, etc. K-D Manufacturing Company. 510,572, June 7; Serial No. 534,894, published Feb. 15, 1949.
Grinding bodies, Ceramic, and ceramic abrasive bodies. Grefraction Incorporated. 442,862, June 7; Serial No. 528,022, published Feb. 22, 1949.
Holst apparatus, Concrete burial vault. W. W. Haase. 510,533, June 7; Serial No. 530,066, published Feb. 22, 1949.
Implements, Corn husking. The Boss Manufacturing Company. 113,936, Nov. 14, 1916. Republished June 7.
Jacks, Hydraulic lifting. The Joyce-Cridland Co. 510,587, June 7; Serial No. 536,094, published Feb. 15, 1949.
Knives, Pocket. H. Boker & Co., Inc. 442,857, June 7; Serial No. 522,391, published Feb. 22, 1949.
Knives, Steak. Gerber Legendary Blades. 510,568, June 7; Serial No. 534,622, published Feb. 15, 1949.
Machetes. O. B. Hirsch Co. Inc. 510,673, June 7; Serial No. 546,448, published Feb. 8, 1949.
Machine-tools. Société Genevoise D'Instruments De Physique. 442,838, June 7; Serial No. 503,766, published Feb. 22, 1949.
Machines and equipment, Food processing. Chain Belt Company. 510,478, June 7; Serial No. 487,308, published Feb. 22, 1949.
Machines for cleaning track ballast. Nordberg Manufacturing Company. 431,629, July 29, 1947. Republished June 7.
Machines for preparing, tilling and cultivating soil. Ariens Company. 510,552, June 7; Serial No. 532,190, published Feb. 22, 1949.
Mechanisms, Lifting. The Joyce-Cridland Co. 510,586, June 7; Serial No. 536,093, published Feb. 22, 1949.
Openers, Can, jar openers and knife sharpeners. Steel Products Manufacturing Company. 510,585, June 7; Serial No. 536,006, published Feb. 15, 1949.
Pickers, Cotton, cotton harvesters, and parts thereof. International Harvester Company. 510,480, June 7; Serial No. 494,973, published Feb. 8, 1949.
Plows, Rotary. Climax Industries, Inc. 510,531, June 7; Serial No. 529,438, published Jan. 4, 1949.
Pumps. Red Jacket Manufacturing Co. 379,364, July 9, 1940. Republished June 7.
Refueling systems, Portable and stationary aircraft. The Wayne Pump Company. 510,494, June 7; Serial No. 519,846, published Feb. 22, 1949.

Rolls, crushers, pulverisers, etc. American Car and Foundry Company. 439,727, July 13, 1948. Republished June 7.
Scrapes, Agricultural. King Plow Company. 352,390, Nov. 30, 1937. Republished June 7.
Screw machine products. U. S. Automatic Corporation. 442,822, June 7; Serial No. 460,460, published Jan. 18, 1949.
Sealing machines. Qolk-Seal, Inc. 510,528, June 7; Serial No. 528,817, published Feb. 22, 1949.
Shafts of metal, Flexible, flexible shaft cutting, polishing, and abrading tools, rotary bole cutters, etc. Wynenbeek & Staff, Inc. 510,523, June 7; Serial No. 527,657, published Feb. 22, 1949.
Snaths, Scythe. Sta-Tite Snath Company. 510,648, June 7; Serial No. 542,677, published Feb. 8, 1949.
Spatula, Rotatable. P. Grancell. 510,554, June 7; Serial No. 532,288, published Feb. 22, 1949.
Spatulas. Spir-It, Inc. 442,847, June 7; Serial No. 515,466, published Feb. 22, 1949.
Speed reducers, Variable gear and belt. Stephens-Adamson Mfg. Co. 442,858, June 7; Serial No. 523,838, published Jan. 18, 1949.
Take-ups, screw take-ups, and parts thereof. Link-Belt Company. 280,761, Feb. 24, 1931. Republished June 7.
Tools, Flexible cable type portable, hand manipulated. Spartan Tool Company. 442,837, June 7; Serial No. 503,332, published Feb. 22, 1949.
Tools, Hand actuated. Rite Tool, Inc. 510,486, June 7; Serial No. 509,471, published Feb. 22, 1949.
Tools, Oil well. Eastman Oil Well Survey Company. 510,485, June 7; Serial No. 507,674, published Feb. 22, 1949.
Tractors. Deere & Company. 442,833, June 7; Serial No. 501,902, published Feb. 22, 1949.
Tractors. The General Tractor Company. 262,919, renewed Feb. 19, 1949. O. G. June 7.
Twisters, Bale tie, tag dispensers, baling presses, etc. Wurzburg Brothers. 439,372, June 22, 1948. Republished June 7.
Washers for metal cleaning, Power spray. Phillips Manufacturing Company. 442,841, June 7; Serial No. 506,195, published Feb. 8, 1949.
Water systems, pumps, etc. Red Jacket Manufacturing Co. 370,044, Aug. 15, 1939. Republished June 7.
Water systems, pumps, water well accessories, etc. Red Jacket Manufacturing Co. 880,854, Aug. 26, 1941. Republished June 7.
Well-pumps, well-pump pipes, well-pump-pipe couplings, and cylinders for well-pumps. Red Jacket Manufacturing Co. 90,838, Mar. 25, 1913. Republished June 7.
Wheels, Sprocket. Link-Belt Company. 204,153, Oct. 6, 1925. Republished June 7.
Wire slack pullers, Quick-release portable, portable-adjustable reel machines, lamp changers, etc. W. N. Matthews Corporation. 510,517, June 7; Serial No. 527,150, published Jan. 18, 1949.

CLASS 24

Cover, Ironing board. Stadham Company, Inc. 431,530, July 22, 1947. Canceled. O. G. June 7.
Ironing board, Folding. Washington Missionary College. 510,610, June 7; Serial No. 538,478, published Feb. 1, 1949.

Johnson, Dan R., Los Angeles, Calif. Desk or similar article. 154,040, June 7.

Johnson, Gerald C., Bronxville, and A. A. Perelman, Brooklyn, assignors to Lily-Tulip Cup Corporation, New York, N. Y. Telescopic paper cup dispenser. 154,041, June 7.

Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 154,042, June 7.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 154,043, June 7.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 154,044. June 7.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 154,045. June 7.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 154,046, June 7.

Kilsby, Perry, Inc., assignee: *See*—
Storm, Frederick K., Jr.

Lammi, David G., Chicago, Ill. Single spindle hydraulic paper drill or similar article. 154,047, June 7.

Le Vaggi, Gloria, Attleboro, Mass., assignor to Swank, Inc. Cuff link. 154,048, June 7.

Lily-Tulip Cup Corporation, assignee: *See*—
Johnson, Gerald C., and Perelman.

Lipton, Nat, Long Beach, Calif. Combined toothpaste dispenser and toothbrush holder. 154,049, June 7.

Mandina, William S., Kansas City, Mo. Child's rocking horse. 154,050, June 7.

Marquardt, Oswald F., Montclair, N. J. Wrapping paper. 154,051, June 7.

Marquardt, Oswald F., Montclair, N. J. Wrapping paper. 154,052, June 7.

McCann, Clyde D., Des Moines, Iowa. Lighting fixture. 154,053, June 7.

Medgyes, Ladislas, assignor to Helena Rubinstein, Inc., New York, N. Y. Nail polish bottle holder and finger rest. 154,054, June 7.

Miller, Irving, New York, N. Y. Animal figure. 154,055, June 7.

Moffats Limited, assignee: *See*—
Reynolds, Carl, Jr.

Nelson, Jennings, St. Paul, Minn. Ash tray. 154,056, June 7.

Nelson, Noral A., Royal Oak, assignor to Harry Ferguson, Inc., Detroit, Mich. Manure spreader. 154,057, June 7.

Nitardy, Carl, Ipswich, assignor to Sylvania Electric Products Inc., Salem, Mass. Fluorescent lighting fixture. 154,058, June 7.

Olson, Roland K., Newton, Mass. Illuminable rule. 154,059, June 7.

Osborn, John G., Sheboygan, Wis. Combination chest and hutch. 154,060, June 7.

Pass & Seymour, Inc., assignee: *See*—
Despard, Victor R.

Patty, James S., New York, N. Y. Finger ring. 154,061, June 7.

Patty, James S., New York, N. Y. Finger ring. 154,062, June 7.

Perelman, Albert A.: *See*—
Johnson, Gerald C., and Perelman.
Philco Corporation, assignee: *See*—
Schaefer, Carl W. D.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 154,063, June 7.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 154,064, June 7.
Phillips, Harvey M., and H. H. Boucher, Dallas, Tex. Combination fishing rod and walking cane. 154,065, June 7.
Provenzano, Joseph, New York, N. Y. Lamp with illuminable base. 154,066, June 7.
Reynolds, Carl, Jr., Detroit, Mich., assignor to Moffats Limited, Weston, Ontario, Canada. Electrical heating apparatus. 154,067, June 7.
Rives, Walter L., Jacksonville, Fla. Fishing rod reel mount. 154,068, June 7.
Rubinstein, Helena, Inc., assignee: *See*—
Medgyes, Ladislas.
Schaefer, Carl W. D., Dayton, Ohio, assignor to Philco Corporation, Philadelphia, Pa. Phonograph tone arm. 154,069, June 7.
Simpson, David M., Hawthorne, Calif. Scooter. 154,070, June 7.
Smith, Frederick R., Toledo, Ohio. Vegetable cutter. 154,071, June 7.
Sorrentino, Vincent, Providence, R. I., assignor to Uncas Manufacturing Company. Ring or similar article. 154,072, June 7.
Spear, Arthur S., Providence, R. I., assignor to Sperry Mfg. Co. Clasp. 154,073, June 7.
Spear, Arthur S., Providence, R. I., assignor to Sperry Mfg. Co. Clasp. 154,074, June 7.
Spear, Arthur S., Providence, R. I., assignor to Sperry Mfg. Co. Clasp. 154,075, June 7.
Spear, Arthur S., Providence, R. I. Jewelry chain. 154,076, June 7.
Spear, Arthur S., Providence, R. I. Jewelry chain. 154,077, June 7.
Spear, Arthur S., Providence, R. I. Jewelry chain. 154,078, June 7.
Sperry Mfg. Co., assignee: *See*—
Spear, Arthur S.
Stahl, Gerald E., New York, assignor to American Safety Razor Corporation, Brooklyn, N. Y. Table lighter. 154,079, June 7.
Stevens, Clifford B., Milwaukee, Wis. Automobile. 154,080, June 7.
Storm, Frederick K., Jr., assignor to Perry Kilsby, Inc., Los Angeles, Calif. Dishwasher. 154,081, June 7.
Swank, Inc., assignee: *See*—
Le Vaggi, Gloria.
Sylvania Electric Products Inc., assignee: *See*—
Nitardy, Carl.
Thrailkill, Orville W., Wellington, Kans. Merchandise container or the like. 154,082, June 7.
Trautner, Wagn, Syracuse, N. Y. Automobile lamp. 154,083, June 7.
Trautner, Wagn, Syracuse, N. Y. Automobile lamp. 154,084, June 7.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Uncas Manufacturing Company, assignee: *See*—
Barbieri, Nicholas.
Sorrentino, Vincent.
Van Cleef & Arpels, Inc., assignee: *See*—
Duvalet, Maurice.
Victor Industries Corporation, assignee: *See*—
Jung, Albert H.
Warren, Arthur E., Des Moines, Iowa. Quarter boot. 154,085, June 7.
Weaver, Walter E., Nacogdoches, and V. N. Bridges, Houston, Tex.; said Bridges assignor to said Weaver. Pipe holder. 154,086, June 7.
Weil, Joe: *See*—
Zitenfield, Abraham, and Weil.
Werner, John, Chicago, and A. H. Zeigler, Kenilworth, assignors to Aciform Corporation, Chicago, Ill. Combined chair and vibrator. 154,087, June 7.
White, Constance R., Beverly Hills, Calif. Toy roly-poly or similar article. 154,088, June 7.
Zeigler, Albert H.: *See*—
Werner, John, and Zeigler.
Zitenfield, Abraham, and J. Weil, New York, N. Y. Toll coin or token device for automobiles. 154,089, June 7.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 7TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Moore, Majorie B. and E. E.
Ackerly, Orville B., Jr., Piedmont, assignor to Oliver United Filters Incorporated, Oakland, Calif. Rotary drum filter. 2,472,558, June 7.
Ackles, Virgil E., Los Angeles, Calif., assignor to Doughnut Corporation of America, New York, N. Y. Glaze applying machine. 2,472,545, June 7.
Acorn Designing Co., assignee: *See*—
Barrie, Arthur J., and Dwyer.
Actiengesellschaft Joh. Jacob Rieter & Cie., assignee: *See*—
Naegeli, Werner.
Adam, Frank, Electric Company, assignee: *See*—
Schmelig, Nicholas J., and Green.
Adams, Harold A., Bakersfield, and M. Eichelberger, Kernville, Calif., assignors to E. A. B. Incorporated. Fluid weighing system. 2,472,080, June 7.
Advance Transformer Co., assignee: *See*—
Epstein, Hirsch.
Aero Supply Mfg. Co., Inc., assignee: *See*—
Downey, George T.
Aerovox Corporation, assignee: *See*—
Schmitt, Frank R.
Aetna-Standard Engineering Company, The, assignee: *See*—
Rodder, William.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Mehltretter, Charles L., Rist, and Alexander.
Reitz, Henry C.
Air Reduction Company, Incorporated, assignee: *See*—
Hoover, Charles O.
Akeroyd, Ewart L.: *See*—
Prescott, William G., Akeroyd, and Holmes.
Albiau, Luis G., Ponce, P. R. Clinical exercise table. 2,472,301, June 7.
Aldeborgh, Erik H., Poughkeepsie, and A. H. Emery, Wappingers Falls, assignors to Standard Gage Company, Inc., Poughkeepsie, N. Y. Bore gauge. 2,472,139, June 7.
Alexander, Arthur F., Cleveland, Ohio. Screw driver. 2,472,302, June 7.
Alexander, Benjamin H.: *See*—
Hebltretter, Charles L., Rist, and Alexander.
Allegheny Ludlum Steel Corporation, assignee: *See*—
Kiefer, George C.
Allen, James G., Ubly, Mich. Door check and closer. 2,472,508, June 7.
Allen, Raymond P., Akron, assignor to Seiberling Rubber Company, Barberton, Ohio. Apparatus for the treatment of fabrics. 2,472,057, June 7.
Aluminum Company of America, assignee: *See*—
Mason, Ralph B.
Ambrose, Leo, assignee: *See*—
Rundle, George W.
American Brake Company, The, assignee: *See*—
Mueller, Emil G.
American Catheter Corporation, assignee: *See*—
Krippendorf, Louis H.
American Cyanamid Company, assignee: *See*—
Baker, Bernard R., and Querry.
Boothe, James H.
Hultquist, Martin E., and Dreisbach.
Hultquist, Martin E., and Seeger.
Stewart, Hugh W.
American Home Foods, Inc., assignee: *See*—
Ornfelt, John.
American-La France-Foamite Corporation, assignee: *See*—
McGlenn, Robert C.
American Locomotive Company, assignee: *See*—
Gantvoort, John M.
American Optical Company, assignee: *See*—
Splaine, Edward M.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Avallone, Samuel C., Harris, and Whiting.
American Telephone and Telegraph Company, assignee: *See*—
Gordon, Chester S., Lally, and Zieschang.
Matthew, Henry J.
American Viscose Corporation, assignee: *See*—
Rivers, George W.
Wicker, Dan B., and Cox.
Anderson, Christopher J., Peru, Ind. Blade-shearing band-saw attachment. 2,472,509, June 7.
Andresen, John H., Jr., Port Washington, and E. Kasner, Brooklyn, N. Y., assignors to Square D Company, Detroit, Mich. Polyphase supply circuit. 2,472,807, June 7.
Anest, William, North Platte, Nebr. Snap chuck. 2,472,184, June 7.
Anglo-Canadian Pulp and Paper Mills Limited, assignee: *See*—
O'Halloran, James.
Anicetti, Robert J., Beverly, Mass., assignor to the United States of America as represented by the United States Atomic Energy Commission. Crucible and making crucibles. 2,472,456, June 7.
Ansingh, Herman K., Beaufort, N. C., assignee to F. J. Raybould, Lakewood, Ohio. Dual grip contractible hose coupling. 2,472,455, June 7.
Apel, Arno A., Ventnor, N. J. Seat for small boats. 2,472,185, June 7.
Armstrong, George C., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Thermal switch. 2,472,082, June 7.
Arnold, Edwin E., Pittsburgh, and J. S. Newton, Lansdowne, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Planetary gearing. 2,472,559, June 7.
Arnold, Gilbert E., Grenville, Quebec, Canada. Apparatus for collecting urine from horses and other animals. 2,471,186, June 7.
Arsem, William C., Bethesda, Md. Active halogen compounds and their production. 2,472,361, June 7.
Artley, Wayne C., Des Moines, Iowa. Tube and instrument holder. 2,472,058, June 7.
Arwood, James A., Birmingham, Ala. Fishing rod holder. 2472,059, June 7.
Ash, Isaac E., Athens, Ohio. Vent system for sanitary toilets. 2,472,457, June 7.
Atherton, Thomas, and P. E. Ryder, assignors to Dorman & Smith Limited, Salford, England. Electrical plug. 2,472,690, June 7.
Atlantic Refining Company, The, assignee: *See*—
Ferris, Seymour W., Lamson, and Smith.
Gzemski, Felix C.
Hersberger, Arthur B.
Automatic Electric Laboratories, Inc., assignee: *See*—
Herrick, Roswell H.
Jones, Roy W.
Peterson, Edward S.
Automotive Products Company Limited, assignee: *See*—
Chouings, Leslie C.
Avallone, Samuel C., Cleveland Heights, A. W. Harris and E. J. Whiting, Cleveland, Ohio, assignors to The American Steel and Wire Company of New Jersey. Process and bath for copper coating ferrous metal. 2,472,393, June 7.
Avery, Charles R., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Glass feeder shear mechanism actuating means. 2,472,560, June 7.
Aviation Developments Limited, assignee: *See*—
Diaper, Herbert E.
Backer, Christian B., Ottawa, Ontario, Canada. Terminal block. 2,472,738, June 7.
Baker, Allister L., Jersey City, assignor to Keuffel & Esser Company, Hoboken, N. J. Sealed adjustable eyepiece for optical instruments. 2,472,739, June 7.
Baker, Bernard R., Nanuet, and M. V. Querry, Pearl River, assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y. Imidazolido thiophanes and preparing same. 2,472,458, June 7.
Baldock, Harold: *See*—
Smith, Arthur E. W., Scaife, and Baldock.
Banks, Clarence K.: *See*—
Brooker, Leslie G. S., Holcomb, and Banks.
Banks, Daniel B., Drexel Hill, assignor to Sun Oil Company, Philadelphia, Pa. Method and apparatus for feeding adsorbent materials to streams of liquid hydrocarbons. 2,472,459, June 7.
Banks, Harry R., Creston, Iowa, assignor of one-half to C. A. Overturf, Algonac, Mich. Vegetable peeler. 2,472,460, June 7.
Barbagallo, Alfred, West Palm Beach, assignor of one-half to A. J. Longo, Palm Beach, Fla. Shoe stitch remover. 2,472,643, June 7.
Barber, Edward A., A. D. Collins, and H. C. Sylvester, St. Albans, Vt. Automatic window lock. 2,472,395, June 7.
Barcus, John W., assignor of fifty per cent to N. R. Kneass, Baltimore, Md. Gear hobbing machine attachment. 2,472,644, June 7.
Barker, Charley S., Ithaca, N. Y. Indoor golf. 2,472,187, June 7.
Barnebey, Herbert L., Oakmont, and J. B. Shields, assignors to Blaw-Knox Company, Pittsburgh, Pa. Heat-exchange apparatus. 2,472,362, June 7.

Barnes, Harold, Smethwick, England. Hand drying or cleaning apparatus. 2,472,272, June 7.

Barnett, David, Wellesley, Mass. Piano key action. 2,472,740, June 7.

Barraket, Jacob A., Brooklyn, N. Y. Locking device. 2,472,394, June 7.

Barrie, Arthur J., and B. J. Dwyer, assignors to Acorn Designing Co., Toledo, Ohio. Metalworking machine. 2,472,561, June 7.

Barth, William E.: *See*—
Van Sittert, Paul, and Barth.

Bartholdy, Carl O., San Francisco, Calif. Machine-tool fixture. 2,472,083, June 7.

Bashark, Nicholas: *See*—
Grant, David, and Bashark.

Bassick Company, The, assignee: *See*—
Claud-Mantle, Arthur.

Bates, Robert L., Lexington, Va. Apparatus for production of relief surfaces. 2,472,273, June 7.

Batten, Percy H., trustee, assignee: *See*—
Boestad, Gustav K. W., and Nilsson.

Beach, Harold W.: *See*—
Salinger, Hans W. G., and Beach.

Beleskas, Stanley M., Oaklyn, N. J., assignor to Radio Corporation of America. High-frequency coaxial cable switch. 2,472,274, June 7.

Bell Telephone Laboratories, Incorporated: *See*—
Bond, Walter L.
Brown, John T. L., and Pollard.
Gordon, Chester S., Lally, and Zieschang.
Knapp, Harry M.
Mason, Warren P.
Ostendorf, Bernard, Jr.

Beller, Hans, Cranford, R. E. Christ, and F. Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y. Carburetor process for acetylene reactions. 2,472,084, June 7.

Beller, Hans, Cranford, R. E. Christ, and F. Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y. Carburetor process for making N-vinyl compounds. 2,472,085, June 7.

Beller, Hans, Cranford, R. E. Christ, and F. Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y. Carburetor process for acetylene reactions. 2,472,086, June 7.

Bendix Aviation Corporation, assignee: *See*—
Dickey, John W., and Trout.
Du Bois, William H.
McHenry, Harland L.
McNulty, John V.
Thomas, Michael J., and Fricke.
Waterman, Herbert C.

Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Eaton, Wilfred A.

Bennett, Azzel C., Hudson, N. Y., and W. G. Engler, Chicago, Ill., assignors to Gifford-Wood Company, Hudson, N. Y. Ice breaker. 2,472,188, June 7.

Bennett, Loren E., Winnetka, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Wire twisting device. 2,472,510, June 7.

Bennett, William P., San Bernardino, Calif. Door holder and buffer. 2,472,397, June 7.

Benthall, Arthur P., assignor to Bird & Company, Calcutta, Bengal, British India. Manufacture of blankets, blanket material, felt substitutes, and carpet material. 2,472,511, June 7.

Benthall, Arthur P., assignor to Bird & Company, Calcutta, Bengal, British India. Blankets, blanket material, felt substitutes, and carpet material. 2,472,512, June 7.

Berardinelli, Frank: *See*—
Palst, Walter D., and Berardinelli.

Berger, Jack, Laurelton, Long Island, assignor to Diesel Oil Burner Corporation of New York, Jamaica, N. Y. Arrangement for operating oil burners. 2,472,398, June 7.

Berger, Paul, assignor, by mesne assignments, of one-half to H. Epstein and one-half to L. R. Duman, Chicago, Ill. Lighting transformer. 2,472,140, June 7.

Bergs, E. A., Fabriks Aktiebolag, assignee: *See*—
Österdahl, Eric L. L.

Berninger, Kenneth L., and C. H. Lowrey, assignors to The Hidee Products Company, Dayton, Ohio. Light control. 2,472,741, June 7.

Berquist, Nils O., Appelviken, near Stockholm, Sweden. Belt driving device. 2,472,513, June 7.

Berryman, Lloyd M., Baltimore, Md. Air conditioning apparatus including a sterilizing means. 2,472,243, June 7.

Bethlehem Steel Company, assignee: *See*—
Fairchild, Theodore M.

Beylerian, Beedge K., Los Angeles, Calif. Simulating surface structures. 2,472,060, June 7.

Bienfait, Henri, and C. F. Veenemans, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Thermionic tube having a secondary-emission electrode. 2,472,189, June 7.

Bierman, Carroll M., assignor of one-half to F. J. Wagner, Franklin Square, N. Y. Roller skate wheel hubcap. 2,472,087, June 7.

Bierwirth, Rudolph A., Kingston, N. J., assignor to Radio Corporation of America. Dehydrating effervescent liquids. 2,472,362, June 7.

Bievenoger, Francis L., Rochester, N. Y. Necktie clasp. 2,472,190, June 7.

Bird & Company, assignee: *See*—
Benthall, Arthur P.

Blackburn, Luther A., Lynwood, Calif. Chain support. 2,472,461, June 7.

Blackinton, James G., Flint, assignor of one-half to D. G. B. Hill, Corunna, Mich. Building block. 2,472,363, June 7.

Blaw-Knox Company, assignee: *See*—
Barnebey, Herbert L., and Sheilds.

Bloss, Richard R., and A. R. McLerran, Beaumont, Tex., assignors to International Derrick & Equipment Company, Columbus, Ohio. Rotary swivel for drilling rigs. 2,472,091, June 7.

Boddie, Clarence A., Belmar, N. J. Oscillator tube. 2,472,088, June 7.

Boestad, Gustav K. W., Lidingo, and H. B. Nilsson, Fredhall, Stockholm, Sweden, assignors, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Turbine casing construction. 2,472,062, June 7.

Bogert, Leslie S.: *See*—
Miller, Frank G., and Bogert.

Boldue, Gerard, Manchester, N. H. Polishing chuck. 2,472,399, June 7.

Bollmann, Karl, Zurich, and H. Meier, assignors to Landis & Gyr, A. G., Zug, Switzerland. Electric switch. 2,472,275, June 7.

Bond, Donald C., Northbrook, and M. Savoy, assignors to The Pure Oil Company, Chicago, Ill. Protecting metal surfaces against hydrogen sulfide corrosion. 2,472,400, June 7.

Bond, Walter L., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,472,691, June 7.

Bone, Herbert L., Forest Hills, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway switch point support. 2,472,364, June 7.

Bonner, William A., H. Woods, and C. D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y. Production of arylidesoxyglycoses and diarylidesoxyalditols. 2,472,276, June 7.

Bonner, William A., H. Woods, and C. D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y. Monosubstituted desoxyglycoses and preparing the same. 2,472,277, June 7.

Boothe, James H., Pearl River, assignor to American Cyanamid Company, New York, N. Y. Preparing pteroic acid and amino acid amidee thereof. 2,472,462, June 7.

Borkowski, Casimer J., Oak Ridge, Tenn., assignor to The United States of America as represented by the United States Atomic Energy Commission. Alpha particle counting. 2,472,365, June 7.

Botha, Louis, New York, N. Y. Convertible garment. 2,472,141, June 7.

Boucek, James F., Chicago, Ill. Mica splitting machine. 2,472,401, June 7.

Boulin Instrument Corporation, assignee: *See*—
Boulin, Jean J.

Boulin, Jean J., Chatham, N. J., assignor to Boulin Instrument Corporation, New York, N. Y. Tensiometer. 2,472,142, June 7.

Bourland, Eli, Millbrae Highlands, assignor to Pacific Can Company, San Francisco, Calif. Can line divider. 2,472,563, June 7.

Boyle, Edward J., Oak Ridge, Tenn., assignor to The New Jersey Zinc Company, New York, N. Y. Zinc-copper-titanium alloys. 2,472,402, June 7.

Brady, Wilson M., Catonsville, Md. Iron support. 2,472,244, June 7.

Braitberg, Leo D.: *See*—
Friedman, Harris L., and Braitberg.

Brandon, Richard C., Elizabeth, and M. C. K. Jones, Mountainside, N. J., assignors to Standard Oil Development Company. The distillation of a mixture of hydrocarbons. 2,472,463, June 7.

Brauch, Albert L., assignor to H. A. Smith and B. E. Kaslow, Omaha, Nebr. Attachment for tractors. 2,472,278, June 7.

Brennan, Linn S., Dayton, Ohio. Coil winder. 2,472,089, June 7.

Brewer, Nathaniel, Hatfield, assignor to Fischer & Porter Company, Hatboro, Pa. Flow-actuated valve. 2,472,090, June 7.

Brinkley, David T., Elk Park, N. C. Roller track. 2,472,514, June 7.

Brinkoeter, Paul H., assignor to Ed Friedrich, Inc., San Antonio, Tex. Dies. 2,472,515, June 7.

Briskin, Jack, assignor to Revere Camera Company, Chicago, Ill. Self-threading device for motion-picture apparatus. 2,472,143, June 7.

Britten, Edwin F., Jr., Short Hills, assignor to Monroe Calculating Machine Company, Orange, N. J. Actuator controlling means for calculating machines. 2,472,564, June 7.

Brode, Robert B., Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy. Thermal time delay. 2,472,366, June 7.

Brooker, Leslie G. S., Rochester, N. Y., W. F. Holcomb and C. K. Banks, Detroit, Mich., assignors to Eastman Kodak Company, Rochester, N. Y. Pyrimido-2'-cyanine dyes. 2,472,505, June 7.

Brooks, Harry: *See*—
McCune, Donald C., and Brooks.

Brown, Alexander M.: *See*—
Carlile, Alfred E., and Brown.

Brown, Henry A., Cleveland, Ohio. Safety control for track switches. 2,472,063, June 7.

Brown, John T. L., Short Hills, and C. E. Pollard, Jr., Hohokus, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Motor control circuit. 2,472,564, June 7.

Brown, Leo H., Glenville, Conn. Bore sight for insertion in the breech chamber of guns to provide overlapping images of muzzle portions of the gun bores. 2,472,091, June 7.

Brown, Morris C., Richmond Heights, assignor to Carter Carburetor Corporation, St. Louis, Mo. Carburetor. 2,472,692, June 7.

Brown and Sharpe Manufacturing Company, assignee: *See*—
Mathewson, Maxwell I.

Brown, Theophilus, assignor to Deere & Company, Moline, Ill. Adjustable axle and wheel assembly. 2,472,742, June 7.

Brown, Thomas W. F., Newcastle on Tyne, assignor to The Parsons and Marine Engineering Turbine Research and Development Association, Wallsend, England. Pipe expansion joint. 2,472,279, June 7.

Brown, William V., Flushing, assignor to Republic Aviation Corporation, near Farmingdale, N. Y. Pitch indicator for variable pitch propellers. 2,472,693, June 7.

Bruce, William A., Tulsa, Okla., assignor to Standard Oil Development Company. Well analyzer. 2,472,464, June 7.

Broderlin, Henry H., Venice, Calif. Brassière. 2,472,280, June 7.

Broderlin, Henry H., Venice, Calif. Garment. 2,472,281, June 7.

Bruen, George C., assignor of seventy and one-half per cent to S. E. Bruen, Chicago, five per cent to E. V. Dickinson, Highland Park, nine per cent to S. M. Bullock, Wilmette, Ill., ten and one-half per cent to O. A. Stuart, Washington, D. C., two per cent to J. Fisher, Chicago, one per cent to M. Thoenen, Elmwood Park, Chicago, one per cent to G. H. Frederickson, Chicago, Ill., and one per cent to E. M. Thorsen, St. Joseph, Mo. Card filing equipment. 2,472,567, June 7.

Bruen, Sophie E., assignee: *See*—
Bruen, George C.

Brush Development Company, The, assignee: *See*—
Malone, Edward J.

Bullock, Sarah M., assignee: *See*—
Bruen, George C.

Burbage, George H.: *See*—
Toth, Emerick, and Burbage.

Burchett, Ray L., Newark, N. J., assignor to Ronson Art Metal Works, Inc. Pyrophoric lighter construction. 2,472,282, June 7.

Burt Manufacturing Company, The, assignee: *See*—
Manville, Charles J.

Burt, Ralph, assignor to Syntron Company, Homer City, Pa. Fluid operated vibrator. 2,472,568, June 7.

Burwen, Charles B., assignee: *See*—
Burwen, Solomon.

Burwen, Frank W., assignee: *See*—
Burwen, Solomon.

Burwen, Solomon, Swampscott, assignor of one-third to F. W. Burwen, Marblehead, and one-third to C. B. Burwen, Lynn, Mass. Steel wool pad holder. 2,472,403, June 7.

Busse, William M., Massillon, Ohio, assignor to The Griscom Russell Company, New York, N. Y. Finning engine cylinders. 2,472,245, June 7.

Buttery, Kenneth T., assignor to Sutherland Paper Company, Kalamazoo, Mich. Carton. 2,472,516, June 7.

Byers, George W., Glen Mills, Pa., assignor to American Viscose Corporation, Wilmington, Del. Slubbing device. 2,472,283, June 7.

Cadwell, Wallace H., New Carlisle, Ohio. Handle operated latch for receptacles. 2,472,404, June 7.

Caldwell, Percy G., and L. W. Hope-Walton, London, England. Securing a pipe fitting to a plate, wall, or the like. 2,472,569, June 7.

Calhoun, John V., Haverford, assignor to Edwin L. Wiegand Company, Pittsburgh, Pa. Electric heater for softening thermoplastics. 2,472,144, June 7.

Campbell, Alvin A., Hackettstown, N. J. Dispensing and measuring device. 2,472,092, June 7.

Cantrell, Troy L.: *See*—
Smith, Herschel G., Cantrell, and Petera.

Cantrell, Troy L., Lansdowne, and H. G. Smith, Wallingford, assignors to Gulf Oil Corporation, Pittsburgh, Pa. Addition agents for mineral oil lubricants. 2,472,517, June 7.

Cantrell, Troy L., Lansdowne, and H. G. Smith, Wallingford, assignors to Gulf Oil Corporation, Pittsburgh, Pa. Addition agents for mineral oil lubricants. 2,472,518, June 7.

Cappell, Charles W., Allison Park, assignor to E. L. Wiegand Company, Pittsburg, Pa. Manufacture of electric heaters. 2,472,145, June 7.

Carlile, Alfred E., Great Neck, N. Y., and A. M. Brown, Spring Lake Heights, N. J., assignors to Talon, Inc. End stop for slide fasteners. 2,472,743, June 7.

Carlsen, John, Copenhagen, Denmark. Key-operated differential actuator. 2,472,519, June 7.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Muddiman, Earll R.

Carroll, James, Scranton, Pa. Animated cartoon. 2,472,191, June 7.

Carroll, Joseph D., McKeesport, Pa. Applying and securing antiskid chains. 2,472,766, June 7.

Carter Carburetor Corporation, assignee: *See*—
Brown, Morris C.

Carter, Robert, Johnstown, Pa. Automatic signal mailbox. 2,472,192, June 7.

Celanese Corporation of America, assignee: *See*—
Palst, Walter D., and Berardinelli.
Ward, George C., and Genazzani.

Charron, Robert R.: *See*—
Cournoyer, Charles E., and Charron.

Cheney, Harry A.: *See*—
Nixon, Alan C., Lehwalder, and Cheney.

Chownings, Leslie C., assignor to Automotive Products Company Limited, Leamington Spa, England. Liquid pressure operated controlling system. 2,472,694, June 7.

Chownings, Leslie C., assignor to Automotive Products Company Limited, Leamington Spa, England. System operated by liquid pressure. 2,472,695, June 7.

Christ, Robert E.: *See*—
Beller, Hans, Christ, and Wuerth.

Christian, Rodney E., Royal Oak, and Alfred W. Widerstedt, Detroit, Mich., assignors to Kerr Manufacturing Company. Centrifugal casting machine. 2,472,246, June 7.

Christie, Stanley J. A., Oshawa, Ontario, Canada. Work-supporting adjustable mandrel for band saws. 2,472,570, June 7.

Ciba Limited, assignee: *See*—
Rossi, Carlo.

Cities Service Oil Company, assignee: *See*—
Dermer, Otis C.

Clark, John M., Northfield, N. J. Cylinder back pressure valve. 2,472,284, June 7.

Clark, William J., Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited. Thermal conductivity analysis of gases. 2,472,645, June 7.

Clary Multiplier Corporation, assignee: *See*—
Drake, Edward P.

Claud-Mantle, A., Trumbull, assignor to The Bassick Company, Bridgeport, Conn. Lid fastener. 2,472,285, June 7.

Clayton, Benjamin, assignor, by mesne assignments, to B. Clayton, Houston, Tex., doing business as Refining, Unincorporated. Electronic drying of foots. 2,472,193, June 7.

Cleveland Welding Company, The, assignee: *See*—
Mueller, Homer L.

Cochran, Clyde E., assignor to The Elwell Parker Electric Company, Cleveland, Ohio. Speed control for industrial trucks or the like. 2,472,646, June 7.

Coleman, Edwin J., assignor to Crane Packing Company, Chicago, Ill. Fast-setting compound of resin and powdered metal. 2,472,247, June 7.

Collins, Alwin D.: *See*—
Barber, Edward A., Collins, and Sylvester.

Collins Radio Company, assignee: *See*—
Reinschmidt, Edward H., Jr.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Savard, Arthur J.

Continental Electric Company, assignee: *See*—
Hutchings, John H.

Continental Motors Corporation, assignee: *See*—
McGowen, Frank, and Travis.

Cook, Carroll R., Lenawee County, Mich. Farm implement or loader. 2,472,194, June 7.

Cooper, Victor J., Writtle, and E. Green, Writtle, Chelmsford, England, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Electron discharge tube high-frequency amplifier and modulating circuits therefor. 2,472,195, June 7.

Corbyn, David B., London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Electrically operated vibrator apparatus. 2,472,367, June 7.

Cork, Bruce B., Cambridge, Mass., assignor, by mesne assignments, to United States of America as represented by the Secretary of War. Transmit-receive system. 2,472,196, June 7.

Corn Products Refining Company, assignee: *See*—
Bonner, William A., and Hurd.

Cornell, Robert C., assignor to The Dow Chemical Company, Midland, Mich. Apparatus for the treatment of molten metals. 2,472,485, June 7.

Corning Glass Works, assignee: *See*—
Hood, Harrison P.

Cossor, A. C., Limited, assignee: *See*—
Woodbridge, Leonard A.

Cottingham, Rufus F., Scunthorpe, England. Golf exercising apparatus. 2,472,065, June 7.

Cotton, William, Limited, assignee: *See*—
Start, Harry W., and Ernest.

Counts, Ewell C., La Habra, and N. H. Le Roy, Brea, Calif., assignors to Shaffer Tool Works. Landing head for plural casings and oil tubings. 2,472,466, June 7.

Cournoyer, Charles E., Port Washington, and R. R. Charron, New York, N. Y. Cleaning tool for tubes. 2,472,093, June 7.

Covins, Meyer, Danville, Ill. Double-acting reciprocating pump. 2,472,647, June 7.

Cowles, Florence E., New Braunfels, Tex. Clothespin sack. 2,472,094, June 7.

Cox, Charles W.: *See*—
Wicker, Dan B., and Cox.

Cox, Clyde W., High Point, N. C., assignor by decree of distribution to Ethel W. Cox. Wrap yarn controlled stop motion mechanism for knitting machines. 2,472,649, June 7.

Cox, Ethel W., assignee: *See*—
Cox, Clyde W.

Cox, Irvin W., West Allis, and L. D. Drugmand, Greenfield, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Plasticity responsive welder. 2,472,368, June 7.

Cox, James M., Fall River, Mass. Pump primer. 2,472,648, June 7.

Cox, James V., Buffalo, assignor to B. F. Gladding & Company, Inc., South Otselic, N. Y. Spool. 2,472,248, June 7.

Crane Packing Company, assignee: *See*—
Coleman, Edwin J.
Matter, Albert J.
Payne, Frank E.

Crary, Selden B., Schenectady, N. Y., assignor to General Electric Company. Regulating system. 2,472,571, June 7.

Criss, Allen B., Biloxi, Miss. Sifter top. 2,472,520, June 7.

Crittall-Federal, Inc., assignee: *See*—
Kuney, Clarence F., Wurst, and Serzow.

Crookston, Robert R., Houston, Tex., assignor by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Friction lining assembly for brake bands. 2,472,467, June 7.

Cross, Carroll N., Middleboro, Mass. Easel hinge. 2,472,405, June 7.

Crouch, Willie W.: *See*—
Schulze, Walter E., and Crouch.

Crump, Robert S.: *See*—
Hamill, William W., and Crump.

Cullen, James, assignee: *See*—
Rundle, George W.

Curd, Francis H. S., C. G. Raison, and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. 2-arylamino-4-halogenoquinolines. 2,472,066, June 7.

Curlee, Harvey P., near Charlotte, N. C. Confection making machine. 2,472,650, June 7.

Curtiss-Wright Corporation, assignee: *See*—
Schoenbaum, Joseph R.

Cutler-Hammer, Inc., assignee: *See*—
Cox, Irvin W., and Drugmand.
Drugmand, L. D.

Dalley, Lewis A., Oshkosh, Wis. Landing net. 2,472,572, June 7.

Damiano, Frank, Newburgh, N. Y. Toy bank. 2,472,064, June 7.

Danenbauer, George M., Chicago, Ill., assignor, by mesne assignments, to The Diamond Match Company, New York, N. Y. Packaging. 2,472,521, June 7.

Daruis, Joseph, Jr., Kenosha, Wis. Bowling ball. 2,472,406, June 7.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Stop for the operating bar of door fasteners. 2,472,146, June 7.

David, Herbert J., Rockaway Beach, and M. Zausner, Brooklyn, N. Y. Folding cart. 2,472,407, June 7.

Davis, Lincoln K., Brockton, Mass., assignor to the United States of America as represented by the Secretary of the Navy. Rheostat. 2,472,369, June 7.

Dawson, John W., Auburndale, assignor to Raytheon Manufacturing Company, Newton, Mass. Resistance welding system. 2,472,095, June 7.

Deere & Company, assignee: *See*—
Brown, Theophilus.

De Forest, Taber, Chicago, Ill., assignor, by mesne assignments, to J. L. and R. C. Switzer. Leak detection. 2,472,522, June 7.

Degering, Edward F.: *See*—
Spence, John A., and Degering.

De Giers, Clarence A., Forest Hills, and A. Edelman, New York, assignors to The Liquidometer Corporation, Long Island City, N. Y. Liquid level measuring device with oscillator. 2,472,249, June 7.

De Groote, Melvin, University City, and B. Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Breaking petroleum emulsions. 2,472,573, June 7.

De Groote, Melvin, University City, and B. Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Breaking petroleum emulsions. 2,472,574, June 7.

Dennis, Charles E., United States Navy. Radio-frequency testing circuit. 2,472,096, June 7.

Dentists' Supply Company of New York, The, assignee: *See*—
Saffir, Jacob A.

Dermer, Otis C., Stillwater, assignor to Cities Service Oil Company, Bartlesville, Okla. Dibenzylidene derivatives of 2,2,6,6, - tetramethylolcyclohexanol. 2,472,147, June 7.

Detroit Lubricator Company, assignee: *See*—
Dillman, Earnest J.

Dexter Company, The, assignee: *See*—
Snyder, Gry L.

Diamond Match Company, The, assignee: *See*—
Danenbauer, George M.

Di Angelo, Carlo, Hostetter, Pa. Combined castanet and tambourine. 2,472,408, June 7.

Diaper, Herbert E., Bitterne, Southampton, assignor to Aviation Developments Limited, Garden City, Hertford County, England. Fastener. 2,472,651, June 7.

Dickey, John W., Newfield, and N. S. Tcont, Jr., Elmira, N. Y., assignors to Bendix Aviation Corporation. Electromagnetic pump. 2,472,067, June 7.

Dickey, Joseph B., assignor to Eastman Kodak Company, Rochester, N. Y. N-(4,5-dihydroxy-n-amyl) and n-(4,5-diacyloxy-n-amyl) aromatic amines. 2,472,575, June 7.

Dickinson, Edna V., assignee: *See*—
Bruen, George C.

Didato, Thomas P., Middlesex, N. J. Staple setting machine. 2,472,409, June 7.

Diesel Oil Burner Corporation of New York, assignee: *See*—
Berger, Jack.

Digby, Emmet B., Atlanta, Ga. Machine for automatically removing the feathers from fowl. 2,472,468, June 7.

Dillman, Earnest J., assignor to Detroit Lubricator Company, Detroit, Mich. Thermostatic expansion valve. 2,472,149, June 7.

Dillon, John J., Needham, and M. Needle, Chelsea, Mass. Backing or chill ring. 2,472,523, June 7.

Dobrick, August C., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Flush valve. 2,472,576, June 7.

Doersam, Charles H., Jr., Palisade, N. J. Multiplying mechanism. 2,472,097, June 7.

Donovan, Alfred F., Boston, assignor to E. T. Wright & Co., Incorporated, Rockland, Mass. Machine for operating on sole parts. 2,472,524, June 7.

D'Orsai, Anthony A., Spokane, Wash. Device for enlarging pictures. 2,472,148, June 7.

Dorman & Smith Limited, assignee: *See*—
Atherton, Thomas, and Ryder.

Doughnut Corporation of America, assignee: *See*—
Achica, Virgil E.

Dow Chemical Company, The, assignee: *See*—
Cornell, Robert C.
Frevel, Ludo K.
Moll, Harold W.
Peake, John S.

Dowd, Thomas A., Siler City, N. C. Straddle-type log handling cart with hydraulic lift. 2,472,197, June 7.

Downey, George T., assignor to Aero Supply Mfg. Co., Inc., Corry, Pa. Bellows seal for valve plugs. 2,472,652, June 7.

Drake, Edward P., Glendale, assignor to Clary Multiplier Corporation, Los Angeles, Calif. Tens transfer mechanism. 2,472,696, June 7.

Drasnin, Akivah, Buffalo, N. Y. Umbrella carrying garment. 2,472,286, June 7.

Dreisbach, Paul F.: *See*—
Hultquist, Martin E., and Dreisbach.

Drugmand, Lester D.: *See*—
Cox, Irvin W., and Drugmand.

Drugmand, Lester D., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electrode for high-frequency heating of insulation preforms. 2,472,370, June 7.

Du Bois, William H., assignor to Bendix Aviation Corporation, South Bend, Ind. Automatically adjustable disk brake. 2,472,097, June 7.

Dufault, Homer D., Easthampton, assignor to Heatbath Corporation, Springfield, Mass. Combined cooking and air heating stove. 2,472,198, June 7.

Duke, Vernon J., Rockville Centre, N. Y., assignor to Radio Corporation of America. Double time-constant circuit for direct-current restoration. 2,472,577, June 7.

Duman, Louis R., assignee: *See*—
Berger, Paul.

Dumore Company, The, assignee: *See*—
Nash, William W.

Duncan, Richard L., West Lafayette, Ind. Navigational map projection device. 2,472,098, June 7.

Dunn, Ralph L.: *See*—
Yamins, Hyam G., and Dunn.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Holmen, Reynold E.
Leekley, Robert M.
Mighton, Charles J.
Pratt, Burt C.
Shirley, David A.
Weinmayr, Viktor.

Durant, Lyndon A., Chicago, Ill., assignor to Royal Patent Corporation. Automatic time control device for coin-operated phonograph apparatus. 2,472,287, June 7.

Dwyer, Raymond J.: *See*—
Barrie, Arthur J., and Dwyer.

E. A. B. Incorporated, assignee: *See*—
Adams, Harold A., and Eichelberger.

Eastman Kodak Company, assignee: *See*—
Brooker, Leslie G. S., Holcomb, and Banks.
Dickey, Joseph B.
Fuerst, Carl C.
Gregory, Walter A.
Harvey, Douglass C.
Kenyon, William O., and Fowler, Jr.
Kenyon, William O., and Unruh.
Kons, Charles J.
Lubosbez, Benjamin E.
McRae, Daniel B., and McLeod.
Mihalyi, Joseph.
Reed, Alfred B.
Smith, William F., and Stauffer.
Smith, William F., and Trivelli.
Stachle, Henry C.
Stauffer, Robert E., and Smith.
Sun, Kuan-Han.
Utermohlen, William P., Jr.

Eaton, Wilfred A., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Fluid pressure control mechanism. 2,472,653, June 7.

Eby, Lawrence T., Roselle, N. J., assignor to Standard Oil Development Company. Preparation of mercaptans. 2,472,470, June 7.

Eby, Lawrence T., Roselle, N. J., assignor to Standard Oil Development Company. Preparation of thio-ethers. 2,472,471, June 7.

Edelman, Abraham: *See*—
De Giers, Clarence A., and Edelman.

Edtmiller, Anthony G., assignor to Hummel and Downing Company, Milwaukee, Wis. Knockdown carton. 2,472,698, June 7.

Edwards and Company, Inc., assignee: *See*—
Fish, George R.
Miller, Christian.

Edwards, Samuel H., Richmond, Calif. Fluid pressure operated valve. 2,472,525, June 7.

Eichelberger, Merrill: *See*—
Adams, Harold A., and Eichelberger.

Elsner, Josef, Allestree, Derby, assignor to George Fletcher and Company Limited, Derby, England. Evaporator. 2,472,409, June 7.

Eldee Products Company, The, assignee: *See*—
Berninger, Kenneth L., and Lowrey.

Ellsworth, Carl E., assignor to The Girdler Corporation, Louisville, Ky. Loading tray. 2,472,472, June 7.

Emery, Alfred H.: *See*—
Aldeborgh, Erik H., and Emery.

Endsley, Louis E., Pittsburgh, Pa., W. W. Schettler, and J. H. Lentell, Beloit, Wis., assignors to Fairbanks, Morse & Co., Chicago, Ill. Fluxing. 2,472,288, June 7.

Engelke Engineering, Incorporated, assignee: *See*—
Engelke, Herman G.

Engelke, Herman G., West Bend, assignor to Engelke Engineering, Incorporated, Hartford, Wis. Pipe-line support. 2,472,654, June 7.

Engle, Loy S., Harrington Park, N. J., and W. Fiker, Jackson Heights, assignors to Interchemical Corporation, New York, N. Y. Rust inhibiting coating compositions. 2,472,099, June 7.

Engler, Walter G.: *See*—
Bennett, Azzel C., and Engler.

Epstein, Hirsch, assignee: *See*—
Berger, Paul.

Epstein, Hirsch, assignor to Advance Transformer Co., Chicago, Ill. Core clamp. 2,472,150, June 7.

Ermert, Carl, Cincinnati, Ohio. Banana pulp free from starch. 2,472,289, June 7.

Eson, Gordon F., assignor to Ex-Cell-O Corporation, Detroit, Mich. Machine tool. 2,472,744, June 7.

Etnyre, E. D. & Co., assignee: *See*—
Etnyre, George M.

Etnyre, George M., assignor to E. D. Etnyre & Co., Oregon, Ill. Distributor for bitumen and like material. 2,472,199, June 7.

Evans Products Company, assignee: *See*—
Sanders, Elmore J.

Everhart, Edgar, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Variable frequency magnetron circuit. 2,472,200, June 7.

Ewaldson, Waldemar C., Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Counterbalancing apparatus. 2,472,151, June 7.

Ex-Cell-O Corporation, assignee: *See*—
Eson, Gordon F.

Eyges, Leonard J., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Antenna. 2,472,201, June 7.

Fair, William F., Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc. Bituminous mastic coated metal sheet. 2,472,100, June 7.

Fairbanks, Morse & Co., assignee: *See*—
Endsley, Louis E., Schettler, and Lentell.

Fairchild Camera and Instrument Corporation, assignee: *See*—
Moore, David W., Jr.
Roters, Herbert C.

Fairchild Engine and Airplane Corporation, assignee: *See*—
Gregory, Alfred T.

Fairchild, Theodore M., Johnstown, Pa., assignor to Bethlehem Steel Company. Bottom for metallurgical furnaces. 2,472,655, June 7.

Farkas, Adalbert, and A. F. Stribley, Jr., Long Beach, assignors to Union Oil Company of California, Los Angeles, Calif. Diesel engine fuel. 2,472,152, June 7.

Farley, Kathryn, Chicago, Ill. Expansible core for use in molding hollow concrete walls. 2,472,068, June 7.

Farnsworth Research Corporation, assignee: *See*—
Mayle, Louis F.
Salinger, Hans W. G., and Beach.
Selgin, Paul J.

Fearon, Robert E., assignor to Well Surveys, Incorporated, Tulsa, Okla. Method and apparatus for detecting radiations. 2,472,153, June 7.

Federal Telephone and Radio Corporation, assignee: *See*—
Mahren, Arthur A.

Fernstrum, Robert W., Detroit, assignor to Joy Products Company, Menominee, Mich. Hellcopter kite. 2,472,290, June 7.

Ferrell, Milton F., and J. K. Moore, Flagstaff, Ariz. Sack holder. 2,472,410, June 7.

Ferris, Seymour W., Mount Holly, N. J., and E. R. Lamson, Hatboro, and D. M. Smith, Norwood, assignors to The Atlantic Refining Company, Philadelphia, Pa. Contacting fluids. 2,472,578, June 7.

Fetterly, Lloyd C., Long Beach, assignor to Shell Development Company, San Francisco, Calif. Conversion of hydrosulfides to neutral sulfur substances. 2,472,473, June 7.

Fikar, Walter: *See*—
Engle, Loy S., and Fikar.

Florito, Grace Z., Woodhaven, N. Y. Maternity garment. 2,472,154, June 7.

Flecher & Porter Company, assignee: *See*—
Brewer, Nathaniel.

Fish, George R., assignor to Edwards and Company, Inc., Norwalk, Conn. Musical chime signal construction. 2,472,371, June 7.

Fish, George R., assignor to Edwards and Company, Inc., Norwalk, Conn. Musical chime signal construction. 2,472,372, June 7.

Fish, George R., assignor to Edwards and Company, Inc., Norwalk, Conn. Musical chime signal construction. 2,472,373, June 7.

Fish, Walter D., Claremont, N. H., assignor to Joy Manufacturing Company. Tool retainer. 2,472,202, June 7.

Fisher, Jay, assignee: *See*—
Bruen, George C.

Fletcher, George, and Company Limited, assignee: *See*—
Elsner, Josef.

Folger, Wayne O., Wichita, Kans. Tractor trailer electrical coupling. 2,472,069, June 7.

Folkers, Karl, Plainfield, and F. R. Koniuszy, Roselle Park, assignors to Merck & Co., Inc., Rahway, N. J. Alkylating phenolic hydroxyl group containing alkaloids and the resulting products. 2,472,411, June 7.

Food Machinery and Chemical Corporation, assignee: *See*—
Krueger, Frank W.

Ford, Harry D.: *See*—
Vennerholm, Gosta, Ford, and Young.

Ford, Henry, Dearborn, and E. Nador, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Stabilizer. 2,472,291, June 7.

Ford Motor Company, assignee: *See*—
Ford, Henry, and Nador.
Groven, Frederick J.
Sorensen, Charles E., and Miller.
Vennerholm, Gosta, Ford, and Young.
Zoerlein, Emil.

Forsberg, Arthur W.: *See*—
Kraner, Otto, and Forsberg.

Forse, Harry D., Anderson, Ind. Pressing machine head control. 2,472,656, June 7.

Fowler, William F., Jr.: *See*—
Kenyon, William O., and Fowler, Jr.

Frasee, Albert C., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Underspeed motor protective system. 2,472,526, June 7.

Fredericksen, George H., assignee: *See*—
Bruen, George C.

Freeman, Roland J., Baldwin, N. Y. Knockdown desk. 2,472,579, June 7.

Frevel, Ludo K., assignor to The Dow Chemical Company, Midland, Mich. Apparatus for producing a convergent X-ray beam. 2,472,745, June 7.

Fricke, Goy C.: *See*—
Thomas, Michael J., and Fricke.

Friedman, Harris L., New York, and L. D. Braitberg, assignors to Pyridium Corporation, Yonkers, N. Y. Benzylideneamino compounds of pyridine. 2,472,292, June 7.

Friedmann, Erna: *See*—
Friedmann, Siegfried and E.

Friedmann, Siegfried and E., St. Louis, Mo. Collapsible parcel carrier. 2,472,206, June 7.

Friedrich, Ed, Inc., assignee: *See*—
Brinkoeter, Paul H.

Friech, Martin, assignor to Foster Wheeler Corporation, New York, N. Y. Steam drying apparatus. 2,472,101, June 7.

Fritz, Walter E., Monroeville, Ohio. Impeller for centrifugal force pumps. 2,472,412, June 7.

Fryer, Ross L., Jr., Washington, D. C. Metering device. 2,472,102, June 7.

Fubini, Eugene, New York, N. Y., H. C. Kriegel, Houston, Tex., and J. G. Stephenson, Mineola, N. Y., assignors to the United States of America as represented by the Secretary of War. High-frequency concentric line oscillator. 2,472,204, June 7.

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. Camera shutter with automatic diaphragm. 2,472,580, June 7.

G-M Laboratories, Inc., assignee: *See*—
McMaster, Archie J.

Gaino, John, Cleveland, Ohio. Machine for cleaning the surfaces of Venetian blind slats. 2,472,155, June 7.

Gangemi, John, Corona, N. Y. Fruit and vegetable slicer. 2,472,609, June 7.

Gantvoort, John M., Somerville, N. J., assignor to American Locomotive Company, New York, N. Y. Heat exchanger. 2,472,413, June 7.

Garretson, Owen L., Bartlesville, Okla., assignor to Phillips Petroleum Company. Pressure controlled liquid outlet valve. 2,472,070, June 7.

Gas Machinery Company, The, assignee: *See*—
Stookey, Kenneth W.

Gash, Charles B., Oak Park, Ill. Latch. 2,472,474, June 7.

Gathmann, Emil, Baltimore, assignor to Gathmann Research Incorporated, Catonsville, Baltimore, Md. Mold assembly for producing cast metal slabs. 2,472,071, June 7.

Gathmann, Emil, Baltimore, assignor to Gathmann Research Incorporated, Catonsville, Baltimore, Md. Ingot mold. 2,472,072, June 7.

Gathmann Research Incorporated, assignee: *See*—
Gathmann, Emil.

Gaveco Laboratories, Inc., assignee: *See*—
Krauer, Otto, and Forsberg.

Gay, Fraser W., Metuchen, N. J. Disconnecting a faulted feeder circuit from a power circuit. 2,472,657, June 7.

Geater, Harold L., Vinton, Iowa. Lawn trimming machine. 2,472,414, June 7.

Geigy, J. R., A. G., assignee: *See*—
Hindermann, Peter.

Geisse, John H., Washington, D. C. Cross-wind landing gear shock absorber for airplanes. 2,472,415, June 7.

Genassani, Roger U.: *See*—
Ward, George C., and Genassani.

General Aniline & Film Corporation, assignee: *See*—
Beller, Hans, Christ, and Wuerth.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Crary, Selden B.
Hayward, Claude D.
Smith, Sidney E., Jr.
Sprung, Murray M.
Welch, Alanson U., Jr.
Yetter, John W., and Langer, Jr.

General Railway Signal Company, assignee: *See*—
Hailes, William D.

Gerber, Francis G., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Panel access-opening closure. 2,472,156, June 7.

Gibson, Robert M., Pittsburgh, Pa. Blowing tube for molten metal. 2,472,416, June 7.

Giesen, Josef H., U. S. Navy. Modified bone screw holder for surgical drills. 2,472,103, June 7.

Gleesy, A. E., assignee: *See*—
Smith, David C.

Gifford-Wood Company, assignee: *See*—
Bennett, A. Clark, and Engler.

Gilbert, Clyde L., Elkhart, Ind. Rack and pawl actuated quick-acting clamp. 2,472,658, June 7.

Giles, John E., Diablo Heights, C. Z. Resurfacing tool. 2,472,374, June 7.

Gingold, Rudolf, New York, N. Y. Container for a comb. 2,472,700, June 7.

Girdler Corporation, The, assignee: *See*—
Ellsworth, Carl E.

Gladding, B. F., & Company, Inc., assignee: *See*—
Cox, James V.

Goets, Maurus T., assignor to Teletype Corporation, Chicago, Ill. Tape feed suppressor. 2,472,701, June 7.

Goldstine, Hallan R., Port Jefferson, N. Y., assignor to Radio Corporation of America. Signaling system. 2,472,709, June 7.

Gosse, Max, Forest-Brussels, assignor to Solvay & Cie, Brussels, Belgium. Manufacture of glycol. 2,472,417, June 7.

Goodrich, B. F., Company, The, assignee: *See*—
Gerber, Francis G.
Kreis, Alvin S.
Tittle, Harry W.

Gordon, Chester S., Boonton, W. J. Lally, Madison, and G. H. Zieschang, Morristown, N. J., said Gordon and said Lally assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., said Zieschang, assignor to American Telephone and Telegraph Company. Drop wire clamp. 2,472,527, June 7.

Gordon, George H., Bradford Woods, assignor to E. L. Wiegand Company, Pittsburgh, Pa. Control system. 2,472,157, June 7.

Gough, Leslie F., Toronto, Ontario, Canada. Heating unit, including reciprocating grates. 2,472,746, June 7.

Grant, David, Los Angeles, Calif., and N. Bashark, Dayton, Ohio. Infinite stage pump. 2,472,104, June 7.

Green, Ernest: *See*—
Cooper, Victor J., and Green.

Green, Floyd S.: *See*—
Schmelig, Nicholas J., and Green.

Green, Glenn, Lakeville, Ohio, assignor to Syntron Company, Homer City, Pa. Deflocculating bacteria. 2,472,419, June 7.

Green, William E., Los Angeles, Calif. Food container. 2,472,582, June 7.

Greene, Ls E., Muskegon, Mich. Cementitious refractory and making. 2,472,206, June 7.

Greensboro Textile Supply Company, assignee: *See*—
Pons, John A.

Greenstein, Hyman, Brooklyn, N. Y. Knitting finger ring. 2,472,702, June 7.

Greer, John J., Conimicut, R. I. Torque tool with yielding drive. 2,472,659, June 7.

Greer, William J.: *See*—
Wellwood, Elisabeth, McBride, Greer, and Wellwood.

Gregory, Alfred T., Massapequa, assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y. Engine cooling baffle. 2,472,418, June 7.

Gregory, Walter A., Oak Ridge, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of alkoxy pyrasolones. 2,472,581, June 7.

Greider, Paul S., Aberdeen, Md. Rheostat for welding. 2,472,205, June 7.

Grimes, Lawrence E., Bristol, Ind. Leather lace skiver. 2,472,528, June 7.

Grossmith, George W., assignor of one-half to Strachan & Henshaw, Limited, Bristol, England. Car and wagon tippler or dumper. 2,472,703, June 7.

Groven, Fredrick J., Highland Park, assignor to Ford Motor Company, Dearborn, Mich. Ventilated and shielded infrared oven. 2,472,293, June 7.

Guinness, Arthur, Son and Company Limited, Messrs., assignee: *See*—
Hughes, Arthur H.

Gulf Oil Corporation, assignee: *See*—
Cantrell, Troy L., and Smith.
Smith, Herschel G., Cantrell, and Peters.

Gundel, Louis M., Chicago, Ill. Fish lure retriever. 2,472,207, June 7.

Gzemski, Felix C., assignor to The Atlantic Refining Company, Philadelphia, Pa. Production of cyclic nitrogen base sulfonates. 2,472,583, June 7.

H-P-M Development Corporation, assignee: *See*—
Purcell, Howard M.

Haahr, Poul, Copenhagen, Denmark. Hydraulic pump. 2,472,529, June 7.

Hackert, Albert B., St. Paul, Minn. Backstop for bowling alleys. 2,472,208, June 7.

Hadley, Wilfred N., assignor to Parks & Woolson Machine Co., Springfield, Vt. Napping machine. 2,472,584, June 7.

Haecks, Erwin, San Francisco, Calif. Dough cutting and placing machine. 2,472,073, June 7.

Hagner, Frederick H., San Antonio, Tex. Touch signal level. 2,472,420, June 7.

Haig, John, & Company, assignee: *See*—
Whittam, Albert.

Hailes, William D., Brighton, assignor to General Railway Signal Company, Rochester, N. Y. Single channel radio communication system affording break-in operation. 2,472,585, June 7.

Hale, George C., Dover, N. J. Explosive composition. 2,472,105, June 7.

Hall, Monroe D., Wilmington, Calif. Hydraulic system for vehicle jacks. 2,472,294, June 7.

Hall, William M., Lexington, Mass. Cathode-ray circuit. 2,472,209, June 7.

Hamill, William W., Little Aston, and R. S. Crump, Birmingham, England. Attaching wheels to shafts. 2,472,421, June 7.

Hamilton, Tolbert, Oakland, Calif. Centrifugal amalgamator. 2,472,475, June 7.

Hansen, William W., Garden City, N. Y., assignor to The Sperry Corporation. Broad band antenna. 2,472,106, June 7.

Hardt Foundation, assignee: *See*—
Hardt, Leo L.

Hardt, Leo L., Chicago, Ill., assignor to Hardt Foundation. Antacid composition. 2,472,476, June 7.

Harrington, Ferris T., Detroit, and J. Robinson, Huntington Woods, assignors to Vickers Incorporated, Detroit, Mich. Volume control system for pumps. 2,472,477, June 7.

Harris, Arch W.: *See*—
Avallone, Samuel C., Harris, and Whiting.

Harris, Frederic R., New York, N. Y. Operating and controlling apparatus for dry dock side walls. 2,472,295, June 7.

Harris, Leonard B., and V. R. Pascale, New York, N. Y. Finger-grip shoe tree. 2,472,074, June 7.

Harrison, Alma J., assignor to Proctor & Schwartz, Inc., Philadelphia, Pa. Pipe coupling tool. 2,472,530, June 7.

Hartford-Empire Company, assignee: *See*—
Avery, Charles R.

Hartford National Bank and Trust Company, assignee: *See*—
Blenfait, Henri, and Veenemans.
Mak, Gerrit.

Hartnell, Merton R., Chicago, Ill. Soldering iron tip. 2,472,296, June 7.

Harvey, Douglass C., assignor to Eastman Kodak Company, Rochester, N. Y. Detachable shutter mount for cameras. 2,472,586, June 7.

Harvey, Douglass C., assignor to Eastman Kodak Company, Rochester, N. Y. Blade and cover blind shutter with built-in flash synchronizer. 2,472,587, June 7.

Harwood, Paul D., assignor to Dr. Hess & Clark, Inc., Ashland, Ohio. Coccidiostatic composition. 2,472,422, June 7.

Hathaway, C. F., Co., assignee: *See*—
Logan, Ashley J.

Hawes, Albert H., Erdington, Birmingham, assignor, by mesne assignments, to Kwikform Limited, Small Heath, Birmingham, England. Scaffolding. 2,472,423, June 7.

Hayes, Harvey C., and E. Klein, Washington, D. C. Aconstical apparatus. 2,472,107, June 7.

Hayward, Claude D., Lansdowne, Pa., assignor to General Electric Company. Electric switch. 2,472,588, June 7.

Hazeltine Research, Inc., assignee: *See*—
Loughlin, Bernard D.

Heatbath Corporation, assignee: *See*—
Dufault, Homer D.

Heather, Harold B.: *See*—
Heggs, William H., and Heather.

Heggs, William H., and H. G. Heather, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J. Machine for assembling and molding shoe bottom parts. 2,472,210, June 7.

Heller, Joseph I., assignor to Panoramic Radio Corporation, New York, N. Y. Panoramic receiver with pulse narrowing systems. 2,472,531, June 7.

Hellman, Jacob J., Atlanta, Ga. Button card. 2,472,532, June 7.

Helterline, Lee L., Jr., Danvers, assignor to Sylvania Electric Products, Inc., Salem, Mass. Resistance apparatus for converting mechanical movement into electrical pulses. 2,472,770, June 7.

Henry, James M., Needham, Mass., assignor to American Telephone and Telegraph Company. Radio beacon system. 2,472,158, June 7.

Hercules Powder Company, assignee: *See*—
Pratt, Yolanda T.

Herrick, Roswell H., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Antisinging gain controlled repeater. 2,472,211, June 7.

Hersberger, Arthur B., Drexel Hill, assignor to The Atlantic Refining Company, Philadelphia, Pa. Polymerization of alpha alkyl styrenes. 2,472,589, June 7.

Hess, Dr., & Clark, Inc., assignee: *See*—
Harwood, Paul D.

Heyman, Moses D., Woodmere, N. Y. Mica base heating sheet. 2,472,533, June 7.

Heywood-Wakefield Company, assignee: *See*—
Patton, John W.
Smith, George C.

Hickman, Clarence N., Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War. Thrust gauge for projectiles. 2,472,108, June 7.

Hill, Douglas G. B., assignee: *See*—
Blackinton, James G.

Hindermann, Peter, assignor to J. R. Geigy A. G., Basel, Switzerland. Metallisable monoazo dipyrazolones. 2,472,109, June 7.

Hinds, Sherwood, Columbia City, assignor to The Wayne Pump Company, Fort Wayne, Ind. Variating mechanism. 2,472,478, June 7.

Hinnekens, Maurice G., Paterson, N. J. Tenter clip. 2,472,375, June 7.

Hirschler, Alfred E., Drexel Hill, assignor to Sun Oil Company, Philadelphia, Pa. Separating hydrocarbons by adsorption. 2,472,250, June 7.

Hoff, John G., assignor to The Tappan Stove Company, Mansfield, Ohio. Handle mounting. 2,472,479, June 7.

Holcomb, Walter F.: *See*—
Brooker, Leslie G. S., Holcomb, and Banks.

Hole, Harvey K., Dayton, Ohio. Flying kite and control. 2,472,075, June 7.

Holmen, Reynold E., Ann Arbor, Mich., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Resinous interpolymers. 2,472,661, June 7.

Holmes, Eric L.: *See*—
Prescott, William G., Akeroyd, and Holmes.

Holt, Harry C., Cranston, R. I. Exploding ship toy. 2,472,297, June 7.

Homan, Paul, Napoleon, Ohio. Outboard motor mounting. 2,472,704, June 7.

Homrighous, John H., Oak Park, Ill. Time division carrier multiplex telephone system. 2,472,706, June 7.

Hood, Harrison P., assignor to Corning Glass Works, Corning, N. Y. Apparatus for molding glass. 2,472,660, June 7.

Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Production of cuprous naphthenate in the treatment of petroleum oil. 2,472,253, June 7.

Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Production of cuprous naphthenate. 2,472,424, June 7.

Hope-Walton, Lionel W.: *See*—
Caldwell, Percy G., and Hope-Walton.

Horne, Gilder S., Charlotte, N. C. Tobacco curing apparatus. 2,472,534, June 7.

Houghton, John B., Sanger, Calif. Hoisting device. 2,472,251, June 7.

Howard, Charles W., Franklin, Ohio. Pipe joint. 2,472,425, June 7.

Howe, George R., Medaryville, Ind. Scraper guide. 2,472,076, June 7.

Hudspeth, Emmett L., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Locating beacons. 2,472,212, June 7.

Huelster, Otto J., assignor to Scovill Manufacturing Company, Waterbury, Conn. Reduction drive mechanism. 2,472,771, June 7.

Hughes, Arthur H., assignor to Messrs. Arthur Guinness Son and Company Limited, Dublin, Eire. Preservation of beer. 2,472,252, June 7.

Huhn, John, Jr., Detroit, Mich. Clothes rack. 2,472,480, June 7.

Hulst, George D., Jr., Millburn, N. J., assignor to Radio Corporation of America. Pulse transmission system. 2,472,706, June 7.

Hulsted, George E., Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War. Antenna system. 2,472,213, June 7.

Hultquist, Martin E., and D. R. Seeger, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparing pterins. 2,472,481, June 7.

Hultquist, Martin E., Bound Brook, and F. F. Dreisbach, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparing substituted pterins. 2,472,482, June 7.

Hummel and Downing Company, assignee: *See*—
Edtmiller, Anthony G.

Hunt, Ernest R.: *See*—
Rhodes, Thornton R., and Hunt.

Hurd, Charles D.: *See*—
Bonner, William A., and Hurd.

Horvitz, Hyman, Washington, D. C. Pressure responsive electrical resistor. 2,472,214, June 7.

Hutchings, John H., assignor to Continental Electric Company, Geneva, Ill. Cathode structure for electric discharge devices. 2,472,077, June 7.

Husenlaub, Erich G., Brentford, England, assignor to Mars and Husenlaub, Chicago, Ill. Enriching the endosperm of cereal grains with natural vitamins. 2,472,426, June 7.

Hybler, Bretislav, Hubalov, Czechoslovakia. Electric headlighting for vehicles. 2,472,078, June 7.

Hydrocarbon Research, Inc., assignee: *See*—
Keith, Percival C.

Imperial Brass Manufacturing Company, The, assignee: *See*—
Dobrick, August C.

Imperial Chemical Industries Limited, assignee: *See*—
Clark, William J.
Curd, Francis H. S., Raison, and Rose.
McLean, Andrew, and Marrian.
Sexton, Wilfred A.
Smith, Arthur E. W., Scaife, and Baldock.
Wilkinson, Donald G.

Ingebretsen, Olaf M., Prospect Park, Pa. Tobacco pipe. 2,472,159, June 7.

Insley Manufacturing Corporation, assignee: *See*—
Russell, Louis R.

Interchemical Corporation, assignee: *See*—
Engle, Loy S., and Fikar.
Rietz, Charles A.

International Derrick & Equipment Company, assignee: *See*—
Blose, Richard R., and McLerran.

Iscber, Hans, Basel, assignor to the firm Sandoz Ltd., Fribourg, Switzerland. Diazo dyestuffs and their manufacture. 2,472,215, June 7.

Ivers-Lee Company, assignee: *See*—
Salfisberg, Leroy I.

James, Louise, and J. E. Jubin, New Orleans, La. Combined hat stay and compartmenting means for hat boxes. 2,472,079, June 7.

Jaros, John: *See*—
Klein, William, and Jaros.

Jatul, Bernard B.: *See*—
Wilcox, Paul W., and Jatul.

Jenkins, Cecil: *See*—
Woolslayer, Homer J., Jenkins, and Luttgen.

Jensen, Charles A., Buffalo, N. Y. Cleaning, penetrating, and corrosion loosening composition. 2,472,298, June 7.

Jerome, Ivan, Massapequa, N. Y. Universal motion and still picture camera. 2,472,299, June 7.

Johns, S. W., assignee: *See*—
Schulse, John J.

Johnson, Ava J., Oakland, assignor to Shell Development Company, San Francisco, Calif. Apparatus and method for carrying out catalytic reactions. 2,472,254, June 7.

Johnson, Everett A., Park Ridge, assignor to Standard Oil Company, Chicago, Ill. Hydrocarbon synthesis with fluidized catalyst regeneration. 2,472,427, June 7.
Johnson, John A.: *See*—
Kyle, Anthony, and Johnson.
Johnson, S. C., & Son, Inc., assignee: *See*—
Newhall, Joseph F. P.
Jones, Alvin J., and C. C. W. Williams, assignors to Landis Tool Company, Waynesboro, Pa. Work leading device for grinding machines. 2,472,707, June 7.
Jones, John W., Jr., Los Angeles, Calif., assignor to Radio Corporation of America. Wood adhering machine. 2,472,708, June 7.
Jones, Minor C. K.: *See*—
Brandon, Richard C., and Jones.
Jones, Roy W., Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. All relay telephone line circuit and line finder. 2,472,428, June 7.
Jones, Walter R., Emporium, Pa., assignor to Sylvania Electric Products, Inc. Base shield. 2,472,747, June 7.
Jones, William, assignor to Pye Limited, Cambridge, England. Electric remote-control or indicating system. 2,472,535, June 7.
Jordan, William D., Anamosa, Iowa. Barrel contracting tool. 2,472,080, June 7.
Joy Manufacturing Company, assignee: *See*—
Fish, Walter D.
Joy Products Company, assignee: *See*—
Fernstrum, Robert W.
Jubin, Joseph E.: *See*—
James, Louise, and Jubin.
Kadleck, John H., Pasadena, Calif. Shutter-fold awning. 2,472,429, June 7.

Landis Tool Company, assignee: *See*—
Jones, Alvin J., and Williams.
Langan, Eugene E., Rutherford, N. J., N. E. Lemmon and F. W. Schuessler, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Refining hydrocarbon oils. 2,472,217, June 7.
Langer, Frederick G., Jr.: *See*—
Yetter, John W., and Langer, Jr.
Lanta, Jewell M., Oswego, and E. R. Kerchal, Portland, Oreg. Connecting rod aligning jig. 2,472,163, June 7.
Lavash, Francis L., Dedham, assignor to Kinney Manufacturing Company, Jamaica Plain, Mass. Multiple clinch. 2,472,750, June 7.
Lawson, Herbert E., Chevy Chase, Md., assignor to the United States of America as represented by the Secretary of the Navy. Battery electrolyte with phosphoric acid. 2,472,379, June 7.
Lawson, James L., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Detection of high-frequency electric oscillations. 2,472,378, June 7.
Leatherman, Martin, U. S. Army. Fireproofing coating composition. 2,472,112, June 7.
Le Clair, Harriette, Brockton, Mass. Glove incorporating a change purse. 2,472,751, June 7.
Lee, Chite S., Detroit, Mich. Forming paper clips. 2,472,711, June 7.
Lee, Hoard, Houston, Tex., assignor of one-half to T. S. McFarland, Cook County, Ill. Cigar and cigarette lighter. 2,472,773, June 7.
Leekley, Robert M., Chicago, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of dye intermediates. 2,472,666, June 7.
Lehwalder, David C.: *See*—
Nixon, Alan C., Lehwalder, and Chaney.

Lemmen, Norman E.: *See*—
Langan, Eugene E., Lemmen, and Schnessler.
Lentell, John H.: *See*—
Endsley, Louis E., Schettler, and Lentell.
Le Roy, Norman H.: *See*—
Counts, Ewell C., and Le Roy.
Lesnick, Robert N.: *See*—
Matsen, Leslie E., and Lesnick.
Lessard, Maurice J., Grand Forks, N. Dak. Manicuring device. 2,472,667, June 7.
Levinson, George, New York, N. Y. Locking means for cases, containers, and the like. 2,472,486, June 7.
Levy, Milton C., Chicago, Ill. Fluorescent lamp and assembly therefor. 2,472,597, June 7.
Lewandowski, Frank B., Detroit, Mich. Putty knife. 2,472,668, June 7.
Liebhafsky, Herman A.: *See*—
Kearsley, William K., Winslow, and Liebhafsky.
Lifschitz, Morris, New York, N. Y. Roll paper dispenser. 2,472,712, June 7.
Lijoi, Ernesto, Brooklyn, N. Y. Electric water-heating system. 2,472,713, June 7.
Liquidometer Corporation, The, assignee: *See*—
de Giers, Clarence A., and A. Edelman.
Litt, Edward: *See*—
Litt, Samuel and E.
Litt, Samuel and E., New York, N. Y. Feminine garment. 2,472,302, June 7.
Lofton, Jesse H.: *See*—
Kell, Otto C., Jr., and Lofton.
Logan, Ashley J., assignor to C. F. Hathaway Co., Waterville, Maine. Collar. 2,472,480, June 7.
Long, John H., New York, N. Y., assignor to the United States of America as represented by the Secretary of the Navy. Screen for optical displacement gauges. 2,472,380, June 7.
Longo, Andrew J., assignee: *See*—
Barbagallo, Alfred.
Loughlin, Bernard D., Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Ultra high frequency oscillation generator. 2,472,598, June 7.
Lovell, John B., Baton Rouge, La., assignor to Standard Oil Development Company. Butadiene extraction. 2,472,487, June 7.
Lowrey, Chauncey H.: *See*—
Berninger, Kenneth L., and Lowrey.
Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Dental X-ray film package. 2,472,599, June 7.
Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Optical erecting prism for folding a light path. 2,472,600, June 7.
Lucia, Louis V., assignee: *See*—
Short, Frank.
Luttgen, William H.: *See*—
Woolslayer, Homer J., Jenkins, and Luttgen.
Lyon, Ernest F., Hinton, Okla. Combination shade and curtain rod holder. 2,472,220, June 7.
Lyons, Leland R., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Synthesis of hydrocarbons. 2,472,219, June 7.
Lyons, Walter, Wenonah, N. J., assignor to Radio Corporation of America. Radio reception. 2,472,218, June 7.
Mackereth, Edward J., Mimico, Ontario, Canada. Mounting bracket for transformers. 2,472,752, June 7.
Mahren, Arthur A., Long Island City, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Cable end receptacle. 2,472,113, June 7.
Mak, Gerrit, Hendon, South Australia, Australia, assignor to Hartford National Bank & Trust Company, Hartford, Conn., as trustee. Voltage stabilizer. 2,472,256, June 7.
Makewsky, J., Corporation, assignee: *See*—
Van Rosen, Robert.
Mallory, Henry R., assignor to Pioneer Parachute Company, Inc., Manchester, Conn. Parachute canopy. 2,472,601, June 7.
Malone, Edward J., Maple Heights, assignor to The Brush Development Company, Cleveland, Ohio. Growing crystals. 2,472,303, June 7.
Maltheuse, Ernest G., Sheffield, England. Erection of brickwork structures. 2,472,221, June 7.
Mankin, Arthur H., North Merrick, N. Y., assignor to Philco Corporation, Philadelphia, Pa. Automatic focus control for cathode-ray tubes. 2,472,165, June 7.
Mannheimer, Carl, St. Paul, Minn. Cooking apparatus. 2,472,164, June 7.
Manville, Charles J., Pontiac, Mich., assignor, by mesne assignments, to The Burt Manufacturing Company, Akron, Ohio. Overhead door structure. 2,472,602, June 7.
Marble, Jarvis, assignee, trustee: *See*—
Boestad, Gustav K. W., and Nilsson.
Marcil, Mitchell M., Springfield, Mass. Universal height gauge attachment. 2,472,431, June 7.
Marder, Herbert B., Chicago, Ill. Visual training device. 2,472,114, June 7.
Marrian, Stanley F.: *See*—
McLean, Andrew, and Marrian.
Mars and Huzenlaub, assignee: *See*—
Huzenlaub, Erich G.

Martin, Glenn L., Company, The, assignee: *See*—
Schnize, Richard B.
Mason, Ralph B., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Etching aluminum. 2,472,304, June 7.
Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,472,715, June 7.
Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,472,753, June 7.
Massa, Frank, Cleveland Heights, Ohio. Piezoelectric sound pressure microphone. 2,472,714, June 7.
Mathewson, Albert, Mount Vernon, N. Y. Malleable display holder. 2,472,166, June 7.
Mathewson, Maxwell L., Providence, R. I., assignor to Brown and Sharpe Manufacturing Company. Grinding machine. 2,472,222, June 7.
Mathy, Eugene V., Bartlesville, Okla., assignor to Phillips Petroleum Company. Preventing coke formation in preheater tubes. 2,472,060, June 7.
Matson, Leslie E., Jr., Collingswood, and R. N. Lesnick, Camden, N. J., assignors to Radio Corporation of America. Frequency sensitive circuit. 2,472,167, June 7.
Matter, Albert J., Park Ridge, assignor to Crane Packing Company, Chicago, Ill. Shaft seal with internal drive. 2,472,257, June 7.
Maxwell, Albert A. F., assignee, trustee: *See*—
Ramage, Alexander S.
Mayer, Leonard L., New York, N. Y. Form for electric winding coil. 2,472,603, June 7.
Mayer, William G., Asbury Park, N. J. Triggered spark gap. 2,472,115, June 7.
Mayle, Louis F., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Irregular interlace scanning system. 2,472,774, June 7.
Maynes, Emma C., assignee: *See*—
Maynes, Hyla F.
Maynes, Hyla F., assignor of one-half to E. C. Maynes, Miami, Fla. Syringe holder. 2,472,116, June 7.
McBride, Robert J.: *See*—
Wellwood, Elisabeth, McBride, and Wellwood.
McCleery, Harold L., and C. B. Stair, Downers Grove, Ill.; said McCleery assignor to said Stair. Traffic analyzer. 2,472,258, June 7.
McCrea, James W.: *See*—
Owens, William G., and McCrea.
McCune, Donald C., and H. Brooks, Cleveland, Ohio. Trailer hitch. 2,472,432, June 7.
McDonald, Eugene F., Jr., Chicago, Ill. Rheostat with switch. 2,472,604, June 7.
McElhinney, Eric M., Dysart, and T. A. Podhajsky, Traer, Iowa. Loader machine. 2,472,223, June 7.
McFarland, James, Racine, Wis. Hand truck. 2,472,670, June 7.
McFarland, T. S., assignee: *See*—
Lee, Hoard.
McGlenn, Robert C., assignor to American-La France-Foamite Corporation, Elmira, N. Y. Fire extinguishing powder. 2,472,539, June 7.
McGowen, Frank, and M. C. Travis, assignors to Continental Motors Corporation, Muskegon, Mich. Combustion chamber construction. 2,472,117, June 7.
McHenry, Harland L., Sayre, Pa., assignor to Bendix Aviation Corporation. Reciprocating electromagnetic motor. 2,472,334, June 7.
McLean, Andrew, West Kilbride, and S. F. Marrian, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited. Flameproofing combustible cellulosic material. 2,472,335, June 7.
McLeod, John H.: *See*—
McRae, Daniel B., and McLeod.
McLerran, Archie R.: *See*—
Bless, Richard R., and McLerran.
McLoughlin, James E.: *See*—
Quinn, Gerald S., and McLoughlin.
McMaster, Archie J., assignor to G-M Laboratories, Inc., Chicago, Ill. Two range exposure meter. 2,472,381, June 7.
McNaught, Robert P., San Francisco, Calif. Window clothesline support. 2,472,488, June 7.
McNulty, John V., Binghamton, assignor to Bendix Aviation Corporation, New York, N. Y. Electrical apparatus. 2,472,671, June 7.
McPherson, Duncan, Los Gatos, Calif. Producing three-dimensional pictures. 2,472,259, June 7.
McRae, Daniel B., San Diego, Calif., and J. H. McLeod, assignors to Eastman Kodak Company, Rochester, N. Y. Depositing optical interference coatings. 2,472,605, June 7.
Mead, Warren J., Belmont, Mass. Making and maintaining an impression of the shape of an object. 2,472,764, June 7.
Meador, Jim C., Shreveport, La. Piston ring. 2,472,540, June 7.
Mehltretter, Charles L., C. E. Rist, and B. H. Alexander, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Preparation of D-glucosaccharic acid. 2,472,108, June 7.
Meier, Hans: *See*—
Bollmann, Karl, and Meier.
Merck & Co., Inc., assignee: *See*—
Folkers, Karl, and Konlussy.
Wolf, Frank J., and Tishler.

Merrill, Leslie M., assignee, trustee: *See*—
Boestad, Gustav K. W., and Nilsson.
Michaelson, Rose, New York, N. Y. Brassière. 2,472,606, June 7.
Mighton, Charles J., Christiana Hundred, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vinyl sulfone-diene interpolymers. 2,472,672, June 7.
Mihalyi, Joseph, assignor to Eastman Kodak Company, Rochester, N. Y. Variable aperture curtain shutter for cameras. 2,472,607, June 7.
Millen, Edward L., Brookline, Mass. Screw driver having expanding screw holding bit. 2,472,673, June 7.
Miller, Charles F., Denver, Colo. Post puller. 2,472,305, June 7.
Miller, Christian, assignor to Edwards and Company, Inc., Norwalk, Conn. Musical chime signal construction. 2,472,332, June 7.
Miller, Frank O., Farmingdale, and L. S. Bogert, Richmond Hill, assignors to Republic Aviation Corporation, Farmingdale, N. Y. Spanner wrench with work-retaining loop. 2,472,716, June 7.
Miller, Logan C.: *See*—
Sorensen, Charles E., and Miller.
Miller, Walter J., South Bend, Ind. Bed beater. 2,472,224, June 7.
Milnor, Joseph W., Maplewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Means and method for switching of telegraph messages. 2,472,008, June 7.
Milster, Arthur N., Ferguson, assignor to Wagner Electric Corporation, St. Louis, Mo. Brake testing device. 2,472,341, June 7.
Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Minster Machine Company, The, assignee: *See*—
Wiseman, Reuben E.
Minukas, Alfred, assignee: *See*—
Nissen, Henry.
Minuto, Octavio J., Philadelphia, Pa. Taper measuring instrument. 2,472,306, June 7.
Mistretta, Vincent F.: *See*—
Schneider, Helmuth G., and Mistretta.
Moerman, Nathan A., Brooklyn, assignor to Potter Instrument Company, Inc., Flushing, N. Y. Electronic totalising system. 2,472,542, June 7.
Moll, Harold W., assignor to The Dow Chemical Company, Midland, Mich. Di-(2-chloro-cyclohexyl)-sulfide as insecticide. 2,472,755, June 7.
Möller, Ragnar O. J., Finspong, Sweden. Radial-flow turbine of double rotation type. 2,472,543, June 7.
Monroe Calculating Machine Company, assignee: *See*—
Britten, Edwin F., Jr.
Montres Rolex SA (Rolex Watch Co. Ltd.) assignee: *See*—
Prefre, Armand.
Moore, David W., Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation. Elastic fluid-flow measuring system. 2,472,609, June 7.
Moore, Edmond E.: *See*—
Moore, Marjorie B., and E. E.
Moore, Joseph K.: *See*—
Ferrell, Milton F., and Moore.
Moore, Lee C., Corporation, assignee: *See*—
Woolslayer, Homer J., Jenkins and Luttgen.
Moore, Marjorie B., and E. E., Wankegan, Ill., assignors to Abbott Laboratories. Biotin intermediate. 2,472,433, June 7.
Moore, Wiley T., U. S. Army, Laverne, Okla., and R. N. Nelson, Black River Falls, Wis., assignors to the United States of America, as represented by the Secretary of War. Explosive bullet. 2,472,118, June 7.
Morand, Emil, Jersey City, N. J. Duplex box or carton. 2,472,674, June 7.
Morey, Carlyle J., Minneapolis, Minn. Lubricating oil purifier. 2,472,717, June 7.
Morrill, Melvin A., Laton, Calif. Side delivery rake. 2,472,260, June 7.
Morris Motors Limited, assignee: *See*—
Skinner, Peter G.
Muddiman, Earll R., Wilkinsburg, Pa., assignor to Carnegie-Illinois Steel Corporation. Sheet piling apparatus. 2,472,225, June 7.
Mueller, Alfred I., Hoopeston, Ill. Side posture chiropractic adjusting table. 2,472,675, June 7.
Mueller, Emil G., Churchill Borough, assignor to The American Brake Company, Swissvale, Pa. Brake rigging. 2,472,169, June 7.
Mueller, Homer L., assignor to The Cleveland Welding Company, Cleveland, Ohio. Crankshaft and making same. 2,472,261, June 7.
Mueller, William S., Amherst, Mass., assignor to the United States of America as represented by the Secretary of War. Stabilization of butter. 2,472,119, June 7.
Mullan, Charles F., Long Branch, N. J., assignor to Republic Aviation Corporation, Farmingdale, N. Y. Sorter. 2,472,718, June 7.
Mullen, Josephine H., Dayton, Ohio. Clothes hanger. 2,472,262, June 7.
Murphy, Ivester R., U. S. Army. Explosively actuated tool. 2,472,120, June 7.
Musser, Clarence W.: *See*—
Kroeger, William J., and Musser.
Myrela, George, New York, N. Y. Peg game board. 2,472,719, June 7.
Nader, Emory: *See*—
Ford, Henry, and Nader.
Naegeli, Werner, assignor to Actiengesellschaft, Joh. Jacob Rieter & Cie, Winterthur, Switzerland. Driving arrangement for spindles of spinning and doubling frames. 2,472,226, June 7.
Nagel, Henryk, Bronx, N. Y. Coupling device for detachably securing sunshades, filter holders, and like accessories to the lens barrels of cameras. 2,472,307, Jun 7.
Nagel, Theodore, Brooklyn, N. Y. Burning oil. 2,472,720, June 7.
Naras Research Inc., assignee: *See*—
Schwartz, Nathan R.
Nash, William W., Salem, assignor to The Dumore Company, Racine, Wis. Supplying lubrication as a fine mist. 2,472,170, June 7.
Nashua Gummed and Coated Paper Company, assignee: *See*—
Smith, Robert L.
National Folding Box Company, Incorporated, assignee: *See*—
Williamson, Marshall I.
National Lock Company, assignee: *See*—
Stone, Roy A.
Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Brode, Robert B.
Davis, Lincoln K.
Kearsley, William K., Winslow, and Liebhafsky.

Moore, Wiley T., and Nelson.
Nelson, William R.: *See*—
Roach, Harding F., and Nelson.
Nelsson, Nels, assignor to United States Gypsum Company, Chicago, Ill. Partition structure. 2,472,756, June 7.
Nergaard, Leon S., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device employing cavity resonator circuits. 2,472,721, June 7.
Newhall, Joseph F. P., St. Petersburg, Fla., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Treating potatoes. 2,472,775, June 7.
New Jersey Zinc Company, The, assignee: *See*—
Boyle, Edward J.
Newman, Donald K.: *See*—
Yocam, Lee E., and Newman.
Newstead, Ralph, New York, N. Y. Vertically adjustable table. 2,472,722, June 7.
Newton, John S.: *See*—
Arnold, Edwin E., and Newton.
New York Air Brake Company, The, assignee: *See*—
Whittingham, David J.
Nilsson, Hans R.: *See*—
Boestad, Gustav K. W., and Nilsson.
Nissen, Henry, assignor to A. Minukas, Hartford, Conn. Electromagnetic hill holder for vehicles. 2,472,544, June 7.
Nixon, Alan C., Berkeley, D. C. Lehwalder, Oakland, and H. A. Cheney, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Distillation of olefin-hydrogen chloride mixtures. 2,472,610, June 7.
Nixon, Leslie R., New Eltham, London, assignor to J. Stone & Company, Limited, Deptford, England. Apparatus for testing voltage regulators. 2,472,545, June 7.
Nunnally, William B., Jr., Atlanta, Ga. Smoothing iron holder. 2,472,676, June 7.
Oblinger, Leroy I., assignee: *See*—
Smith, David C.
O'Halloran, James, assignor to Anglo-Canadian Pulp and Paper Mills Limited, Quebec, Quebec, Canada. Segmental chute for loading materials. 2,472,808, June 7.
Oliver United Filters Incorporated, assignee: *See*—
Ackerly, Orville E., Jr.
Olson, Norman B., San Diego, Calif. Key container. 2,472,337, June 7.
Opsahl, Earl J., North Hollywood, Calif. Swimming pool apparatus. 2,472,309, June 7.
Ornfelt, John, Morristown, N. J., assignor, by mesne assignments, to American House Foods, Inc. Decaffeinated soluble coffee. 2,472,121, June 7.
Oroshnik, William, Brooklyn, N. Y., assignor to Ortho Pharmaceutical Corporation. Preparing the ethynyl carbinol of β-ionone. 2,472,310, June 7.
Ortho Pharmaceutical Corporation, assignee: *See*—
Oroshnik, William.
Osborn, Katharine S., assignee, executrix: *See*—
Sprong, Severn D.
Ostendorf, Bernard, Jr., Jamaica, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Motor control circuit. 2,472,611, June 7.
Österdahl, Eric L. L., Stockholm, assignor to E. A. Bergs Fabriks Aktiebolag, Eskilstuna, Sweden. Wedge locked, sliding side jaw wrench. 2,472,388, June 7.
Oswald, Marcel V., assignor to Societe Le Carbone Lorraine, Paris, France. Producing electrodes for electric arcs. 2,472,171, June 7.

Ouellette, Maxime E., Macwahoc, Maine. Switch mechanism for fire alarms. 2,472,266, June 7.
Outboard, Marine & Manufacturing Company, assignee: *See*—
Sidell, Philip A.
Ovens, William G., Midland Park, and J. W. McCrea, Radburn, N. J., assignors to Wright Aeronautical Corporation. Hose clamp. 2,472,172, June 7.
Overturf, C. A., assignee: *See*—
Banks, Harry J.
Owens, Fred L., Long Beach, Calif. Air conditioning attachment for toilets. 2,472,368, June 7.
Pacific Can Company, assignee: *See*—
Boarland, Eli.
Page, Thomas M., Detroit, Mich. Razor sharpener. 2,472,231, June 7.
Paillard S. A., assignee: *See*—
Prezioso, Giuseppe.
Palat, Walter D., Orange, and F. Berardinelli, Newark, N. J., assignors to Celanese Corporation of America. Stabilizing a cellulose ether. 2,472,227, June 7.
Panoramic Radio Corporation, assignee: *See*—
Heller, Joseph I.
Parker, Elwell Electric Company, The, assignee: *See*—
Cochran, Clyde E.
Parks & Woolson Machine Co., assignee: *See*—
Hadley, Wilfred N.
Parrish, Sherman S., Minneapolis, Minn. Putter. 2,472,312, June 7.
Parsons and Marine Engineering Turbine Research and Development Association, The, assignee: *See*—
Brown, Thomas W. F.
Pascale, Vito R.: *See*—
Harris, Leonard B., and Pascale.
Pasko, William, Toronto, Ontario, Canada. Producing felt footwear. 2,472,263, June 7.
Patton, John W., Philadelphia, Pa., assignor, by mesne assignments, to Heywood-Wakefield Company, Gardner, Mass. Seat, especially for rail cars. 2,472,339, June 7.
Paulsen, Hans C., Medford, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Trimming machine. 2,472,228, June 7.
Payne, Frank E., Glenview, assignor to Crane Packing Company, Chicago, Ill. Double seal. 2,472,264, June 7.
Payne, John W., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Heat-treating particle-form solid absorbents. 2,472,776, June 7.
Peake, John S., assignor to The Dow Chemical Company, Midland, Mich. Mechanical method for grain refining magnesium alloys. 2,472,757, June 7.
Pechukas, Alphonse, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Preparing vinyl esters of polycarboxylic acids. 2,472,434, June 7.
Peet, Nick P., Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Removal of metal compounds from oil feed to fluid catalyst cracking. 2,472,723, June 7.
Permutit Company, The, assignee: *See*—
Prescott, William G., Akeroyd, and Holmes.
Peters, John G.: *See*—
Smith, Herschel G., Cantrell, and Peters.
Peterson, Dana, Oakland, Calif. Measuring ruler. 2,472,229, June 7.
Peterson, Dana, Newton, Mass. Container cap. 2,472,436, June 7.
Peterson, Edward S., Elmwood Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Wire recording system. 2,472,435, June 7.
Petroleite Corporation, Ltd., assignee: *See*—
De Groote, Melvin, and Keiser.
Pevney, Paul, Massapequa, assignor to Republic Aviation Corporation, Farmingdale, N. Y. Seal. 2,472,724, June 7.
Phelon, Russell E., West Springfield, Mass. Flywheel magneto. 2,472,813, June 7.
Philco Corporation, assignee: *See*—
Keil, Otto C., Jr., and Lofton.
Mankin, Arthur H.
Phillips, Delbert L., Culver City, assignor to W. R., W. S., and R. Whittaker, R. M. and R. D. Vandegrift, and D. L. Phillips, co-partners, doing business as Wm. R. Whittaker Co., Ltd., Los Angeles, Calif. Drain cock. 2,472,677, June 7.
Phillips, Harry, New York, N. Y. Securing together moccasin vamps and plugs. 2,472,265, June 7.
Phillips Petroleum Company, assignee: *See*—
Garretson, Owen L.
Mathy, Eugene V.
Schulze, Walter A., and Crouch.
Pickron, Earl C., Creston, Iowa. Cartridge clip. 2,472,678, June 7.
Pierce, Jerry A., Baton Rouge, La., assignor to Standard Oil Development Company. Preparation of clay catalysts. 2,472,480, June 7.
Pilkington, William, Beckley, W. Va. Support for drills. 2,472,679, June 7.
Pioneer Parachute Company, Inc., assignee: *See*—
Mallory, Henry R.
Pittsburgh Plate Glass Company, assignee: *See*—
Pechukas, Alphonse.
Plank, Charles J., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Preparing porous glass catalysts. 2,472,490, June 7.
Podhajsky, Theodore A.: *See*—
McElhinney, Eric M., and Podhajsky.
Poland, Frank F., assignor to Revere Copper and Brass Incorporated, Rome, N. Y. Electric furnace. 2,472,412, June 7.
Poland, Frank F., assignor to Revere Copper and Brass Incorporated, Rome, N. Y. Electric resistance furnace. 2,472,613, June 7.
Polaroid Corporation, assignee: *See*—
Wolff, Otto E.
Polivka, Dorothy R., executrix: *See*—
Polivka, George J.
Polivka, George J., La Grange, Ill., deceased; D. R. Polivka, executrix. Milking barn. 2,472,122, June 7.
Pollard, Charles E., Jr.: *See*—
Brown, John T. L., and Pollard.
Polymerisable Products Limited, assignee: *See*—
Weizmann, Charles.
Pomeroy, Richard C., Westchester, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Adjustable current transformer. 2,472,546, June 7.
Ponomareff, Alexander I., Hatvertown, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Condenser apparatus. 2,472,615, June 7.
Pons, John A., Morganton, assignor to Greensboro Textile Supply Company, Greensboro, N. C. Tension device. 2,472,614, June 7.
Potter Instrument Company, Inc., assignee: *See*—
Moerman, Nathan A.
Powell, Raymond E., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Welding electrode. 2,472,173, June 7.
Powers, Conlons E., Natches, Miss. Tire making machine. 2,472,123, June 7.
Pratt, Burt C., Brandywine Hundred, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making coating compositions using polyethylene coated pigments. 2,472,080, June 7.
Pratt, Yolanda T., Mount Rainier, Md., assignor to Hercules Powder Company, Wilmington, Del. Dehydroabietic acid derivatives. 2,472,437, June 7.
Prescott, William G., E. L. Akeroyd, and E. L. Holmes, London, England, assignors to The Permutit Company, New York, N. Y. Treatment of water. 2,472,816, June 7.
Pretre, Armand, Geneva, Switzerland, assignor to Montres Rolex SA (Rolex Watch Co. Ltd.). Expansible bracelet. 2,472,314, June 7.
Prezioso, Giuseppe, Yverdon, Switzerland, assignor to Paillard S. A. Sheet feeding and positioning mechanism for typewriters. 2,472,340, June 7.
Price, Voris V., Brazil, Ind. Swinging and rotating reflecting device for motor vehicles. 2,472,438, June 7.
Proctor & Schwartz, Inc., assignee: *See*—
Harrison, Alma J.
Prodromos, George and M., Winston-Salem, N. C. Trimmer. 2,472,617, June 7.
Prodromos, Marcus: *See*—
Prodromos, George and M.
Proll, Gustave, Newark, N. J. Toy musical instrument. 2,472,681, June 7.
Przybylski, Daniel F., Winona, Minn. Trench excavator shovel and scraper. 2,472,758, June 7.
Pummer, Rudolph L., assignee: *See*—
Rundle, George W.
Purcell, Howard M., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Servomotor mechanism. 2,472,547, June 7.
Purdue Research Foundation, assignee: *See*—
Spence, John A., and Degering.
Pure Oil Company, The, assignee: *See*—
Bond, Donald C., and Savoy.
Putney, David H., assignor to Stratford Development Corporation, Kansas City, Mo. Triple tube cyclone separator. 2,472,777, June 7.
Pye Limited, assignee: *See*—
Jones, William.
Pyrene Company Limited, The, assignee: *See*—
Zieschang, Richard.
Pyridium Corporation, assignee: *See*—
Friedman, Harris L., and Braitberg.
Querry, Merle V.: *See*—
Baker, Bernard R., and Querry.
Quinn, Gerald S., Salem, Mass., and J. E. McLoughlin, New Haven, Conn., assignors to Sylvania Electric Products Inc., Salem, Mass. Coil clamping method and apparatus. 2,472,778, June 7.
Quinton, Bernard, Tuckahoe, N. Y. Mobile luggage. 2,472,491, June 7.
Radio Corporation of America, assignee: *See*—
Beleskas, Stanley M.
Bierwirth, Rudolph A.
Cooper, Victor J., and Green.
Duke, Vernon J.
Goldstine, Hailan E.
Hulst, George D., Jr.
Jones, John W., Jr.
Koch, Winfield R.
Lyons, Walter.
Matson, Leslie E., and Lesnick.
Nergaard, Leon S.
Rehmar, John H.
Rennie, Alexander M.

Raison, Clifford G.: *See*—
Curd, Francis H. S., Raison, and Rose.
Ramage, Alexander S., assignor to A. A. F. Maxwell, Detroit, Mich, as trustee. Production of ethyl alcohol. 2,472,615, June 7.
Rand, H. J., Washing Machine Corp., assignee: *See*—
Rand, Henry J.
Rand, Henry J., Fairfield, Conn., assignor to H. J. Rand Washing Machine Corp., Cleveland, Ohio. Washing machine with squeezer extractor. 2,472,682, June 7.
Randall, Edmund A., and V. B. Slifer, New York, N. Y. Tool. 2,472,124, June 7.
Raspet, August, Locust Valley, N. Y. Thermopile for measuring air temperatures. 2,472,759, June 7.
Ratchford, Harry L., Williamsport, assignor to Sylvania Electric Products Inc., Emporium, Pa. Electrode for electron discharge devices. 2,472,760, June 7.
Ray, William A., North Hollywood, assignor to General Controls Co., Glendale, Calif. Gas-burner control system. 2,472,384, June 7.
Raybould, Frank J., assignee: *See*—
Ansingh, Herman K.
Raytheon Manufacturing Company, assignee: *See*—
Dawson, John W.
Klemperer, Hans.
Reed, Alfred B., assignor to Eastman Kodak Company, Rochester, N. Y. Picture selector. 2,472,619, June 7.
Reed, Arthur B., Shreveport, La. Tape dispenser. 2,472,761, June 7.
Reed Roller Bit Company, assignee: *See*—
Van Sittert, Paul.
Van Sittert, Paul, and Barth.
Refining, Unincorporated, assignee: *See*—
Clayton, Benjamin.
Reinschmidt, Edward H., Jr., assignor to Collins Radio Company, Cedar Rapids, Iowa. Rotary electrical switch. 2,472,230, June 7.
Reisner, John H., Collingswood, N. J., assignor to Radio Corporation of America. Varying the gap spacing of pole pieces for electron optical apparatus. 2,472,315, June 7.
Reits, Henry C., Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture. Preparing gluten sulfate and salts thereof. 2,472,267, June 7.
Rennie, Alexander M., Philadelphia, Pa., assignor to Radio Corporation of America. Electron optical instrument. 2,472,316, June 7.
Republic Aviation Corporation, assignee: *See*—
Brown, William V.
Miller, Frank G., and Bogert.
Mullen, Charles F.
Pevney, Paul.
Revere Camera Company, assignee: *See*—
Briskin, Jack.
Revere Copper and Brass Incorporated, assignee: *See*—
Poland, Frank F.
Rhodes, Thornton R., South Gate, and E. R. Hunt, Los Angeles, Calif. Pressure cooker. 2,472,620, June 7.
Richardson, William D., Ontario, Calif. Container for bathroom supplies. 2,472,683, June 7.
Rieta, Charles A., Park Ridge, Ill., assignor to Interchemical Corporation, New York, N. Y. Printing inks. 2,472,125, June 7.
Rist, Carl E.: *See*—
Mehltretter, Charles L., Rist, and Alexander.
Roach, Harding F., and W. R. Nelson, Des Moines, Iowa. Motor acceleration means. 2,472,341, June 7.
Robinson, Hugh S., U. S. Navy. Micrometer caliper. 2,472,126, June 7.
Robinson, James: *See*—
Harrington, Ferris T., and Robinson.
Roequin, Camille J., New Orleans, La. Rake. 2,472,342, June 7.
Rodder, William, assignor to The Aetna-Standard Engineering Company, Youngstown, Ohio. Drawbench. 2,472,231, June 7.
Rodeck, Jack F., Odessa, Wash. Airplane. 2,472,763, June 7.
Rogers, Alban E., Swarthmore, Pa. Device for teaching arithmetic. 2,472,439, June 7.
Roliman, Michael A., Landisville, Pa. Massage device. 2,472,385, June 7.
Ronson Art Metal Works, Inc.: *See*—
Burchett, Ray L.
Ross, Anthony G., Lyndhurst, N. J. Fountain pen. 2,472,343, June 7.
Rose, Francis L.: *See*—
Curd, Francis H. S., Raison, and Rose.
Rosefield, Marvin J.: *See*—
Kuehn, Jack W., and Rosefield.
Rosenberger, Clifford W., Indianapolis, Ind. Cigarette case with clip fastener. 2,472,344, June 7.
Rossi, Carlo, assignor to Ciba Limited, Basel, Switzerland. Removing corrosion products from surfaces containing heavy metals. 2,472,684, June 7.
Roters, Herbert C., Roslyn, N. Y., assignor to Fairchild Camera and Instrument Corporation. Impulse motor. 2,472,621, June 7.
Royal Patent Corporation, assignee: *See*—
Durant, Lyndon A.
Rundle, George W., assignor to R. L. Plummer, J. Culleu, and S. L. Ambrose, Los Angeles, Calif. Crushing and grinding machine. 2,472,725, June 7.
Russell, Griscom, Company, The: *See*—
Busse, William M.
Russell, Louis R., Edison, Ohio, assignor to Insley Manufacturing Corporation, Indianapolis, Ind. Excavating and load handling machine. 2,472,726, June 7.
Ryder, Francis E.: *See*—
Atherton, Thomas, and Ryder.
Saffir, Jacob A., Kew Gardens, assignor to The Dentists' Supply Company of New York, New York, N. Y. Cast or molded denture. 2,472,492, June 7.
Sage, Harry C., assignor to Thomson-Sage, Inc., Stockton, Calif. Harvester. 2,472,762, June 7.
Salisbury, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Machine for fabricating packages. 2,472,440, June 7.
Salinger, Haus W. G., and H. W. Beach, Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation. Voltage distribution system. 2,472,727, June 7.
Saunders, Elmore J., San Gabriel, Calif., assignor to Evans Products Company, Detroit, Mich. Front type thermostat mounting. 2,472,728, June 7.
Sandos Ltd., assignee: *See*—
Ischer, Hans.
Sauers, E. W., assignee: *See*—
Smith, David C.
Savard, Arthur J., San Diego, Calif., assignor to Consolidated Vultee Aircraft Corporation. Vapor recovery system for airplane fuel tanks. 2,472,622, June 7.
Savoy, Michael: *See*—
Bond, Donald C., and Savoy.
Scaife, Charles W.: *See*—
Smith, Arthur E. W., Scaife, and Baldock.
Scharmer, George, New Milford, N. J. Kitchen cabinet structure. 2,472,685, June 7.
Schäublin S. A., assignee: *See*—
Schäublin-Villeneuve, Charles.
Schäublin-Villeneuve, Charles, assignor to Schäublin S. A., Bevilard, Switzerland. Milling machine with pivoting and sliding head. 2,472,345, June 7.
Schettler, Wesley W.: *See*—
Endsley, Louis E., Schettler, and Lentell.
Schindler, Ernst, Biel, Switzerland. Milling machine for formed cutters. 2,472,346, June 7.
Schmeisel, Theodore G., Fresno, Calif. Soil pulverizing and rolling implement. 2,472,386, June 7.
Schmelig, Nicholas J., and F. S. Green, assignors to Frank Adam Electric Company, St. Louis, Mo. Pull-out switch. 2,472,268, July 7.
Schmitt, Frank R., Hollis, N. Y., assignor by mesne assignments, to Aerovox Corporation, New Bedford, Mass. Sheet feeding. 2,472,441, June 7.
Schneider, Helmuth G., Westfield, and V. F. Mistretta, Fanwood, N. J., assignors to Standard Oil Development Company. Catalytic dehydrogenation of alcohols. 2,472,493, June 7.
Schneider, William H., Pittsburgh, Pa. Keeper for door bolts. 2,472,174, June 7.
Schnell, Steve, Kirkwood, assignor to Wagner Electric Corporation, St. Louis, Mo. Automatic tensioning device for reels. 2,472,548, June 7.
Schoenbaum, Joseph R., Roseland, N. J., assignor to Curtiss-Wright Corporation. Electrical speed control system. 2,472,396, June 7.
Schueler, Theodore, Wood River, Ill. Brake lock. 2,472,442, June 7.
Schuessler, Frederick W.: *See*—
Langan, Eubene E., Lemmon, and Schuessler.
Schulmerich Electronics, Incorporated, assignee: *See*—
Kuns, Jacob T.
Schulse, John J., assignor of one-half to S. W. Johns, Chicago, Ill. Bed tray. 2,472,549, June 7.
Schulze, Richard B., Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Air transportation of small parcels. 2,472,623, June 7.
Schulze, Walter A., and W. W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company. Butadiene emulsion polymerization in the presence of a glycol mono-ether. 2,472,232, June 7.
Schwartz, Nathan R., assignor to Naras Research Inc., New York, N. Y. Work hump support. 2,472,024, June 7.
Science Associates Inc., assignee: *See*—
Szent-Györgyi, Albert E.
Scovill Manufacturing Company, assignee: *See*—
Huelsler, Otto J.
Seeger, Doris R.: *See*—
Hultquist, Martin E., and Seeger.
Seiberling Rubber Company, assignee: *See*—
Allen, Raymond P.
Selvin, Paul J., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Cathode-ray tube amplifier. 2,472,779, June 7.
Sersow, Roland J.: *See*—
Kuney, Clarence F., Wurst, and Sersow.
Sexton, Wilfred A., Manchester, England, assignor to Imperial Chemical Industries Limited. Prevention and destruction of weeds. 2,472,347, June 7.
Shaffer, Harvey H., Berwick, Pa. Dead lever fulcrum. 2,472,443, June 7.
Shaffer Tool Works, assignee: *See*—
Counts, Ewell C., and Le Roy.
Sharp & Dohme, Incorporated, assignee: *See*—
Wilcox, Paul W., and Jatul.

Shell Development Company, assignee: *See*—
Fetterly, Lloyd C.
Johnson, Ava J.
Nixon, Alan C., Lebwalder, and Cheney.
Van der Minne, Johan L.
Weber, Martin K., and Nelson.
Shepherd, Clarence G., Fontana, Calif. Drinking fountain. 2,472,387, June 7.
Shields, James R.: *See*—
Barnabey, Herbert L., and Shields.
Shirley, David A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. 2,2-bis-(4-methylthiophenyl)-1,1,1-trichloroethane. 2,472,269, June 7.
Short, Frank, Burke, Va., assignor of one-half to L. V. Lucia, West Hartford, Conn. Circuit breaker. 2,472,233, June 7.
Shulman, Louis, New York, N. Y. Brassière. 2,472,764, June 7.
Shulman, Louis, New York, N. Y. Strapless brassière. 2,472,765, June 7.
Sidell, Philip A., assignor to Outboard, Marine & Manufacturing Company, Galesborg, Ill. Refrigeration system. 2,472,729, June 7.
Sinclair Refining Company, assignee: *See*—
Kimball, Thomas B.
Skinner, Peter G., Cook Hill, near Alcester, assignor to Morris Motors Limited, Cowley, England. Measuring or comparing device. 2,472,348, June 7.
Slason, Frank K., U. S. Navy. Temperature compensated vibration pick-up. 2,472,127, June 7.
Slifer, Vernon B.: *See*—
Randall, Edmund A., and Slifer.
Slotterbeck, Ober C., Rahway, N. J., assignor to Standard Oil Development Company. Safety fuel ingredients and their preparation. 2,472,494, June 7.
Smatt, Edward E., Lyndhurst, Ohio. Pipe. 2,472,444, June 7.
Smith, Arthur E. W., C. W. Scaife, and H. Baldock, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Manufacture of organic nitro compounds. 2,472,550, June 7.
Smith, David C., Toledo, assignor of thirty per cent to E. W. Sauers, thirty per cent to A. E. Giesey, Cleveland, and twenty per cent to L. I. Ohlinger, Toledo, Ohio. Door latch mechanism. 2,472,730, June 7.
Smith, Douglas M.: *See*—
Ferris, Seymour W., Lamson, and Smith.
Smith, George C., Glenside, Pa., assignor, by mesne assignments, to Heywood-Wakefield Company, Gardner, Mass. Reversible seat. 2,472,340, June 7.
Smith, Harold A., Rochester, N. Y. Truck tail gate lock. 2,472,234, June 7.
Smith, Harry A., assignee: *See*—
Brauch, Albert L.
Smith, Herschel G.: *See*—
Cantrell, Troy L., and Smith.
Smith, Herschel O., Wallingford, T. L. Cantrell, Lansdowne, Pa., and J. G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa. Addition agents for mineral oil lubricants. 2,472,552, June 7.
Smith, Robert L., Amherst, assignor to Nashua Gummed and Coated Paper Company, Nashua, N. H. Producing surface decorated plastic sheets. 2,472,551, June 7.
Smith, Sidney E., Jr., Pittsfield, Mass., assignor to General Electric Company. Electric circuit breaker. 2,472,625, June 7.
Smith, William F.: *See*—
Stauffer, Robert E., and Smith.
Smith, William F., and A. P. H. Trivelli, assignors to Eastman Kodak Company, Rochester, N. Y. Fog inhibitor for photographic emulsions. 2,472,626, June 7.
Smith, William F., and R. E. Stauffer, assignors to Eastman Kodak Company, Rochester, N. Y. Fog inhibitor for photographic emulsions. 2,472,627, June 7.
Snyder, Ory L., Newark, N. Y., assignor of forty-nine per cent to The Dexter Company, Fairfield, Iowa. Caster. 2,472,680, June 7.
Société Anonyme Teco, assignee: *See*—
Theunissen, Francois J. M.
Societe Le Carbone Lorraine, assignee: *See*—
Oswald, Marcel V.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Payne, John W.
Plank, Charles J.
Solvay & Cie, assignee: *See*—
Gonze, Max.
Sorensen, Charles E., Detroit, and L. C. Miller, Ann Arbor, assignors to Ford Motor Company, Dearborn, Mich. Aircraft fuselage construction. 2,472,317, June 7.
Sparks, William J., Cranford, and D. W. Young, Roselle, N. J., assignors to Standard Oil Development Company. Condensation product of a polyhalogenated aliphatic hydrocarbon and a copolymer of a polymerizable cyclic compound and an unsaturated aliphatic hydrocarbon. 2,472,495, June 7.
Spence, John A., San Pablo, Calif., and E. F. Degering, West Lafayette, assignors to Purdue Research Foundation, La Fayette, Ind. Preparing C-acetylated and O-acetylated compounds. 2,472,628, June 7.
Sperry Corporation, The, assignee: *See*—
Hansen, William W.
Streeter, Edward C., Jr.
Splaine, Edward M., assignor to American Optical Company, Southbridge, Mass. One-piece channeled lens mounting. 2,472,731, June 7.
Sprong, Severn D., Monroe, N. Y.; K. S. Osborn (K. W. Sprong), executrix of Severn D. Sprong, deceased, assignor to the Thermactor Company, New York, N. Y. Apparatus for treating oil and gas bearing strata. 2,472,445, June 7.
Sprung, Murray M., Scotia, N. Y., assignor to General Electric Company. Preparation of dimethyl silicone gums. 2,472,829, June 7.
Square D Company, assignee: *See*—
Andresen, John H., Jr., and Kasner.
Stachle, Henry C., assignor to Eastman Kodak Company, Rochester, N. Y. Coloring ceramic objects. 2,472,128, June 7.
Stair, Carlyle B., assignee: *See*—
McCleery, Harold L., and Stair.
Standard Gage Company, Inc., assignee: *See*—
Aldeborgh, Erik H., and Emery.
Standard Oil Company, assignee: *See*—
Johnson, Everett A.
Langan, Eugene E., Lemmon, and Schuessler.
Lyons, Leland R.
Standard Oil Development Company, assignee: *See*—
Brandon, Richard C., and Jones.

Tyler, Edward P., North Hollywood, Calif. Combined watchcase and bracelet. 2,472,351, June 7.
Tyson, Charles W., Summit, N. J., assignor to Standard Oil Development Company. Apparatus for stripping finely divided solids. 2,472,502, June 7.
Ulrich, Carl J., Minneapolis, Minn. Barometric instrument. 2,472,735, June 7.
Union Oil Company of California, assignee: *See*—
Farkas, Adalbert, and Scribbey, Jr.
Union Switch & Signal Company, The, assignee: *See*—
Bone, Herbert L.
Corbyn, David B.
United Shoe Machinery Corporation, assignee: *See*—
Heggs, William H., and Heather.
Paulsen, Hans C.
United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Anicetti, Robert J.
Borkowski, Casimer J.
United States Gypsum Company, assignee: *See*—
Nelson, Nels.
Unruh, Cornelius C.: *See*—
Kenyon, William O., and Unruh.
Utermohlen, William P., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Acylating amines. 2,472,633, June 7.
Vandegrift, Robert M., assignee: *See*—
Phillips, Delbert L.
Vandegrift, Roger D., assignee: *See*—
Phillips, Delbert L.
Van Dercar, Lewis E., Miami, Fla. Water closet flushing mechanism. 2,472,624, June 7.
Van der Minne, Johan L., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Lubricating oil compositions. 2,472,503, June 7.
Van Rosen, Robert, New York, N. Y., assignor to J. Makowsky Corporation. Display box. 2,472,449, June 7.
Van Sittert, Paul, Shaker Heights, Ohio, assignor, by mesne assignments, to Reed Roller Bit Company, Houston, Tex. Fluid actuated tool. 2,472,352, June 7.
Van Sittert, Paul, Shaker Heights, and W. E. Barth, Vermilion, Ohio, assignors, by mesne assignments, to Reed Roller Bit Company, Houston, Tex. Nailing attachment for pneumatic hammers. 2,472,353, June 7.
Van Vleck, Horace R., Upper Montclair, N. J. Motor vehicle. 2,472,450, June 7.
Veenemans, Cornelis F.: *See*—
Blenfait, Henri, and Veenemans.
Vensenholm, Oosta, Dearborn, H. D. Ford and F. C. Young, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Heat-treating steel. 2,472,320, June 7.
Vickers Incorporated, assignee: *See*—
Harrington, Ferrie T., and Robinson.
Vinson, Walter L., Sherman Oaks, Calif. Receptacle closure lock. 2,472,321, June 7.
Volle, Harry G., Detroit, Mich. Expansible reamer. 2,472,554, June 7.
Von Stoeser, Walter, assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y. Float control for liquid dispensing devices. 2,472,389, June 7.
Vosbikian, Peter S.: *See*—
Vosbikian, Thomas S. and P. S.
Vosbikian, Thomas S. and P. S., Melrose, Pa. Scrubbing and mopping device. 2,472,781, June 7.
Wagner Electric Corporation, assignee: *See*—
Milster, Arthur N.
Schnell, Steve.
Wagner, Frank J., assignee: *See*—
Hierman, Carroll M.
Walker, William H., Alameda, Calif. Automobile clothes rack. 2,472,132, June 7.
War, United States of America as represented by the Secretary of, assignee: *See*—
Cork, Bruce.
Everhart, Edgar.
Eyges, Leonard J.
Fubini, Eugene, Kriegel, and Stephenson.
Hickman, Clarence N.
Hudspeth, Emmett L.
Hulstede, George E.
Moore, Wiley T., and Nelson.
Mueller, William S.
Yamins, Hyam G., and Dunn.
Ward, George C., Cumberland, Md., and R. U. Genaszani, New York, N. Y., assignors to Celanese Corporation of America. Recovery of wool from wool-acetate fabrics. 2,472,238, June 7.
Ward, Joseph G., Staten Island, N. Y. Container cap and valve therefor. 2,472,555, June 7.
Waterman, Herbert C., assignor to Bendix Aviation Corporation, South Bend, Ind. Motor control. 2,472,736, June 7.
Waters, Cecil P., Fort Lauderdale, Fla. Coconut husk removing tool. 2,472,354, June 7.
Wayne Pump Company, The, assignee: *See*—
Hinds, Sherwood.
Weber, Martin K., Berkeley, and C. R. Nelson, San Carlos, assignors to Shell Development Company, San Francisco, Calif. Inhibiting acid attack on brick. 2,472,635, June 7.
Weimmayr, Viktor, Pitman, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Thiophenthraquinone derivatives. 2,472,133, June 7.
Weiss, Francis P., Gary, Ind. Direct current apparatus. 2,472,134, June 7.
Weissman, David, New York, N. Y. Sanitary trap for bathtubs. 2,472,822, June 7.
Weissman, Eugene, Baltimore, Md. Apparatus for preparing coffee substitutes. 2,472,636, June 7.

Weizmann, Charles, assignor to Polymerisable Products Limited, London, England. Manufacture of condensation products. 2,472,136, June 7.
Welch, Alanson U., Jr., Pittsfield, Mass., assignor to General Electric Company. Arc welding. 2,472,323, June 7.
Well Surveys, Incorporated, assignee: *See*—
Pearon, Robert E.
Weller, Coy A., Flint, Mich. Paper roll holder. 2,472,239, June 7.
Wellwood, Elisabeth, R. J. McBride, W. J. Greer, and J. Wellwood, Belfast, Northern Ireland. Antisplash device for attachment to the heels of shoes or the like. 2,472,687, June 7.
Wellwood, Joseph: *See*—
Wellwood, Elisabeth, McBride, Greer, and Wellwood.
Werth, Frederick W., Jr., Clifton, N. J., assignor to Wright Aeronautical Corporation. Propeller governor. 2,472,181, June 7.
West, George, assignor to Whitin Machine Works, Whitinsville, Mass. Bobbin clinch. 2,472,240, June 7.
West, William L., Belmont, N. C. Rotary helicopter and support. 2,472,556, June 7.
Western Electric Company, Incorporated, assignee: *See*—
Bennett, Loren E.
Ewaldson, Waldemar C.
Pomeroy, Richard C.
Powell, Raymond E.
Western Union Telegraph Company, The, assignee: *See*—
Milner, Joseph W.
Westinghouse Air Brake Company, The, assignee: *See*—
France, Albert C.
Westinghouse Electric Corporation, assignee: *See*—
Armstrong, George C.
Arnold, Edwin E., and Newton.
Ponomareff, Alexander I.
Weyandt, Carl S., Homer City, Pa. Vibratory motor. 2,472,637, June 7.
Wheeler, Foster, Corporation, assignee: *See*—
Frisch, Martin.
White, Everett H., St. Paul, Minn. Thermostatic control device. 2,472,638, June 7.
Whitin Machine Works, assignee: *See*—
West, George.
Whiting, Esther J.: *See*—
Avallone, Samuel C., Harris, and Whiting.
Whitlock, Rex S., Dayton, Ohio. Aiming and fire control system. 2,472,136, June 7.
Whitney, Lyman F., Cambridge, Mass., assignor by mesne assignments, to Stator Corporation, Providence, R. I. Pressure cooker. 2,472,451, June 7.
Whittaker, Beulah, assignee: *See*—
Phillips, Delbert L.
Whittaker, William R., assignee: *See*—
Phillips, Delbert L.
Whittaker, Wm. R., Co., Ltd., assignee: *See*—
Phillips, Delbert L.
Whittaker, William S., assignee: *See*—
Phillips, Delbert L.
Whittam, Albert, assignor of one-half to John Haig & Company, Limited, Markinch, Scotland. Nonrefillable bottle closure. 2,472,182, June 7.
Whittingham, David J., Westertown, N. Y., assignor to The New York Air Brake Company. Pump. 2,472,355, June 7.
Wickens, Clarence W., Portland, Oreg. Wiggler. 2,472,639 June 7.
Wicker, Dan B., Dunbar, and C. W. Cox, St. Albans, W. Va., assignors to American Viscose Corporation, Wilmington, Del. Apparatus for handling liquid suspensions. 2,472,324, June 7.
Widerstedt, Alfred W.: *See*—
Christian, Rodney E., and Widerstedt.
Wiegand, Edwin L., Company, assignee: *See*—
Calhoun, John Y.
Cappell, Charles W.
Gordon, George H.
Temple, Sidney J.
Wilcox, Paul W., Lansdowne, and B. J. Jatul, Norwood, assignors to Sharp & Dohme, Incorporated, Philadelphia, Pa. Clear aqueous solutions of tyrothricin. 2,472,640, June 7.
Wilkinson, Donald G., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. 4:7-dichloro-(2:1-1)-naphthindole-2:2' - (2':1')-naphthathionaphthene indigo. 2,472,755, June 7.
Williams, Charles C. W.: *See*—
Jones, Alvin J., and Williams.
Williams, Chester, Ypsilanti, Mich. Tow bar. 2,472,325, June 7.
Williamson, Marshall I., New Haven, Conn., assignor by mesne assignments, to National Folding Box Company, Incorporated. Container. 2,472,183, June 7.
Wills, Alton G., Robstown, Tex. Vehicle for transporting tanks. 2,472,557, June 7.
Wilson, Charles R., Pekin, Ill. Mill cutter center locator. 2,472,241, June 7.
Wilson, Frank C., Arcade, N. Y. Hydraulic press. 2,472,390, June 7.
Wiseman, Carl, Westfield, N. J., assignor to Standard Oil Development Company. Organometallic compound. 2,472,504, June 7.
Winslow, Arthur F.: *See*—
Kearsley, William K., Winslow, and Liebhafsky.
Winslow, Edward N., Chagrin Falls, Ohio. Kite. 2,472,137, June 7.
Wise, Solomon, Shaker Heights, Ohio. Liquid fuel tank cap. 2,472,787, June 7.
Wiseman, Reuben E., assignor to The Minster Machine Company, Minster, Ohio. Air actuated clutch and brake device. 2,472,452, June 7.
Wolf, Abraham, Vineland, N. J. Mobile body. 2,472,857, June 7.
Wolf, Frank J., Westfield, and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Streptomycin composition of reduced toxicity. 2,472,453, June 7.
Wolff, Otto E., assignor to Polaroid Corporation, Cambridge, Mass. Film holder. 2,472,358, June 7.
Wood, Reginald T., St. Albans, England. Landing gear for aircraft. 2,472,641, June 7.
Woodbridge, Leonard A., Woodford, assignor to A. C. Cossor, Limited, London, England. Cathode-ray tube. 2,472,766, June 7.
Woolslayer, Homer J., C. Jenkins, and W. H. Luttgen, Tulsa, Okla., assignors to Lee C. Moore Corporation, Pittsburgh, Pa. Oil well drilling apparatus having crown block movable lengthwise of mast. 2,472,359, June 7.
Wright Aeronautical Corporation, assignee: *See*—
Ovens, William G., and McCrea.
Werth, Frederick W., Jr.
Wright, E. T., & Co., Incorporated, assignee: *See*—
Donovan, Alfred F.
Wright, Frank R., Nezperce, Idaho. Potato digger blade. 2,472,360, June 7.
Wuerth, Fritz: *See*—
Beller, Hans, Christ, and Wuerth.
Wurlitzer, Rudolph, Company, The, assignee: *See*—
Von Stoeser, Walter.
Wurst, Howard J.: *See*—
Kuney, Clarence F., Wurst, and Serrow.
Wydra, Frank K., Chicago, Ill. Dispenser having step-by-step rotating valve with means to prevent reverse rotation thereof. 2,472,688, June 7.
Yamins, Hyam G., Asbury Park, and R. L. Dunn, West Belmar, N. J., assignors to the United States of America as represented by the Secretary of War. Plotter computer for determining shellfire position. 2,472,138, June 7.
Yardeny, Michel N., New York, N. Y. Antihunting means for control devices. 2,472,271, June 7.
Yetter, John W., Lansdowne, and F. G. Langer, Jr., Philadelphia, Pa., assignors to General Electric Company. Switching control for field windings of dynamoelectric machinery. 2,472,642, June 7.
Yocam, Lee R., and D. K. Newman, Vancouver, Wash. Animated fishing lure. 2,472,505, June 7.
Youker, Malcolm P., assignee: *See*—
Youker, Mildred D.
Youker, Mildred D., Los Angeles, assignor, by mesne assignments, to M. P. Youker, Santa Rosa, Calif. Cylinder rotating mechanism for revolvers. 2,472,326, June 7.
Young, David W.: *See*—
Sparks, William J., and Young.
Young, Frederick C.: *See*—
Vennerholm, Oosta, Ford, and Young.
Zausner, Max.: *See*—
David, Herbert J., and Zausner.
Zetka, Joseph B., Clifton, N. J., assignor to Sylvania Electric Products, Inc. Electron tube grid structure. 2,472,767, June 7.
Ziegler, Fred H., Cullman, Ala. Harrow tooth mounting. 2,472,242, June 7.
Zieschang, Gustav H.: *See*—
Gordon, Chester S., Lally, and Zieschang.
Zieschang, Richard, assignor to The Pyrene Company Limited, Brentford, England. Fire extinguisher. 2,472,506, June 7.
Zoerlein, Emil, assignor to Ford Motor Company, Dearborn, Mich. Distributor coupling. 2,472,327, June 7.

LIST OF PLANT INVENTIONS

Rose plant. J. D. Brownell. 845–6, June 7.

LIST OF DESIGN INVENTIONS

Ash tray. J. Nelson. 154,056, June 7.
Automobile. C. B. Stevens. 154,080, June 7.
Boot, Quarter. A. E. Warren. 154,085, June 7.
Bracelet, Wrist watch. E. G. O. Anderson. 154,014, June 7.
Brassière. P. Amyot. 154,013, June 7.
Cap, Container. A. H. Jung. 154,042, June 7.
Casing, Suction cleaner. H. Dreyfuss. 154,027, June 7.
Chain, Jewelry. P. Bardach. 154,020, June 7.
Chain, Jewelry. A. S. Spear. 154,076–8, June 7.
Chair and vibrator, Combined. J. Werner and A. H. Zeigler. 154,087, June 7.
Chest and hutch, Combination. J. G. Osborn. 154,060, June 7.
Clasp. A. S. Spear. 154,073–5, June 7.
Clip, Pen and pencil. F. P. Griffith. 154,035, June 7.
Coin, Toll, or token device for automobiles. A. Zitenfield and J. Weil. 154,089, June 7.
Container or the like, Merchandise. O. W. Trailkill. 154,062, June 7.
Cuff link. G. Le Vaggi. 154,048, June 7.
Cutter, Vegetable. F. R. Smith. 154,071, June 7.
Desk or similar article. D. R. Johnson. 154,040, June 7.
Dishwasher. F. K. Storm, Jr. 154,081, June 7.
Dispenser and toothbrush holder, Combined toothpaste. N. Lipton. 154,049, June 7.
Dispenser, Telescopic paper cup. G. C. Johnson and A. A. Perelman. 154,041, June 7.
Display case and lipstick exhibit, Combined. I. W. Crull. 154,025, June 7.
Drill or similar article, Single spindle hydraulic paper. D. G. Lammi. 154,047, June 7.
Figure, Animal. I. Miller. 154,055, June 7.
Fish, lure, Artificial. J. V. Ferriot. 154,038, June 7.
Fishing rod and walking cane, Combination. H. M. Phillipe and E. H. Boucher. 154,065, June 7.
Fixture, Fluorescent lighting. C. Nitardy. 154,058, June 7.
Fixture, Lighting. C. D. McCann. 154,053, June 7.
Hammock, Kneeling. M. R. Grubb and N. C. Grubb. 154,036, June 7.
Handle for table flatware. A. M. Guior. 154,037, June 7.
Heating apparatus, Electrical. C. Reynolds, Jr. 154,067, June 7.
Holder for a keyway broach and bushing set. W. B. du Mont. 154,029–9, June 7.
Holder, Nail polish bottle, and finger rest. L. Medgyes. 154,054, June 7.
Holder, Pipe. W. E. Weaver and V. N. Bridges. 154,086, June 7.
Instrument, Writing. H. L. Fischer. 154,034, June 7.
Lamp, Automobile. W. Trautner. 154,083–4, June 7.
Lamp with illuminable base. J. Provenzano. 154,066, June 7.
Lighter, Table. G. E. Stahl. 154,079, June 7.
Love seat, lounge, and bed, Combination. R. N. Eisendrath. 154,031, June 7.
Mount, Fishing rod reel. W. L. Rives. 154,068, June 7.
Necklace. M. Duvalet. 154,030, June 7.
Necklace or similar article. A. Katz. 154,043–6, June 7.
Necklace or similar article. A. Philippe. 154,063–4, June 7.
Paper, Wrapping. O. F. Marquardt. 154,051–2, June 7.
Ring, Finger. J. S. Patty. 154,061–2, June 7.
Ring or similar article. N. Barbieri. 154,019, June 7.
Ring or similar article. A. Hoeckele. 154,039, June 7.
Ring or similar article. V. Sorrentino. 154,072, June 7.
Ring or the like, Finger. N. Barbieri. 154,016–18, June 7.
Rocking horse, Child's. W. S. Mandina. 154,050, June 7.
Rule, Illuminable. R. K. Olson. 154,059, June 7.
Scooter. D. M. Simpson. 154,070, June 7.
Shell for an expansible bracelet or similar article, Top. E. G. O. Anderson. 154,015, June 7.
Sofa. A. J. Buckner. 154,023, June 7.
Spoon, Measuring. C. E. Bretney. 154,022, June 7.
Spoon or other article of flatware. E. J. Conroy. 154,024, June 7.
Spreader, Manure. N. A. Nelson. 154,057, June 7.
Standard, Chair end. W. H. Bond, Jr. 154,021, June 7.
Switch, Box cover. V. R. Deepard. 154,026, June 7.
Table, sink, stove, and cabinet unit for vehicle trailer, Combined. D. F. Ham. 154,033, June 7.
Tone arm, Phonograph. C. W. D. Schaefer. 154,069, June 7.
Toy roly-poly or similar article. C. R. White. 154,088, June 7.
Trailer for grading articles. E. A. Ernst. 154,032, June 7.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading device, Vacuum-actuated. G. Kryl. 2,472,161, June 7.
Acid attack on brick, Inhibiting. M. K. Weber and C. R. Nelson. 2,472,635, June 7.
Acoustical apparatus. H. C. Hayes and E. Klein. 2,472,107, June 7.
Actuator controlling means for calculating machines. E. F. Britten, Jr. 2,472,564, June 7.
Actuator, Key-operated differential. J. Carlsen. 2,472,519, June 7.
Acylating amines. W. P. Utermohlen, Jr. 2,472,633, June 7.
Addition agents for mineral oil lubricants. T. L. Cantrell and H. G. Smith. 2,472,517–18, June 7.
Addition agents for mineral oil lubricants. H. G. Smith, T. L. Cantrell, and J. G. Peters. 2,472,552, June 7.
Adhering machine, Wood. J. W. Jones, Jr. 2,472,708, June 7.
Aiming and fire control system. R. S. Whitlock. 2,472,136, June 7.
Air conditioning apparatus including a sterilising means. L. M. Berryman. 2,472,243, June 7.
Aircraft fuselage construction. C. E. Sorensen and L. C. Miller. 2,472,317, June 7.
Airplane. J. F. Rodeck. 2,472,763, June 7.
Alcohols, Catalytic dehydrogenation of. H. G. Schneider and V. F. Mistretta. 2,472,493, June 7.
Alkoxy pyrasolones, Preparation of. W. A. Gregory. 2,472,581, June 7.
Alkylating phenolic hydroxyl group containing alkaloids and the resulting products. K. Folkers and F. R. Koniuszy. 2,472,411, June 7.
Alloys, Zinc-copper-titanium. E. J. Boyle. 2,472,402, June 7.
Alpha particle counting. C. J. Borkowski. 2,472,365, June 7.
Aluminum, Etching. R. B. Mason. 2,472,304, June 7.
Amalgamator, Centrifugal. T. Hamilton. 2,472,475, June 7.
Amplifier and modulating circuits therefor, Electron discharge tube high-frequency. V. J. Cooper and E. Green. 2,472,195, June 7.
Amplifier, Cathode-ray tube. P. J. Selgin. 2,472,779, June 7.
Analysis of gases, Thermal conductivity. W. J. Clark. 2,472,645, June 7.
Analyzer, Traffic. H. L. McCleery and C. B. Stair. 2,472,258, June 7.
Analyzer, Well. W. A. Bruce. 2,472,464, June 7.
Antacid composition. L. L. Hardt. 2,472,476, June 7.
Antenna. L. J. Eyges. 2,472,201, June 7.
Antenna, Broad band. W. W. Hansen. 2,472,106, June 7.
Antenna system. G. E. Hulstede. 2,472,213, June 7.
Antihunting means for control devices. M. N. Yardeny. 2,472,271, June 7.
Antisplash device for attachment to the heels of shoes or the like. E. Wellwood, R. J. McBride, W. J. Greer, and J. Wellwood. 2,472,687, June 7.
Apparatus and method for carrying out catalytic reactions. A. J. Johnson. 2,472,254, June 7.
Apparatus for capping containers. F. W. Krueger. 2,472,694, June 7.
Apparatus for collecting urine from horses and other animals. G. E. Arnold. 2,472,186, June 7.
Apparatus for handling liquid suspensions. D. B. Wicker and C. W. Cox. 2,472,324, June 7.
Apparatus for molding glass. H. P. Hood. 2,472,660, June 7.
Apparatus for preparing coffee substitutes. E. Weissman. 2,472,636, June 7.
Apparatus for producing a convergent X-ray beam. L. K. Frevel. 2,472,745, June 7.
Apparatus for production of relief surfaces. R. L. Bates. 2,472,273, June 7.
Apparatus for progressively melting and dispensing solidified materials. J. W. Kuehn and M. J. Rosefield. 2,472,594, June 7.
Apparatus for stripping finely divided solids. C. W. Tyson. 2,472,502, June 7.
Apparatus for testing voltage regulators. L. R. Nixon. 2,472,545, June 7.
Apparatus for the treatment of fabrics. R. P. Allen. 2,472,057, June 7.
Apparatus for the treatment of molten metals. R. C. Cornell. 2,472,465, June 7.
Apparatus for treating oil and gas bearing strata. S. D. Sprong. 2,472,445, June 7.
Arc welding. A. U. Welch, Jr. 2,472,323, June 7.
Arrangement for operating oil burners. J. Berger. 2,472,308, June 7.
Aryldesoxyglycoses and diaryldesoxyalditols, Production of. W. A. Bonner and C. D. Hurd. 2,472,276, June 7.
Assembly for brake bands, Friction lining. R. R. Crookston. 2,472,467, June 7.
Attachment for motor vehicles, Traction. F. G. Koehler. 2,472,331, June 7.
Attachment for pneumatic hammers, Nailing. P. Van Sittert and W. E. Barth. 2,472,353, June 7.
Attachment for toilets, Air conditioning. F. L. Owens. 2,472,383, June 7.
Attachment for tractors. A. L. Brauch. 2,472,278, June 7.
Automatic window lock. E. A. Barber, A. D. Collins, and H. C. Sylvester. 2,472,895, June 7.
Automatically adjustable disk brake. W. H. Du Bois. 2,472,697, June 7.
Automobile clothes rack. W. H. Walker. 2,472,132, June 7.
Awning, Shutter-fold. J. H. Kadleck. 2,472,429, June 7.
Axle and wheel assembly, Adjustable. T. Brown 2,472,742, June 7.
Backstop for bowling alleys. A. B. Hackert. 2,472,208. June 7.
Backing or chill ring. J. J. Dillon and M. Needle. 2,472,523, June 7.
Bacteria, Deflocculating. G. Green. 2,472,419, June 7.
Ball, Bowling. J. Darula, Jr. 2,472,406, June 7.
Band-saw attachment, Blade-shearing. C. J. Anderson 2,472,509, June 7.
Bar: *See*—
Tow bar.
Barn, Milking. G. J. Polivka. 2,472,122, June 7.
Barrel contracting tool. W. D. Jordan. 2,472,080, June 7.
Bed heater. W. J. Miller. 2,472,224, June 7.
Beer, Preservation of. A. H. Hughes. 2,472,252, June 7.
Belt driving device. N. O. Berquist. 2,472,513, June 7.
Benzylideneamino compounds of pyridine. H. L. Friedman and L. D. Braitberg. 2,472,292, June 7.
Binding for linoleum. A. I. Kantor. 2,472,081, June 7.
Biotin intermediate. M. B. and E. E. Moore. 2,472,433, June 7.
Bit: *See*—
Removable drilling bit.
Blade, Potato digger. F. R. Wright. 2,472,360, June 7.
Blankets, blanket material, felt substitutes, and carpet material. A. P. Benthall. 2,472,512, June 7.
Blankets, blanket material, felt substitutes, and carpet material, Manufacture of. A. P. Benthall. 2,472,511, June 7.
Block: *See*—
Building block. Terminal block.
Board: *See*—
Peg game board.
Bobbin clutch. G. West. 2,472,240, June 7.
Boost device, Hydraulic. R. W. Thomas. 2,472,236, June 7.
Bore gauge. E. H. Aldeborgh and A. H. Emery. 2,472,139, June 7.
Bore sight for insertion in the breech chamber of guns to provide overlapping images of muzzle portions of the gun bores. L. H. Brown. 2,472,091, June 7.
Bottle carrier. S. W. Turner. 2,472,237, June 7.
Bottle closure, Nonrefillable. A. Whitlam. 2,472,182, June 7.
Bottom for metallurgical furnaces. T. M. Fairchild. 2,472,655, June 7.
Box: *See*—
Display box.
Box or carton, Duplex. E. Morand. 2,472,674, June 7.
Bracelet, Expansible. A. Pretre. 2,472,314, June 7.
Brake: *See*—
Automatically adjustable disk brake.
Brake lock. T. Schueler. 2,472,442, June 7.
Brake rigging. E. G. Mueller. 2,472,169, June 7.
Brassière. H. H. Bruderlin. 2,472,280, June 7.
Brassière. R. Michaelson. 2,472,606, June 7.
Brassière. L. Shulman. 2,472,764, June 7.
Brassière, Strapless. L. Shulman. 2,472,765, June 7.
Brickwork structures, Erection of. E. G. Malthouse. 2,472,221, June 7.
Building block. J. G. Blackinton. 2,472,363, June 7.
Bullet, Explosive. W. T. Moore and R. N. Nelson. 2,472,118, June 7.
Butadiene emulsion polymerization in the presence of a glycol mono-ether. W. A. Schulze and W. W. Crouch. 2,472,232, June 7.
Butadiene extraction. J. B. Lovell. 2,472,487, June 7.
C-acetylated and O-acetylated compounds, Preparing. J. A. Spence and E. F. Degering. 2,472,628, June 7.

LIST OF INVENTIONS

Cabinet structure, Kitchen. G. Scharmer. 2,472,685, June 7.
Cable end receptacle. A. A. Mahren. 2,472,113, June 7.
Caliper, Micrometer. H. S. Robinson. 2,472,126, June 7.
Camera, Universal motion and still picture. I. Jerome. 2,472,299, June 7.
Canopy, Parachute. H. E. Mallory. 2,472,601, June 7.
Cap: *See*—
Container cap. Liquid fuel tank cap.
Cap and valve therefor, Container. J. G. ward. 2,472,555, June 7.
Carburetor. M. C. Brown. 2,472,092, June 7.
Carburetor process for acetylene reactions. H. Beller, R. E. Christ, and F. Wuerth. 2,472,084, June 7.
Carburetor process for acetylene reactions. H. Beller, R. E. Christ, and F. Wuerth. 2,472,086, June 7.
Carburetor process for making N-vinyl compounds. H. Beller, R. E. Christ, and F. Wuerth. 2,472,085, June 7.
Card, Button. J. J. Heilman. 2,472,532, June 7.
Carrier: *See*—
Bottle carrier. Collapsible parcel carrier.
Cart, Folding. H. J. David and M. Zaumer. 2,472,407, June 7.
Cart with hydraulic lift, Straddle-type log handling. T. A. Dowd. 2,472,197, June 7.
Carton: *See*—
Knockdown carton.
Carton. A. T. Buttery. 2,472,516, June 7.
Cartoon, Animated. J. Carroll. 2,472,191, June 7.
Cartridge clip. E. C. Pickron. 2,472,673, June 7.
Case with cap fastener, Cigarette. C. W. Rosenberger. 2,472,344, June 7.
Castanet and tambourine, Combined. C. Di Angelo. 2,472,406, June 7.
Caster. O. L. Snyder. 2,472,686, June 7.
Casting machine, Centrifugal. R. E. Christian and A. W. Widergatedt. 2,472,246, June 7.
Catch. R. A. Stone. 2,472,498, June 7.
Cathode-ray circuit. W. M. Hall. 2,472,209, June 7.
Cathode-ray tube. L. A. Woodbridge. 2,472,766, June 7.
Cathode structure for electric discharge devices. J. H. Hutchings. 2,472,077, June 7.
Cellulosic material, Flameproofing combustible. A. McLean and S. F. Harrian. 2,472,335, June 7.
Cementitious refractory and making. L. E. Greene. 2,472,206, June 7.
Ceramic objects, Coloring. H. C. Staehle. 2,472,128, June 7.
Chain support. L. A. Blackburn. 2,472,461, June 7.
Chains, Applying and securing anklekid. J. D. Carroll. 2,472,765, June 7.
Check and closer, Door. J. G. Allen. 2,472,508, June 7.
Chuck, Polishing. G. Bolduc. 2,472,399, June 7.
Chuck, Snap. W. Apest. 2,472,184, June 7.
Chute for loading materials, Segmental. J. O'Halloran. 2,472,308, June 7.
Circuit: *See*—
Cathode-ray circuit. Radio-frequency testing circuit.
Frequency sensitive circuit. Variable frequency magnetron circuit.
Motor control circuit.
Polyphase supply circuit.
Circuit breaker. F. Short. 2,472,233, June 7.
Circuit breaker, Electric. S. R. Smith, Jr. 2,472,625, June 7.
Circuit for direct-current restoration, Double time-constant. V. J. Duke. 2,472,577, June 7.
Circuit interrupting device. E. F. Kohl. 2,472,332, June 7.
Clamp: *See*—
Core clamp. Rack and pawl actuated quick-acting clamp.
Drop wire clamp. Suspension clamp.
Hose clamp.
Clasp, Neckties. F. L. Bievenouer. 2,472,190, June 7.
Clay catalysts, Preparation of. J. A. Pierce. 2,472,489, June 7.
Cleaning, penetrating, and corrosion loosening composition. C. A. Jensen. 2,472,298, June 7.
Clinical exercise table. L. G. Albisu. 2,472,391, June 7.
Clip: *See*—
Cartridge clip. Tenter clip.
Clips, Forming paper. C. S. Lee. 2,472,711, June 7.
Clothes hanger. J. H. Mullen. 2,472,202, June 7.
Clothes rack. J. Huhn, Jr. 2,472,480, June 7.
Clutch: *See*—
Bobbin clutch. Multiple clutch.
Clutch and brake device, Air actuated. R. E. Wiseman. 2,472,452, June 7.
Coating composition, Fireproofing. M. Leatherman. 2,472,112, June 7.
Coating compositions, Rust inhibiting. L. S. Engle and W. Fikar. 2,472,099, June 7.
Coating compositions using polyethylene coated pigments, Making. B. C. Pratt. 2,472,680, June 7.
Coating for electrical steel sheet and strip, Inorganic insulating. G. C. Kiefer. 2,472,592, June 7.
Coccidiostatic composition. P. D. Harwood. 2,472,422, June 7.
Coconut husk removing tool. C. P. Waters. 2,472,854, June 7.
Coffee, Decaffeinated soluble. J. Ornfelt. 2,472,121, June 7.
Coil clamping method and apparatus. G. S. Quinn and J. E. McLoughlin. 2,472,778, June 7.
Collapsible parcel carrier. S. and E. Friedmann. 2,472,203, June 7.
Collar. A. J. Logan. 2,472,430, June 7.
Combination shade and curtain rod holder. E. F. Lyon. 2,472,220, June 7.
Combustion chamber construction. F. McGowen and M. C. Travis. 2,472,117, June 7.
Communication system affording break-in operation, Single channel radio. W. D. Hailes. 2,472,585, June 7.
Compound of resin and powdered metal, Fast-setting. E. J. Coleman. 2,472,247, June 7.
Computer for determining shellfire position, Plotter. H. G. Yamins and R. L. Dunn. 2,472,138, June 7.
Condensation product of a polyhalogenated aliphatic hydrocarbon and a copolymer of a polymerizable cyclic compound and an unsaturated aliphatic hydrocarbon. W. J. Sparks and D. W. Young. 2,472,495, June 7.
Condensation products, Manufacture of. C. Weismann. 2,472,135, June 7.
Condenser apparatus. A. I. Ponomareff. 2,472,615, June 7.
Confection making machine. H. P. Curlee. 2,472,650, June 7.
Contacting fluids. S. W. Ferris, E. R. Lamson, and D. M. Smith. 2,472,578, June 7.
Container: *See*—
Food container. Key container.
Container. M. L. Williamson. 2,472,153, June 7.
Container cap. D. Petersen. 2,472,436, June 7.
Container for a comb. R. Gingold. 2,472,700, June 7.
Container for bathroom supplies. W. D. Richardson. 2,472,683, June 7.
Control device for coin-operated phonograph apparatus, Automatic time. L. A. Durant. 2,472,287, June 7.
Control devices for steam locomotives, Throttle. C. Stern. 2,472,176, June 7.
Control for field windings of dynamoelectric machinery, Switching. J. W. Yetter and F. G. Langer, Jr. 2,472,642, June 7.
Control for industrial trucks or the like, Speed. C. E. Cochran. 2,472,646, June 7.
Control for track switches, Safety. H. A. Brown. 2,472,063, June 7.
Control mechanism, Fluid pressure. W. A. Eaton. 2,472,653, June 7.
Control of electrical contacting elements. H. M. Knapp. 2,472,709, June 7.
Control system. G. H. Gordon. 2,472,157, June 7.
Control system, Alternator. O. Krauer and A. W. Forsberg. 2,472,538, June 7.
Control system, Electrical speed. J. R. Schoenbaum. 2,472,390, June 7.
Control system for pumps, Volume. F. T. Harrington and J. Robinson. 2,472,477, June 7.
Control system, Fuel. M. J. Thomas and G. C. Fricke. 2,472,734, June 7.
Control system, Gas-burner. W. A. Ray. 2,472,384, June 7.
Controlling system, Liquid pressure operated. L. C. Chouings. 2,472,694, June 7.
Conversion of hydrosulfides to neutral sulfur substances. L. C. Fetterly. 2,472,473, June 7.
Cooker, Pressure. T. R. Rhodes and E. R. Hunt. 2,472,620, June 7.
Cooker, Pressure. L. F. Whitney. 2,472,451, June 7.
Cooking apparatus. C. Mannheimer. 2,472,164, June 7.
Copper coating ferrous metal, Process and bath for. S. C. Avallone, A. W. Harris, and E. J. Whiting. 2,472,393, June 7.
Core clamp. H. Epstein. 2,472,150, June 7.
Core for use in molding hollow concrete walls, Expansible. K. Farley. 2,472,068, June 7.
Corrosion products from surfaces containing heavy metals, Removing. C. Rossi. 2,472,694, June 7.
Counterbalancing apparatus. W. C. Ewaldson. 2,472,151, June 7.
Coupling: *See*—
Distributor coupling. Tractor trailer electrical coupling.
Dual grip contractible hose coupling.
Coupling device for detachably securing sunshades, filter holders, and like accessories to the lens barrels of cameras. H. Nagel. 2,472,307, June 7.
Cover means for vegetables and other plants. J. F. Stevenson. 2,472,630, June 7.
Cracking machine, Cereal grain. J. W. Thomas. 2,472,780, June 7.
Crankshaft and making same. H. L. Mueller. 2,472,261, June 7.
Crucible and making crucibles. R. J. Anicetti. 2,472,456, June 7.
Crushing and grinding machine. G. W. Rundle. 2,472,725, June 7.
Crystal apparatus, Piezoelectric. W. L. Bond. 2,472,691, June 7.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,472,715, June 7.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,472,753, June 7.
Crystals, Growing. E. J. Malone. 2,472,203, June 7.
Cuprous naphthenate in the treatment of petroleum oil, Production of. C. O. Hoover. 2,472,253, June 7.
Cutting and placing machine, Dough. M. Haecks. 2,472,073, June 7.

LIST OF INVENTIONS

Cyclic nitrogen base sulfonates, Production of. F. C. Giemski. 2,472,583, June 7.
Cylinder back pressure valve. J. M. Clark. 2,472,284, June 7.
Cylinder rotating mechanism for revolvers. M. D. Yonker. 2,472,326, June 7.
D-gluco-saccharic acid, Preparation of. C. L. Mehltretter, C. E. Rist, and B. H. Alexander. 2,472,166, June 7.
Dehydroabietic acid derivatives. Y. T. Pratt. 2,472,487, June 7.
Denture, Cast or molded. J. A. Saffir. 2,472,492, June 7.
Desk, Knockdown. R. J. Freeman. 2,472,579, June 7.
Detecting radiations, Method and apparatus for. R. E. Fearon. 2,472,185, June 7.
Detection of high-frequency electric oscillations. J. L. Lawson. 2,472,375, June 7.
Device for enlarging pictures. A. A. D'Orazi. 2,472,148, June 7.
Device for teaching arithmetic. A. E. Rogers. 2,472,439, June 7.
Dibenzylidene derivative of 2,2,6,6-tetramethylcyclohexanol. G. C. Dermer. 2,472,147, June 7.
Dice. P. H. Brinkoeter. 2,472,515, June 7.
Dimethyl silicone gums, Preparation of. M. M. Sprung. 2,472,629, June 7.
Direct-current apparatus. F. P. Weiss. 2,472,134, June 7.
Dispenser: *See*—
Roll paper dispenser. Tape dispenser.
Dispenser having step-by-step rotating valve with means to prevent reverse rotation thereof. F. K. Wydra. 2,472,688, June 7.
Dispensing and measuring device. A. A. Campbell. 2,472,092, June 7.
Display box. R. Van Rosen. 2,472,449, June 7.
Distillation of a mixture of hydrocarbons, The. R. C. Brandon and M. C. K. Jones. 2,472,465, June 7.
Distillation of olefin-hydrogen chloride mixtures. A. C. Nixon, D. C. Lehwalder, and H. A. Cheney. 2,472,610, June 7.
Distributor coupling. E. Zoerlein. 2,472,327, June 7.
Distributor for bitumen and like material. G. M. Etnyre. 2,472,199, June 7.
Di-(2-chloro-cyclohexyl)-sulfide as insecticide. H. W. Moll. 2,472,755, June 7.
Divider, Can line. E. Bourland. 2,472,563, June 7.
Door structure, Overhead. C. J. Manville. 2,472,602, June 7.
Double-acting reciprocating pump. M. Covihs. 2,472,647, June 7.
Drain cock. D. L. Phillips. 2,472,677, June 7.
Drawbench. W. Rodder. 2,472,231, June 7.
Dry wear, Ball bearing. E. W. King. 2,472,598, June 7.
Drilling apparatus having crown block movable lengthwise of mast, Oil well. H. J. Woolslayer, C. Jenkins, and W. H. Luttgen. 2,472,359, June 7.
Drive mechanism, Reduction. O. J. Huelster. 2,472,771, June 7.
Driving arrangement for spindles of spinning and doubling frames. W. Naegeli. 2,472,226, June 7.
Drop wire clamp. C. S. Gordon, W. J. Lally, and G. H. Zirachang. 2,472,527, June 7.
Drying apparatus, Steam. M. Frisch. 2,472,101, June 7.
Drying of foots, Electronic. B. Clayton. 2,472,193, June 7.
Drying or cleaning apparatus, Hand. H. Barnes. 2,472,272, June 7.
Dual grip contractible hose coupling. H. K. Ansingh. 2,472,455, June 7.
Dye intermediates, Production of. R. M. Leekley. 2,472,666, June 7.
Dyestuffs and their manufacture, Diazo. H. Fischer. 2,472,215, June 7.
Electric cell of the immersion type. W. K. Kearsley, A. F. Winslow, and H. A. Liebhafsky. 2,472,376, June 7.
Electric furnace. F. F. Poland. 2,472,612, June 7.
Electric heating. S. J. Temple. 2,472,178, June 7.
Electric resistance furnace. F. F. Poland. 2,472,613, June 7.
Electric switch. K. Bollmann and H. Meier. 2,472,275, June 7.
Electric switch. C. D. Hayward. 2,472,588, June 7.
Electrical apparatus. J. V. McNulty. 2,472,671, June 7.
Electrical plug. T. Atherton and F. E. Ryder. 2,472,690, June 7.
Electrode for high-frequency heating of insulation preforms. L. D. Draigmand. 2,472,370, June 7.
Electrodes for electric arcs, Producing. M. V. Oswald. 2,472,171, June 7.
Electrode for electron discharge devices. H. L. Ratchford. 2,472,760, June 7.
Electrolyte with phosphoric acid, Battery. H. E. Lawson. 2,472,379, June 7.
Electromagnet. F. J. M. Theunissen. 2,472,553, June 7.
Electromagnetic pump. J. W. Dickey and N. S. Trout, Jr. 2,472,067, June 7.
Electron discharge device employing cavity resonator circuits. L. S. Nergaard. 2,472,721, June 7.
End stop for slide fasteners. A. E. Carlile and A. M. Brown. 2,472,743, June 7.
Engine cooling baffle. A. T. Gregory. 2,472,418, June 7.
Enriching the endosperm of cereal grains with natural vitamins. E. G. Hueniaub. 2,472,426, June 7.
Ethyl alcohol, Production of. A. S. Ramage. 2,472,618, June 7.
Ethynyl carbinol of β-ionone, Process for preparing the. W. Oroshalk. 2,472,310, June 7.
Evaporator. J. Elsner. 2,472,400, June 7.
Excavating and load handling machine. L. R. Russell. 2,472,726, June 7.
Explosive composition. G. C. Hale. 2,472,105, June 7.
Explosively actuated tool. I. R. Murphy. 2,472,120, June 7.
Extraction of oil, Solvent. C. M. Stone. 2,472,499, June 7.
Eyepiece for optical instruments, Sealed adjustable. A. L. Baker. 2,472,739, June 7.
Fastener: *See*—
Garment fastener. Lid fastener.
Fastener. H. E. Diaper. 2,472,651, June 7.
Feed, Cattle. C. W. A. and M. R. S. Kleine. 2,472,663, June 7.
Feeder circuit from a power circuit, Disconnecting a faulted. F. W. Gay. 2,472,657, June 7.
Feeding absorbent materials to streams of liquid hydrocarbons, Method and apparatus for. D. B. Banks. 2,472,459, July 7.
Filing equipment, Card. G. C. Bruen. 2,472,567, June 7.
Film holder. O. E. Wolf. 2,472,358, June 7.
Filter: *See*—
Rotary drum filter.
Finning engine cylinders. W. M. Busse. 2,472,245, June 7.
Firearm and ammunition therefor, Recoilless. W. J. Kroeger and C. W. Musser. 2,472,111, June 7.
Fire extinguisher. R. Zieschang. 2,472,506, June 7.
Fish lure retriever. L. M. Gundel. 2,472,207, June 7.
Fishing lure, Animated. L. R. Yoeam and D. K. Newman. 2,472,505, June 7.
Fishing rod holder. J. A. Arwood. 2,472,089, June 7.
Fixture, Machine tool. C. O. Bartholdy. 2,472,083, June 7.
Float control for liquid dispensing devices. W. Von Steeser. 2,472,389, June 7.
Flow-actuated valve. N. Brewer. 2,472,090, June 7.
Fluid actuated tool. P. Van Sittert. 2,472,352, June 7.
Fluid pressure operated valve. S. H. Edwards. 2,472,523, June 7.
Fluorescent inspection lamp. H. W. Tittle. 2,472,180, June 7.
Flush valve. A. C. Dobrick. 2,472,576, June 7.
Flushing mechanism, Water closet. L. E. Van Dercar. 2,472,634, June 7.
Focus control for cathode-ray tubes, Automatic. A. H. Mankin. 2,472,165, June 7.
Fog inhibitor for photographic emulsions. W. F. Smith and R. E. Stauder. 2,472,627, June 7.
Fog inhibitor for photographic emulsions. W. F. Smith and A. P. H. Trivelli. 2,472,626, June 7.
Food container. W. E. Green. 2,472,582, June 7.
Footwear, Producing felt. W. Pasko. 2,472,263, June 7.
Form for electric winding coil. L. L. Mayer. 2,472,603, June 7.
Fountain, Drinking. C. G. Shepherd. 2,472,367, June 7.
4:7-dichloro-(2:1)-naphthindole-2:2'-(2'':1'')-naphthathionaphthene indigo. D. G. Wilkinson. 2,472,356, June 7.
Frequency sensitive circuit. L. E. Matson, Jr., and R. N. Lemick. 2,472,167, June 7.
Front type thermostat mounting. E. J. Sanders. 2,472,728, June 7.
Fuel, Diesel engine. A. Farkas and A. F. Stribley, Jr. 2,472,152, June 7.
Fuel ingredients and their preparation, Safety. O. C. Slotterbeck. 2,472,494, June 7.
Furnace: *See*—
Electric furnace.
Electric resistance furnace.
Furnace. K. W. Stookey. 2,472,497, June 7.
Garment. H. H. Broderlin. 2,472,281, June 7.
Garment. J. J. Klapert. 2,472,329, June 7.
Garment, Convertible. L. Botha. 2,472,141, June 7.
Garment fastener. R. V. Sullivan. 2,472,233, June 7.
Garment, Feminine. S. and E. Litt. 2,472,302, June 7.
Garment, Maternity. G. Z. Florito. 2,472,154, June 7.
Garment, Umbrella carrying. A. Drasnin. 2,472,286, June 7.
Gauge: *See*—
Bore gauge.
Gauge attachment, Universal height. M. M. Marcil. 2,472,431, June 7.
Gauge for conduits, Magnetic. H. L. Turner. 2,472,319, June 7.
Gauge for projectiles, Thrust. C. N. Hickman. 2,472,108, June 7.
Gear for aircraft, Landing. R. T. Wood. 2,472,641, June 7.
Gearing, Planetary. E. E. Arnold and J. S. Newton. 2,472,559, June 7.
Generator: *See*—
Ultra high frequency oscillation generator.
Glass catalysts, Preparing porous. C. J. Plank. 2,472,490, June 7.
Glass feeder shear mechanism actuating means. C. R. Avery. 2,472,560, June 7.
Glass, Lead-titanium-borate. K.-H. Sun. 2,472,447, June 7.
Glass, Thallium-silicate. K.-H. Sun. 2,472,448, June 7.

Glaze applying machine. V. E. Ackles. 2,472,454, June 7.
Glove, Incorporating a change purse. H. Le Clair. 2,472,751, June 7.
Gluten sulfate and salts thereof, Preparing. H. C. Reitz. 2,472,267, June 7.
Glycol, Manufacture of. M. Gonze. 2,472,417, June 7.
Golf exercising apparatus. R. F. Cottingham. 2,472,065, June 7.
Golf, Indoor. C. S. Barker. 2,472,187, June 7.
Governor, Propeller. F. W. Werth, Jr. 2,472,181, June 7.
Grinding machine. M. I. Mathewson. 2,472,222, June 7.
Guide, Scraper. G. R. Howe. 2,472,076, June 7.
Halogen compounds and their production, Active. W. C. Arsem. 2,472,361, June 7.
Handle mounting. J. G. Hoff. 2,472,479, June 7.
Hanger: *See*—
  Clothes hanger.
Harness, Loom. J. J. Kaufmann. 2,472,772, June 7.
Harrow tooth mounting. F. H. Ziegler. 2,472,242, June 7.
Harvester. H. C. Sage. 2,472,762, June 7.
Hat stay and compartmenting means for hat boxes, Combined. L. James and J. E. Jubin. 2,472,079, June 7.
Headlighting for vehicles, Electric. B. Hybler. 2,472,078, June 7.
Heat-exchange apparatus. H. L. Barnebey and J. R. Shields. 2,472,362, June 7.
Heat exchanger. J. M. Gantwoort. 2,472,413, June 7.
Heat-treating particle-form solid adsorbents. J. W. Payne. 2,472,776, June 7.
Heat-treating steel. G. Vennerholm, H. D. Ford, and F. C. Young. 2,472,320, June 7.
Heater: *See*—.
  Bed-heater.
Heater for softening thermoplastics, Electric. J. V. Calhoun. 2,472,144, June 7.
Heaters, Manufacture of electric. C. W. Cappell. 2,472,145, June 7.
Heating sheet, Mica base. M. D. Heyman. 2,472,533, June 7.
Heating unit, including reciprocating grates. L. F. Gough. 2,472,746, June 7.
Helicopter and support, Rotary. W. L. West. 2,472,556, June 7.
Helicopter kite. R. W. Fernstrum. 2,472,290, June 7.
High-frequency coaxial cable switch. S. M. Beleskas. 2,472,274, June 7.
Hinge, Easel. C. N. Cross. 2,472,405, June 7.
Hitch, Trailer. D. C. McCune and H. Brooks. 2,472,432, June 7.
Hoisting device. J. B. Houghton. 2,472,251, June 7.
Holder: *See*—
  Combination shade and curtain rod holder.
  Film holder.
  Fishing rod holder.
  Malleable display holder.
  Paper roll holder.
  Portable drill press holder.
  Sack holder.
  Self-fastening cord holder.
  Smoothing iron holder.
  Steel wool pad holder.
  Syringe holder.
  Tube and instrument holder.
  Welding electrode holder.
Holder and buffer, Door. W. P. Bennett. 2,472,397, June 7.
Holder for surgical drills, Modified bone screw. J. H. Giesen. 2,472,103, June 7.
Holder for vehicles, Electromagnetic hill. H. Nissen. 2,472,544, June 7.
Hose clamp. W. G. Ovens and J. W. McCrea. 2,472,172, June 7.
Hydraulic press. F. C. Wilson. 2,472,390, June 7.
Hydraulic pump. P. Hashr. 2,472,529, June 7.
Hydraulic system for vehicle jacks. M. D. Hall. 2,472,294, June 7.
Hydrocarbon conversion with fluidized catalyst. T. B. Kimball. 2,472,537, June 7.
Hydrocarbon oils, Refining. E. E. Langan, N. E. Lemmon, and F. W. Schuessler. 2,472,217, June 7.
Hydrocarbon synthesis. P. C. Keith. 2,472,377, June 7.
Hydrocarbon synthesis with fluidized catalyst regeneration. E. A. Johnson. 2,472,427, June 7.
Ice breaker. A. C. Bennett and W. O. Engler. 2,472,188, June 7.
Imidasolido thiophanes and preparing same. B. R. Baker and M. V. Querry. 2,472,458, June 7.
Impeller for centrifugal force pumps. W. B. Fritz. 2,472,412, June 7.
Implement or loader, Farm. C. R. Cook. 2,472,194, June 7.
Implement, Soil pulverizing and rolling. T. G. Schmeiser. 2,472,386, June 7.
Impression of the shape of an object, Making and maintaining an. W. J. Mead. 2,472,754, June 7.
Impulse motor. H. C. Roters. 2,472,621, June 7.
Indicator for variable pitch propellers, Pitch. W. V. Brown. 2,472,693, June 7.
Indicator system, Tuning. O. C. Keil, Jr., and J. H. Loftun. 2,472,536, June 7.
Infinite stage pump. D. Grant and N. Bashark. 2,472,104, June 7.
Ingot mold. E. Gathmann. 2,472,072, June 7.
Inhibitor. P. Subkow. 2,472,318, June 7.
Inks, Printing. C. A. Rietz. 2,472,126, June 7.
Instrument, Barometric. C. J. Ulrich. 2,472,735, June 7.
Instrument, Catheter-type. L. H. Krippendorf. 2,472,483-5, June 7.
Instrument, Musical. J. T. Kuns. 2,472,595, June 7.
Instrument, Taper measuring. O. J. Minuto. 2,472,306, June 7.
Instruments, Electron optical. A. M. Rennie. 2,472,316, June 7.
Interpolymers, Resinous. R. E. Holmen. 2,472,661, June 7.
Iron support. W. M. Brady. 2,472,244, June 7.
Iron tip, Soldering. M. R. Hartnell. 2,472,296, June 7.
Jig, Connecting rod aligning. J. M. Lantz and E. R. Kerchal. 2,472,163, June 7.
Joint: *See*—
  Pipe expansion joint.
  Pipe joint.
  Railway rail joint.
Keeper for door bolts. W. H. Schneider. 2,472,174, June 7.
Key container. N. E. Olson. 2,472,337, June 7.
Kite. E. N. Winslow. 2,472,137, June 7.
Kite and control, Flying. H. K. Hole. 2,472,075, June 7.
Knife, Putty. F. B. Lewandowski. 2,472,668, June 7.
Knitting finger ring. H. Greenstein. 2,472,702, June 7.
Knitting machine, Straight-bar. H. W. and E. Start. 2,472,175, June 7.
Knockdown carton. A. G. Edtmiller. 2,472,698, June 7.
Lamp: *See*—
  Fluorescent inspection lamp.
Lamp. D. Trompeter. 2,472,632, June 7.
Lamp and assembly therefor, Flourescent. M. C. Levy. 2,472,597, June 7.
Landing head for plural casings and oil tubings. E. C. Counts and N. H. Le Roy. 2,472,466, June 7.
Latch. C. B. Gaeh. 2,472,474, June 7.
Latch for receptacles, Handle operated. W. H. Cadwell. 2,472,404, June 7.
Latch mechanism, Door. D. C. Smith. 2,472,730, June 7.
Leak detection. T. de Forest. 2,472,522, June 7.
Lever fulcrum, Dead. H. H. Shaffer. 2,472,443, June 7.
Lid fastener. A. Claud-Mantle. 2,472,285, June 7.
Light control. K. L. Beninger and C. H. Lowrey. 2,472,741, June 7.
Lighter, Cigar and cigarette. H. Lee. 2,472,773, June 7.
Lighter construction, Pyrophoric. R. L. Burchett. 2,472,282, June 7.
Line circuit and line finder, All relay telephone. R. W. Jones. 2,472,428, June 7.
Liquid from wet film, Removal of excess. C. J. Kunz. 2,472,590, June 7.
Liquid fuel tank cap. S. Wise. 2,472,737, June 7.
Liquids, Dehydrating effervescent. R. A. Bierwirth. 2,472,562, June 7.
Loader machine. E. M. McElhinney and T. A. Podhajsky. 2,472,223, June 7.
Loading device for grinding machines, Work. A. J. Jones and C. C. W. Williams. 2,472,707, June 7.
Locating beacons. E. L. Hudspeth. 2,472,212, June 7.
Locator, Mill cutter center. C. R. Wilson. 2,472,241, June 7.
Lock: *See*—
  Automatic window lock.
  Brake lock.
  Receptacle closure lock.
  Truck tail gate lock.
Locking device. J. A. Barraket. 2,472,394, June 7.
Locking means for cases, containers, and the like. G. Levinson. 2,472,486, June 7.
Luggage, Mobile. B. Quinton. 2,472,491, June 7.
Machine attachment, Gear hobbing. J. W. Barcus. 2,472,644, June 7.
Machine for assembling and molding shoe buttom parts. W. H. Hegga and H. G. Heather. 2,472,210, June 7.
Machine for automatically removing the feathers from fowl. E. B. Digby. 2,472,468, June 7.
Machine for cleaning the surfaces of Venetian blind slats. J. Gaino. 2,472,155, June 7.
Machine for operating on sole parts. A. F. Donovan. 2,472,524, June 7.
Machine head control, Pressing. H. D. Forse. 2,472,656, June 7.
Machine tool. G. F. Eason. 2,472,744, June 7.
Machine with squeezer extractor, Washing. H. J. Rand. 2,472,682, June 7.
Magneto, Flywheel. R. E. Phelon. 2,472,313, June 7.
Mailbox, Automatic signal. R. Carter. 2,472,192, June 7.
Mailable display holder. A. Mathewson. 2,472,166, June 7.
Maudrel for band saws, Work-supporting adjustable. S. J. A. Christie. 2,472,570, June 7.
Manicuring device. M. J. Lessard. 2,472,667, June 7.
Massage device. M. A. Bollman. 2,472,385, June 7.
Measuring device with oscillator, Liquid level. C. A. de Cillers and A. Edelman. 2,472,249, June 7.
Measuring or comparing device. P. G. Skinner. 2,472,348, June 7.
Measuring system, Elastic fluid-flow. D. W. Moore, Jr. 2,472,609, June 7.
Mechanical method for grain refining magnesium alloys. J. S. Peake. 2,472,757, June 7.
Mercaptans, Preparation of. L. T. Eby. 2,472,470, June 7.
Metal compounds from oil feed to fluid catalyst cracking, Removal of. N. P. Peet. 2,472,723, June 7.
Metal sheet, Bituminous mastic coated. W. F. Fair, Jr. 2,472,100, June 7.
Metal surfaces against hydrogen sulfide corrosion, Protecting. D. C. Bond and M. Savoy. 2,472,400, June 7.
Metalworking machine. A. J. Barrie and R. J. Dwyer. 2,472,561, June 7.

Meter: *See*—
  Two range exposure meter.
Metering device. R. L. Fryer, Jr. 2,472,102, June 7.
Mica splitting machine. J. F. Boucek. 2,472,401, June 7.
Microphone, Piezoelectric sound pressure. F. Massa. 2,472,714, June 7.
Milling machine for formed cutters. E. Schludier. 2,472,346, June 7.
Milling machine with pivoting and sliding head. C. Schlablin-Villeneuve. 2,472,345, June 7.
Mixture of nucleotides containing predominantly adenosintriphosphate, Preparation of. A. E. Szent-Györgyi. 2,472,130, June 7.
Mobile body. A. Wolf. 2,472,357, June 7.
Moccasin vamps and plugs, Securing together. H. Phillips. 2,472,265, June 7.
Mold: *See*—
  Ingot mold.
Mold assembly for producing cast metal slabs. E. Gathmann. 2,472,071, June 7.
Monoazo dipyrazolones, Metallizable. P. Hindermann. 2,472,109, June 7.
Monosubstituted desoxyglycoses and preparing the same. W. A. Bonner, H. Woods, and C. D. Hurd. 2,472,277, June 7.
Motor: *See*—
  Impulse motor.
  Reciprocating electromagnetic motor.
  Vibratory motor.
Motor acceleration means. H. F. Roach and W. R. Nelson. 2,472,341, June 7.
Motor control. H. C. Waterman. 2,472,736, June 7.
Motor control circuit. J. T. L. Brown and C. E. Pollard, Jr. 2,472,566, June 7.
Motor control circuit. B. Ostendorf, Jr. 2,472,611, June 7.
Motor protective system, Underspeed. A. C. Frazee. 2,472,526, June 7.
Motor vehicle. H. R. Van Vleck. 2,472,450, June 7.
Mount for cameras, Detachable shutter. D. C. Harvey. 2,472,586, June 7.
Mounting: *See*—
  Front type thermostat mounting.
  Handle mounting.
  Harrow tooth mounting.
  One-piece channeled lens mounting.
  Outboard motor mounting.
Mounting bracket for transformers. E. J. Mackereth. 2,472,752, June 7.
Mounting for camera lens turrets, Range finder. R. Stillwell. 2,472,732, June 7.
Mullion. C. F. Kuney, H. J. Wurst, and R. J. Serxow. 2,472,162, June 7.
Multiple clutch. F. L. Lavash. 2,472,750, June 7.
Multiplying mechanism. C. H. Doersam, Jr. 2,472,097, June 7.
N-(4,5-dihydroxy-n-amyl) and n-(4,5-diacyloxy-n-amyl) aromatic amines. J. B. Dickey. 2,472,575, June 7.
Naphthenate, Production of cuprons. C. O. Hoover. 2,472,424, June 7.
Napping machine. W. N. Hadley. 2,472,584, June 7.
Navigation system, Radio. E. C. Streeter, Jr. 2,472,129, June 7.
Net, Landing. L. A. Dailey. 2,472,572, June 7.
Nitro compounds, Manufacture of organic. A. E. W. Smith, C. W. Scaife, and H. Baldock. 2,472,550, June 7.
Oil, Burning. T. Nagel. 2,472,720, June 7.
Oil compositions, Lubricating. J. L. van der Minne. 2,472,503, June 7.
Oil purifier, Lubricating. C. J. Morey. 2,472,717, June 7.
1-carbethoxy-4-methylpiperazine, its salts, and preparing same. H. W. Steward. 2,472,496, June 7.
One-piece channeled lens mounting. E. M. Splaine. 2,472,731, June 7.
Operating and controlling apparatus for dry dock side walls. F. R. Harris. 2,472,295, June 7.
Optical interference coatings, Depositing. D. B. McRae and J. H. McLeod. 2,472,605, June 7.
Organometallic compound. C. Winning. 2,472,504, June 7.
Oscillator, High-frequency concentric line. E. Fubini, H. C. Kriegel, and J. G. Stephenson. 2,472,204, June 7.
Oscillator, Magnetostrictive. A. L. Thuras. 2,472,388, June 7.
Oscillator tube. C. A. Boddie. 2,472,088, June 7.
Outboard motor mounting. P. Homan. 2,472,704, June 7.
Oven, Ventilated and shielded infrared. F. J. Groven. 2,472,293, June 7.
Oxidized nitrated cellulose, Preparing an. W. O. Kenyon and W. F. Fowler, Jr. 2,472,591, June 7.
Package, Dental X-ray film. B. E. Luboshes. 2,472,599, June 7.
Packaging. G. M. Danenbauer. 2,472,521, June 7.
Palladium complexes as photographic emulsion stabilizers. R. E. Stauffer and W. F. Smith. 2,472,631, June 7.
Panel access-opening closure. F. G. Gerber. 2,472,156, June 7.
Paper roll holder. C. A. Weller. 2,472,239, June 7.
Partition structure. N. Nelson. 2,472,766, June 7.
Peeler, Vegetable. H. R. Banks. 2,472,460, June 7.
Peg game board. G. Mysels. 2,472,719, June 7.
Pen, Fountain. A. G. Rosa. 2,472,343, June 7.
Petroleum emulsions, Breaking. M. De Groote and B. Keiser. 2,472,573-4, June 7.
Piano key action. D. Barnett. 2,472,740, June 7.
Pick-up, Temperature compensated vibration. F. K. Slason. 2,472,127, June 7.
Piezoelectric device. R. W. Tibbetts. 2,472,179, June 7.
Pipe: *See*—
  Tobacco pipe.
Pipe. E. E. Smatt. 2,472,444, June 7.
Pipe coupling tool. A. J. Harrison. 2,472,530, June 7.
Pipe expansion joint. T. W. F. Brown. 2,472,279, June 7.
Pipe joint. C. W. Howard. 2,472,425, June 7.
Pipe-line support. H. G. Engelke. 2,472,654, June 7.
Piston. L. E. Endsley, W. W. Schettler, and J. H. Lentell. 2,472,288, June 7.
Piston ring. J. C. Meador. 2,472,540, June 7.
Plastic sheets, Producing surface decorated. R. L. Smith. 2,472,551, June 7.
Plug: *See*—
  Electrical plug.
Polymerization of alpha alkyl styrenes. A. B. Hersberger. 2,472,589, June 7.
Polyphase supply circuit. J. H. Andresen, Jr., and E. Kasner. 2,472,507, June 7.
Portable drill press holder. F. P. Stinchcomb. 2,472,270, June 7.
Post puller. C. F. Miller. 2,472,305, June 7.
Potatoes, Treating. J. F. P. Newhall. 2,472,775, June 7.
Powder, Fire extinguishing. B. C. McGlenn. 2,472,639, June 7.
Press: *See*—
  Hydraulic press.
Pressure controlled liquid outlet valve. O. L. Garretson. 2,472,070, June 7.
Preventing coke formation in preheater tubes. E. V. Mathy. 2,472,669, June 7.
Prevention and destruction of weeds. W. A. Sexton. 2,472,347, June 7.
Primer, Pump. J. M. Cox. 2,472,648, June 7.
Prism for folding a light path, Optical erecting. B. E. Luboshes. 2,472,600, June 7.
Projection device, Navigational map. R. L. Duncan. 2,472,098, June 7.
Pterins, Preparing. M. E. Hultquist and D. R. Seeger. 2,472,481, June 7.
Pterins, Preparing substituted. M. E. Hultquist and P. F. Dreisbach. 2,472,482, June 7.
Pteroic acid and amino acid amides thereof, Preparing. J. H. Boothe. 2,472,462, June 7.
Puller: *See*—
  Post puller.
Pull-out switch. N. J. Schmelig and F. S. Green. 2,472,268, June 7.
Pulp free from starch, Banana. C. Ermert. 2,472,289, June 7.
Pump: *See*—
  Double-acting reciprocating pump.
  Electromagnetic pump.
  Hydraulic pump.
  Infinite stage pump.
Pump. D. J. Whittingham. 2,472,355, June 7.
Putter. S. S. Parrish. 2,472,312, June 7.
Pyrimido-2'-cyanine dyes. L. G. S. Brooker, W. F. Holcomb, and C. K. Banks. 2,472,565, June 7.
Rack: *See*—
  Automobile clothes rack.
  Clothes rack.
Rack and pawl actuated quick-acting clamp. C. L. Gilbert. 2,472,658, June 7.
Radio beacon system. J. M. Henry. 2,472,158, June 7.
Radio-frequency testing circuit. C. E. Dennis. 2,472,096, June 7.
Radio reception. W. Lyons. 2,472,218, June 7.
Railway rail joint. G. A. Standfast. 2,472,446, June 7.
Railway switch point support. H. L. Boue. 2,472,364, June 7.
Rake. C. J. Rocquin. 2,472,342, June 7.
Rake, Side delivery. M. A. Morrill. 2,472,260, June 7.
Reamer, Expansible. H. G. Volis. 2,472,554, June 7.
Receiver, Frequency modulated-amplitude modulated. W. E. Koch. 2,472,301, June 7.
Receiver with pulse narrowing systems, Panoramic. J. I. Heller. 2,472,531, June 7.
Receptacle: *See*—
  Cable end receptacle.
  Receptacle closure lock.
Reciprocating electromagnetic motor. H. L. McHenry. 2,472,384, June 7.
Recording system, Wire. E. S. Peterson. 2,472,435, June 7.
Reflecting device for motor vehicles, Swinging and rotating. V. V. Price. 2,472,438, June 7.
Refrigeration system. P. A. Sidell. 2,472,729, June 7.
Regenerating synthesis catalyst with oxygen and return of oxidized catalyst to the synthesis reactor. S. B. Sweetser. 2,472,501, June 7.
Register, Air. C. A. Labus. 2,472,748, June 7.
Regulating system. S. B. Crary. 2,472,671, June 7.
Remote-control or indicating system, Electric. W. Jones 2,472,535, June 7.
Removable drilling bit. C. C. Koeln. 2,472,710, June 7.
Remover, Shoe stitch. A. Barbagallo. 2,472,643, June 7.
Repeater, Antisinging gain controlled. R. H. Herrick. 2,472,211, June 7.
Resistance apparatus for converting mechanical movement into electrical pulses. L. L. Helterline, Jr. 2,472,770, June 7.
Resistor, Pressure responsive electrical. H. Hurvitz. 2,472,214, June 7.

Resurfacing tool. J. E. Giles. 2,472,374, June 7.
Reversible seat. G. C. Smith. 2,472,549, June 7.
Rheostat. L. K. Davis. 2,472,369, June 7.
Rheostat for welding. P. S. Greider. 2,472,205, June 7.
Rheostat with switch. E. F. McDonald, Jr. 2,472,604, June 7.
Rim, Separable. F. W. King. 2,472,328, June 7.
Ring: *See*—
Backing or chill ring. Piston ring.
Knitting finger ring.
Roll paper dispenser. M. Lifschitz. 2,472,712, June 7.
Roller skate wheel bubcap. C. M. Bierman. 2,472,087, June 7.
Rotary drum filter. O. B. Ackerly, Jr. 2,472,558, June 7.

Seat, especialy for rail cars. J. W. Patton. 2,472,389, June 7.
Seat for small boats. A. A. Apel. 2,472,185, June 7.
Securing a pipe fitting to a plate, wall or the like. P. G. Caldwell, and L. W. Hope-Walton. 2,472,569, June 7.
Selector, Picture. A. B. Reed. 2,472,619, June 7.
Self-fastening cord holder. R. V. Kemplin. 2,472,300, June 7.
Self-threading device for motion-picture apparatus. J. Briskin. 2,472,143, June 7.
Separating hydrocarbons by adsorption. A. E. Hirschler. 2,472,250, June 7.
Separator: *See*—
Triple tube cyclone separator.
Servomotor mechanism. H. M. Purcell. 2,472,547, June 7.
Shaft seal with internal drive. A. J. Matter. 2,472,257, June 7.
Sharpener, Razor. T. M. Page. 2,472,311, June 7.
Sheet feeding. F. R. Schmitt. 2,472,441, June 7.
Sheet feeding and positioning mechanism for typewriters. G. Presioso. 2,472,340, June 7.
Sheet piling apparatus. E. R. Muddiman. 2,472,225, June 7.
Shield, Base. W. R. Jones. 2,472,747, June 7.
Shock absorber for airplanes, Cross-wind landing gear. J. H. Geisse. 2,472,415, June 7.
Shoe tree, Finger-grip. L. B. Harris, and V. E. Pascale. 2,472,074, June 7.
Shovel and scraper, Trench excavator. D. F. Przbylski. 2,472,758, June 7.
Shutter for cameras, Variable aperture curtain. J. Mihalyi. 2,472,607, June 7.
Shutter with automatic diaphragm, Camera. C. C. Fuerst. 2,472,580, June 7.
Shutter with built-in flash synchronizer, Blade and cover blind. D. C. Harvey. 2,472,587, June 7.
Side posture chiropractic adjusting table. A. I. Mueller. 2,472,675, June 7.
Signal construction, Musical chime. G. R. Fish. 2,472,371–3, June 7.
Signal construction, Musical chime. C. Miller. 2,472,382, June 7.
Signal device for tanks, Liquid level. B. Ladner. 2,472,665, June 7.
Signal level, Touch. F. H. Hagner. 2,472,420, June 7.
Signaling system. H. E. Goldstine. 2,472,769, June 7.
Skiver, Leather lace. L. E. Grimes. 2,472,528, June 7.
Slicer, Fruit and vegetable. J. Gangemi. 2,472,699, June 7.
Slubbing device. G. W. Byers. 2,472,283, June 7.
Smoothing iron holder. W. B. Nunnally, Sr. 2,472,676, June 7.
Snap acting electric switch. E. F. Kohl. 2,472,333, June 7.
Socket, Vacuum tube. E. Toth, and G. H. Burbage. 2,472,181, June 7.
Solutions of tyrothricin, Clear aqueous. P. W. Wilcox, and B. B. Jatul. 2,472,640, June 7.
Sorter. C. F. Mullen. 2,472,718, June 7.
Spark gap, Triggered. W. G. Mayer. 2,472,115, June 7.
Spool. J. V. Cox. 2,472,248, June 7.
Stabilization of butter. W. S. Mueller. 2,472,119, June 7.
Stabiliser. H. Ford and E. Nador. 2,472,291, June 7.
Stabilising a cellulose ether. W. D. Paist, and F. Berardinelli. 2,472,227, June 7.
Staple setting machine. T. P. Didato. 2,472,469, June 7.
Starch with nitrogen dioxide, Oxidation of. W. O. Kenyon, and C. C. Unruh. 2,472,590, June 7.
Steel wool pad holder. B. Burwes. 2,472,403, June 7.
Stop for the operating bar of door fasteners. G. E. Dath. 2,472,146, June 7.
Stop-motion mechanism for knitting machines, Wrap yarn controlled. C. W. Cox. 2,472,649, June 7.
Stop, Window. R. J. Kasik. 2,472,216, June 7.
Stove, Combined cooking and air heating. H. D. Dufault. 2,472,198, June 7.
Streptomycin composition of reduced toxicity. F. J. Wolf, and M. Tishler. 2,472,453, June 7.
Supplying lubrication as a fine mist. W. W. Nash. 2,472,170, June 7.
Support: *See*—
Chain support. Window clothesline support.
Iron support. Work lamp support.
Pipe-line support.
Railway switch point support.
Support for drills. W. Pilkington. 2,472,679, June 7.
Suporter, Hosiery. R. M. Taylor. 2,472,350, June 7.
Surface structures, Simulating. B. K. Beylerian. 2,472,060, June 7.
Suspension clamp. W. W. King. 2,472,662, June 7.
Swimming pool apparatus. E. J. Opsahl. 2,472,309, June 7.
Switch: *See*—
Electric switch. Rotary electrical switch.
High-frequency coaxial cable switch. Snap acting electric switch.
Pull-out switch. Thermal switch.
Rheostat with switch.
Switch mechanism for fire alarms. M. E. Ouellette. 2,472,266, June 7.
Swivel for drilling rigs, Rotary. R. R. Bloss, and A. R. McLerran. 2,472,001, June 7.
Synthesis of hydrocarbons. L. R. Lyons. 2,472,219, June 7.
Syringe holder. H. F. Mayues. 2,472,110, June 7.
System operated by liquid pressure. L. C. Chouings. 2,472,695, June 7.
Table: *See*—
Clinical exercise table. Vertically adjustable table.
Side posture chiropractic adjusting table.
Tape dispenser. A. B. Reed. 2,472,761, June 7.
Tape feed suppressor. M. T. Goetz. 2,472,701, June 7.
Telegraph messages, Switching of. J. W. Milner. 2,472,608, June 7.
Telephone system. Time division carrier multiplex. J. H. Homrighous. 2,472,705, June 7.
Tensiometer. J. J. Boulin. 2,472,142, June 7.
Tension device. J. A. Pons. 2,472,614, June 7.
Tensioning device for reels, Automatic. S. Schnell. 2,472,548, June 7.
Tenter clip. M. G. Hinnekens. 2,472,375, June 7.
Terminal block. C. B. Backer. 2,472,738, June 7.
Testing device, Brake. A. N. Milster. 2,472,541, June 7.
Thermal switch. G. C. Armstrong. 2,472,082, June 7.
Thermopile for measuring air temperatures. A. Raspet. 2,472,759, June 7.
Thermostatic control device. E. H. White. 2,472,638, June 7.
Thermostatic expansion valve. R. J. Dillman. 2,472,149, June 7.
Thioethers, Preparation of. L. T. Eby. 2,472,471, June 7.
Thiophanthraquinone derivatives. V. Weinmayr. 2,472,133, June 7.
Three-dimensional pictures, Producing. D. McPherson. 2,472,259, June 7.
Time delay, Thermal. R. R. Brode. 2,472,366, June 7.
Tippler or dumper, Car and wagon. G. W. Grossmith. 2,472,765, June 7.
Tire making machine. C. E. Powers. 2,472,123, June 7.
Tobacco curing apparatus. G. S. Horne. 2,472,534, June 7.
Tobacco pipe. O. M. Ingebretsen. 2,472,159, June 7.
Tool: *See*—
Barrel contracting tool. Machine tool.
Coconut husk removing tool. Pipe coupling tool.
Explosively actuated tool. Resurfacing tool.
Fluid actuated tool. Well reaming tool.
Tool. E. A. Randall, and V. B. Slifer. 2,472,124, June 7.
Tool for joists and studs, Grappling. L. E. Swanson. 2,472,500, June 7.
Tool for tubes, Cleaning. C. E. Cournoyer and R. R. Charron. 2,472,093, June 7.
Toolholder. A. Kyle, and J. A. Johnson. 2,472,255, June 7.
Tool retainer. W. D. Fish. 2,472,202, June 7.
Tool with yielding drive, Torque. J. J. Greer. 2,472,659, June 7.
Top, Sifter. A. B. Criss. 2,472,520, June 7.
Totalizing system, Electronic. N. A. Moerman. 2,472,542, June 7.
Tow bar. C. Williams. 2,472,325, June 7.
Toy bank. F. Damiano. 2,472,064, June 7.
Toy, Exploding ship. H. C. Holt. 2,472,297, June 7.
Toy musical instrument. G. Proll. 2,472,681, June 7.

Track, Roller. D. T. Brinkley. 2,472,514, June 7.
Tractor trailer electrical coupling. W. O. Folger. 2,472,069, June 7.
Training device, Visual. H. B. Marder. 2,472,114, June 7.
Transfer mechanism, Tens. E. P. Drake. 2,472,696, June 7.
Transformer, Adjustable current. R. C. Pomeroy. 2,472,546, June 7.
Transformer, Lighting. P. Berger. 2,472,140, June 7.
Transmission system, Pulse. G. D. Hulst, Jr. 2,472,706, June 7.
Transmit-receive system. B. B. Cork. 2,472,196, June 7.
Transmitter, Key operated. C. W. Swan. 2,472,733, June 7.
Transportation of small parcels, Air. R. B. Schulze. 2,472,623, June 7.
Trap for bathtubs, Sanitary. D. Weissman. 2,472,322, June 7.
Tray, Bed. J. J. Schulze. 2,472,549, June 7.
Tray, Loading. C. E. Ellsworth. 2,472,472, June 7.
Trimmer. G. and M. Prodromos. 2,472,617, June 7.
Trimming machine. H. C. Paulsen. 2,472,228, June 7.
Trimming machine, Lawn. H. L. Geater. 2,472,414, June 7.
Triple tube cyclone separator. D. H. Putney. 2,472,777, June 7.
Truck for rail vehicles, Flexible. A. S. Krots. 2,472,160, June 7.
Truck, Hand. J. McFarland. 2,472,670, June 7.
Truck tail gate lock. H. A. Smith. 2,472,234, June 7.
Tube: *See*—
Cathode-ray tube. Oscillator tube.
Tube and instrument holder. W. C. Artley. 2,472,058, June 7.
Tube for molten metal, Blowing. R. M. Gibson. 2,472,416, June 7.
Tube grid structure, Electron. J. B. Zetka. 2,472,767, June 7.
Tube having a secondary-emission electrode, Thermionic. H. Blenfait and C. F. Veenemans. 2,472,189, June 7.
Turbine casing construction. G. K. W. Boestad and H. R. Nilsson. 2,472,062, June 7.
Turbine of double rotation type, Radial-flow. R. G. J. Möller. 2,472,543, June 7.
2-arylamino-4-halogenoquinolines. F. H. S. Curd, C. G. Raison, and F. L. Rose. 2,472,066, June 7.
Two range exposure meter. A. J. McMaster. 2,472,381, June 7.
2,2-bis-(4-methylthiophenyl)-1,1,1-trichloroethane. D. A. Shirley. 2,472,269, June 7.
Ultra high frequency oscillation generator. B. D. Loughlin. 2,472,598, June 7.
Valve: *See*—
Cylinder back pressure valve. Flush valve.
Flow-actuated valve. Pressure controlled liquid outlet valve.
Fluid pressure operated valve. Thermostatic expansion valve.
Vapor recovery system for airplane fuel tanks. A. J. Savard. 2,472,622, June 7.
Variable frequency magnetron circuit. E. Everhart. 2,472,200, June 7.
Variating mechanism. S. Hinds. 2,472,478, June 7.
Varying the gap spacing of pole pieces for electron optical apparatus. J. H. Reisner. 2,472,315, June 7.
Vehicle: *See*—
Motor vehicle.
Vehicle for transporting tanks. A. G. Wills. 2,472,557, June 7.
Vent system for sanitary toilets. I. E. Ash. 2,572,457, June 7.
Vertically adjustable table. R. Newstead. 2,472,722, June 7.
Vibrator apparatus, Electrically operated. D. B. Corbyn. 2,472,367, June 7.
Vibrator, Fluid operated. R. Burt. 2,472,568, June 7.
Vibratory motor. C. S. Weyandt. 2,472,687, June 7.
Vinyl esters of polycarboxylic acids, Preparing. A. Pechukas. 2,472,434, June 7.
Vinyl sulfone-diene interpolymers. C. J. Mighton. 2,472,672, June 7.
Voltage distribution system. H. W. G. Salinger and H. W. Beach. 2,472,727, June 7.
Voltage stabiliser. G. Mak. 2,472,256, June 7.
Watchcase and bracelet, Combined. E. P. Tyler. 2,472,351, June 7.
Water-heating system, Electric. E. Liljol. 2,472,718, June 7.
Water, Treatment of. W. G. Prescott, E. I. Akeroyd, and E. L. Holmes. 2,472,616, June 7.
Wedge locked, sliding side jaw wrench. E. L. L. Österdahl. 2,472,335, June 7.
Weed eradicating machine. W. Klein and J. Jacos. 2,473,330, June 7.
Weighing system, Fluid. H. A. Adams and M. Eichelberger. 2,472,689, June 7.
Welder, Plasticity responsive. I. W. Cox and L. D. Drugmand. 2,472,306, June 7.
Welding electrode. R. E. Powell. 2,472,173, June 7.
Welding electrode holder. C. W. Taber. 2,472,177, June 7.
Welding system, Condenser. H. Klemperer. 2,472,110, June 7.
Welding system, Resistance. J. W. Dawson. 2,472,095, June 7.
Well reaming tool. W. F. Lake. 2,472,740, June 7.
Wheels to shafts, Attaching. W. W. Hamill and R. S. Crump. 2,472,421, June 7.
Wiggler. C. W. Wickens. 2,472,630, June 7.
Winder, Coil. L. S. Brennan. 2,472,089, June 7.
Window clothesline support. R. P. McNaught. 2,472,488, June 7.
Wire twisting device. L. E. Bennett. 2,472,510, June 7.
Wool from wool-acetate fabrics, Recovery of. G. C. Ward and R. U. Genazzani. 2,472,238, June 7.
Work lamp support. N. R. Schwartz. 2,472,624, June 7.
Wrench: *See*—
Wedge locked, sliding side jaw wrench.
Wrench with work-retaining loop, Spanner. F. G. Miller and L. S. Bogert. 2,472,716, June 7.

CLASSIFICATION OF PATENTS

ISSUED JUNE 7, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,472,469

Total	1,240		

Patents expiring: Patent Numbers 1,862,518 to 1,863,553, inclusive, issued June 14, 1932, expire June 14, 1949

Condition of Applications Under Examination at Close of Business May 20, 1949

Total number of patent applications awaiting action, 147,132. Date of oldest new application, June 25, 1947; date of oldest amended application, November 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	4-5-48	7-26-47	2674
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	2-16-48	5-6-47	2718
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	10-23-48	10-11-48	945
4. BISHOP, WALTER C., Power Driven Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	11-26-47	7-10-47	3220
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	3-15-48	9-30-47	1422
6. SUELE, H., Carbon Chemistry (part)	5-28-48	6-10-48	1907
7. HANLIN, GEORGE, Optics; Photographic Apparatus	5-20-48	6-3-48	1470
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	8-1-47	5-28-47	4078
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	3-6-48	7-19-47	2063
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	8-7-48	6-17-48	1584
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	6-1-48	10-4-47	1966
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	7-22-48	8-14-47	1897
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	8-6-47	9-9-47	2078
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	8-14-48	6-12-48	1251
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	8-31-48	1-2-48	1784
16. LOVEWELL, N. N., Television; Telephony	9-1-48	2-4-48	1532
17. LEIGHEY, R. A., (acting), Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	11-26-47	1-4-47	2297
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices, Rotary Internal Combustion Engines.	4-19-48	9-29-47	2429
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	8-28-48	1-2-48	1648
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	4-1-48	6-26-47	1978
21. MADER, R. C., Textiles	4-10-48	2-26-48	1326
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	2-26-48	9-5-47	1470
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	4-23-48	7-15-47	1120
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	5-6-48	5-3-48	2340
25. BLAKELY, O. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	8-20-48	12-9-47	1631
26. YOUNG, R. R., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	8-21-48	1-30-48	1068
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Brush, Broom and Mop Making.	12-18-47	9-25-47	3285
28. BRAUNER, R. H., Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horse-power Motors; Dumping Vehicles, Wheel Substitutes; Vehicle Fenders; Hand and Hoist Line Implements; Chutes, Skids, Guides, Ways; Fluid Current Conveyors; Pneumatic Dispatch; Store Service.	10-27-47	7-14-47	1777
29. HABECKER, LEON B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	9-18-47	9-4-47	3203
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Heat Exchange (part); Illuminating Burners.	11-1-48	11-2-48	627
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)— e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	9-28-48	9-27-48	1930
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating	12-13-47	9-15-47	1849
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	9-9-47	8-26-47	3720
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	5-17-48	2-12-48	1261
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	2-25-48	3-5-47	3588
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	8-4-47	6-5-47	1902
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	5-26-48	2-2-48	1323
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	6-10-48	4-17-48	1671
39. WHITNEY, F. L., Fluid-Pressure Regulators; Valves; Water Distribution	7-29-48	5-2-47	3045
40. DRUMMOND, E. J., Receptacles (part); Packages	8-2-48	9-11-47	3210
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	6-7-48	3-19-47	2800
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	10-16-48	10-9-48	943
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	9-9-48	6-28-48	1133
44. HARVEY, L. P., Refrigeration	2-9-48	6-30-47	948
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	5-26-48	9-15-47	2477
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	3-16-48	5-9-47	1926

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 147,132. Date of oldest new application, June 25, 1947; date of oldest amended application, November 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	8-25-48	3-10-48	1978

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

CARLTON *v.* ROBIE ET AL.

No. 5491. Decided February 1, 1949

[173 F.2d 362; 81 USPQ 202]

1. INTERFERENCE—PRIORITY—BURDEN OF PROOF.

Appellant being the junior party had the burden of establishing priority of invention by a preponderance of the evidence.

2. SAME—REDUCTION TO PRACTICE—PRIOR APPLICATION.

Held that appellees are entitled to the benefit of the earlier applications, which they filed together with two others as a four-party application, and that they can rely on the dates thereof to establish constructive reduction to practice.

3. SAME—RECORD ON APPEAL—TESTIMONY TAKEN IN ANOTHER INTERFERENCE.

Where during the taking of testimony counsel for appellant offered in evidence a copy of the printed record of his testimony in Interference No. 80,225, *Held* that such testimony cannot properly be considered as part of the record herein.

4. APPEAL TO COURT — REASONS OF APPEAL — ABANDONMENT.

While in his reasons of appeal counsel for appellant may be considered to have included error in the decision of the Board, on the evidence, we find nothing in his brief in which that alleged error has been discussed; *Held* that we assume that reason of appeal has been abandoned.

5. INTERFERENCE—PRIORITY—FLEXIBLE HEAT-RESISTANT ABRASIVE ARTICLE.

Held that the decision of the Board of Interference Examiners awarding priority of invention of the subject matter of three counts relating to a flexible heat-resistant abrasive article, to appellees, is affirmed.

APPEAL from the Patent Office. Interference No. 81,422.

AFFIRMED.

Harold J. Kinney (*Carpenter, Abbott, Coulter & Kinney* and *Richard K. Stevens* of counsel) for Carlton.

William H. Webb, Donald A. Gardiner, Stebbins, Blenko & Webb, and *Webb, Mackey & Burden* for Robie et al.

JACKSON, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Interference Examiners awarding priority of invention of the subject matter of three counts to appellees.

The interference is a companion to a three party interference, No. 80,225, the issues of which have been decided by us concurrently herewith in appeal Nos. 5485 and 5486.

The counts read as follows:

1. A flexible heat-resistant abrasive article of the coated abrasive type comprising a flexible backing, a layer of abrasive grits, and a bond for uniting said grits to said backing, said bond comprising a primary bonding or grit binder coating comprising glue, and a secondary or sandsize coat comprising a silicate cement, the silicate cement coating being shielded from air by a protective coating of a waterproofing agent.

2. A heat-resistant abrasive article of the coated abrasive type comprising a backing, a layer of abrasive grits, and a bond for uniting said grits to said backing, said bond comprising a primary bonding or grit binder coating including a hydrophilic organic gelatinous adhesive material and a secondary or sandsize coating comprising a silicate cement, said sandsize coat being rendered resistant to air by inclusion therein of a waterproofing agent.

3. A heat-resistant abrasive article of the coated abrasive type comprising a backing, a layer of abrasive grits, and a bond for uniting said grits to said backing, said bond comprising a primary bonding or grit binder coating including a hydrophilic organic gelatinous adhesive material and a secondary or sandsize coating comprising a silicate cement, said sandsize coat being treated with an agent to shield the same from air.

The involved invention is for a flexible heat-resistant coated abrasive article including a flexible backing to the surface of which abrasive grits are secured by a layer of adhesive. The adhesive consists of two coats: the first of which comprises glue and may be called a primary holding coating between the backing of the article and the grits, and a second or sandsize coating is applied over the layer of grits and comprises a silicate cement which is shielded from the air by a protective coating of a waterproofing agent.

The interference involves an application of appellant, Serial No. 433,027, filed March 2, 1942, as a continuation-in-part of his application, Serial No. 261,069, filed March 10, 1939, and an application of appellees, Serial No. 457,174, filed September 8, 1942. Appellees together with two other applicants filed earlier applications and relied on the dates thereof to establish constructive reduction to practice. The first of those applications is Serial No. 137,796, filed April 19, 1937, and the second is Serial No. 336,212, filed May 30, 1940, while the former application was still pending. The application of May 30, 1940, was pending when appellees' involved application was filed September 3, 1942.

The same applications of the parties are involved in said appeal Nos. 5485 and 5486.

The present interference, as originally declared, consisted of counts 1 and 2. During the interlocutory period, appellant moved to dissolve the interference, which motion was dismissed. He also moved to shift the burden of proof. Appellees filed a motion to amend the interference by adding other counts. The Primary Examiner denied the motion

Vol. 623 • No. 2 Tuesday, June 14, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

to shift the burden of proof and granted the motion to amend with respect to one proposed count, which is count 3 of this interference.

The counts before us define an abrasive article similar to that which is the subject matter of the said two companion appeals, but in addition provide for making a silicate cement coating resistant to air by treatment with a waterproofing agent. That agent may be incorporated in the silicate coating or applied over that coating as a protective film.

When the interference was first declared, appellees were given the benefit of the application, No. 396,212, filed May 20, 1940. In appellant's motion to shift he contended that he was entitled to the benefit of his application, Serial No. 261,069, filed March 10, 1939. In that motion, anticipating that appellees would claim the date of April 19, 1937, of the application, Serial No. 137,796, appellant contended they were not entitled to that date. The Primary Examiner held appellees were entitled to the date of the earliest application, No. 136,796, and confirmed such holding in a second decision. While the Examiner at first held that he found no support for count 1 in the earlier application of appellant, on reconsideration he held that it read upon that application as well as did the other counts. After the said motions had been disposed of, the interference was redeclared, adding count 3 as aforesaid.

Each party filed two preliminary statements. In his first statement, appellant alleged with respect to counts 1 and 2 that a first written description of the subject matter of count 1 had been made as early as about November 25, 1936, and of count 2 as early as November 20, 1936; first disclosure of the invention to others as early as the fall of 1936, but prior to November 26 of that year; reduction to practice of the invention defined by count 1 as early as November 27, 1936, and by count 2 as early as November 20, 1936, and that appellant exercised reasonable diligence in adapting and perfecting his invention at least as early as the fall of 1936 and prior to November 26 of that year. In his second preliminary statement, appellant alleged first written description of the subject matter defined in count 3, disclosure of it to others, reduction of the invention to practice, and the exercise of reasonable diligence at least as early as the fall of 1936 and prior to November 20 of that year. Appellees in their preliminary statements allege a first written description of the invention, disclosure of it to others, and the making of the first drawings as of on or about November 6, 1936. Reduction to practice of all the counts is alleged as of the date of April 19, 1937, their filing date. In addition they allege the exercise of reasonable diligence in adapting and perfecting the subject matter of all of the counts as of November 1936.

[1] Appellant took testimony. Appellees not having taken testimony were confined to the date of April 19, 1937, for constructive reduction to practice. Appellant being the junior party had the burden of establishing priority of invention by a preponderance of the evidence.

The Board of Interference Examiners held that the evidence offered on behalf of appellant was not sufficient to overcome the 1937 filing date of appellees in that he failed to establish an actual reduction to practice prior to his filing date or diligence "during the period it was incumbent upon him to do so."

[2] Appellant challenges the award of priority to appellees in this appeal and also in appeal Nos. 5485 and 5486 on the same grounds. All through those proceedings he has contended that the subject matter of those interferences were not disclosed in the application filed April 19, 1937, and also that appellees are not entitled to the benefit of that filing date even though that earliest application contains a full disclosure of the subject matter of the counts.

It is argued in the brief for appellant that that application does not disclose the subject matter of the counts involved in appeal Nos. 5485 and 5486, and therefore can not support the similar but more specific counts here involved.

In this interference as well as that involved in appeal Nos. 5485 and 5486, it was held by the Board that the earliest application relied upon by appellees supports the counts of both interferences. Since in our decision in appeal Nos. 5485 and 5486 we have held that the earliest application relied upon by appellees discloses the subject matter involved in the counts of those appeals, it is only necessary to discuss the said disclosure with reference to the specific differences between the counts there and the counts herein.

In the application of April 19, 1937, it is stated that flexible abrasive articles such as discs can be strengthened or reinforced "by applying to them a coating of a soluble silicate." It is pointed out in that application that such coating may be applied to articles "bonded with glue, varnish, resin or the like, or to the improved silicate bonded articles of our invention. The reinforcing coating may be applied by any suitable means and may extend over the whole area of the articles if desired, * * *." It is further disclosed in that application that "These silicate solutions may be used in applying both the making coat and the sizing coat or either of these * * *." It is our opinion that such quotations disclose the use of a silicate cement in the sizing coat over the abrasive article which has a primary bonding coat comprising glue. While the disclosure of the April 19, 1937, application applies clearly to sandpaper, as does the application of appellant, it is clear that the disclosure embraces other abrasive articles. The counts in the present interference are not limited to sandpaper, but may apply to many other forms of abrasive articles. The limitation of the counts defining waterproofing of the adhesive is likewise found in the 1937 disclosure wherein it is stated as follows:

> It is frequently desired to provide an abrasive article which, in addition to resistance to the influence of atmospheric humidity, will also have a resistance to water. We have discovered that a high degree of water resistance can be imparted to our improved silicate bonded flexible abrasive articles by coating the article with a thin film of a protective substance which is preferably waterproof.

That quotation clearly discloses a protective coating of a waterproofing agent over the sandsize coating which comprises silicate cement. The application further specifically discloses a number of different materials usable as waterproofing agents in the coating.

By reason of what has hereinbefore been set out, we agree with the decision of the Board that the disclosure of April 19, 1937, fully supports all of the limitations of the counts herein.

We are further of opinion that appellees are entitled to the benefit of April 19, 1937, for the same reasons that are given on that issue in said appeal Nos. 5485 and 5486.

[3] During the taking of testimony, counsel for appellant offered in evidence a copy of the printed record of his testimony in said interference No. 80,225. Under the authority of the case of *Noxon* v. *Potts*, 25 CCPA (Patents) 859, 94 F.2d 888, 36 USPQ 329, the Board correctly held that such testimony taken in that interference can not properly be considered as part of the record herein. The Board quoted the language from the case of *Olson v. Poapeshil*, 50 App. D. C. 183, 269 F. 698, which we approved in the Noxon case as follows:

> Rule 157 provides the only manner in which a record in another case may be used, namely, by filing a motion in the proper tribunal, with proof of service, as required by Rule 153. It then provides that, when the motion has been allowed and a former record, or portions thereof, are introduced, the contesting party may call witnesses to rebut it.

[4] Counsel for appellant in their brief state that appellant will not attempt to carry the date of his invention back of his filing date of March 10, 1939, except that should the decision of the Board be affirmed by this court, and only in that event appellant will contend that he has proved the exercise of diligence "beginning just prior to April 19, 1937, and ending March 10, 1939." While in his reasons of appeal, counsel for appellant may be considered to have included error in the decision of the Board on the evidence, we find nothing in his brief in which that alleged error has been discussed, and therefore we assume that reason of appeal has been abandoned. *In re Krasnow et al.*, 35 CCPA (Patents) 939, 166 F.2d 196, 76 USPQ 567; *In re McCabe*, 24 CCPA (Patents) 1224, 90 F.2d 111, 33 USPQ 539.

[5] For the reasons hereinbefore set out, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE ROBINSON

No. 5583. Decided March 1, 1949

[173 F.2d 356; 81 USPQ 205]

1. PATENTABILITY—ANTICIPATION—FOREIGN PUBLICATION. Where claims are rejected on a foreign publication using terms with a plurality of recognized meanings, *Held* that such terms must be translated in view of the context in which they are used.

2. SAME—PARTICULAR SUBJECT MATTER—PROJECTILE. Certain claims for a projectile *Held* properly rejected for lack of invention over the combination of references cited.

APPEAL from the Patent Office. Serial No. 418,497.

AFFIRMED.

Irving F. Goodfriend for Robinson.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, J.:

After having been allowed 17 claims, appellant appealed from a decision of the Board of Appeals of the United States Patent Office affirming final rejection by the Primary Examiner of claims 84, 87 and 88 of an application for a patent defining new and useful improvements in "Projectile Methods and Means" for lack of invention over the following prior art: Wilkins, 1,307,607, June 24, 1919, LeBrun (French), 797,983, February 24, 1936.

The rejected claims read as follows:

> 84. In a device of the type described, an elongated body adapted to be directed along a course, normally inoperative discharge means in said body having an outlet arranged to exert a force component to impel said body forwardly upon discharge, normally inoperative energy responsive means and re-directing means on said body for re-directing the body at an angle to said course, and means controlled by said energy responsive means for operating said re-directing means and said discharge means.
>
> 87. In an elongated projectile having a body, adapted to be directed along a course, operative discharge means in said body having an outlet arranged to exert a force component to impel said body forwardly upon discharge, energy responsive means and re-directing means on said body for redirecting the body at an angle to said course, and means co-operating with said energy responsive means for operating said re-directing means during forward movement of said body, whereby the exerted impelling force would continue to operate on its new course.
>
> 88. In an elongated projectile having a body, adapted to be directed along a course, operative discharge means in said body having an outlet arranged to exert a force component to impel said body forwardly upon discharge, pick-up means responsive to radiation on said body, re-directing means responsive to the pick-up means on said body for re-directing the body at an angle to said course, and means cooperating with said pick-up means for operating said re-directing means during forward movement of said body whereby the exerted impelling force would continue to operate on its new course.

The invention relates to projectiles, particularly to anti-aircraft shells comprising means for self-direction in its flight to the target. In the nose of the projectile a number of radiant energy responsive means are mounted, each of which is responsive to rays or beams received from a particular direction. When one of those responsive means is affected by the target, a means for directing the shell or projectile toward the target is accomplished. The projectile comprises an explosive jet which impels it toward the target, or the directing means may be a vane projecting from the shell and influenced by the air to divert the shell from a straight flight to a desired direction. At about the time when the direction of the shell is changed, a jet is discharged from its rear which accelerates the movement in the changed direction.

The Wilkins' patent relates to projectiles and particularly to an explosive projectile or shell. It discloses a shell having a secondary propelling charge therein which is fired by means of fuse ignition a short time subsequent to the time that the projectile is fired from a gun. The purpose of the secondary charge is to give the shell an additional forward

impulse. There is nothing in the patent disclosing any means for directing the shell after it has left the gun.

The French patent to LeBrun relates to the change of direction of a projectile toward a specific target after it has left the barrel of the gun from which it is discharged. There is disclosed a projectile which has in the nose thereof a light-sensitive means which when the target is sighted extends one of several vanes from the side of the projectile in such manner that the passing air stream impels the projectile to turn toward the target.

The Primary Examiner rejected the involved claims as unpatentable over the LeBrun patent in view of the patent to Wilkins, holding that no invention is involved in providing the anti-aircraft shell of the LeBrun patent with a delayed-action rocket type propelling means, as shown in the Wilkins patent. Subsequent to the decision of the Examiner finally rejecting the involved claims, appellant requested, pursuant to Patent Office rule 138, that the application be remanded to the Primary Examiner for the purpose of considering three affidavits which had been filed on behalf of appellant. The application was remanded to the Primary Examiner for reconsideration, pursuant to Patent Office rule 76. The Examiner in his second statement considered the affidavits in detail, but adhered to his former decision.

[1] It appears that there was a clear difference of opinion between the appellant and the Examiner with respect to the meaning of certain language in French appearing in the LeBrun patent reading:

Ce projectile (fusée d'artifice, obus, torpille, etc.) comporte une enveloppe exterieure 1 qui contient une charge explosive 2.

which according to the Examiner's translation reads in English:

This projectile (rocket, shell, torpedo, etc.) comprises an exterior casing 1 which contains an explosive charge 2.

The difference of opinion arises from the translation of the expression "fusée d'artifice."

Two of the affidavits were made by qualified translators from the French to the English language. According to those translations, the expression "fusée d'artifice" is interpreted to mean a "pyrotechnic fuse," a "time fuse," a "delayed action fuse" or a "powder fuse."

An examination of several standard French-English and English-French dictionaries discloses that the word "fusée" has different recognized English meanings among which are the English words "fuse" and "rocket." The same situation applies to the French word "artifice" which among other meanings is defined as "pyrotechnic." It is clear that the disputed expression may be literally translated as either "pyrotechnic fuse" or "pyrotechnic rocket." Where we have foreign terms with a plurality of recognized meanings, we think it is elementary, as was stated by the Examiner, that such terms must be translated in view of the context in which they are used. Therefore, we must consider the text of the LeBrun patent.

That patent relates particularly to a steered anti-aircraft projectile comprising radiant energy responsive means for the purpose of steering the projectile toward an enemy aircraft. There is no disclosure in the patent of a fuse as means for firing the explosive contained therein, and the invention relates solely to the steering of the shell and not to the firing of the explosive carried therein. The words "fusée d'artifice obus, torpille, etc." all preceded by the expression "Ce projectile" quite obviously mean that the "projectile" is generic to those of several types of projectiles and the inclusion of rocket, shell, torpedo merely specify examples of projectiles. In our opinion it can not in reason be considered that a "fuse" is such an example, but clearly a "rocket" is well known to be a recognized form of military projectile. As was said in the Examiner's second statement, "It is obvious from the LeBrun disclosure that he is not interested in amusing enemy aviators or the anti-aircraft gunner with a pyrotechnic display, but is interested in directing an explosive charge to the enemy aircraft."

The Board in affirming the rejection by the Examiner stated that it was immaterial as to what the disputed meaning of the French words may be for the reason that the claims, as worded, are met by the combination of the references even though the French patent does not disclose a rocket.

[2] We find no error in the decision of the tribunals below.

There can be no question but that the French patent discloses means in a shell for turning the projectile. It is also clear that in the patent to Wilkins there is disclosed a shell which contains a rearwardly directed rocket means. The rocket means does not function until after the time the shell has been fired from the gun, and the purpose of the rocket shown in the patent to Wilkins is to add an additional impulse to the impulse given by the firing of the gun.

It is our opinion, therefore, that even though the projectile of the LeBrun patent is not called a rocket, there can certainly be no invention in applying his directing means to a rocket such as is disclosed in the Wilkins patent.

We have examined with care all of the interesting arguments contained in the brief of counsel for appellant, but do not deem it necessary to discuss the issue in further detail.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

NOTICES

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,349,281, G. H. Kendall, Pulley bearing, decided Apr. 12, 1949, claims 1 and 2.

Pat. 2,439,906, W. W. Rigrod, Tuning means for electron discharge devices, decided May 17, 1949, claims 1, 2, and 3.

Classification Bulletin No. 166

Classification Bulletin Number 166 containing the definitions of Class 250, Radiant Energy, is now available. Copies of this publication may be procured from the Commissioner of Patents at 30 cents per copy.

Cross-References in Cases Relating to Same Subject

When an applicant files an application claiming an invention disclosed in a prior filed application of the same applicant, the second application must contain a reference to the prior application, identifying it by serial number and filing date and indicating the relationship of the applications. When an applicant files, or a common assignee owns, two or more applications relating to the same subject matter of invention, with one or more of the applications disclosing unclaimed matter that is disclosed and claimed in another of the applications, the applications not claiming it must refer to and identify the application claiming it. Cross-references to other related applications may be made when appropriate.

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)
Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)
Original application. (Facsimile petition, specification, oath, and drawings at present time.)
Specification as originally filed. (As received in Office.)
Specification as amended. (With amendments entered.)
Specification as allowed. (As passed by the Examiner for issue.)
Original specification. (Facsimile at present time.)
File-wrapper. (File-wrapper only.)
File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)
File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)
Assignment. (Give the liber and page of the record as well as the name of the inventor.)
Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)
Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Group" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,445,082. FOLDABLE SHELF. Patented July 13, 1948. Shelf panel is hinged to a T-shaped bar (attached to wall or door) so that shelf may be swung to horizontal position. The shelf is supported in horizontal position by a U-shaped frame or bracket pivotally mounted on the vertical portion of the T-shaped bar. In use, the frame is also utilized to support a number of clothes hangers. When shelf is unsupported, it is inconspicuously folded downwardly flat against wall, hiding empty coat hangers and carrying a mirror or advertising matter on its upper surface. (Owners) John L. Posun, Le Roy Houghton, Howard C. Faust. Correspondence to John L. Posun, 303 Fairfield Ave., Johnstown, Pa. Groups 25—41; 33—49; 40. Reg. No. 19,614.

Pat. 2,458,889. COLLET CHUCK. Patented Jan. 11, 1949. A collet chuck for attachment to the nose of a lathe spindle to support the work. The advantages of the chuck are two-fold: The full size of the bore in the spindle of the machine can be used to accommodate the greatest number of sizes of work stock; improved structure for opening and closing the chuck is an additional attribute flowing from the structural components of the device. (Owner) Donald W. Bloomquist, 104 North Oak St., Bloomington, Ill. Group 35—43. Reg. No. 19,615.

Pat. 2,442,998. CLOTHESBASKET. Patented June 8, 1948. Basket has a rigid metallic frame consisting of a top hoop and a bottom hoop connected by spaced, vertically inclined side stays. Opposite ends of each stay terminate in hooks, with one hook welded to bottom hoop and the other in interlocking engagement in a channel of top hoop. The stays and hoops may be wrapped or otherwise covered with reed, cloth, etc., and bottom and sides of frame may be closed by weaving panels of suitable material thereto. (Owner) Joseph Egel, 824 Homer St., Toledo 8, Ohio. Groups 25—51—52; 33—49. Reg. No. 19,616.

Pat. 2,452,726. MULTIROTOR HELICOPTER WITH TILTABLE ROTORS. Patented Nov. 2, 1948. Dual rotor helicopter having a pair of rotors mounted for universal movement is of substantially the compactness of a conventional craft having a single rotor. A single tiltable and rotatable control "stick" is provided for angularly adjusting the rotors simultaneously in opposite directions relative to each other to steer craft. The rotors are angularly mounted directly above the upper corners of fuselage on the protruding ends of a pair of downwardly extending converging rotor shafts inside fuselage. The shafts extend through and are supported for universal movement in bearings in upper corners of fuselage. The lower ends of the shafts disposed beneath floor boards of fuselage are connected for universal movement to the opposite ends of a horizontal bar rigidly secured to lower end of control "stick." A transverse shaft disposed directly below top of fuselage for driving the rotors in opposite directions has bevel gears on opposite ends meshing with bevel gears on the rotor shafts. (Co-owner) Milton H. Lees, Jr., 9 Sutter St., San Francisco 4, Calif. Group 37—21—22. Reg. No. 19,617.

Pat. 2,460,522. MANICURE SET. Patented Feb. 1, 1949. A compact unit containing articles necessary for a complete pedicure consists of a handle body and a removable cap which encloses, when not in use, a nail clipper and a callus scraper. A pair of files having the same transverse curvature as the handle body are secured to the sides. The scraper (resembling a safety razor head) has a stem portion which may be screwed into an axial threaded socket or bore at opposite end of handle body. When not in use, the cutting edges of scraper are protected by an arcuate resilient cover. (Owner) Anthony J. Miller, Freeman, S. Dak. Groups 33—51—53; 34—54; 39—81—91. Reg. No. 19,618.

Des. Pat. 151,274. DESIGN FOR A HOSE REEL. Patented Oct. 5, 1948. (Owner) Henry E. Kirschner, 5606 King Hill Ave., St. Joseph 48, Mo. Groups 25—99; 35—99. Reg. No. 19,619.

Pat. 2,454,592. CABLE EYE AND METHOD OF SPLICING THE SAME. Patented Nov. 23, 1948. A method of forming an eye at the end of a rable, with the ends firmly spliced to the cable body. The end of the cable is divided into two parts, each bundle of strands preserving its original convolution. The two parts are crossed forming an eye, and the ends intertwined toward the crotch formed by the separation. Detailed directions are given for manipulating the free ends of the separate strands of each bundle to form with the body of the cable a spliced joint that is symmetrical in appearance and strong enough to withstand heavy pull and stress. (Owner) Joseph Budzinski, 1510 Thirty-fifth St., Kenosha, Wis. Groups 22—98; 33—41—49; 36—31; 37—32. Reg. No. 19,620.

Pat. 2,437,718. EXPANDING MANDREL. Patented Mar. 16, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Cylindrical mandrel consisting of a series of expansible cylindrical sections may be used in the fabrication of suitably shaped heat insulating covers for valves, fittings, pipe flanges, etc., by merely adjusting various sections to the shape desired. The expansible feature of each section consists of radial segmental shoes of inverted U-shape movably mounted on a pair of disks. Each section carries a rack bar and a latch to hold the shoes in any position of adjustment. All disks of all sections are mounted on a common shaft. Any section may be adjusted independently of all other sections by simply grasping a selected section in one hand to hold it against rotation (after releasing latch) while the shaft is turned with other hand to cause the shoes to move radially, either inwardly or outwardly depending upon the direction of rotation of the shaft. (Co-owner) Mercer L. Whitson, General Delivery, Los Alamos, N. Mex. Group 35—43. Reg. No. 19,621.

Pat. 2,460,326. EXPANSIBLE MANDREL. Patented Feb. 1, 1949. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 767.) Cylindrical mandrel, for use in fabricating heat insulating pipe covers, may be expanded and then collapsed to permit removal of

fabricated cover. Mandrel consists of radial segmental staves (T-shaped in cross section) engaging a pair of oppositely disposed cones slidably mounted on the ends of a shaft. A longitudinally slotted spool mounted on the shaft between the cones engages and prevents longitudinal movement of the staves. Mandrel may be adjusted by holding the staves against rotation while the shaft is rotated in the desired direction to slide the cones toward or away from each other to move the staves radially, either inwardly or outwardly. (Co-owner) Mercer L. Whitson, General Delivery, Los Alamos, N. Mex. Group 35—43. Reg. No. 19,622.

Pat. 2,456,419. FOLDING BOX. Patented Dec. 14, 1948. Knock-down box consists of a number of sections connected by strap hinges. All sections, with the exception of the end pieces, are of approximately the same size, being made of wire mesh welded onto a wire frame or any other suitable material. The box may be made in any dimension that will serve a number of different purposes such as a live-bait box, chicken coop, etc. No clamps, hooks, or clasps are required to hold the box in folded position. (Owners) Alphonsus L. Jackson and Herbert A. Brown, St. Clair, Mo. Group 33—49. Reg. No. 19,623.

Pat. 2,460,015. MOTION TRANSMITTING MECHANISM. Patented Jan. 25, 1949. A magnetic clutch includes a closed cylindrical main casing, one end of which is formed with an axial cylindrical indentation constituting a secondary casing isolated from the interior of the main casing. An outer non-magnetic cup-shaped rotor is supported from the opposite end to rotate within the main casing and has a rim portion surrounding the secondary casing. A second disk-shaped rotor has spaced recesses in alignment with recesses in the outer rotor. The recesses of the two rotors receive horseshoe permanent magnets. The polarity of the opposed magnets on the two rotors is reversed. Upon turning either rotor the force of the mutual attraction of the opposed poles of their magnets will cause the other rotor to turn in the same direction and synchronize therewith. (Owner) Neven J. Jones, Box 327, Natrona Heights, Pa. Group 36—31. Reg. No. 19,624.

Pat. 2,448,592. PLUG CONNECTOR. Patented Sept. 7, 1948. Plug of the type to be screwed into a socket consists of a plug body and a cap member separably clamped together by a bayonet joint inside plug. Cap member has an axial guide rod extension and a pair of contact prongs to fit into and engage a pair of conductors inside plug body. When cap is turned to clamp it to plug body, contact shoes on the prongs are rotatably brought into frictional contact with arcuate contact heads on the conductors. The shoes also strike stop flanges on the heads to limit turning movement of the cap so that good electrical connection between the prongs and conductors is assured. (Owners) Carl F. Hart, Carl J. Fredrickson, and Paul J. Mueller. Correspondence to Carl F. Hart, 511 N. W. 62nd Ave., Miami, Fla. Group 36—11. Reg. No. 19,625.

Pat. 2,256,965. REMOTE CONTROL FOR CAMERA SHUTTERS. Patented Sept. 23, 1941. A remote control for operating the shutter release cable of a camera so the operator may take a picture of himself. A frame has two parallel end members which support a plunger with an operating knob at one end and a rubber cup at other end to receive the shutter release cable. A block of Bakelite or the like attached to end of frame has a U-shaped bracket pivoted thereto. The arms of bracket are attached to springs at sides of plunger. An armature pivoted to the block lies in a notch in plunger. An electro-magnet below the free end of the armature is attached to a storage battery. When energized, the magnet attracts the armature against resistance of a leaf spring and withdraws the armature from the plunger. The plunger will press on cable and operate the camera shutter. (Owner) DeLaney E. Sexton, 426 Gilpin St., Dallas 11, Tex. Group 39—12. Reg. No. 19,626.

Pat. 2,392,968. ELECTAIC BRAKE. Patented Jan. 1, 1946. A brake for lathes includes a rotatable body driven by an electric motor and controlled by a brake band. One end of the band is attached to a linkage connected to two independently actuated solenoids. One solenoid applies a continuous force to the rotating body. The other solenoid is energized intermittently to actuate the brake at a predetermined place determined by the position of an adjustable reflecting surface thereon. A lens focused on the reflecting surface projects a light ray from a lamp to the reflecting surface where it is reflected through another lens onto a photoelectric cell. (Owner) DeLaney E. Sexton, 426 Gilpin St., Dallas 11, Tex. Group 35—43. Reg. No. 19,627.

Pat. 2,430,441. LUBRICATING FITTING CAP. Patented Nov. 11, 1947. Cylindrical cap for protecting the nipple of fittings to which a grease gun is to be applied consists of an inner cork portion fitted with a rubber cap. A centered spherical recess is provided in the cork portion, as well as a flared bottom opening, so that it fits the nipple and cone-shaped shoulder of a conventional type of lubricant fitting. The cork portion is tightly fitted with a rubber cap which includes a beveled edge which forms a continuation of the flared opening in the cork portion so that the shoulder of the fitting is fully covered. (Owner) Seth Abramson, 11014 108th Ave. S. E., Renton, Wash. Groups 35—61; 36—31. Reg. No. 19,628.

Pat. 2,450,196. BRAKE SHOE ADJUSTING GAUGE. Patented Sept. 28, 1948. A gauge for adjusting brake shoes of automobiles and the like, which permits a visual inspection of the adjustment being made. An open-ended adjusting cylinder has a longitudinal slot throughout its length to provide a pair of spaced edges. A pair of anchor blocks adjacent the spaced edges are joined by an adjusting screw. Rotation of the screw will vary the spacing between the blocks and increase or decrease the diameter of the cylinder. Gauging surfaces are provided at one end of cylinder. One gauge is inserted in the brake drum and the adjusting screw turned until the gauge fits snugly into the drum. The other gauge surface is simultaneously adjusted, and the cylinder may be removed and this gauge surface placed over the assembled brake shoes. (Owner) John Meridith Houston, Woodson, Tex. Groups 35—43; 36—31. Reg. No. 19,629.

Pat. 2,451,702. PIPE CLAMP. Patented Oct. 19, 1948. Clamp for large pipes is used to hold the end of a short pipe to the side of another pipe in assembled relation so that the seam between the pipes may be welded. Clamp has a frame consisting of an elongated flat plate having upturned sides with an adjustable slide retained in one end and a transverse shaft rotatably mounted in opposite end. A flexible clamping strap wound on the shaft has a ring on its free end to detachably engage a lug on the outer end of the slide. In use, the clamp is placed with the bottom of the frame resting on the outer end of the short pipe with the strap embracing the bottom of other pipe. The shaft is then rotated to tension the strap, reverse rotation of shaft being prevented by a releasable pawl engaging a pair of ratchet wheels mounted on the shaft. Clamp will accommodate pipes of different diameter by adjusting the slide. (Owner) F. G. Weigand, 431 West 5th St., Mount Carmel, Ill. Group 35—60. Reg. No. 19,630.

Pat. 2,460,813. PLATENLESS TYPEWRITER. Patented Feb. 8, 1949. Portable typewriter is designed to operate primarily on plane and drawings of practically any size. The machine moves bodily over the material during typing operations, while the material remains stationary in horizontal position on any suitable supporting surface, such as a desk. It has the general appearance and operating structure of a conventional typewriter, except that the platen is omitted. Its operation requires only ordinary typing skill since all movements both longitudinally and laterally are accomplished by conventional typing operations. Rotatable balls carried by legs of machine support it on the work and move it thereover. The balls are frictionally rotated by disks, which have concave peripheral surfaces. (Owner) Charles W. Dohn, 70—41 67th Place, Glendale, Long Island 27, N. Y. Group 35—72—79. Reg. No. 19,631.

Pat. 2,460,133. ALARM DEVICE. Patented Jan. 25, 1949. Alarm individually rouses person desiring to be awakened by means of noiseless vibration. One arm of a U-shaped spring is subjected to the impulses of a coil magnet to produce vibration which is rendered silent by a sound dampening plug. The spring is enclosed within a casing which may be inserted under a coil mattress (to spread the vibration). The alarm is used in combination with an electric clock. (Owner) William E. La Pedus. Correspondence to Dawson, Ooms, Booth & Spangenberg, 209 South La Salle St., Chicago 4, Ill. Groups 34—61; 36—62. Reg. No. 19,632.

Pat. 2,245,271. SAFETY CUTOFF VALVE. Patented June 10, 1941. A safety cutoff valve for high pressure gas equipment to be inserted between the source of supply and the source of consumption. A casing for a valve chamber has a valve seat at one end and a valve abutment at opposite end. The valve is normally held open against the abutment by a biasing spring. The chamber wall has grooves between the abutment and valve seat. Grooves in the abutment-engaging portion of the valve communicate with the wall grooves so liquid can bypass around the open valve. Upon loss of pressure in the conduit the sudden rush of gas through the valve overcomes the force of the spring and the valve automatically closes. (Owner) Howard A. Guill, General Delivery, Brunswick, Ga. Group 35—42—60. Reg. No. 19,633.

Pat. 2,461,779. ROAD SANDER. Patented Feb. 15, 1949. Sander delivers air-dried sand to the road in front of rear wheels of an automotive vehicle to prevent slipping. Controlled by a switch on the dash. Sander housing attached to a vehicle chassis has a removable sand reservoir, and a motor-driven conveyor and fan. A flexible conduit connects the reservoir to a heating chamber around the air exhaust conduit and the fan draws the warm air into the reservoir. A Y-shaped coupling secured to a sand outlet has a pair of delivery conduits with nozzles to be clamped to the chassis in front of the rear wheels. (Owner) Elmer J. Schall, 1303 Pratt St., Elmira, N. Y. Group 38—11—31. Reg. No. 19,634.

Pat. 2,460,634. ALARM CLOCK. Patented Feb. 1, 1949. This alarm clock is designed to have light signals of sufficient volume and intensity to awaken a sleeping person. A light signal box (with a circular opening through which a lamp bulb extends) houses a lamp socket, toggle switch, and wires, and forms the base for the clock housing. The alarm circuit switch comprises two alarm signal contacts with a switch arm fulcrumed below having an insulated bridging piece. A pin on a push rod passes through a slot in switch arm. A head plate on push rod is within range of a dog which when rotated by the alarm spring presses against the head plate and operates the switch arm. The casing also carries a toggle switch controlling the circuit of the alarm signal contacts and a plug socket in the alarm circuit for connection of the signal lamp. An auxiliary alarm bell may be provided. (Owner) R. F. Heckmer, 247 West Scott St., Youngstown, Ohio. Group 34—61. Reg. No. 19,635.

Pat. 2,435,934. LIQUID COOLER. Patented Jan. 27, 1948. Cooling element consists of a double wall backed by insulation and enclosed within a casing, the element being bent to form a series of step-like transverse troughs. Distributor pipes embedded in the insulation receive refrigerant in liquid form forced from a receiving tank. The refrigerant passes through an expansion valve and is converted into a gas which is drawn between the hollow walls of the element. Gas reaching the upper limits of the element is reconverted to a liquid by a heat exchanger and flows back to the tank for re-circulation. Milk or other fluid cascading down the element is cooled as it spills from trough to trough. A spout is provided at lower end of casing. (Owner) Eugene F. Chisholm, 2005 N. E. Dekum, Portland, Oreg. Group 35—84. Reg. No. 19,636.

The following four patents are offered for license by Winfield B. Heins, Middlebrook Road, Bound Brook, N. J.

Pat. 2,343,181. AUTOMATIC TENSION CONTROL. Patented Feb. 29, 1944. A loop of traveling strand material, such as fabric, paper, etc., is engaged by a movable roller which constitutes a tension detector. The roller is resiliently journaled to a piston, the action of which is regulated by a vane interposed between the opposed vents of a pair of pressure supply lines. In accordance with the alteration of the position of the vane, a brake engageable with the unwinding reel is controlled. In its intermediate position, the vane equalizes pressure in the supply lines to the piston. As the vane is moved closer to either of the vents, by changes in the tension of the traveling strands, flow is decreased in one supply line and pressure is raised in the corresponding supply line. Thus constant tension is maintained regardless of the various strains to which the strand material is subjected. Groups 35—52; 36—13. Reg. No. 19,637.

Pat. 2,389,047. TENSION REGULATING MECHANISM. Patented Nov. 13, 1945. Winding mechanism is incorporated in machines such as dyeing jigs in which material is wound from one roll to another as it passes through a dye bath. Essentially, variations in tension are utilized to control a rheostat that governs the output of the motor. The shaft of the motor drive rotates in one direction until the effective diameters of the winding rolls are equal, at which time rotation ceases. At this time a switch becomes effective to disconnect the drive of the motor from the roll that was originally driven and transfers it to the roller having the smaller diameter. Groups 35—52; 36—13. Reg. No. 19,638.

Pat. 2,392,226. TENSION REGULATING MECHANISM FOR DIFFERENTIAL DRIVES. Patented Jan. 1, 1946. Apparatus for winding and unwinding strip material from a rotatable mandrel includes a driven roll and a differential gearing having the three usual power transmission elements. Driving connections are provided between one of the elements and the roll and between the second element and the mandrel as well as a continuously variable transmission. A pump is driven by the third element. A reversing motor is responsive to the pressure of the pump to vary the output speed of the transmission. The circuit for the motor includes a reversing switch operated by the pressure of the pump. Groups 35—52; 36—13. Reg. No. 19,639.

Pat. 2,422,531. APPARATUS FOR CUTTING BARS, TUBES, AND THE LIKE. Patented June 17, 1947. Work to be cut (pipes, bars, etc.) is clamped between jaws of an oscillating or rotating vise of a cylindrical holder so that new faces of the work are alternately brought into contact with the edge of a grinding wheel. Wheel is supported in a slide having a rear pulley and adjustable weight arrangement to provide floating feed for uniformly advancing the wheel into the work during cutting operation. Apparatus has several advantages: Less friction and heat are developed by relieving previously cut portions of the work from contact with the wheel; the floating force

exerted by the pulley and weight arrangement permits change of position of the work without damage to the cutting wheel, reducing time and power required to make a given cut. Groups 35—52; 36—13. Reg. No. 19,640.

Pat. 2,462,424. WINDOW LOCKING DEVICE. Patented Feb. 22, 1949. An inconspicuous detachable locking device for window sashes. A hollow casing has a rectangular base with a V-shaped groove which fits over a thin wedge-shaped member screwed to upper edge of lower sash frame. Within the casing is a comparatively short plunger which is brought into frictional contact with the lower stile of the upper sash by manipulation of a threaded thumb screw mounted in the casing, thus preventing movement of either sash. Casing is easily installed or removed when upper sash is lowered below upper edge of lower sash. (Owner) Bayard P. Sparks, P. O. Box 476, St. James, Long Island, N. Y. Groups 24—31; 28—59—83. Reg. No. 19,641.

Pat. 2,461,689. VALVE ASSEMBLY FOR HYDRAULIC STEERING SYSTEMS. Patented Oct. 19, 1948. Hydraulic system for easier steering and for preventing road shocks to the steering wheel. By rotating the wheel, fluid is forced from a pump into a case containing two valve chambers and a plunger. Fluid is forced through the valve chamber, closing or opening the valve, and enters the steering motor and forces the guide wheels attached thereto to turn in either direction. (Owner) Everett Nelson, 704 Holcombe Ave. South, Litchfield, Minn. Groups 35—61; 36—31. Reg. No. 19,642.

Pat. 2,455,313. HEAT EXCHANGING AIRPLANE PROPELLER. Patented Nov. 30, 1948. A heat exchanger embodied in an airplane propeller for reducing the temperature of oil which has been used for cooling the engine and at the same time warming the propellers to prevent formation of ice thereon. A main circulating conduit in the propeller hub has two sections arranged lengthwise in each blade and connected at top of blade through which the oil to be cooled is circulated. One section (insulated) is connected to an outlet of the engine and receives heated oil therefrom. The other section (not insulated) connects with an inlet of the engine through a main return conduit within the propeller hub and returns the cooled oil to the engine. (Owner) Irving Osofsky, 457 Glenwood Ave., Buffalo 8, N. Y. Group 37—22. Reg. No. 19,643.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 14, 1949

[VOL. 623. No. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 3, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 508,477. HARCO CHEMICAL COMPANY, East Cranford, N. J. Filed Sept. 4, 1946.

MASKIT

FOR SOAP COMPOUNDS FOR APPLICATION TO THE WALLS OF PAINT SPRAY BOOTHS AS A PROTECTIVE COATING TO PREVENT PAINT MATERIAL FROM ADHERING THERETO AND WHICH MAY BE READILY REMOVED BY A WATER SPRAY.

Claims use since Feb. 19, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 519,021. LUCKY CALF MFG. CO., Chambers, Nebr. Filed Mar. 14, 1947.

LUCKY CALF

Applicant disclaims the word "Calf" except in the association shown.

FOR REMEDY FOR CALF SCOURS.

Claims use since Nov. 6, 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 474,561. VITA-VAR CORPORATION, Newark, N. J. Filed Sept. 23, 1944.

VITA-CLOR

FOR WATERPROOFING COMPOUND FOR WOOD, BRICK, CONCRETE, AND LIKE BUILDING MATERIALS, THE SAID COMPOUND BEING APPLIED TO SURFACES BY A BRUSH, TROWEL, OR SPRAY AND ALSO BY MIXING IT IN CONCRETE BUILDING MATERIALS.

Claims use since Aug. 10, 1944.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 508,967. MORRIS F. BOOTH, Alden, Mich. Filed Sept. 13, 1946.

VIZ-U-CATOR

FOR TOYS MADE OF WOOD, PLASTIC, OR LIKE MATERIAL IN THE FORM OF ADDING BLOCKS FOR TEACHING CHILDREN RUDIMENTARY ARITHMETIC.

Claims use since July 1, 1946.

Ser. No. 514,199. WALTER D. HEDENKAMP, doing business as B. L. Fry Products Company, St. Louis, Mo. Filed Dec. 13, 1946.

BARN YARD

FOR GAME PLAYED WITH CARDS AND A SPINNING ARROW.

Claims use since July 7, 1937.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 521,422. ARENCO AKTIEBOLAG, Stockholm, Sweden. Filed Apr. 28, 1947.

ARENCO

FOR MATCH MAKING MACHINES; CIGAR AND CIGARETTE MACHINES; MACHINES FOR DISINTEGRATING, STEMMING, MOISTENING, DRYING AND CURING TOBACCO; MACHINES FOR ENVELOPING, PACKING, AND FILLING PULVEROUS, GRANULAR, LIQUID, OR PASTY MATERIAL; MACHINES FOR APPLYING SEALING STRIPS; LABELLING MACHINES; CAPPING MACHINES; MACHINES FOR PACKING CIGARS, CIGARETTES, SNUFF, SMOKING-TOBACCO, OR CHEWING-TOBACCO; ENVELOPE AND BAG MACHINES; MACHINE-TOOLS—NAMELY, LATHES, DRILLING, BORING, MILLING, PLANING, GRINDING, AND TAPPING MACHINES; BOTTLE FILLING AND BOTTLE CLEANING MACHINES; KNITTING MACHINES; MACHINES FOR TREATING AND REFINING PAPER, CARDBOARD AND SIMILAR MATERIALS; LITHOGRAPHIC MACHINES; BOX MACHINES; MACHINES FOR THE MANUFACTURE OF AMMUNITION;

ASSORTING MACHINES, INCLUDING FISH ASSORTING MACHINES; FISH COLLECTING MACHINES; FISH DRESSING MACHINES, INCLUDING MACHINES FOR EVISCERATING, KIPPERING, BEHEADING, OR OTHER CUTTING OF FISH; TOOLS—NAMELY, DRILLS, TURNING CHISELS, MILLING CUTTERS, BROACHES, REAMERS, SCREW TAPS, SCREW STOCKS, CHUCKS, AND TOLL HOLDERS.
Claims use since Sept. 1, 1920.

Ser. No. 521,442. EFCO MANUFACTURING, INC., Hamilton, R. I. Filed Apr. 28, 1947.

EFCO

FOR WRENCHES AND WRENCH PARTS.
Claims use since Jan. 2, 1947.

Ser. No. 523,991. JOHN WALDRON CORPORATION, Highland Park, N. J. Filed July 3, 1947.

SYNCROSET

FOR MACHINES FOR COATING PAPER WEBS WITH COATING COMPOUNDS OF STARCH, CLAY, AND THE LIKE TO PRODUCE BRIGHT, GLOSSY STOCK FOR PRINTING.
Claims use since Nov. 20, 1946.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 500,232. THE LINDE AIR PRODUCTS COMPANY, New York, N. Y. Filed Apr. 15, 1946.

Linde

FOR SYNTHETIC SAPPHIRE, SYNTHETIC RUBY, AND SYNTHETIC SPINEL.
Claims use since 1942 in respect to synthetic ruby and synthetic sapphire; and since April 1945 in respect to synthetic spinel.

Ser. No. 525,590. HAMILTON WATCH COMPANY, Lancaster, Pa. Filed July 2, 1947. Under section 5b of the act of 1905 as amended. One year extension of 10-year proviso.

Hamilton

FOR LEATHER AND FABRIC ARTICLES—I. E., WRIST WATCH STRAPS.
Claims use since November 1922.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 519,891. NATIONAL SLEEP PRODUCTS, INC., Brooklyn, N. Y. Filed Mar. 31, 1947.

SLEEPO-MAT

FOR MATTRESSES.
Claims use since May 1946.

CLASS 37

PAPER AND STATIONERY

Ser. No. 514,735. ALFRED ALLEN WATTS CO., INC., New York, N. Y. Filed Dec. 23, 1946.

WATTSPEED COPYSETS

No exclusive claim is made to the word "Copysets" apart from the mark as shown in the drawing.
FOR LETTER COPY SETS, PRE-COLLATED WITH ONE-TIME CARBON.
Claims use since December 1940.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 515,101. GERARD LAWRENCE STANNARD, New York, N. Y. Filed Dec. 31, 1946.

Save and Travel

The word "Travel" is disclaimed apart from the mark.
FOR MAGAZINES PUBLISHED FROM TIME TO TIME.
Claims use since Dec. 31, 1946.

CLASS 39

CLOTHING

Ser. No. 483,039. THE SCHOLL MFG. CO., INC., Chicago, Ill. Filed May 5, 1945.

Korrecto

FOR SHOES MADE OF LEATHER, RUBBER, AND FABRIC, AND/OR COMBINATIONS THEREOF.
Claims use since Dec. 9, 1924.

Ser. No. 505,912. GREGOIRE OVSIANICO, Paris, France. Filed July 19, 1946.

The term "Paris" is disclaimed.
FOR COATS, HATS, SUITS, UNDERWEAR, AND GLOVES FOR MEN, WOMEN, AND CHILDREN; SOCKS, CAPS, AND SHIRTS FOR MEN AND CHILDREN; CAPES AND SCARVES FOR WOMEN AND CHILDREN; DRESSES AND GOWNS FOR WOMEN; AND SCARVES FOR MEN.
Claims use since Apr. 1, 1946.

Ser. No. 514,097. BARACUTA (CLOTHIERS) LIMITED, Manchester, England. Filed Dec. 12, 1946.

Baracuta

FOR CLOTHING FOR MEN, WOMEN, AND CHILDREN—NAMELY, WATERPROOF AND RAINPROOF COATS, OVERCOATS, SPORTS JACKETS, FLANNEL TROUSERS, SUITS, GOLF JACKETS, GOLF TROUSERS.
Claims use since July 1, 1936.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 520,327. DEL-MAR QUALITY FOOD CO., Culver City, Calif. Filed Apr. 8, 1947.

FELBRO

FOR FRENCH DRESSING, MAPLE FLAVOR SYRUP FOR FOOD PURPOSES, BARBECUE SAUCE, FOOD FLAVORING EXTRACT, SUCH AS GRAVY FLAVOR, FOOD FLAVORING SYRUPS, SUCH AS IMITATION VANILLA FLAVOR AND IMITATION LEMON FLAVOR, MARASCHINO CHERRIES, IMITATION RASPBERRY JELLY, RASPBERRY GELATIN DESSERT PREPARATIONS.
Claims use since Feb. 11, 1947.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 548,703. ABEL & BACH, INC., Milwaukee, Wis. Filed Feb. 4, 1948. Under section 2f of the act of 1946. Applicant claims ownership of Registration No. 236,599.

The Stetson

FOR SUITCASES.
Claims use since Aug. 7, 1926.

Ser. No. 571,157. NASH, INC., Jersey City, N. J. Filed Dec. 27, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of Registration No. 410,996.
FOR WALLETS, KEY CASES, PURSES, PORTFOLIOS, CATALOGUE CASES, BILL FOLDS, SCHOOL BAGS, BRIEF CASES, HANDBAGS, AND POCKETBOOKS, OF LEATHER AND OF LEATHER AND FABRIC.
Claims use since Nov. 1, 1943.

Ser. No. 571,237. RONAY, INC., New York, N. Y. Filed Dec. 28, 1948. Under section 2f of the act of 1946.

Ronay

Applicant claims ownership of Registration No. 354,419.
FOR LADIES', WOMEN'S, AND MISSES' POCKETBOOKS, HANDBAGS, PURSES, WALLETS, BILLFOLDS.
Claims use since Sept. 1, 1936.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 508,237. PARFUMERIE & SAVONNERIE GILOT SOCIETE ANONYME, Paris, France. Original filed Aug. 29, 1946, under the act of 1905; amended under act of 1946, July 27, 1948. Under section 2f of the act of 1946.

GILOT

Applicant claims ownership of French Registration No. 345,726 dated June 11, 1943.
FOR SOAPS.

Ser. No. 529,858. ARMOUR AND COMPANY, Chicago, Ill. Filed July 29, 1947. Under section 2f of the act of 1946.

GARNET

The word "Garnet" is disclaimed apart from the mark as shown.
FOR COATED ABRASIVE PRODUCTS HAVING A FLEXIBLE BACKING WITH AN ABRASIVE SECURED TO THE BACKING BY AN ADHESIVE.
Claims use since 1932.

Ser. No. 530,183. THE FLEISCHER MILLS, INC., Cincinnati, Ohio. Filed Aug. 1, 1947.

KLIX

FOR NON-INFLAMMABLE DRY CLEANING FLUID.
Claims use since April 1932.

Ser. No. 531,603. INLAND RUBBER CORPORATION, Chicago, Ill. Filed Aug. 16, 1947.

INLAND

FOR CLEANERS AND SOLVENTS FOR CLEANING SURFACE OF RUBBER ARTICLES PREPARATORY TO MENDING OR PATCHING.
Claims use since May 1943.

Ser. No. 537,352. PITKIN, INC., Newark, N. Y. Filed Oct. 9, 1947. Under section 2f of the act of 1946.

Linda Lee

The mark is not the name of any particular individual.
FOR TOILET SOAP.
Claims use since November 1933.

Ser. No. 548,456. ARMOUR AND COMPANY, Chicago, Ill. Filed Jan. 31, 1948.

H.G. VEGETABLE

The word "Vegetable" is disclaimed.
FOR SOAP.
Claims use since Apr. 12, 1933.

Ser. No. 557,839. FISCHER INDUSTRIES, INC., Cincinnati, Ohio. Filed May 26, 1948.

FICON

FOR CONCENTRATED LATHERING SYNTHETIC DETERGENT IN LIQUID FORM TO BE USED FOR GENERAL CLEANING WHEN DISSOLVED IN WATER.
Claims use since Feb. 11, 1948.

Ser. No. 559,413. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Feb. 27, 1948. Under section 2f of the act of 1946.

JUNE GERANIUM

Applicant claims ownership of Registrations Nos. 236,338 and 230,829.
FOR BATH AND TOILET SOAPS.
Claims use since January 1917.

Ser. No. 565,561. H. KOHNSTAMM & CO., INC., New York, N. Y. Filed Sept. 21, 1948. Under section 2f of the act of 1946.

COLORSUDS

Applicant claims ownership of Registration No. 417,795.
FOR SOAP, USED FOR LAUNDRY PURPOSES.
Claims use since Aug. 31, 1933.

Ser. No. 565,607. BLUE SUDS COMPANY, Detroit, Mich. Filed Sept. 22, 1948. Under section 2f of the act of 1946.

BLUE SUDS

No claim is made to the word "Suds" apart from the mark as shown in the drawing. Applicant claims ownership of Registration No. 401,662.
FOR WASHING COMPOUND.
Claims use since Aug. 12, 1935.

Ser. No. 565,638. WALTER G. LEGGE COMPANY, INC., New York, N. Y. Filed Sept. 22, 1948.

SPIRCO

FOR CLEANSER FOR WOOD, CORK AND LINOLEUM.
Claims use since July 6, 1948.

Ser. No. 565,640. WALTER G. LEGGE COMPANY, INC., New York, N. Y. Filed Sept. 22, 1948.

TRAFCO

FOR CLEANSER FOR WOOD, CORK, AND LINOLEUM.
Claims use since June 4, 1948.

CLASS 5

ADHESIVES

Ser. No. 549,149. INDUSTRIAL TAPE CORPORATION, New Brunswick and North Brunswick Township, N. J. Filed Feb. 9, 1948.

BONDEX HOT IRON TAPE

The words "Hot Iron Tape" are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 435,827.
FOR HEAT-REACTIVE ADHESIVE SHEETS, TAPES, AND APPLIQUES.
Claims use since Apr. 1, 1946.

Ser. No. 556,591. MINNESOTA MINING & MANUFACTURING COMPANY, St. Paul, Minn. Filed May 8, 1948. Under section 2f of the act of 1946.

SCOTCH

Applicant claims ownership of Registration No. 417,265.
FOR PRESSURE-SENSITIVE ADHESIVE COATED ABRASION RESISTANT SHEET MATERIAL FOR MAKING STENCILS USED IN SANDBLASTING.
Claims use since February 1933.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 519,153. HARVEY J. FISCHER, doing business under the firm and style name of Le Maire, Oak Park, Ill. Original filed Mar. 17, 1947, under the act of 1905; amended to application under act of 1946, Dec. 4, 1947. Under section 2f of the act of 1946.

Neoplasma

FOR FACIAL MASKING CREAM FOR CONDITIONING THE FACIAL TISSUES.
Claims use since Apr. 5, 1924.

Ser. No. 523,402. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Original filed June 2, 1947, under the act of 1905; amended to application under act of 1946, July 5, 1947.

Si-O-Lite

FOR SILICA GEL HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.
Claims use since May 23, 1947.

Ser. No. 526,208. CARLO ERBA, SOCIETA' ANONIMA, Milan, Italy. Original filed July 4, 1947, under the act of 1905; amended to application under act of 1946, Jan. 30, 1948. Under section 2f of the act of 1946.

CARLO ERBA MILANO

The exclusive use of the word "Milano" is disclaimed. The words "Carlo Erba" comprise the name of the deceased founder of applicant's business. Applicant claims ownership of Registrations Nos. 64,729, 76,787, 76,788, 77,455 (renewed); Italian Registration No. 7,754, dated Jan. 7, 1907.

FOR PREPARATIONS FOR ANAEMIA, ASTHENIA AND TONICS, PREPARATIONS FOR ARTHRITIS AND URIC ACIDS, PREPARATIONS FOR SYPHILIS, PREPARATIONS FOR NEURALGIA, RHEUMATISM, PREPARATIONS FOR DYSENTERY AND INTESTINE ANTISEPTICS, PREPARATIONS FOR TUBERCULOSIS, PREPARATIONS FOR COUGH, ASTHMA AND BRONCHITIS; CARDIOTONICS AND ANALEPTICS; CHEMIOTHERAPICS AND SULPHONAMIDES; PREPARATIONS FOR DIGESTIVE TROUBLES AND CHOLAGOGUES; PREPARATIONS FOR THYROID TROUBLES; SEDATIVES, HYPNOTICS AND ANTHALGICS; HYPOTHENSIVES AND ANTISTENOCARDICS; ORGANIC AND INORGANIC IODINE PREPARATIONS, RHADIOLOGIC EXAMINATION MEANS; PREPARATIONS FOR UTERUS AND OVARY TROUBLES; HORMONIC PREPARATIONS, HORMONIC EXTRACTS AND SYNTHETIC HORMONES; CALCIUM PREPARATIONS; VITAMINIC PREPARATIONS; VITAMINIC EXTRACTS AND SYNTHETIC VITAMINS; PREPARATIONS FOR SCAB; PREPARATIONS FOR URETHRAL DISEASE AND URINARY TROUBLES; PURGATIVE EXTRACTS AND SYNTHETIC PURGATIVES; TAMARIND EXTRACTS.

Claims use since 1894.

Ser. No. 530,395. GALEEN PRODUCTS CO., INC., New York, N. Y. Filed Aug. 4, 1947.

HYPO

FOR MOTH PREVENTATIVE AND INSECTICIDE.
Claims use since January 1930.

Ser. No. 537,961. ASSOCIATED PRODUCTS, INC., Chicago, Ill., assignor to Chen Yu, Inc., New York, N. Y., a corporation of New York. Filed Oct. 16, 1947.

Lucky Strike RED

Applicant disclaims the word "Red" apart from the mark as shown. The drawing is lined for the color red.
FOR LIPSTICK AND NAIL LACQUER.
Claims use since July 7, 1947.

Ser. No. 544,197. REVLON PRODUCTS CORPORATION, New York, N. Y. Filed Dec. 12, 1947.

Revlon Lastron

Applicant claims ownership of Registration No. 326,840.
FOR NAIL ENAMEL, LIPSTICK, FACE POWDER, CHEEK STICK, AND CAKE ROUGE.
Claims use since Oct. 30, 1946.

Ser. No. 551,719. MORTON PRODUCTS INC., Akron, Ohio. Filed Mar. 11, 1948.

ENCA

FOR HAND LOTION AND MEDICINAL PREPARATION FOR TREATMENT OF EXTERNALLY CAUSED SKIN ERUPTIONS.
Clamis use sluce Sept. 9, 1947.

Ser. No. 555,644. A/S M. AARSLEFF & Co., Copenhagen, Denmark. Filed Apr. 27, 1948.

ESPRIT DU ROI.

Priority claimed under section 44(d). Applicant claims ownership of Danish Registration No. 387—1948, dated Mar. 13, 1948.
FOR COLOGNE, TOILET WATER, HAIR LOTIONS, HAIR OILS, LIQUID PREPARATION FOR USE IN STRAIGHTENING HAIR, AND AFTER-SHAVE LOTION.

Ser. No. 555,656. DEXTER CHEMICAL CORPORATION, New York, N. Y. Filed Apr. 27, 1948.

STRODEX

FOR CHEMICAL LIQUID OR SOLID FOR USE AS A DETERGENT, WETTING AGENT, OR DYE ASSISTANT IN TREATING TEXTILES.
Claims use since Nov. 15, 1946.

Ser. No. 557,207. CARMINE PAULANTONIO, doing business as The Paul Laboratories, New York, N. Y. Filed May 17, 1948.

PAULDERMA

FOR ANTISEPTIC MEDICATED SKIN PREPARATION FOR RELIEF OF THE DISCOMFORTS OF ITCHING AND BURNING.
Claims use since Feb. 3, 1947.

Ser. No. 557,313. TILLIE SCHWARTS, New Haven, Conn. Filed May 18, 1948.

ADHEALAGE

FOR TONIC FOR RELIEF OF HEART TROUBLE AND DIABETES.
Claims use since Apr. 10, 1948.

Ser. No. 558,556. GERARD J. DANCO, INC., New York, N. Y. Filed June 5, 1948.

DANCO

FOR ESSENTIAL OILS FOR THE PREFUMERY TRADE, PHENYLETHYL ALCOHOL, AND RHODINOL.
Claims use since May 13, 1948.

Ser. No. 559,178. THE PURO CO., INC., St. Louis, Mo. Filed June 14, 1948.

Deod-o-Matic

FOR DEODORANT BLOCKS OF THE CHEMICAL TYPE AND DEODORIZERS OF THE CHEMICAL TYPE CONTAINING SUCH DEODORIZING BLOCKS.
Claims use since June 4, 1948.

Ser. No. 560,660. SANDOZ CHEMICAL WORKS, INC., New York, N. Y. Filed July 2, 1948.

XANTHERGINE

FOR PREPARATION RECOMMENDED FOR THE TREATMENT OF HEADACHES.
Claims use since June 9, 1948.

Ser. No. 561,126. LACLEDE LABORATORIES, INC., St. Louis, Mo. Filed July 10, 1948.

TOPI-FLUOR

FOR PREPARATION FOR APPLICATION TO THE TEETH TO PREVENT OR RETARD DECAY AND A SUBSTANCE FOR USE AFTER SUCH APPLICATION TO CONTROL THE PERIOD OF THERAPEUTIC ACTIVITY.
Claims use since June 11, 1948.

Ser. No. 562,262. DR. HESS & CLARK, INC., Ashland, Ohio. Filed July 27, 1948.

NFZ

FOR MEDICAL PREPARATION FOR THE PREVENTION AND CONTROL OF CECAL COCCIDIOSIS OF POULTRY.
Claims use since Feb. 17, 1948.

Ser. No. 562,263. DR. HESS & CLARK, INC., Ashland, Ohio. Filed July 27, 1948.

PŌL

FOR ESCHAROTIC PREPARATION FOR USE IN DEHORNING CALVES AND KIDS.
Claims use since July 23, 1946.

Ser. No. 563,981. POND'S EXTRACT COMPANY, New York, N. Y. Filed Mar. 19, 1948. Under secttion 2f of the act of 1946.

Cheeks

Applicant claims ownership of Registration No. 402,800.
FOR COSMETIC ROUGE.
Claims use since Nov. 25, 1941.

Ser. No. 566,228. HARTMAN-LEDDON COMPANY, INCORPORATED, Philadelphia, Pa. Filed Oct. 1, 1948.

H·S·R

FOR DRIED SYNTHETIC RESIN AND COMPOUNDS AND PREPARED TOLUENE AND/OR XYLENE SOLUTIONS FOR USE AS MICROSCOPIC MOUNTING MEDIA AND SOLUTIONS IN SUCH OTHER SOLVENTS AS MAY BE REQUIRED FOR THE SAME PURPOSE.
Claims use since Sept. 10, 1947.

Ser. No. 566,820. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Oct. 15, 1948.

SULFALIDINE

Applicant claims ownership of Registration No. 408,341.
FOR PREPARATION FOR INTERNAL USE FOR DISEASES IN THE DIGESTION CANAL.
Claims use since Oct. 11, 1948.

Ser. No. 566,945. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Oct. 13, 1948.

HISTADRINA

FOR MEDICINAL PREPARATION OF THENYLPYRAMINE AND EPHEDRINE HYDROCHLORIDE FOR USE IN THE TREATMENT OF ALLERGIC SYMPTOMS.
Claims use since Sept. 1, 1948.

Ser. No. 567,185. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Oct. 19, 1948.

ARGO

FOR CHEMICALS DERIVED FROM CORN—NAMELY, POLYSACCHARIDE, ZEIN, CALCIUM PHYTATE, AND INOSITOL.
Claims use on polysaccharide since Aug. 13, 1948; on zein since Aug. 25, 1948; on calcium phytate since Sept. 3, 1948; and on inositol since Oct. 1, 1948.

CLASS 7
CORDAGE

Ser. No. 570,248. CLEVELAND MILL AND POWER COMPANY, Lawndale, N. C. Filed Dec. 9, 1948.

BIG-BOY

FOR CLOTHES LINES SOLD IN BULK AND IN INDIVIDUAL LENGTHS.
Claims use since July 15, 1940.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 514,175. BRIDGEPORT FABRICS, INC., Bridgeport, Conn. Original filed Dec. 13, 1946, under the act of 1905; amended to application under act of 1946, Mar. 12, 1948. Under section 2f of the act of 1946.

BRIDGEPORT FABRICS

The word "Fabrics" is disclaimed.
FOR RUBBERIZED FABRIC WEATHER STRIPPING.
Claims use since 1920.

Ser. No. 539,191. OSCAR GEORGE MATTHEUS, doing business as O. G. Mattheus Co., Pensacola, Fla. Filed Oct. 27, 1947.

The word "Baths" is disclaimed apart from the mark. The portrait appearing on the drawing is a likeness of Eddie Eugene Day, whose consent has been made a part of this application.
FOR BATH UNIT CONTAINING TUB WITH SHOWER, COMMODE, LAVATORY, AND OTHER FIXTURES WHICH NORMALLY COMPRISE A COMPLETE BATHROOM, SAID UNIT BEING ASSEMBLED BEFOREHAND AND MOVED TO A PARTICULAR SITE.
Claims use since Jan. 15, 1947.

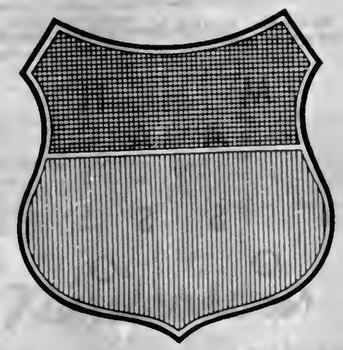
Ser. No. 541,943. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 21, 1947.

HILOSET

The syllable "Set" is disclaimed. Applicant claims ownership of Registration No. 381,868.
FOR FIRE BRICK MORTAR.
Claims use since Oct. 1, 1930.

Ser. No. 543,783. CHENEY INDUSTRIES, Trenton, N. J. Filed Dec. 9, 1947.

ALAMO



FOR ALUMINUM AND METAL CORRUGATED ROOFING USED IN THE BUILDING AND CONSTRUCTION INDUSTRIES.
Claims use since Nov. 25, 1947.

Ser. No. 544,376. PACIFIC IRON & STEEL CO., Los Angeles, Calif. Filed Dec. 15, 1947.

The representation of the framework of the building is disclaimed.
FOR STEEL INDUSTRIAL BUILDINGS.
Claims use since Jan. 1, 1947.

Ser. No. 545,342. CONGOLEUM-NAIRN, INC., Kearny, N. J. Filed Dec. 24, 1947.

The drawing is lined for the colors red and black. Applicant claims ownership of Registrations Nos. 247,213, 291,477, 299,946, 368,487, 368,488, and 369,035.
FOR PIGMENTED COMPOSITION TILES FOR INTERIOR FLOOR COVERINGS.
Claims use since July 15, 1947.

Ser. No. 552,439. THE COLOTRYM COMPANY, Seattle, Wash. Filed Mar. 19, 1948.

HANDI-TRYM

Applicant disclaims the notation "Trym" apart from the mark as shown.
FOR METALLIC MOLDING STRIPS AND TRIM ELEMENTS FOR USE IN CONNECTION WITH HARDBOARD AND OTHER SHEET-LIKE WALL COVERING.
Claims use since Jan. 1, 1947.

Ser. No. 555,930. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa. Filed Apr. 30, 1948.

ALCOR

Applicant claims ownership of Registration No. 269,083.
FOR FIRE-BRICK.
Claims use since Jan. 17, 1928.

Ser. No. 557,141. LEATHERTONE, INC., Boston, Mass. Filed May 15, 1948.

Wallco

FOR PLASTIC WALL TILE.
Claims use since May 5, 1948.

Ser. No. 558,154. NATIONAL TILEBOARD CORP., New York, N. Y., assignor to Roxdale Building Products Corporation, New York, N. Y., a corporation of New York. Filed May 29, 1948.

ROXDALE

FOR TILES AND TILEBOARD OF COMPOSITE FIBROUS MATERIALS AND OF METAL.
Claims use since Apr. 15, 1948.

Ser. No. 558,399. LEWIS & OWENS MANUFACTURING COMPANY, INC., Knoxville, Tenn. Filed June 3, 1948.

Duralite

FOR ALUMINUM WINDOW SASHES.
Claims use since Aug. 15, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 517,664. THE REPUBLIC STAMPING & ENAMELING COMPANY, Canton, Ohio. Original filed Feb. 17, 1947, under the act of 1905; amended to application under act of 1946, Apr. 12, 1948. Under section 2f of the act of 1946.

TRIPLE /// CHECK

FOR BASE METAL COOKING, KITCHEN, HOUSEHOLD AND HOSPITAL WARE—NAMELY, WASH BASINS, INFANTS' OVAL BATH BASINS, JUMBO BASINS, DOUBLE BOILERS AND COVERS, BOWLS, BATTER BOWLS, MIXING BOWLS, PORRIDGE BOWLS, CHAMBERS, CHAMBER COVERS, COFFEE POTS AND COVERS, COFFEE BOILERS AND COVERS, COLANDERS, COMBINETS AND COVERS, COOKERS AND STEAMERS AND COVERS, CUPS, DRINKING CUPS, OPEN HANDLE CUPS, CUSPIDORS, OVAL DISH PANS, ROUND DISH PANS, OBLONG VEGETABLE DISHES, OVAL FOOT TUBS, CONVEX KETTLES AND COVERS, TAPERED KETTLES AND RECESSED DOME COVERS, MILK KETTLES AND COVERS, PRESERVING KETTLES, PERCOLATORS AND INSETS AND SPREADERS THEREFOR, PITCHERS AND COVERS, PLATES, BABY PLATES, DINNER PLATES, SOUP PLATES, PIE PLATES, PLATTERS, OVAL MEAT PLATTERS, CONVEX POTS AND COVERS, STRAIGHT POTS AND COVERS, TAPERED POTS AND RECESSED DOME COVERS, PUDDING PANS, REFRIGERATOR PANS AND COVERS, REFRIGERATOR DISHES AND COVERS, RICE BOILERS AND COVERS, OVAL ROASTERS, SAUCERS, CONVEX SAUCE PANS AND COVERS, LIP SAUCE PANS, TAPERED SAUCE PANS AND RECESSED DOME COVERS, SINK STRAINERS AND COVERS, OBLONG STOVE PANS, TEA POTS, INDIVIDUAL TEA POTS, TEA KETTLES AND COVERS, TRAYS AND BUTCHER TRAYS.

Claims use since January 1941.

Ser. No. 517,667. THE REPUBLIC STAMPING & ENAMELING COMPANY, Canton, Ohio. Original filed Feb. 17, 1947, under the act of 1905; amended to application under act of 1946, Apr. 12, 1948.

REPUBLIC

FOR BASE METAL COOKING, KITCHEN, HOUSEHOLD AND HOSPITAL WARE—NAMELY, WASH BASINS, INFANTS' OVAL BATH BASINS, JUMBO BASINS, DOUBLE BOILERS AND COVERS, BOWLS, BATTER BOWLS, MIXING BOWLS, PORRIDGE BOWLS, CHAMBERS, CHAMBER COVERS, COFFEE POTS AND COVERS, COFFEE BOILERS AND COVERS, COLANDERS, COMBINETS AND COVERS, COOKERS AND STEAMERS AND COVERS, CUPS, DRINKING CUPS, OPEN HANDLE CUPS, CUSPIDORS, OVAL DISH PANS, ROUND DISH PANS, OBLONG VEGETABLE DISHES, OVAL FOOT TUBS, CONVEX KETTLES AND COVERS, TAPERED KETTLES AND RECESSED DOME COVERS, MILK KETTLES AND COVERS, PRESERVING KETTLES, PERCOLATORS AND INSETS AND SPREADERS THEREFOR, PITCHERS AND COVERS, PLATES, BABY PLATES, DINNER PLATES, SOUP PLATES, PIE PLATES, PLATTERS, OVAL MEAT PLATTERS, CONVEX POTS AND COVERS, STRAIGHT POTS AND COVERS, TAPERED POTS AND RECESSED DOME COVERS, PUDDING PANS, REFRIGERATOR PANS AND COVERS, REFRIGERATOR DISHES AND COVERS, RICE BOILERS AND COVERS, OVAL ROASTERS, SAUCERS, CONVEX SAUCE PANS AND COVERS, LIP SAUCE PANS, TAPERED SAUCE PANS AND RECESSED DOME COVERS, SINK STRAINERS AND COVERS, OBLONG STOVE PANS, TEA POTS, INDIVIDUAL TEA POTS, TEA KETTLES AND COVERS, TRAYS AND BUTCHER TRAYS.

Claims use since January 1941.

Ser. No. 519,734. COOK ELECTRIC COMPANY, Chicago, Ill. Original filed Mar. 25, 1947, under the act of 1905; amended to application under act of 1946, Mar. 30, 1948.

DIAPHLEX

FOR BELLOWS OF METAL.

Claims use since Sept. 1, 1946.

Ser. No. 549,816. HARRY E. MATSON, Los Angeles, Calif. Filed Feb. 16, 1948.

MATSON

FOR DOOR AND WALL RACK FOR HOLDING HATS COMPRISING A SINGLE METALLIC FRAMEWORK FOR ATTACHMENT TO A DOOR, WALL, OR SHELF TO SUPPORT A HAT THEREON.

Claims use since January 1948.

Ser. No. 554,156. RED DEVIL TOOLS, Irvington, N. J. Filed Apr. 8, 1948.

Red Devil

Applicant claims ownership of Registrations Nos. 144,940, 307,170, 335,645, and 409,316.

FOR METAL WASHERS AND LOCK WASHERS, LAWN SPRINKLERS, GLAZIER POINTS, AND WEDGES FOR TOOL HANDLES.

Claims use since Feb. 1, 1900, on metal washers and lock washers; since May 1, 1933, on lawn sprinklers; since Jan. 1, 1927, on glazier points; and since September 1937 on wedges for tool handles.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 566,210. CARNEGIE-ILLINOIS STEEL CORPORATION, Pittsburgh, Pa. Filed Oct. 1, 1948.

CARILLOY

FOR STEEL INGOTS, BLOOMS, SLABS, BILLETS, SHEETS, STRIPS, PLATES, BARS, STRUCTURAL SHAPES, AND SPECIAL BAR SECTIONS.

Claims use since October 1936.

Ser. No. 566,990. THE MIDVALE COMPANY, Philadelphia, Pa. Filed Oct. 14, 1948.

MIDVALE NO. 77

Applicant claims ownership of Registrations Nos. 274,656, 286,061, and others.

FOR OIL-HARDENING TOOL STEEL.

Claims use since Feb. 29, 1936.

CLASS 15

OILS AND GREASES

Ser. No. 487,139. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa., by change of name from Merco Nordstrom Valve Company. Original filed Aug. 14, 1945, under the act of 1905; amended to application under act of 1946, Dec. 1, 1947.

Nordcoseal

The word "Seal" is disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 349,221.

FOR VALVE LUBRICATING GREASES, LUBRICATING OILS AND SOLID LUBRICATING COMPOUNDS IN STICK OR BULK FORM.

Claims use since June 27, 1945.

Ser. No. 551,325. SINCLAIR REFINING COMPANY, New York, N. Y. Filed Mar. 5, 1948. Under section 2f of the act of 1946.

LACLEDE

Applicant claims ownership of Registration No. 245,010.

FOR LUBRICATING OILS AND GREASES.

Claims use since Jan. 2, 1916.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,429. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Original filed July 1, 1947, under the act of 1905; amended to application under act of 1946, Feb. 26, 1948.

The drawing is lined to indicate the color red.

FOR PLUG, TWIST, AND SMOKING TOBACCO.

Claims use since June 1, 1885.

Ser. No. 525,436. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Original filed July 1, 1947, under the act of 1905; amended to application under act of 1946, Feb. 25, 1948.

GOLDEN LION

The drawing is lined for the color gold.
FOR CIGARETTES.
Claims use since Mar. 8, 1948.

Ser. No. 553,664. THE AMERICAN TOBACCO COMPANY, New York, N. Y. Filed Apr. 2, 1948.

GREENBACK

FOR SMOKING TOBACCO.
Claims use since July 1868.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 517,811. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio, now by change of name Armco Steel Corporation. Original filed Feb. 20, 1947, under the act of 1905; amended to application under act of 1946, July 28, 1947. Under section 2f of the act of 1946.

CARLITE

FOR SILICON STEEL SHEET MATERIALS FOR MAGNETIC USES AND HAVING ELECTRICALLY INSULATIVE COATINGS.
Claims use since Feb. 3, 1947.

Ser. No. 524,932. ARMSTRONG CORK COMPANY, Lancaster, Pa. Original filed June 27, 1947, under the act of 1905; amended to application under act of 1946, Feb. 24, 1948. Under section 2f of the act of 1946.

ARMSTRONG A CORK COMPANY

FOR ELECTRICAL INSULATORS OF GLASS.
Claims use since Dec. 1, 1938.

Ser. No. 527,974. BURGESS BATTERY COMPANY, Chicago, Ill. Filed July 5, 1947.

The vertical lining on the mark as shown indicates red color.
FOR PORTABLE ELECTRIC ENGRAVING AND CUTTING IMPLEMENTS.
Claims use since 1941.

Ser. No. 540,545. THE MAGNAVOX COMPANY, Fort Wayne, Ind. Filed Nov. 8, 1947.

Traditional

FOR RADIO RECEIVING SETS AND RADIO PHONOGRAPH COMBINATION SETS.
Claims use since June 1, 1947.

Ser. No. 544,333. DAMON RECORDING STUDIOS, INC., Kansas City, Mo. Filed Dec. 15, 1947. Under section 2f of the act of 1946 as to "Damon."

The words "Recording Studios Inc." and the representation of the goods are disclaimed apart from the mark as shown in the drawing.
FOR MAGNETIC SOUND RECORDS OF THE DISC, TAPE, WIRE, AND FILM TYPE AND ELECTRIC SOUND RECORDING APPARATUS.
Claims use since 1933.

Ser. No. 546,062. SENTINEL RADIO CORPORATION, Evanston, Ill. Filed Jan. 2, 1948.

VOLTA

Applicant claims ownership of Registration No. 208,959.
FOR RADIO RECEIVING AND TRANSMITTING SETS AND PARTS THEREOF AND THEREFOR.
Claims use since Dec. 13, 1924.

Ser. No. 546,625. THE SUPERIOR MANUFACTURING COMPANY, Fitchburg, Mass. Filed Jan. 9, 1948. Under section 2f of the act of 1946.

Superior

Applicant claims ownership of Registration No. 223,524.
FOR INSULATED SADDLE STAPLES.
Claims use since Aug. 3, 1925.

Ser. No. 549,560. MCGILL MANUFACTURING COMPANY, INC., Valparaiso, Ind. Filed Feb. 12, 1948.

Levolier

Applicant claims ownership of Registrations Nos. 125,627 and 371,686.
FOR ELECTRIC SWITCH SOCKETS, ELECTRIC SWITCH PORCELAIN BRACKETS, AND OTHER ELECTRIC SWITCH MECHANISMS FOR DOMESTIC AND COMMERCIAL USES—NAMELY, LINK SWITCHES, FIXTURE SWITCHES, WALL SWITCHES, CANOPY SWITCHES, SINGLE CIRCUIT AND MULTI-CIRCUIT CONTROL SWITCHES.
Claims use since Aug. 30, 1918.

Ser. No. 549,776. AMERICAN BATTERY MFG. COMPANY, doing business as Century Battery Company, Kansas City, Mo., and Kansas City, Kans. Filed Feb. 16, 1948.

Century

FOR ELECTRIC STORAGE BATTERIES.
Claims use since 1938.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 536,650. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 3, 1947. Under section 2f of the act of 1946.

UNIFORM

FOR SOFTBALLS.
Claims use since 1938.

Ser. No. 538,669. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 22, 1947.

SPEED-WIN

FOR TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, AND TABLE TENNIS BATS.
Claims use since 1930.

Ser. No. 557,048. RICHARD G. KRUBORR, INCORPORATED, New York, N. Y. Filed May 14, 1948.

BUTTON BUDDY

The word "Button" is disclaimed apart from the mark.
Applicant claims ownership of Registration No. 405,154.
FOR STUFFED TOYS—NAMELY, STUFFED DOLLS AND ANIMALS.
Claims use since June 21, 1948.

Ser. No. 557,057. LALLA MAPLES, Granville, N. Y. Filed May 14, 1948.

DIMIJA

FOR CARD GAME.
Claims use since Apr. 23, 1948.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.

Ser. No. 512,186. McDOWELL MANUFACTURING COMPANY, Millvale, Pa. Original filed Nov. 7, 1946, under the act of 1905; amended to application under act of 1946, Feb. 21, 1948.

DILVER

FOR HAND OPERATED PRESSES FOR THE EXTRACTION OF FRUIT AND VEGETABLE JUICES, AND USED AS A SIEVE, COLANDER, AND RICER.
Claims use since 1910.

Ser. No. 520,278. J. P. HONE CORPORATION, Youngstown, Ohio. Original filed Apr. 7, 1947, under the act of 1905; amended to application under act of 1946, July 28, 1947. Under section 2f of the act of 1946.

J.P.

FOR HONING MACHINES AND PARTS THEREOF.
Claims use since Apr. 2, 1943.

Ser. No. 522,835. BEACON DEVICES, North Tonawanda, N. Y. Original filed May 22, 1947, under the act of 1905; amended to application under act of 1946, Feb. 20, 1948.

BEACON

Applicant claims ownership of Registration No. 228,854.
FOR METAL FLASKS FOR HOLDING COMPRESSED GASES AND PROVIDED WITH AN ASSOCIATED CONTROLLING VALVE FOR REGULATING THE DISCHARGE OF THE GAS, SUCH FLASKS AND THE CONTROLLING VALVES CONSTITUTING DEVICES FOR USE IN THE INFLATION OF TIRES AND ALSO FOR USE IN EXTINGUISHING FIRES.
Claims use since Aug. 7, 1926.

Ser. No. 530,863. SMITH ENGINEERING WORKS, Milwaukee, Wis. Filed Aug. 8, 1947.

TELSMITH

FOR ROCK, ORE, SAND AND GRAVEL HANDLING EQUIPMENT—NAMELY, GYRATORY, JAW AND ROLL CRUSHERS AND BREAKERS; VIBRATORY AND ROTARY SCREENS AND GRIZZLIES; WASHERS, SCRUBBERS AND CLASSIFIERS; BELT, CHAIN, BUCKET, FLIGHT AND SCREW CONVEYORS AND ELEVATORS; AND BIN GATES AND PLATE, APRON AND SCREW FEEDERS.
Claims use since Jan. 1, 1912.

Ser. No. 532,408. TWIN DISK CLUTCH COMPANY, Racine, Wis. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

TWIN DISC

Applicant claims ownership of Registrations Nos. 240,524, 389,134, and 390,561.
FOR CLUTCHES, POWER TAKE-OFF UNITS, REDUCTION GEAR UNITS, MARINE REVERSE GEARS, HYDRAULIC TORQUE CONVERTERS, AND HYDRAULIC COUPLINGS.
Claims use on clutches since Feb. 10, 1927; on power take-off units and reduction gear units since Jan. 1, 1928; on marine reverse gears since Dec. 30, 1937; on hydraulic torque converters since Sept. 26, 1938; and on hydraulic couplings since Aug. 7, 1939.

Ser. No. 534,212. J. H. WILLIAMS & Co., Buffalo, N. Y. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

MEASURRENCH

Applicant claims ownership of Registration No. 370,819.
FOR WRENCHES, WRENCH SETS, WRENCH SOCKETS, AND TOOL HANDLES.
Claims use since July 15, 1938.

Ser. No. 534,358. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Sept. 11, 1947.

Applicant claims ownership of Registrations Nos. 428,477, 428,478, and 428,699.
FOR WOOD WORKING MACHINES CONSISTING OF ROUTING AND BORING MACHINES, LATHES, CIRCULAR SAWS, SCROLL SAWS, BAND SAWS, JOINTERS, SANDERS; SAFETY SHIELDS FOR USE AS ATTACHMENTS FOR ABRASIVE GRINDING MACHINES, SAW TABLES; POWER TOOLS FOR BORING, SAWING, SHAPING, AND SURFACE FINISHING WOOD, METAL, AND OTHER MATERIALS, INCLUDING WOOD TURNING CHISELS; WORK HOLDING ATTACHMENTS FOR GRINDING MACHINES; GRINDERS WITH RECIPROCATORY BEDS; ADJUSTABLE WORK HEADS FOR MACHINE TOOLS; MACHINE TOOLS—NAMELY, DRILL PRESSES; PLANERS, SAW TABLE MACHINES, SHAPERS, CUT-OFF MACHINES, DISK GRINDERS FOR WOOD AND METAL, HOLLOW-CHISEL, MORTICERS, WOOD AND METAL WORKING LATHES; CARTONING MACHINES—NAMELY, MACHINES FOR ERECTING, FILLING, AND CLOSING CARTONS; POWER PRESSES, BENCH PRESSES, PUNCHING PRESSES, DOUBLE ACTION PRESSES, ARCH PRESSES, REDUCING PRESSES, THREAD ROLLING MACHINES, ROLL FEEDS AND DIAL FEEDS; FOUNDRY MOLDING MACHINERY—NAMELY, CORE MOLDING MACHINES, JOLTERS, AND COMPONENT PARTS THEREOF; PLANER BASE, JOINER PEDESTAL, JOINER FRAME, SAW-FRAME, SHAPER PEDESTAL, DISC SANDER PEDESTAL, LATHE FRAME; HOLLOW CHISEL MORTICER FRAME; COFFEE MILLS; AND COMPONENT PARTS THEREOF.
Claims use since Dec. 13, 1945.

Ser. No. 534,560. THE ALDEN SPEARE'S SONS CO., Cambridge, Mass. Filed Sept. 18, 1947.

ROBO

FOR KNIFE SHARPENING MACHINES.
Claims use since Sept. 9, 1947.

Ser. No. 536,627. THE NATIONAL TELEPHONE SUPPLY COMPANY, Cleveland, Ohio. Filed Oct. 3, 1947.

NICOPRESS

Applicant claims ownership of Registrations Nos. 378,901 and 378,905.
FOR COMPRESSION TOOLS FOR COMPRESSING WIRE CONNECTING AND TERMINATING SLEEVES UPON A WIRE, THE TERM WIRE INCLUDING SINGLE OR MULTIPLE STRANDED WIRES, CABLE WIRES, ROPE WIRES, AND THE LIKE.
Claims use since Jan. 25, 1934.

Ser. No. 536,708. THE NATIONAL TELEPHONE SUPPLY COMPANY, Cleveland, Ohio. Filed Oct. 3, 1947.

Nicopress

Applicant claims ownership of Registrations Nos. 378,901 and 378,905.
FOR COMPRESSION TOOLS FOR COMPRESSING WIRE CONNECTING AND TERMINATING SLEEVES UPON A WIRE, THE TERM WIRE INCLUDING SINGLE OR MULTIPLE STRANDED WIRES, CABLE WIRES, ROPE WIRES, AND THE LIKE.
Claims use since Jan. 25, 1934.

Ser. No. 545,944. L. O. BRAND TOOL COMPANY, Lancaster, Pa. Filed Jan. 2, 1948. Under section 2f of the act of 1946.

LAWRENCE

FOR REAMERS, BUSHING REMOVERS AND INSERTERS, PISTONS, PISTON PINS, VALVE GRINDERS, REAMER DRIVE MACHINES, RIDGE REAMERS, AXLE, WHEEL AND BEARING PULLERS, PISTON PIN REMOVERS, COMBINED REAMERS AND BUSHING DRIVERS, VALVE RESEATING TOOLS, STEEL MANDRELS AND MAT AND GASKET CUTTERS.
Claims use since May 1936.

Ser. No. 546,506. RED DEVIL TOOLS, Irvington, N. J. Filed Jan. 9, 1948.

Red Devil

Applicant claims ownership of Registrations Nos. 169,874, 298,461, 337,409, 376,308, and 380,327.
FOR NON-ELECTRIC FLOOR POLISHERS AND METALWORKING AND WOODWORKING LATHES.
Claims use since July 1, 1947.

Ser. No. 547,076. VITAL PRODUCTS MANUFACTURING COMPANY, Cleveland, Ohio. Filed Jan. 14, 1948.

Calkmaster

FOR CAULKING GUNS.
Claims use since Jan. 2, 1948.

Ser. No. 547,300. VITAL PRODUCTS MANUFACTURING COMPANY, Cleveland, Ohio. Filed Jan. 16, 1948.

Vital-Calker

The word "Calker" is disclaimed apart from the mark.
FOR CAULKING GUNS.
Claims use since Jan. 7, 1948.

Ser. No. 547,302. VITAL PRODUCTS MANUFACTURING COMPANY, Cleveland, Ohio. Filed Jan. 16, 1948.

VITAL-SWEEPER

No claim is made for the word "Sweeper" apart from the mark "Vital-Sweeper."
FOR CARPET SWEEPER.
Claims use since Jan. 12, 1948.

Ser. No. 547,869. JOHN OSTER MANUFACTURING COMPANY, Racine, Wis. Filed Jan. 23, 1948.

KRU-KUT

The word "Kut" is disclaimed.
FOR HAIR CLIPPERS, BOTH ELECTRICALLY AND HAND OPERATED, AND PARTS THEREOF.
Claims use since Oct. 31, 1947.

Ser. No. 549,737. CLIPPER MANUFACTURING COMPANY, Kansas City, Mo. Filed Feb. 16, 1948.

Clipper Hoist

The words "Hoist" and "Sails Right Thru" are disclaimed. The drawing is lined to indicate the colors yellow and orange.

FOR POWER AND HAND DRIVEN HOISTS AND DERRICKS.

Claims use since Sept. 4, 1940.

Ser. No. 549,845. IRENE SAEMANN, doing business as Lake City Machine Shop, Mentone, Ind., assignor, by mesne assignments, to Frank Manufacturing Co., Inc., Mentone, Ind., a corporation of Indiana. Filed Feb. 16, 1948.

COVERALL

FOR COULTERS DESIGNED FOR USE ON BREAKING PLOWS.

Claims use since Oct. 10, 1946.

Ser. No. 550,076. SCOTTDEL, INC., Swanton, Ohio. Filed Feb. 18, 1948.

SCOTTDEL

FOR CORN SHELLERS, FEED MIXERS, AND GRAIN CONVEYORS.

Claims use since Sept. 1, 1945.

Ser. No. 550,476. AMERICAN SAW MILL MACHINERY COMPANY, Hackettstown, N. J. Filed Feb. 25, 1948.

SET-A-MATIC

No claim is made herein to the word "Set" apart from the mark "Set-A-Matic."

FOR SAW MILLS.

Claims use since Aug. 7, 1947.

Ser. No. 550,561. SIGNODE STEEL STRAPPING COMPANY, Chicago, Ill. Filed Feb. 25, 1948.

SIGNODE SYSTEM

The word "System" is disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 116,691, 116,692, 116,862, 116,863, 116,624, 397,726, and 399,088.

FOR STRETCHING OR TENSIONING TOOLS, SEALING TOOLS, STRAPPING MACHINES, REELS, HOLDERS AND COIL BOXES FOR PACKAGE BUNDLE AND LOAD BINDING STRAPPING; CUTTERS FOR STRAPPING; AUTOMATIC MACHINES FOR BINDING PACKAGES AND BUNDLES WITH STRAPPING; STAPLING TOOLS.

Claims use since June 20, 1947.

Ser. No. 550,987. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Mar. 2, 1948.

TAHARA

FOR BURNISHING MACHINES.

Claims use since 1915.

Ser. No. 551,718. MCCROSKY TOOL CORPORATION, Meadville, Pa. Filed Mar. 11, 1948.

WIZARD

Applicant claims ownership of Registration No. 142,597.

FOR CHUCKS AND COLLETS.

Claims use since Aug. 1, 1908.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 535,371. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Sept. 23, 1947.

NOEX

FOR DRY-CLEANING MECHANISM AND APPARATUS—NAMELY, DRY-CLEANING WASHERS, DRYING TUMBLERS, AND EXTRACTORS, AND FILTERS AND STILLS FOR USE AS A PART OF DRY-CLEANING APPARATUS, AND PARTS THEREOF.

Claims use since April 1942.

Filed Oct. 7, 1947, Serial No. 537,019. Published Mar. 1, 1949. Class 42.

510,899. GAS MAIN STOPPERS. ELIZABETH A. GOODMAN, doing business as Safety Gas Main Stopper Co., Brooklyn, N. Y.
Filed Oct. 7, 1947, Serial No. 537,037. Published Mar. 1, 1949. Class 13.

510,900. MECHANICALLY GROOVED PHONOGRAPH RECORDS. DECCA RECORDS, INC., New York, N. Y.
Filed Oct. 8, 1947, Serial No. 537,163. Published Mar. 22, 1949. Class 36.

510,901. APPARATUS FOR REGISTERING PRINTING PLATES WITH THEIR CORRESPONDING FIXED REGISTRY ELEMENTS AND FOR APPARATUS FOR RECEIVING AND FACILITATING THE PROPER SETTING OF TWO COACTING AND PLATE FITTED PRINTING ELEMENTS. H. H. HEINRICH, INC., New York, N. Y.
Filed Oct. 8, 1947, Serial No. 537,191. Published Mar. 1, 1949. Class 23.

510,902. WORSTED PIECE GOODS. GUERIN MILLS INC., Woonsocket, R. I.
Filed Oct. 9, 1947, Serial No. 537,311. Published Feb. 8, 1949. Class 42.

510,903. SELF-PROPELLED, EARTH MOVING SCRAPERS. THE HEIL CO., Milwaukee, Wis.
Filed Oct. 9, 1947, Serial No. 537,312. Published Mar. 1, 1949. Class 23.

510,904. SCREW DRIVERS, DRILLS, SCREW DRIVER BITS, AND COUNTERSINKS. NORTH BROTHERS MANUFACTURING COMPANY, Philadelphia, Pa.
Filed Oct. 10, 1947, Serial No. 537,402. Published Mar. 8, 1949. Class 23.

510,905. NEEDLES FOR HAND SEWING, CROCHET HOOKS AND KNITTING NEEDLES FOR HAND USE, AND EMBROIDERY HOOPS. T. BUETTNER & CO., INC., Chicago, Ill.
Filed Oct. 11, 1947, Serial No. 537,548. Published Feb. 8, 1949. Class 40.

510,906. TALKING-MACHINE NEEDLES. W. H. BAGSHAW Co., Lowell, Mass.
Filed Oct. 13, 1947, Serial No. 537,654. Published Mar. 8, 1949. Class 36.

510,907. COAL AND ROCK DRILLS, MACHINES FOR DRILLING COAL AND ROCK, AND PARTS THEREOF. HOWELLS MINING DRILL COMPANY, Plymouth, Pa.
Filed Oct. 14, 1947, Serial No. 537,798. Published Mar. 8, 1949. Class 23.

510,908. LEAD PENCILS. RICHARD BEST PENCIL COMPANY, INC., Springfield, N. J.
Filed Oct. 16, 1947, Serial No. 537,968. Published Feb. 22, 1949. Class 37.

510,909. BLACK LEAD AND COPYING PENCILS. RICHARD BEST PENCIL COMPANY, INC., Springfield, N. J.
Filed Oct. 16, 1947, Serial No. 537,970. Published Feb. 15, 1949. Class 37.

510,910. HOLDERS FOR BABIES' NURSING BOTTLES. FRANK PETTIT, doing business as Pettl-Products Company, Union, N. J.
Filed Oct. 16, 1947, Serial No. 538,037. Published Feb. 22, 1949. Class 44.

510,911. HAND-OPERATED FORKS, HOES, RAKES, SCOOPS, SPADES, SHOVELS. UNITED CO-OPERATIVES, INC., Alliance, Ohio.
Filed Oct. 16, 1947, Serial No. 538,032. Published Mar. 8, 1949. Class 23.

510,912. STEEL SPLIT PULLEYS. THE AMERICAN PULLEY COMPANY, Philadelphia, Pa.
Filed Oct. 17, 1947, Serial No. 538,064. Published Mar. 1, 1949. Class 23.

510,913. EMBOSSING AND PRINTING MACHINES AND PARTS THEREOF. FARRINGTON MANUFACTURING COMPANY, Boston, Mass.
Filed Oct. 18, 1947, Serial No. 538,261. Published Mar. 8, 1949. Class 23.

510,914. MECHANICALLY OPERATED TURNTABLES FOR MOTION DISPLAY OF VEHICLES, FARM MACHINERY AND THE LIKE. HERBERT H. MACK, doing business as The Mosby-Mack Equipment Company, Topeka, Kans.
Filed Oct. 18, 1947, Serial No. 538,307. Published Mar. 1, 1949. Class 23.

510,915. VARIABLE SPEED DRIVING UNITS FOR MACHINES OF VARIOUS TYPES WHICH ARE BROUGHT TOGETHER AND OPERATED IN A MANUFACTURING SYSTEM. SYCO MANUFACTURING CORPORATION, Syracuse, N. Y.
Filed Oct. 21, 1947, Serial No. 538,571. Published Mar. 1, 1949. Class 23.

510,916. DRAWING PAPER, TRACING PAPER, RULED PAPER, PRINTED CHARTS. DIETERICH-POST COMPANY, San Francisco, Calif.
Filed Oct. 22, 1947, Serial No. 538,617. Published Mar. 1, 1949. Class 37.

510,917. HYDRAULIC DUMP UNITS, HYDRAULIC LIFT MECHANISMS FOR DUMP TRUCKS, ETC. THE HEIL CO., Milwaukee, Wis.
Filed Oct. 22, 1947, Serial No. 538,638. Published Mar. 1, 1949. Class 23.

510,918. FLEXIBLE SHEET HANDLING MECHANISMS—NAMELY, SHEET GUIDERS, EXPANDERS, AND PLAITERS, AND PARTS THEREOF, TEXTILE WEFT STRAIGHTENERS, DETWISTERS, SQUEEZERS, AND PARTS THEREOF. MOUNT HOPE MACHINERY COMPANY, Taunton, Mass.
Filed Nov. 1, 1947, Serial No. 539,892. Published Mar. 8, 1949. Class 23.

510,919. SIMULTANEOUS CLARIFICATION PRECIPITATION PROCESS AND APPARATUS INCLUDING CYANIDE PRECIPITATION APPARATUS—NAMELY, CLARIFYING EQUIPMENT, DEAERATING EQUIPMENT, PRECIPITATING FILTERS, FILTER PRESSES, VACUUM FILTER LEAVES, BAG TYPE FILTERS, AND REAGENT FEEDERS FOR USE IN THE RECOVERY OF GOLD AND SILVER FROM CYANIDE SOLUTIONS. THE MERRILL COMPANY, San Francisco, Calif.
Filed Nov. 3, 1947, Serial No. 539,973. Published Mar. 8, 1949. Class 31.

510,920. MINERAL SEPARATION PROCESS EQUIPMENT—NAMELY, SLUICING SLIME FILTERS, CLARIFYING FILTERS, CLASSIFYING CONES, ZINC FEEDERS, FILTER PROCESSES, CYANIDE PRECIPITATION APPARATUS, INCLUDING CLARIFYING EQUIPMENT, DEAERATING EQUIPMENT, PRECIPITATING FILTERS, FILTER PRESSES, VACUUM FILTER LEAVES, BAG TYPE FILTERS, AND REAGENT FEEDERS FOR USE IN THE RECOVERY OF GOLD AND SILVER FROM CYANIDE SOLUTIONS. THE MERRILL COMPANY, San Francisco, Calif.
Filed Nov. 3, 1947, Serial No. 539,974. Published Mar. 8, 1949. Class 31.

510,921. CRAYONS USED FOR MARKING ON METALS, PAPER, WOOD, TEXTILES, GLASS, RUBBER, CHINAWARE, AND PLASTICS. MARKWELL MANUFACTURING CO., INC., New York, N. Y.
Filed Nov. 10, 1947, Serial No. 540,690. Published Mar. 1, 1949. Class 37.

510,922. SILK FABRICS IN THE PIECE. ONONDAGA SILK COMPANY, INC., New York, N. Y.
Filed Nov. 14, 1947, Serial No. 541,171. Published Mar. 1, 1949. Class 42.

510,923. ACID PUMPS AND LOCOMOTIVE PILOTS. ROBB-MEEHAN FOUNDRIES, Chattanooga, Tenn.
Filed Nov. 17, 1947, Serial No. 541,465. Published Mar. 1, 1949. Class 23.

510,924. SHOE LACES. HERMAN B. LAYMON, doing business as World's Products Company, Spencer, Ind.
Filed Nov. 18, 1947, Serial No. 541,553. Published Mar. 1, 1949. Class 40.

510,925. AIR CLEANERS, DUST COLLECTORS, AND MACHINES OR APPARATUS OF A MECHANICAL TYPE UTILIZING WATER AND FANS OR BLOWERS FOR FILTERING OR SEPARATING DUST AND OTHER FOREIGN PARTICLES FROM THE AIR. GIOVANNI C. ZILIOTTO, Lake Orion, Mich.
Filed Nov. 18, 1947, Serial No. 541,622. Published Mar. 8, 1949. Class 23.

510,926. HAIR ROLLERS. BEN-HUR PRODUCTS, INC., New York, N. Y.
Filed Nov. 21, 1947, Serial No. 541,913. Published Feb. 8, 1949. Class 40.

510,927. QUICK FROZEN FRESH SHELLED BLACK-EYE PEAS AND CANNED FRUITS AND VEGETABLES, ETC. PAN-AM FOODS, INC., Brownsville, Tex.
Filed Nov. 21, 1947, Serial No. 541,955. Published Mar. 1, 1949. Class 46.

510,928. WATCHES, WATCH-MOVEMENTS, WATCH-CASES, AND PARTS THEREOF. HARVEL WATCH COMPANY, New York, N. Y.
Filed Nov. 24, 1947, Serial No. 542,123. Published Mar. 8, 1949. Class 27.

510,929. COTTON SHEETINGS. COLUMBUS MANUFACTURING CO., Columbus, Ga.
Filed Aug. 15, 1947, Serial No. 542,224. Published Mar. 1, 1949. Class 42.

510,930. LOCKING PLATES FOR SCREWS AND BOLTS. TINNERMAN PRODUCTS, INC., Cleveland, Ohio.
Filed Aug. 20, 1947, Serial No. 542,239. Published Mar. 1, 1949. Class 13.

510,931. SAXOPHONES, CORNETS, TRUMPETS, TROMBONES, ALTO HORNS, BARITONE HORNS, FRENCH HORNS, MELLOPHONES, BASS HORNS, CLARINETS, OBOES, BASSOONS, AND FLUTES. THE ELKHART BAND INSTRUMENT COMPANY, Elkhart, Ind.
Filed Sept. 22, 1947, Serial No. 542,416. Published Mar. 15, 1949. Class 26.

510,932. ACRYLIC DENTURE MATERIAL. MYERSON TOOTH CORPORATION, Cambridge, Mass.
Filed Nov. 29, 1947, Serial No. 542,778. Published Feb. 8, 1949. Class 44.

510,933. BOND, LEDGER, WRITING, MAP, BOOK, INDEX, AND ONIONSKIN PAPER, BOXED STATIONERY, TABLETS, AND MANUSCRIPT COVER. NEENAH PAPER COMPANY, Neenah, Wis.
Filed Dec. 1, 1947, Serial No. 542,864. Published Mar. 1, 1949. Class 37.

510,934. FINGER RINGS. GRANAT BROS., INC., San Francisco, Calif.
Filed Dec. 2, 1947, Serial No. 542,923. Published Mar. 15, 1949. Class 28.

510,935. WATCHES. EMIL LEICHTER, New York, N. Y.
Filed Dec. 2, 1947, Serial No. 542,958. Published Mar. 8, 1949. Class 27.

510,936. MACHINES FOR MARKING AND ATTACHING PRICE TAGS TO MERCHANDISE BOTH MECHANICALLY AND ELECTRICALLY POWERED. THE MONARCH MARKING SYSTEM COMPANY, Dayton, Ohio.
Filed Sept. 29, 1947, Serial No. 543,028. Published Mar. 8, 1949. Class 23.

510,937. ICE CREAM DISHERS. SCOVILL MANUFACTURING COMPANY, Racine, Wis., and Waterbury, Conn.
Filed Oct. 7, 1947, Serial No. 543,363. Published Mar. 8, 1949. Class 23.

510,938. SUITCASES. ABEL & BACH, INC., Milwaukee, Wis.
Filed Dec. 5, 1947, Serial No. 543,375. Published Feb. 22, 1949. Class 3.

510,939. ASH BINS, ROCK OR GRAVEL BINS, COAL BINS, HOPPERS, AND SETTLING TANKS (SAND AND SEWAGE). THE JEFFREY MANUFACTURING COMPANY, Columbus, Ohio.
Filed Dec. 5, 1947, Serial No. 543,457. Published Mar. 15, 1949. Class 2.

510,940. SHAMPOO. R. B. SEMLER, INC., New Canaan, Conn.
Filed Dec. 5, 1947, Serial No. 543,531. Published Mar. 15, 1949. Class 6.

510,941. HAIR TONIC AND SHAMPOO. R. B. SEMLER, INC., New Canaan, Conn.
Filed Dec. 5, 1947, Serial No. 543,534. Published Mar. 15, 1949. Class 6.

510,942. HAIR TONIC. R. B. SEMLER, INC., New Canaan, Conn.
Filed Dec. 5, 1947, Serial No. 543,536. Published Mar. 15, 1949. Class 6.

510,943. FINGER HOLDER FOR MANICURING PURPOSES. THE BOW CORPORATION, Boston, Mass.
Filed Dec. 10, 1947, Serial No. 543,877. Published Feb. 8, 1949. Class 44.

510,944. TANNED LEATHER FROM WHICH BANDS FOR CAPS AND HATS ARE MADE. BRIZEL LEATHER CORPORATION, New York, N. Y.
Filed Dec. 11, 1947, Serial No. 544,048. Published Mar. 15, 1949. Class 1.

510,945. ARTISTS' BRUSHES. M. GRUMBACHER, INC., New York, N. Y.
Filed Dec. 11, 1947, Serial No. 544,084. Published Jan. 4, 1949. Class 29.

510,946. STERLING SILVER FLATWARE—NAMELY, KNIVES, FORKS, SPOONS, BUTTER SPREADERS, BUTTER PICKS, AND JELLY SERVERS. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass.
Filed Dec. 11, 1947, Serial No. 544,113. Published Mar. 15, 1949. Class 28.

510,947. CLEANSING COMPOUND CONTAINING SILICATE OF SODA, ETC. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa.
Filed Oct. 21, 1947, Serial No. 544,653. Published Feb. 15, 1949. Class 4.

510,948. CLOSET ACCESSORIES MADE OF PLASTIC FILM—NAMELY, GARMENT BAGS, ETC. A. L. SIEGEL CO., INC., New York, N. Y.
Filed Dec. 24, 1947, Serial No. 545,398. Published Mar. 8, 1949. Class 2.

510,949. FILING SPINDLES PARTICULARLY ADAPTED FOR OFFICE USE IN THE FILING OF BILLS AND THE LIKE. PILOT DISTRIBUTING COMPANY, Battle Creek, Mich.
Filed Dec. 26, 1947, Serial No. 545,532. Published Feb. 8, 1949. Class 37.

Filed Jan. 6, 1948, Serial No. 546,332. Published Mar. 15, 1949. Class 36.

510,962. SOAP. A. BRESLAUER EXPORT CORP., New York, N. Y.
Filed Jan. 7, 1948, Serial No. 546,352. Published Feb. 15, 1949. Class 4.

510,963. SKIN LOTIONS, TOILET CREAM, TOILET POWDER, ETC. GENATOSAN LIMITED, Loughborough, England.
Filed Jan. 7, 1948, Serial No. 546,387. Published Mar. 8, 1949. Class 6.

510,964. KNIVES, FORKS, SPOONS, FOOD PUSHERS, TONGS, ETC. ROGERS, LUNT & BOWLEN COMPANY, Greenfield, Mass.
Filed Jan. 7, 1948, Serial No. 546,432. Published Mar. 15, 1949. Class 28.

510,965. PAPER NAPKINS, PAPER TOWELS, AND TOILET TISSUE. ERVING PAPER MILLS, Erving, Mass.
Filed Jan. 8, 1948, Serial No. 546,474. Published Mar. 1, 1949. Class 37.

510,966. PAPER NAPKINS. ERVING PAPER MILLS, Erving, Mass.
Filed Jan. 8, 1948, Serial No. 546,478. Published Mar. 1, 1949. Class 37.

510,967. CRAYONS. MILTON BRADLEY COMPANY, Springfield, Mass.
Filed Jan. 9, 1948, Serial No. 546,552. Published Mar. 1, 1949. Class 37.

510,968. AIR MAIL WRITING PAPER AND ENVELOPES. AVERICK PAPER COMPANY, New York, N. Y.
Filed Jan. 10, 1948, Serial No. 546,641. Published Jan. 4, 1949. Class 37.

510,969. LADIES' HANDBAGS, MADE OF LEATHER, FABRIC, AND PLASTIC MATERIALS. NORTH BERGEN LEATHER PRODUCTS CO., North Bergen, N. J.
Filed Jan. 14, 1948, Serial No. 547,024. Published Jan. 25, 1949. Class 3.

510,970. WATER SOLUBLE COLORED INDELIBLE PENCILS. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J.
Filed Jan. 20, 1948, Serial No. 547,521. Published Feb. 8, 1949. Class 37.

510,971. LEAD PENCILS. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J.
Filed Jan. 20, 1948, Serial No. 547,522. Published Feb. 8, 1949. Class 37.

510,972. LEAD PENCILS. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J.
Filed Jan. 20, 1948, Serial No. 547,526. Published Feb. 8, 1949. Class 37.

510,973. LEAD PENCILS. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J.
Filed Jan. 20, 1948, Serial No. 547,529. Published Feb. 15, 1949. Class 37.

510,974. RED IRON OXIDE ADAPTED ESPECIALLY FOR RUBBER MANUFACTURE. C. K. WILLIAMS & Co., Easton, Pa., assignor to C. K. Williams & Co., East St. Louis, Ill., a corporation of Delaware.
Filed Jan. 20, 1948, Serial No. 547,595. Published Mar. 8, 1949. Class 6.

510,975. MECHANICAL PENCILS. BROWN & BIGELOW, St. Paul, Minn.
Filed Jan. 21, 1948, Serial No. 547,613. Published Mar. 8, 1949. Class 37.

510,976. PIECE GOODS OF COTTON, SILK, RAYON, NYLON, LINEN, HEMP, WOOL, WORSTED OR HAIR, OR MIXTURES OF THESE MATERIALS. WILLIAM PICKLES & COMPANY LIMITED, Manchester, England.
Filed Jan. 21, 1948, Serial No. 547,682. Published Mar. 1, 1949. Class 42.

510,977. COATED AND UNCOATED FABRICS IN THE PIECE, OF COTTON, LINEN, SYNTHETIC FIBRES, AND COMBINATIONS THEREOF, FOR USE AS WINDOW SHADES. BARRET TEXTILE CORPORATION, New York, N. Y.
Filed Jan. 23, 1948, Serial No. 547,819. Published Mar. 1, 1949. Class 42.

510,978. SHEETS AND PILLOW CASES. PACIFIC MILLS, New York, N. Y., and Boston, Mass.
Filed Jan. 23, 1948, Serial No. 547,870. Published Mar. 1, 1949. Class 42.

510,979. BROOMS. YOUNG BROOM CO., INC., West Springfield, Mass.
Filed Jan. 23, 1948, Serial No. 547,884. Published Jan. 4, 1949. Class 29.

510,980. BRUSHES FOR APPLYING COLORING TO THE HAIR. ROUX DISTRIBUTING CO. INC., New York, N. Y.
Filed Jan. 24, 1948, Serial No. 547,942. Published Jan. 11, 1949. Class 29.

510,981. CLEANER AND DETERGENT FOR DISHES, UTENSILS, SILVERWARE, AND GLASSWARE. ALLIED HOME PRODUCTS CORPORATION, Beloit, Wis.
Filed Jan. 26, 1948, Serial No. 547,956. Published Mar. 1, 1949. Class 4.

510,982. MOPS, BROOMS, AND BRUSHES. JANITORS SUPPLY HOUSE, INCORPORATED, Baltimore, Md.
Filed Jan. 26, 1948, Serial No. 547,997. Published Jan. 11, 1949. Class 29.

510,983. FEATURE ADVERTISING, SOLD AS SUCH. WILLIAM G. GRAYELL, doing business as Lakewood Products Company, Norwalk, Ohio.
Filed Jan. 31, 1948, Serial No. 548,497. Published Mar. 1, 1949. Class 38.

510,984. LEATHER, MORE SPECIFICALLY FULL GRAIN SIDES, IN ELK, SMOOTH, OR EMBOSSED LEATHER. A. H. ROSS AND SONS, CO., Chicago, Ill.
Filed Feb. 9, 1948, Serial No. 549,174. Published Mar. 15, 1949. Class 1.

PRAIRIE HOME

FOR WHEAT FLOUR.
Claims use since Mar. 28, 1927.

Reg. No. 233,399. Registered Sept. 27, 1927. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

CAMPFIRE

FOR WHEAT FLOUR.
Claims use since Apr. 1, 1927.

Reg. No. 234,348. Registered Oct. 25, 1927. LA VERNE ORANGE ASSOCIATION, La Verne, Calif., a corporation of California. Republished by registrant.

Paul Neyron

The notation "Paul Neyron" is the name of a well known pink rose.
FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT.
Claims use since 1910.

Reg. No. 237,454. Registered Jan. 10, 1928. CITRUS FRUIT ASSOCIATION OF ONTARIO, Ontario, Calif. Republished by Citrus Fruit Growers, Ontario, Calif., a partnership.

Pluma

FOR FRESH CITRUS FRUIT—NAMELY, ORANGES.
Claims use since Aug. 1, 1927.

Reg. No. 240,223. Registered Mar. 20, 1928. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Claflin, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

WHITE GOOSE

FOR WHEAT FLOUR.
Claims use since Apr. 3, 1905.

Reg. No. 241,852. Registered May 8, 1928. THE COLORADO MILLING & ELEVATOR CO., Monte Vista, Colo., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

CRESTONE

FOR WHEAT FLOUR.
Claims use since Nov. 1, 1906.

Reg. No. 246,931. Registered Sept. 18, 1928. THE KANSAS MILL & ELEVATOR COMPANY, Arkansas City, Kans. Republished by Dixie-Portland Flour Co., Memphis, Tenn., a corporation of Tennessee.

Maytime

FOR WHEAT FLOUR.
Claims use since January 1928.

Reg. No. 247,115. Registered Sept. 18, 1928. PATSY'S CANDIES, INC., Colorado Springs, Colo., a corporation of Colorado. Republished by registrant.

Patsy's ORIGINAL

FOR CANDY, CANDIED POP CORN, BUTTERED POP CORN, SALTED PEANUTS, AND SALT-WATER TAFFY.
Claims use since Oct. 1, 1924.

Reg. No. 249,130. Registered Nov. 6, 1928. CITRUS FRUIT ASSOCIATION OF ONTARIO, Ontario, Calif. Republished by Citrus Fruit Growers, Ontario, Calif., a partnership.

LINNET

FOR FRESH CITRUS FRUIT—NAMELY, ORANGES.
Claims use since 1896.

Reg. No. 249,310. Registered Nov. 13, 1928. THE PFAFFMAN EGG NOODLE COMPANY, Cleveland, Ohio. Republished by The Pfaffman Company, Cleveland, Ohio, a corporation of Ohio.

Pfaffman's

FOR ALIMENTARY PASTE PRODUCTS, ESPECIALLY NOODLES, SPAGHETTI, VERMICELLI, AND MACARONI, PREPARED IN VARIOUS SHAPES AND FORMS.
Claims use since March 1891.

Reg. No. 249,873. Registered Nov. 20, 1928. RAPID CITY PACKING COMPANY, Rapid City, S. Dak. Republished by Black Hills Packing Co., Rapid City, S. Dak., a corporation of South Dakota.

The word "Brand" is disclaimed apart from the mark as shown.
FOR SMOKED MEATS—NAMELY, HAMS, BACON, PICNICS, AND BACON NUGGETS; COOKED MEATS, SMOKED AND FRESH—NAMELY, BOILED HAMS, WIENERS, FRANKFURTERS, BOLOGNA, MINCED HAM, LIVER SAUSAGE, HEADCHEESE, BLOOD SAUSAGE, SUMMER SAUSAGE, DRIED BEEF, AND LUNCH HAM; FRESH MEATS—NAMELY, BEEF, PORK, MUTTON, AND POULTRY; AND LARD.
Claims use since August 1926.

Reg. No. 251,868. Registered Jan. 15, 1929. CHULA VISTA CITRUS ASSOCIATION, Chula Vista, Calif. Republished by The Chula Vista Citrus Association, Chula Vista, Calif., a corporation of California.

SEABOARD

FOR FRESH CITRUS FRUIT—NAMELY, LEMONS.
Claims use since Aug. 1, 1928.

Reg. No. 252,942. Registered Feb. 19, 1929. WING HING COMPANY, Honolulu, Territory of Hawaii, assignor to Wing Coffee Company. Republished by Wing Coffee Co., Ltd., Honolulu, Territory of Hawaii, a corporation organized under the laws of the Territory of Hawaii.

WING

FOR COFEE, TEA, AND FRUIT PRESERVED IN SUGAR, AND PICKLED PINEAPPLE, AND MANGO CHUTNEY.
Claims use since Feb. 1, 1918.

Reg. No. 253,860. Registered Mar. 5, 1929. COMMANDER MILLING COMPANY, Minneapolis, Minn. Republished by Commander-Larabee Milling Company, Minneapolis, Minn., a corporation of Delaware.

COMMODORE

FOR WHEAT FLOUR.
Claims use since about Jan. 1, 1928.

Reg. No. 256,553. Registered May 21, 1929. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

CORENCO

FOR LARD, OLEO OILS, POULTRY AND STOCK FEEDS, GELATINE, STEARINE MADE FROM EDIBLE FATS AND USED AS AN INGREDIENT OF SHORTENING; MEAT PRODUCTS FOR FOOD PURPOSES—NAMELY, COOKED MEAT, WHOLE OR GROUND, TO BE USED FOR POULTRY AND STOCK FOOD; AND BONE PRODUCTS FOR FOOD PURPOSES—NAMELY, COOKED BONE, WHOLE OR GROUND, TO BE USED FOR POULTRY AND STOCK FOOD.
Claims use since about July 1920.

Reg. No. 257,465. Registered June 11, 1929. POMONA FIRST GROWERS EXCHANGE, Pomona, Calif., a corporation of California. Republished by registrant.

APACHE

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES AND GRAPEFRUIT.
Claims use since Jan. 1, 1912.

Reg. No. 262,608. Registered Oct. 15, 1929. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Hays, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

The word "Qualified" is disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since Apr. 10, 1929.

Reg. No. 264,605. Registered Nov. 26, 1929. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Burley, Idaho, a corporation of Colorado. Republished by registrant, present address Denver, Colo.

FOR WHEAT FLOUR.
Claims use since Feb. 1, 1929.

Reg. No. 269,464. Registered Apr. 8, 1930. THE PFAFFMAN EGG NOODLE COMPANY, Cleveland, Ohio. Republished by The Pfaffman Company, Cleveland, Ohio, a corporation of Ohio.

Vit-O-Veg

FOR ALIMENTARY PASTE PRODUCTS, ESPECIALLY NOODLES, MACARONI, AND SPAGHETTI, IN CONVENTIONAL FORMS AND VARYING DESIGNS AND SHAPES.
Claims use since Nov. 13, 1929.

Reg. No. 278,011. Registered Dec. 2, 1930. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Caldwell, Idaho., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

FOR SELF-RISING FLOUR.
Claims use since Nov. 1, 1909.

Reg. No. 278,521. Registered Dec. 23, 1930. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

HARVEST QUEEN

FOR WHEAT FLOUR.
Claims use since 1873.

Reg. No. 279,234. Registered Jan. 13, 1931. GULF VEGETABLE AND FRUIT COMPANY, INC., Weslaco, Tex., a corporation of Texas. Republished by registrant.

GOLD RIM

FOR FRESH VEGETABLES—NAMELY, TOMATOES, CORN, SPINACH, CARROTS, TURNIPS, BEETS, CABBAGE, PARSLEY, ENDIVE, ESCAROLE, LIMA BEANS, MUSTARD, CAULIFLOWER, AND POTATOES; FRESH FRUITS—NAMELY, GRAPEFRUIT, ORANGES, LEMONS.
Claims use since Nov. 1, 1928.

Reg. No. 279,906. Registered Feb. 3, 1931. NORRIS INCORPORATED, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

Buccaneer

FOR CANDY.
Claims use since Sept. 20, 1930.

Reg. No. 282,029. Registered Apr. 7, 1931. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Wilson, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

JUNE GOLD

FOR WHEAT FLOUR.
Claims use since July 1930.

Reg. No. 291,785. Registered Feb. 23, 1932. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

FOR SELF-RISING FLOUR.
Claims use since April 1931.

Reg. No. 294,046. Registered May 17, 1932. GREENSPAN BROTHERS COMPANY, Perth Amboy, N. J. Republished by Flagstaff Foods, Perth Amboy, N. J., a corporation of New Jersey.

FLAGSTAFF

FOR CANNED VEGETABLES, CANNED FRUIT, CANNED FISH, CANNED SALMON, FRUIT PRESERVES, COFFEE, AND TEA.
Claims use since Dec. 11, 1931.

Reg. No. 298,095. Registered Oct. 11, 1932. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Twin Falls, Idaho, a corporation of Colorado. Republished by registrant, present address, Denver, Colo.

IDA-DOWN

FOR CAKE FLOUR.
Claims use since Sept. 1, 1931.

Reg. No. 302,675. Registered Apr. 25, 1933. REDLANDS FOOTHILL GROVES, Redlands, Calif., a corporation of California. Republished by registrant.

SUNNY COVE

FOR FRESH CITRUS FRUITS.
Claims use since Oct. 16, 1931.

Reg. No. 313,091. Registered May 15, 1934. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Dodge City, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

Rose Mist

FOR WHEAT FLOUR.
Claims use since Aug. 8, 1933.

Reg. No. 313,092. Registered May 15, 1934. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Dodge City, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

FOR WHEAT FLOUR.
Claims use since Dec. 9, 1932.

Reg. No. 314,869. Registered July 10, 1934. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Republished by Clover Farm Stores Corporation, Cleveland, Ohio, a corporation of Ohio.

FOODLAND

FOR CANNED CORN AND CANNED PEACHES.
Claims use since January 1934.

Reg. No. 319,013. Registered Nov. 13, 1934. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Republished by Clover Farm Stores Corporation, Cleveland, Ohio, a corporation of Ohio.

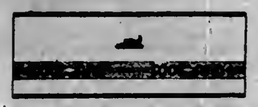
FOODLAND

FOR CANNED FRUITS AND CANNED VEGETABLES.
Claims use since January 1934.

Reg. No. 320,448. Registered Jan. 1, 1935. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Claflin, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo .

White Bun

FOR WHEAT FLOUR.
Claims use since Jan. 1, 1934.



Reg. No. 324,749. Registered May 28, 1935. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Salt Lake City, Utah, a corporation of Colorado. Republished by registrant, present address Denver, Colo.

LAKEMERE

FOR WHEAT FLOUR.
Claims use since July 1912.

Reg. No. 326,478. Registered July 23, 1935. FOODLAND, INC., Cleveland, Ohio. Republished by Clover Farm Stores Corporation, Cleveland, Ohio, a corporation of Ohio.

The drawing is lined for gold and yellow.
FOR CANNED SALMON, CANNED FRUITS AND VEGETABLES, MUSTARD, CHILI POWDER, AND SPICES.
Claims use since January 1934.

Reg. No. 326,832. Registered Aug. 6, 1935. FOODLAND, INC., Cleveland, Ohio. Republished by Clover Farm Stores Corporation, Cleveland, Ohio, a corporation of Ohio.

FOODLAND

FOR WHEAT FLOUR, COFFEE, EVAPORATED MILK, TOMATO CATSUP, SPICES, CANNED FRUITS AND VEGETABLES, AND CANNED SALMON.
Claims use since January 1934.

Reg. No. 328,980. Registered Oct. 15, 1935. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

PRIZE WINNER

FOR WHEAT FLOUR—PLAIN AND SELF-RISING.
Claims use since 1878.

Reg. No. 338,780. Registered Sept. 15, 1936. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Wilson, Kans., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

The words "From Pioneer to Perfection" are disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since Apr. 1, 1936.

Reg. No. 342,331. Registered Jan. 12, 1937. EASTERN SHORE CANNING CO., INC., Machipongo, Va., a corporation of Virginia. Republished by registrant.

ESCCO

FOR CANNED VEGETABLES AND FROZEN VEGETABLES IN CANS.
Claims use since August 1930.

Reg. No. 365,613. Registered Mar. 14, 1939. SUPERIOR BRANDS INC., New York, N. Y. Republished by Superior Brands, Inc., New York, N. Y., a corporation of Delaware.

FOR PROCESSED FLOURS OF WHEAT, SOY, AND A COMBINATION OF WHEAT AND SOY FOR BREADS, CAKES, AND SWEETDOUGHS.
Claims use since Apr. 28, 1938.

Reg. No. 366,685. Registered Apr. 25, 1939. AMERICAN CHICLE COMPANY, Long Island City, N. Y., a corporation of New Jersey. Republished by registrant.

SEN-SEN

The lining on the drawing is for the purpose of shading only.
FOR CACHOUS.
Claims use since Apr. 7, 1938.

Reg. No. 369,724. Registered Aug. 1, 1939. THE COLORADO MILLING & ELEVATOR CO., Denver and Berthoud, Colo., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

AGUILA DE GUERRA

FOR WHEAT FLOUR.
Clamis use since Aug. 30, 1935.

Reg. No. 372,331. Registered Oct. 31, 1939. NASH-FINCH COMPANY, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

GOLDEN VALLEY

FOR CANNED FRUITS, CANNED VEGETABLES, CATSUP, FRUIT JUICE FOR FOOD PURPOSES, CANNED SALMON, PEANUT BUTTER, MUSTARD, VINEGAR, AND PICKLES.
Claims use since on or about Jan. 22, 1914.

Reg. No. 379,980. Registered Aug. 6, 1940. DIXIE MILLS COMPANY, East St. Louis, Ill., a corporation of Illinois. Republished by registrant.

DIXIE DOG FOOD

The words "Dog Food" are disclaimed apart from the mark as shown.
FOR DOG FOOD.
Claims use since September 1932.

Reg. No. 381,452. Registered Sept. 24, 1940. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., and Weiser, Idaho, a corporation of Colorado. Republished by registrant, present address Denver, Colo.

MYRTLE

The drawing is lined to indicate the color red and green of the respective areas thereby indicated.
FOR WHEAT FLOUR.
Claims use since Apr. 22, 1919.

Reg. No. 387,301. Registered May 13, 1941. DIXIE MILLS COMPANY, East St. Louis, Ill., a corporation of Illinois. Republished by registrant.

The drawing is lined for red and blue.
FOR LIVESTOCK AND DAIRY FEEDS AND INGREDIENTS ENTERING INTO THE COMPOSITION OF THE SAME—NAMELY, HEIFER GROWING FEED, CALF MEAL, MILKING GOAT FEED, DRY AND FRESHENING FEED, WHEAT BRAN, STEER FEED, LAMB AND SHEEP FEED, RABBIT FEED AND WHEAT MIDDLINGS.
Claims use since about Feb. 1, 1940.

Reg. No. 387,850. Registered June 3, 1941. FOODLAND, Inc., Cleveland, Ohio. Republished by Clover Farm Stores Corporation, Cleveland, Ohio, a corporation of Ohio.

FOR CANNED MEAT PRODUCT CONSISTING OF CHOPPED CURED PORK MEAT WITH SPICES.
Claims use since Nov. 25, 1940.

Reg. No. 394,571. Registered Apr. 14, 1942. THE COLORADO MILLING & ELEVATOR Co., Denver, Colo., and Springfield, Mo., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

The drawing is lined to indicate red color.
FOR WHEAT FLOUR.
Claims use since July 1, 1920.

Reg. No. 399,105. Registered Dec. 15, 1942. GREEN MOUNTAIN PACKING Co., INC., St. Albans, Vt., a corporation of Vermont. Republished by registrant.

GREEN MOUNTAIN

FOR CANNED VEGETABLES AND CANNED FRUITS.
Claims use since August 1894.

Reg. No. 430,783. Registered June 24, 1947. NORRIS INCORPORATED, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

Peachtree

FOR CANDIES.
Claims use since June 16, 1941.

Reg. No. 434,587. Registered Nov. 25, 1947. THE COLORADO MILLING & ELEVATOR Co., Denver, Colo., and Springfield, Mo., a corporation of Colorado. Republished by registrant, present address Denver, Colo.

Southern Lily

The word "Southern" is disclaimed except in combination with "Lily." The drawing is lined to indicate red and blue colors respectively.
FOR WHEAT FLOUR.
Claims use since Feb. 5, 1938.

Reg. No. 435,721. Registered Jan. 6, 1948. E. B. WOOD, trading as Wood Fruit Co., Atwater, Calif. Republished by registrant.

RED CHAIN

FOR FRESH DECIDUOUS FRUITS.
Claims use since September 1929.

Reg. No. 436,869. Registered Mar. 2, 1948. CHICLES "ATLAS," S. A., Guadalajara, Mexico, a corporation of Mexico. Republished by registrant.

ATLAS

FOR CHEWING GUM.
Claims use since April 1943.

Reg. No. 438,152. Registered Apr. 13, 1948. THE SUGARDALE PROVISION COMPANY, Canton, Ohio, a corporation of Ohio. Republished by registrant.

Sugardale

FOR LARD, LUNCHEON MEAT, CHOPPED PRESSED BONELESS HAM, PASTEURIZED PROCESS CHEESE, SWISS CHEESE.
Claims use since about 1935.

CLASS 47

WINES

Reg. No. 440,115. Registered Aug. 10, 1948. BROOKSIDE DISTILLING PRODUCTS CORPORATION, Scranton, Pa., a corporation of Delaware. Republished by registrant.

BROOKSIDE

FOR WINE.
Claims use since Jan. 6, 1934.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 307,419. Registered Oct. 24, 1933. N. V. BEIERSCH-BIERBROUWERIJ "DE AMSTEL," Amsterdam, Netherlands. Republished by Amstel Brouwerij N. V., Amsterdam, Natherlands, a corporation organized under the laws of the Netherlands.

FOR BEER.
Claims use since about January 1901.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 371,240. Registered Sept. 19, 1939. JOHN R. WALD COMPANY, Huntingdon, Pa. Republished by Prismo Safety Corporation, Huntingdon, Pa., a corporation of Pennsylvania.

Life Line

FOR MATERIALS SOLD AS A UNIT, INCLUDING PAINT AND SMALL LIGHT REFRACTING MATERIALS SUCH AS MINUTE GLASS SPHERES FOR USE IN CONNECTION WITH THE FABRICATION OF HIGHWAY MARKERS, OTHER MARKERS, AND THE LIKE.
Claims use since Sept. 7, 1938.

REISSUES

JUNE 14, 1949

23,120

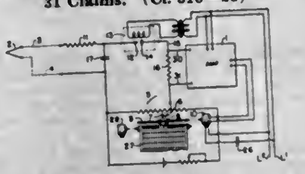
COUPLING

Clarence E. Earle, Washington, D. C., and Carl A. Covington, Alexandria, Va.

Original No. 2,463,253, dated March 1, 1949, Serial No. 743,986, April 25, 1947. Application for reissue March 25, 1949, Serial No. 83,506

14 Claims. (Cl. 285—169)

1. A coupling comprising a joint member, a detent and a detent actuating sleeve carried by said member, a detent operator interposed between and projecting beyond said member and sleeve prior to assembly of said member with a second member, and a second joint member providing an abutment engageable with said operator when said members are coupled to actuate said detent.



23,121

ANTIHUNTING ELECTRICAL MEASURING AND CONTROL APPARATUS

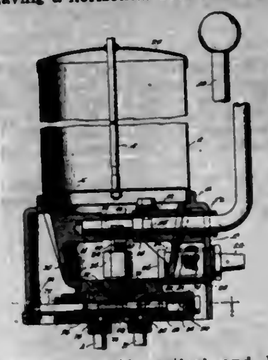
Thomas R. Harrison, Wyncote, and Walter P. Wills, Philadelphia, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Original No. 2,300,742, dated November 3, 1942, Serial No. 240,594, November 15, 1938. Application for reissue January 22, 1949, Serial No. 72,182

31 Claims. (Cl. 318—28)

1. The method of restoring the balance of an electrical network which comprises the steps of producing a potential in variable accordance with an original electromotive force in said network to be measured, opposing said potential to a measuring electromotive force, measuring the difference between said potential and said measuring electromotive force, adjusting said measuring electromotive force by means of the energization of motor means adjusting said measuring electromotive force in accordance with said measurement to reduce said difference, and continuing the energization until the difference between said potential and measuring force is zero.

23,122



DOUBLE-ACTING PUMP

John T. Leonard, Evanston, Ill.

Original No. 2,440,411, dated April 27, 1948, Serial No. 647,789, filed February 15, 1946. Application for reissue filed November 2, 1948, Serial No. 57,942

11 Claims. (Cl. 184—28)

1. In a pump of the class described, a hollow base casting which includes an upwardly open sump, a block fitted into and forming a portion of the bottom wall of said sump, said block having a vertical bore threaded at its upper end, a pump cylinder having its lower end portion fitted into said bore and having a threaded portion engaging said upper end portion of the bore, said block having a horizontal bore and a transverse

bore connecting said vertical and horizontal bores, said block having also a pair of outlet ports which intersect said horizontal bore, a slide valve member movable in said horizontal bore to connect the outlet bores alternatively with said transverse bore, and a piston reciprocable in said cylinder.

23,123

IDLER SYSTEM FOR PHONOGRAPH TURNTABLE DRIVES

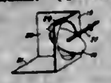
Emmor V. Schneider, Alliance, Ohio, assignor to The Alliance Manufacturing Company, Alliance, Ohio, a corporation of Ohio

Original No. 2,451,304, dated October 12, 1948, Serial No. 770,279, August 23, 1947. Application for reissue November 20, 1948, Serial No. 61,242

4 Claims. (Cl. 74—206)

1. Drive mechanism for a phonograph turntable having a depending annular flange, said drive mechanism comprising a motor mounting plate having an aperture therein, a slightly raised area surrounding said aperture, a motor suspended from the motor mounting plate, a shaft on the motor extending upward through the aperture in the motor mounting plate, a drive pulley upon the upper end of the motor shaft, a hollow rivet located in said aperture, a head on the rivet accurately spaced above said raised area, said shaft being located through said hollow rivet and spaced therefrom, a flat smooth idler plate having a portion accurately sized for a sliding fit between said raised area and the rivet head and slidably pivoted upon the rivet whereby the only contact between the idler plate and the motor mounting plate is at said raised area, an idler pulley journalled upon the idler plate and means for urging the idler pulley into contact with the drive pulley and the turntable flange.

PLANT PATENTS



GRANTED JUNE 14, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

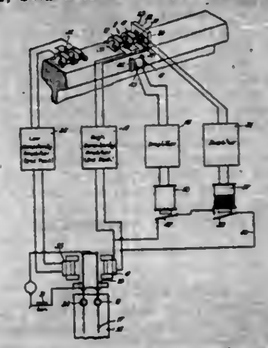
847
FLOWERING QUINCE PLANT
Walter Bosworth Clarke, San Jose, Calif., assignor to W. B. Clarke & Co., a partnership composed of Walter B. Clarke, James F. Clarke, and Walter C. Borchers, all of San Jose, Calif.
Application July 3, 1947, Serial No. 758,772
1 Claim. (Cl. 47—69)

A new and distinct variety of plant of the species *Chaenomeles lagenaria*, Koidzumi, substantially as described, being characterized by the changing and distinctive colors of its blooms, appearing during different stages of development, being pure white at first, then tinged with pink tips and finally turning to a soft rose; the habit of its first blooms being single-petaled and the later ones double-petaled; the shape and coloring of its leaves, and its superior keeping quality as a cut flower.

2,472,782
WAVE MODIFYING REFLECTOR
Walter J. Albersheim, Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 7, 1945, Serial No. 614,938
6 Claims. (Cl. 343—18)

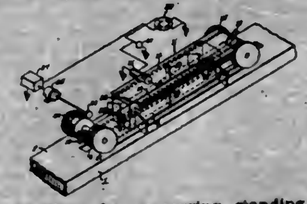
2. A radiant energy reflector comprising three planar reflecting elements mounted normally in mutually perpendicular relationship to each other, one of said elements being rotatable through 360 degrees about an axis inclined with respect to said rotatable element.

2,472,783
HANDLE CONTROL MECHANISM
Gerald N. Barrere, Cincinnati, Ohio
Application November 24, 1944, Serial No. 565,018
7 Claims. (Cl. 192—93)



1. In a device of the character described in combination, a housing, a drive shaft rotatable in said housing, a spindle rotatable in said housing, a clutch between said shaft and said spindle, a handle exterior of said housing, and pivoted thereto, a pin adjacent said handle extending through said housing, and means operable by said pin to engage and disengage said clutch, said last-mentioned means including a shoe having an inclined surface, and a second shoe having an opposed inclined surface, the arrangement being such that inward movement of said pin with respect to said housing moves said first-mentioned shoe to engage said clutch.

2,472,784
METHOD AND APPARATUS FOR DETECTING FLAWS
Walter C. Barnes, Lake Bluff, and Henry W. Keevil, Evanston, Ill.
Application September 8, 1943, Serial No. 501,537
23 Claims. (Cl. 175—183)

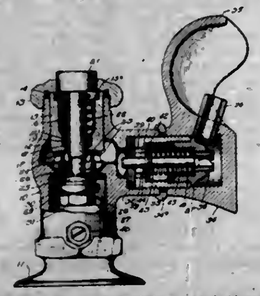


3. Apparatus for detecting flaws in a metallic body which has been energized to produce characteristic magnetic conditions adjacent to the body in the vicinity of flaws, including a detector movable along the body for locating said characteristic conditions, a recorder operated by said detector, said detector comprising at least two units adapted to respond concurrently to the same longitudinal portion of the body, each including a flux-responsive pick-up, one being responsive to certain flux conditions adjacent the body the other being responsive to certain other flux conditions adjacent the body, and means for so interlocking said two units that their combined responsiveness to particular flux conditions caused by irregularities in the body, determine whether or not the recorder is actuated.

11. Apparatus for detecting flaws in a metallic body which has been energized to produce characteristic magnetic conditions adjacent to the body in the vicinity of flaws, including a detector movable along the body for locating said characteristic conditions, a recorder operated by said detector, said detector comprising at least two

units responsive concurrently to the same longitudinal portion of the body each including a flux-responsive pick-up, one of said units being responsive to the magnetic fields caused by fissures and the magnetic fields caused by non-fissure irregularities in the body and another of said units being selectively responsive to the magnetic fields caused by non-fissure irregularities in the body, and means for so interlocking said two units that their combined responsiveness to particular flux conditions caused by irregularities in the body determines whether or not the recorder is actuated.

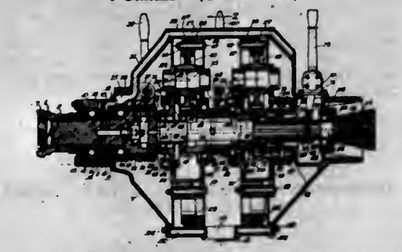
2,472,785
STANDING WAVE DETECTOR AND INDICATOR SYSTEM
Daniel Blitz, Newtonville, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application September 14, 1946, Serial No. 697,131
11 Claims. (Cl. 171—95)



1. A system for measuring standing wave characteristics in a waveguide transmission line

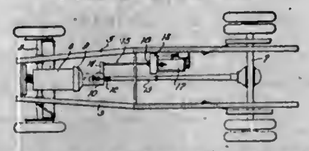
comprising, in combination, a coupling waveguide disposed adjacent to and adapted to be coupled over a distance of at least one half wavelength to said line, a wave measuring device coupled into said coupling waveguide, and a movable wave coupling device interposed between said waveguide section and said waveguide transmission line and movable with respect to both said section and said line for providing selective wave coupling to said measuring device at progressive points along said transmission line.

2,472,786
METHOD OF PICKLING METAL CONTACT SURFACES
Edwin R. Bowerman, Jr., Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
No Drawing. Application August 21, 1943, Serial No. 499,556
3 Claims. (Cl. 134—3)



1. The method of removing a porous oxide coating from the surface of a ferrous base alloy which comprises lightly etching said alloy by treating its surface with a mild etching agent containing a wetting agent to effect an activation of the alloy surface and then immersing the alloy in a bath containing approximately 25 gms. of copper nitrate and approximately 200 c. c.'s of nitric acid per liter thereby first causing a replacement action in which iron on the surface of the alloy is replaced by copper and dissolved in the bath prior to the removal of the alloy from the bath.

2,472,787
FLOW REGULATOR
Frank L. Brown, Park Ridge, and Harry S. Steen, Chicago, Ill., assignors to Chicago Faucet Company, a corporation of Illinois
Application August 24, 1945, Serial No. 612,320
2 Claims. (Cl. 137—152)

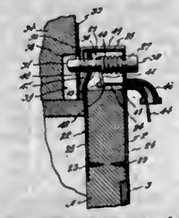


1. A device for minimizing variations in the flow of liquid in a conduit subject to variations in supply pressure, comprising a control unit adapted to be inserted in said conduit to control the flow therethrough and having a passageway therethrough including a cylindrical portion, a first wall adapted to extend completely across said conduit in the end toward the inlet of the conduit, said wall having a central guiding orifice and a plurality of flow orifices therethrough; a removable second wall opposite said first wall and having a single central control orifice, said orifice having a conical portion tapering away from said first wall and opening into a cylindrical portion; a pin of greater length than the distance between said walls and extending into and movable in said guiding and control orifices, said pin having a close but removable fit in said guiding orifice and having a loose fit in the cylindrical portion of said control orifice; a disk fixed on said pin and so related to said flow orifices as to be subject to and moved by the kinetic energy of liquid flowing therethrough at all times during flow, there being substantial clearance between said disk periphery and the wall of the cylindrical portion of the passageway; and a spring urging said pin and disk toward said first wall.

2,472,788
STEP-UP GEARING
Robert E. Burrus, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application May 25, 1945, Serial No. 595,781
6 Claims. (Cl. 74—750)

1. In step-up gearing, a power input shaft, a power output shaft, a pair of axially spaced sun gears rotatably mounted about said output shaft and having axially spaced internal clutch teeth radially encircling said output shaft, a first planetary gear mechanism for one of said sun gears, a second planetary gear mechanism for the other of said sun gears, clutch means for directly coupling said shafts together or for coupling said input shaft to said first planetary mechanism, secondary clutch means on said output shaft for optionally coupling either of said sun gears thereto, and means operable to clutch the sun gear associated with said first planetary mechanism to said second planetary mechanism.

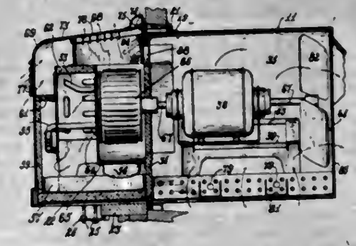
2,472,789
VEHICLE CLUTCH CONTROL MECHANISM
Robert E. Burrus, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application July 16, 1945, Serial No. 605,236
8 Claims. (Cl. 192—.07)



1. In a vehicle, a main engine, having an accelerator, an auxiliary engine, a transmission coupled to said main engine, a lay shaft connecting said auxiliary engine into said transmission, clutch means between said auxiliary engine and said lay shaft, and means responsive to movement of said accelerator to an idling position of said main engine for disconnecting said clutch means.

2,472,790
METHOD OF PREPARING STARCH PASTE
James P. Casey, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application April 20, 1946, Serial No. 663,748
11 Claims. (Cl. 195—66)

1. The method of preparing an enzyme-thinned starch paste which comprises providing a slurry of water, starch-liquefying enzyme, and a plurality of starches modified in such manner that their enzyme-converting temperatures are lowered around 15° F., said starches being so selected that there is a difference between the enzyme-converting temperatures of every pair thereof, heating the slurry to the enzyme-converting temperature of the starch having the lowest enzyme-converting temperature, maintaining the slurry temperature at this value until the corresponding starch has been thinned by the enzyme, raising the temperature of the slurry to the enzyme-converting temperature of the starch having the next higher enzyme-converting temperature, maintaining the slurry at the elevated temperature until the corresponding starch has been thinned by the enzyme, but below the inactivation temperature of the enzyme, until the starches therein have been progressively thinned by the enzyme.



2,472,791
OVERHEAD DOOR LOCK
Henry B. Clark, Elizabeth, N. J.
Application January 14, 1948, Serial No. 2,311
2 Claims. (Cl. 292—171)

1. A lock including a keeper plate fastened to a fixed member, said plate having an opening, a strap having one end fastened to the keeper plate and its other end offset therefrom, a substantially U-shaped plate fastened to a movable member, a sliding bolt supported by said U-shaped plate and adapted to be projected into the opening in the keeper plate for locking the fixed and movable members together and a hooked strap fastened to said U-shaped plate adapted to interlock with the offset end of the strap of the keeper plate for preventing relative movement between the keeper plate and U-shaped plate in a direction parallel to the direction of movement of the bolt.

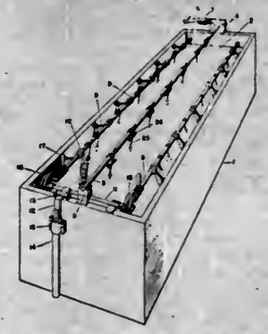
2,472,792
AIR CONDITIONING UNIT FOR MOUNTING IN WINDOWS
Irving H. Cohler, Chicago, Ill., assignor, by mesne assignments, to Mitchell Manufacturing Company, a corporation of Delaware
Application September 17, 1945, Serial No. 616,844
6 Claims. (Cl. 62—140)

1. In a window mounted unit air conditioner, the combination of, a window mounting structure comprising a top wall, side walls, an end wall and an open bottom extending outwardly through the window opening and having guide rails at its bottom extending inwardly of said window opening, means for fastening the mounting structure to the window and to the window sill, and an air circulating and cooling unit mounted in said mounting structure comprising an open frame-like base and a vertical partition mounted on said base, a condenser mounted on the open frame-like base on one side of the partition, said condenser and partition cooperating with said top, side and end walls of the mounting structure to form a machine compartment, a fan in said machine compartment to cause air to flow into the compartment over the condenser, a floor on said frame-like base on the other side of the partition, an evaporator supported above said floor, and walls arranged around said evaporator and cooperating with the floor and vertical partition to form an evaporator compartment, a shroud covering said walls, said shroud having air-flow openings communicating with the evaporator compartment, and selectively controlled openings in said vertical partition communicating with outside atmosphere to selectively control the intake and exhaust of air into and out of the evaporator compartment.

2,472,793
GAS STOVE VALVE OPERATOR GUARD
Charles Conterno, Brooklyn, N. Y.
Application June 12, 1947, Serial No. 754,295
4 Claims. (Cl. 126—42)

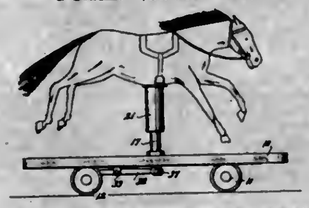
1. In a gas stove guard for shielding pet-cocks, two laterally enclosed telescopically fitted cover members of channel-like cross-section and providing a continuous rear opening, wall portions at the opposite outer ends of the said members, resilient holders extending inwardly from said wall portions and each containing a terminal end for engaging the rear surface of a pet-cock, the said terminal ends being disposed a predetermined distance inwardly of the peripheral edge defining the said opening, and stops within said opening in engagement with the rear surfaces of said holders for holding them against rearward movement, whereby the said terminal ends are maintained at least the said predetermined distance inwardly from said peripheral edge.

2,472,794
REMOVAL OF SURFACE MOISTURE FROM WET ARTICLES
Charles D. Cothran, Pomona, Calif., assignor, by mesne assignments, to M. W. Engleman, trustee, Los Angeles, Calif.
Application September 15, 1944, Serial No. 554,365
28 Claims. (Cl. 99—156)



1. In the preparation of fresh fruit and vegetable articles for market by cleansing them with the aid of water applied in relatively large volume in a cleansing zone, and thereafter surface-drying them, the process which comprises moving the wet articles out of the cleansing zone and, while supporting them in such manner as to permit liquid to drain therefrom, applying to them a relatively small volume of a water-miscible surface-conditioning liquid containing a surface active agent in concentration, not substantially exceeding 2%, effective to promote filming-out and accelerated run-off of the adhering water to an extent such that the amount left on said articles is substantially less than the amount which said articles carried immediately prior to such application; the volume of the surface-conditioning liquid thus applied being so controlled that the amount of surface active agent actually employed for a given quantity of said articles is restricted to only a small percentage, not substantially exceeding 3%, of what would have to be employed in order to obtain the same run-off effect, if contained in the large volume of water applied in said cleansing zone.

2,472,795
CONTROL FOR RANGES
Joseph F. Dunn, New York, N. Y.
Application December 22, 1945, Serial No. 636,930
1 Claim. (Cl. 236—15)



A range control comprising in combination, a time clock having hour and minute hands movable over the usual time dial having indicia, the time clock having tubular concentric shafts for driving the hour and minute hands, a spring driven announcer with a bell mounted to the rear of the time clock and having an operating shaft extending forwardly through the inner tubular shaft and a control knob mounted on the front of the operating shaft in front of the hour and minute hands, the knob serving, when manually rotated, to wind the announcer spring and determine the time to elapse before the bell is sounded, and an oven thermostat having a temperature presetting means including a shaft mounted directly to the rear of the announcer and coaxial with the control knob shaft and an L-shaped operator for the temperature presetting shaft, said L-shaped operator extending forwardly and having its terminus adjacent the periphery of the time dial, and a temperature dial past which the said terminus is movable to indicate the temperature setting.

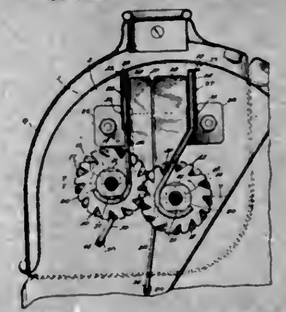
2,472,796
ANODE ROD FOR PLATING TANKS
William G. Evans, Baltimore, and William C. Schaefer, Parkville, Md., assignors to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application September 6, 1944, Serial No. 552,870
4 Claims. (Cl. 204—297)

1. An anode-rack suspension for an elongated electro-plating tank having a work-supporting rod extending along the middle of the tank, comprising a plurality of parallel brackets of equal length spaced longitudinally along one side wall of the tank and each having one end pivoted on a vertical axis to said side wall, a conductive anode-rack-supporting rod extending longitudinally of said tank, and means including an insulator arranged between said anode-rack-supporting rod and the other end of each bracket for pivotally supporting said anode-rack-supporting rod for movement relative thereto about a vertical axis, whereby said anode-rack-supporting rod may be moved relative to the side wall of the tank, toward and away from the work-supporting rod to regulate the plating of the work supported thereby.

2,472,797
TOY HORSE
Louise M. Jones Foulke, Brooklyn, N. Y.
Application May 23, 1947, Serial No. 749,969
1 Claim. (Cl. 280—1.19)

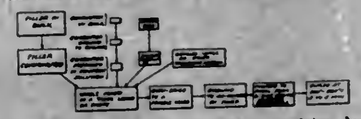
A toy comprising a base, axles rotatably secured to the base, wheels mounted on said axles, one of said axles having a crank deformation therein, a vertical rod slidably mounted in said base and extending through the base, a figure of an animal such as a horse rigidly mounted on the upper end of said rod, a beam pivotally secured to the base and having a longitudinal slot in one end thereof, a pin on the lower end of said rod registering in said slot, a link pivoted at one end to the other end of said beam and having its other end pivotally secured to said crank deformation, a tubular housing of lesser length than said rod secured in said base and surrounding said rod, said housing having an outwardly extending flange on the upper end thereof, a second tubular housing rigid with said figure and of greater diameter than said first housing, said upper end of said first housing registering slidably in said second housing, said upper end of said rod having a head thereon, the lower end of said second housing having an inwardly extending flange thereon slidably engaging said first housing and cooperating with said head to provide a limit stop to the upward movement of said second housing and hence of said figure, a compression spring surrounding said rod between said head thereof and said first-named flange, said second housing having an internal thread thereon, said head having an external thread thereon engaging said internal thread thereby releasably and adjustably locking said rod in said second housing.

2,472,798
LOW-PASS FILTER SYSTEM
Gordon L. Fredendall, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1943, Serial No. 512,115
13 Claims. (Cl. 178—44)



7. An adjustable low band pass network for a source of signal frequency currents including a first modulator, a first adjustable carrier frequency current source, a first band pass filter network, means for applying currents including currents of frequencies to be transmitted and said first carrier currents to said first modulator to derive said first carrier and equal sideband currents, means for applying said equal sideband currents to said first filter to pass said first carrier, a complete one of said sidebands and only the desired low frequency portion of the other of said sidebands, a second adjustable carrier frequency current source, a second modulator, means for applying said second carrier currents and said first carrier and sideband currents derived from said first filter to said second modulator to derive said second carrier and second equal sideband currents, a second band pass filter network, means for applying said second carrier and second equal sideband currents to said second filter to derive two equal sidebands each having widths corresponding to said desired low frequency portion of said other of said first sidebands, means for adjusting the frequencies of said carrier current sources, and means for detecting said last mentioned equal sidebands to derive currents having substantially only frequencies within the desired low pass band.

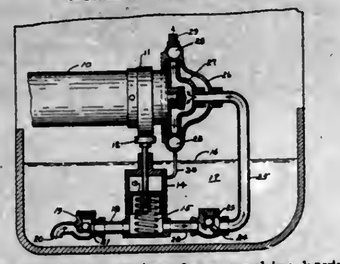
2,472,799
METHOD FOR THE PRODUCTION OF ALKALI-METAL SALTS OF TRIORGANO-SILANOLS
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application November 25, 1946, Serial No. 712,040
3 Claims. (Cl. 260—448.8)



1. The method for the production of organosilicon compositions which comprises dehydrating a reaction mixture of an alkali metal oxide, water, and an organosilicon compound selected from the group consisting of compounds of the type RR'_2SiY and $(RR'_2Si)_2O$ where R represents methyl, Y represents alkoxy and R' is selected from the group consisting of methyl and phenyl radicals, whereby a salt is obtained of the general formula RR'_2SiOM in which R represents methyl, R' is selected from the group consisting of methyl and phenyl radicals and M represents an alkali metal.

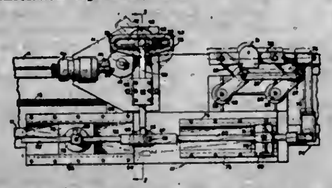
2,472,800
KNIFE ASSEMBLY AND STRIPPER FOR MEAT TENDERING MACHINES
Arthur H. Ahrndt, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application November 18, 1944, Serial No. 564,034
30 Claims. (Cl. 17—26)

1. A machine for operating on a substance and comprising a knife roll assembly member and a stripper member, said members being disconnected from and supported independently of each other and adapted to be removed as a unit from said machine, there being means carried by one of said members adapted to be brought into engagement with the other member when one member is being removed to support the other member to permit such removal as a unit.



2,472,801
TEMPERATURE-STABLE MOLDED RESISTOR
Morris L. Barfield, Washington, D. C., and John J. Gurtowski, Wallington, N. J., assignors to the United States of America as represented by the Secretary of War
Application May 6, 1947, Serial No. 746,284
3 Claims. (Cl. 201—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of producing a resistor body comprising comminuting an unpolymerized thermoplastic base, comminuting a filler material of low cohesive quality and high electrical resistance, reducing a conductive material to a colloid, mixing all the ingredients in a transient liquid medium, to produce a viscid mass, baking the mass at low temperature to produce a completely dry relatively weak friable mass, comminuting said mass to at least the fineness of the original said



comminution of binder and filler, pressing the last comminuted material in a mold with high pressure, and curing the same at a high temperature.

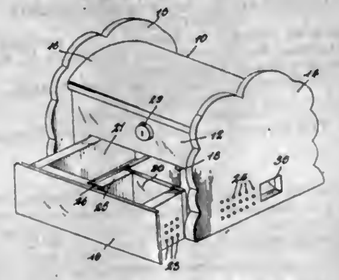
2,472,802
LUBRICATION SYSTEM
Oliver D. H. Bentley, Dover, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 4, 1947, Serial No. 752,322
6 Claims. (Cl. 184—6)

1. A lubrication system for a machine having an oil sump and a rotary shaft, comprising a centrifugal pump having a rotor attached to the shaft for rotation therewith, a reciprocating pump having a piston, means operated by said shaft for moving said piston on its pressure strokes, a spring for returning said piston on its suction strokes, means for supplying oil from said sump into said reciprocating pump and from same into said centrifugal pump, and means using oil from said centrifugal pump for rendering said means operated by the shaft ineffective to move said piston when said shaft rotates at high speeds.

2,472,803
WELDING APPARATUS
Frederick C. Beyer, Washington, D. C., and Clarence E. Jackson, Niagara Falls, N. Y.
Application April 17, 1946, Serial No. 662,768
3 Claims. (Cl. 219—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

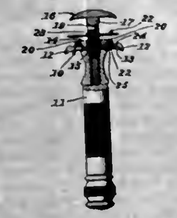
1. A welding apparatus including a bed, a carriage supported on and movable along said bed in a substantially straight line, means for advancing said carriage along said bed, a welding head mounted on said carriage and constrained to move thereon in a horizontal plane, means connected to said welding head for causing said welding head to reciprocate across the line of advance of said carriage, and means associated with said welding head reciprocating means imparting thereto a component of motion parallel to the direction of movement of said carriage whereby a substantially semi-elliptic movement is imparted to said welding head as it is reciprocated.

2,472,804
COMBINATION MOUNT AND SHOULDER REST
John R. Bird, Framingham, Mass.
Application August 29, 1947, Serial No. 771,291
3 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A mount for a recoilless rifle or the like having a tube and front and rear mounting trunnions, comprising a clamp mounted in said rear trunnion for swinging movement about a pivot, a bipod, including a pair of substantially parallel-disposed legs carried by said clamp and responsive to the swinging movement of said clamp to move to and from a first position wherein said legs lie in a plane substantially parallel to the axis of said tube to form a shoulder support for said gun and a second position wherein said legs lie in a plane substantially normal to said axis, means on said bipod for guiding each said leg from and toward the other said leg to one of a plurality of selective positions relative to each other to form a support for the rifle, including means for locking said legs in a said selected position, a front member including a dependent extendible handle rigidly carried by said front trunnion, means telescopically carried within said handle for selectively adjusting the length of said front member, and locking means for maintaining said telescopic means in a selected position, said legs being curved intermediate the ends thereof to form a shoulder rest when said legs are in said first position.

2,472,805
MULTIPLE BELT CONVEYER SYSTEM
Frank J. Blume, Chicago, Ill.
Application August 18, 1945, Serial No. 611,359
1 Claim. (Cl. 198—185)



A conveyor system comprising a sending station and a plurality of receiving stations, a long horizontal trough extending from the sending station past each receiving station and terminating at the most remote one, the bottom of the trough having large openings at the receiving stations, as many belts as there are stations extending from the sending station through said trough while lying flat upon each other, the belt which is at the bottom of the trough at any given receiving station passing down through the corresponding opening and returning to the sending station; a second horizontal trough for the returning portions of all belts, except the two outer belts, reaching from the sending station past all of the receiving stations except the one that is most remote from the sending station, said second trough being interrupted at the stations which it passes, and including in the gap in the second trough at each such station a receptacle to receive articles intended for that station; each such receptacle having at the bottom a tunnel through which the rearwardly movable belts in the second trough pass; and a third horizontal trough containing the portions of the two outer belts returning from the most remote station to the sending station.

2,472,806
AUTOMATIC ELECTRIC ANIMAL TRAP
Alfred G. Burns, Farmland, Ind.
Application April 17, 1945, Serial No. 588,770
6 Claims. (Cl. 43—99)

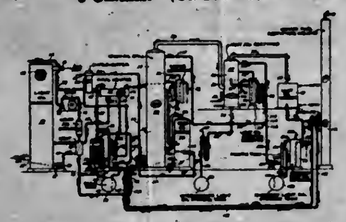
1. An automatic everset electrical animal trap comprising a cabinet having an entrance opening, a ramp within the cabinet in advance of the opening, a tiltable platform at the upper end of the ramp, a body-receiving compartment in said cabinet in advance of said platform, a swinging strike lever above the platform, an electrical contact on said platform, an electrical contact normally spaced from said first named contact, but engageable upon downward swinging movement of the platform, an electrical circuit connected between said contacts, said circuit including means for forcibly swinging said strike lever, and a strike plate mounted in the cabinet in the path of forward swinging movement of said strike lever.

2,472,807
SAFETY RAZOR
John W. Clark, Washington, D. C., assignor of one-third to Ethel Hudson Clark, Washington, D. C.
Application March 16, 1944, Serial No. 526,732
9 Claims. (Cl. 30—70)

1. A safety razor comprising a member having a longitudinally and centrally disposed flat blade-engaging area; a second member having a complementary flat blade-engaging area to clamp the central portion of a blade against the first-named area in flat undistorted position; a longitudinally disposed centrally placed rib on one of said members and a complementary recess on the other of said members, said rib having straight side wall portions and straight end wall portions, said end wall portions being only slightly coned to engage the ends of the slot in the blade slightly in advance of the engagement of the side wall portions with the slotted blade, and curved blade-engaging edges on said members adjacent the flat areas to engage and flex the outer edge portion of a blade.

2,472,808
THERMOCOUPLE JUNCTION WITH RADIATION SHIELD
Andrew I. Dahl, Arlington, Va.
Application July 1, 1946, Serial No. 680,783
5 Claims. (Cl. 136—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A shielded thermocouple for use in gas streams comprising a thermocouple junction of base metals shaped substantially into a thin disc, leads to the junction, a covering of a noble metal having low thermal emissivity closely surrounding and in good thermal contact with the junction and extending beyond said junction along the leads, and a layer of insulating material interposed between the leads and the noble metal covering whereby the thermocouple is shielded against thermal radiation.



2,472,809
ILLUMINATED RETICLE ATTACHMENT FOR TELESCOPES
John R. Decker, Amherst, Mass.
Application September 6, 1945, Serial No. 614,797
1 Claim. (Cl. 88—2.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In an attachment for a sighting telescope, a first sleeve adapted to form the ocular end of said telescope and to be attached to said telescope as an axial extension thereof, said sleeve having a rearwardly-facing internal annular shoulder between its ends, an objective lens fitting within said sleeve against said shoulder, first and second tube sections fitting said first sleeve and having confronting edges defining a plane at 45° to the common axis of said sleeve and telescope, a partial reflector interposed between and engaged on opposite sides about its periphery by said edges, a collar threaded into the ocular end of said sleeve and operable to engage said first tube section to force both said sections axially whereby said second section holds said lens against said shoulder and said sections act to clamp said partial reflector between them, a second sleeve secured in offset relation to and parallel with, said first sleeve, there being a passageway for light between said sleeve in a transverse plane through said partial reflector and a second plane through the parallel axes of said sleeves normal

to said partial reflector, and means in said second sleeve and including a reflector, lens, reticle and lamp, for projecting an illuminated image of said reticle onto the rearward face of said partial reflector through said passageway.

2,472,810
RECOVERY OF LIGHT OIL FROM ABSORBENT
Fred Denig, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application December 24, 1941, Serial No. 424,278
5 Claims. (Cl. 196—8)

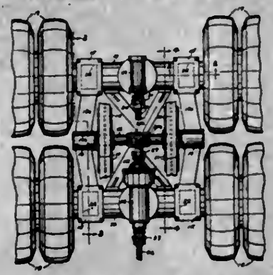
1. A process for the recovery of light-oil vapors from coke-oven gas containing the same by means of an absorbent oil, that is recycled in sequence through a step for absorbing light-oil vapors from said coke-oven gas and a step for stripping so-absorbed light oil from said absorbent oil by direct contact with steam, and that in the course of said recycling accumulates undistillable contaminant which reduces its effectiveness in said absorption step, said process comprising the steps of: prior to introduction into said stripping step, heating absorbent oil effluent from said absorption step to a temperature of at least about 200° C. by indirect contact with vapor of a boiling substance that is at substantially atmospheric pressure and at a temperature of at least about 200° C. and also superheating said steam at low pressure by indirect contact with vapor of said boiling substance, introducing so preheated absorbent oil into said stripping step and withdrawing from near the absorber oil inlet end thereof a minor portion of the bulk thereof into a distillation step for the same, and flowing said superheated steam first into direct contact with said minor portion of hot absorbent oil thereby simultaneously volatilizing without substantial condensation of the steam absorbent-oil constituents from the minor portion, rejecting absorbent-oil residuum from said minor portion distillation, thereafter introducing the steam and volatilized absorbent oil from the minor portion distilling step into said stripping step, and effecting the stripping therein substantially solely with the stripping steam and vapors from the aforesaid minor portion distillation prior to withdrawal of the said minor portion from the stripping step to the minor portion distillation step.

2,472,811
POLYMERS OF ALPHA-FLUOROMETHYL ACRYLIC ACID ESTERS
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application April 27, 1946, Serial No. 665,620
8 Claims. (Cl. 260—83)

1. A polymer obtained by heating in the presence of a polymerisation catalyst a compound having the general formula:

$$CH_2=C(CXF_2)-COOR_1$$

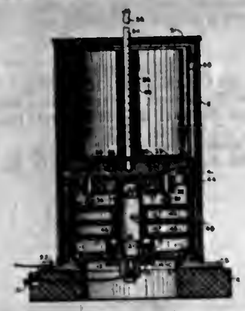
wherein R_1 represents an alkyl group containing from 1 to 4 carbon atoms, and X represents a member selected from the group consisting of a hydrogen atom and an atom of fluorine.



2,472,812
ESTERS OF ALPHA-FLUOROMETHYL ACRYLIC ACIDS
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application April 27, 1946, Serial No. 665,621
4 Claims. (Cl. 260—486)

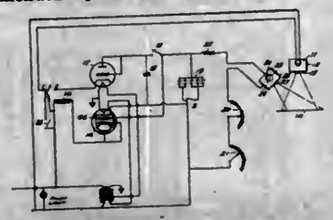
1. The compounds having the general formula:

$$CH_2=C(CXF_2)-COOR_1$$



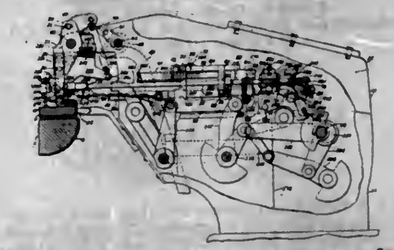
wherein R_1 represents an alkyl group having from 1 to 4 carbon atoms, and X represents a member selected from the group consisting of an atom of hydrogen, and an atom of fluorine.

2,472,813
TANDEM AXLE CONSTRUCTION
Walter F. Double, Wickliffe, Stewart F. Armington, Willoughby, and Raymond Q. Armington, Shaker Heights, Ohio, assignors to The Euclid Road Machinery Co., Cleveland, Ohio, a corporation of Ohio
Application February 6, 1947, Serial No. 726,871
3 Claims. (Cl. 280—104.5)



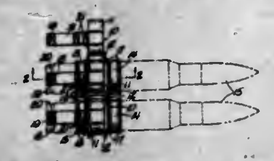
1. Tandem axle construction comprising a vehicle frame, a shaft rigidly supported thereon and therebeneath and extending transversely of said frame, parallel rocker beams on opposite sides of said frame, each beam having an intermediate portion oscillatably mounted on said shaft and having arms diverging upwardly from said shaft in a fore-and-aft direction, parallel front and rear axle units on opposite sides of said shaft, each of said axle units having wheel means at opposite sides of said vehicle, interengaging pairs of connecting parts between each of said axle units and the free ends of said rocker beam arms, a resilient deformable body between each said pair of connecting parts for cushioning relative movement between said axle units and said beams, and a V-shape wishbone bracket for each axle unit, each of said brackets having a universal connection between the apex of said V-shape and said shaft and having the diverging legs of said V-shape secured to the associated axle unit.

2,472,814
TESTING DIELECTRIC MATERIALS
Myron A. Elliott, Washington, D. C.
Application July 13, 1945, Serial No. 604,940
8 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



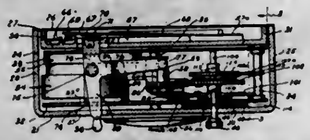
1. In an apparatus for determining the dielectric characteristics of a liquid, a pair of spaced electrodes having flat parallel opposed surfaces, one of said electrodes having a recess formed in a face thereof opposed to the other electrode for receiving a quantity of liquid, the other of said electrodes being of relatively small volume and provided with a current lead comprising a tube of a material having low thermal conductivity with a coating of electrically conductive material, said other electrode being provided with a supporting collar of electrically insulating material having a flat face flush with the electrode face, means for clamping said electrodes together to cause said collar face to bear against the opposed face of said first electrode, means for cooling said liquid while in said recess, means for applying an alternating field to said electrodes, and electrical testing means operatively connected with said electrodes.

2,472,815
AUTOMATIC LIGHT CONTROL
William D. Fleming, Denver, Colo.
Application August 23, 1946, Serial No. 692,420
1 Claim. (Cl. 250—41.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An automatic light control having in combination a light source illuminating an object, a power line for said light source, and a control means for energizing and deenergizing said light source, said control means comprising a photoelectric device responsive to the degree of illumination of said object, a vacuum control tube having at least an anode, a cathode and a grid, a rectifier having a cathode terminal and an anode terminal, a relay in the anode circuit of said control tube, said relay including an armature, a normally-open contact in its pickup circuit and a normally-closed contact in circuit with said light source, means connecting said armature to one side of said power line, means connecting said normally-closed contact to one terminal of said light source, means connecting said other terminal of said light source to the other side of said power line, means connecting said normally-open contact of said relay to said cathode terminal of said rectifier; a first condenser connected between the anode terminal of said rectifier and said other side of the power line; a second condenser connected between said grid and cathode of the control tube, a connection between said other side of the power line and the cathode of the control tube; a push-button switch connected between the grid of the control tube and said anode terminal of said rectifier; and means connecting said photoelectric device across said second condenser; whereby upon application of power-line voltage, said control tube will conduct, causing the relay to operate opening the light circuit and through the action of the rectifier charge said first condenser setting up the circuit for operation, and upon depressing said switch the said second condenser charges, blocking the control tube thereby deenergizing said relay and energizing said light source, illuminating said object, the photoelectric device discharging said second condenser thereby unlocking said control tube after a predetermined time, and deenergizing said light source.

2,472,816
GRIPPER MECHANISM
Joseph Fossa, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 26, 1947, Serial No. 730,978
14 Claims. (Cl. 12—1)

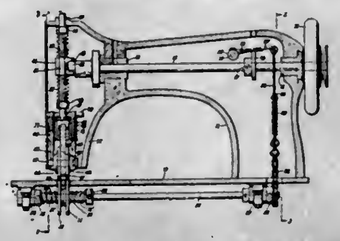


14. A gripper mechanism comprising a first jaw yieldingly movable in a direction to tension the stock and having a toothed operating face for engaging one side of the lasting margin of the stock, a second jaw having a toothed operating face for engaging the opposite side of the lasting margin, means for reciprocating said second jaw including adjustable spring means for moving said second jaw toward said first jaw, and positive means for moving said second jaw away from said first jaw, and cooperating cam means associated with said jaws constructed and arranged, upon movement of the second jaw in a direction toward the first jaw, to effect relative approaching movement of said operating faces for positively gripping the lasting margin and, thereafter, to cause movement of said first jaw by, and together with, said second jaw for tensioning the stock.

2,472,817
CARTRIDGE BELT LINK
Alonzo F. Gaidos, Redwood City, Calif., assignor to the United States of America as represented by the Secretary of War
Application April 4, 1946, Serial No. 659,638
5 Claims. (Cl. 89—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

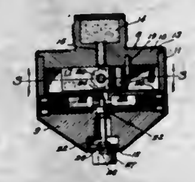
2. In an ammunition belt of the type made up of a series of like links articulately interconnected by a series of cartridges, a belt link comprising a body, a single cartridge-receiving loop on the body at one side thereof, a pair of cartridge-receiving loops on the body at the other side thereof and spaced apart coaxially on an axis paralleling the axis of the single loop a distance slightly greater than the axial width of said single loop to receive coaxially between them the single loop of an adjacent similar link, and means on the single loop for locating a cartridge received by the single loop and the pair of loops of an adjacent similar link, the means including a finger member projecting in a generally axial direction from the single loop and including a portion formed to engage a cartridge, the member being constructed and arranged to bridge one of the loops of the pair of loops on an adjacent similar link.

2,472,818
TIMING AND CONTROL DEVICE
Alfred W. Gardes, Detroit, Mich.
Application October 18, 1943, Serial No. 506,615
14 Claims. (Cl. 161—1)



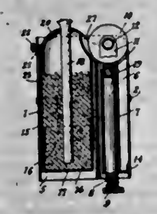
1. A timing and control device adapted for use in conjunction with an electrically operated unit comprising the combination of, a switch for controlling a current supply circuit to said unit, a manually settable switch control member settable to control the operation of said switch, timing means including a clock face having hands associated therewith, a time responsive device coacting with said timing means and with said manually settable switch control member for automatically closing and opening said switch at predetermined times, a finish time-indicating device arranged in non-driven relationship with said timing means, and separate and apart from said clock face and hands, manually operable control means for setting said finish time-indicating device into position to indicate a preselected finish time, a cooking time-indicating device arranged in non-driven relationship with said timing means, said cooking time indicating device being separate and apart from said clock face and hands and from said finish time indicating device, manually operable control means, independent of said timing means, for setting said cooking time-indicating device into position to indicate a preselected cooking time, and means under the control of and coacting with both of the said manually operable control means for said cooking and finish time-indicating devices for setting the said time responsive device for a preselected cooking time and a preselected finish time.

2,472,819
MECHANICAL SKELETON
Josef H. Giesen, United States Navy
Application January 26, 1945, Serial No. 574,670
3 Claims. (Cl. 35—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



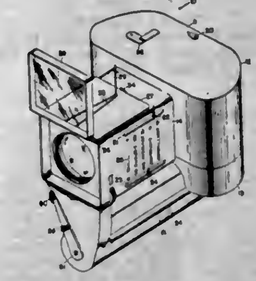
1. A mechanical assembly simulating the bones of one of the extremities of the human body comprising an upper member having a slot, a lower member, a tongue removably secured to said lower member adapted to be engaged in the said slot, releasable means for securing said tongue in said slot adapted to allow relative movement of the said members in a single plane, and means for limiting the movement of the said members.

2,472,820
BONDING MACHINE
Joseph P. Graham and William Roland Church, Midland, Mich., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 7, 1945, Serial No. 576,658
20 Claims. (Cl. 154—42)



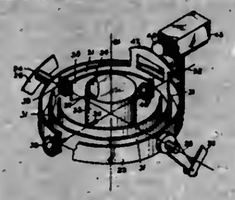
1. In an electrostatic bonding machine, in combination, an electrode having a work-contacting face, means for establishing a high frequency field in a zone proximate to said face, means for feeding dielectric material through said zone, thereby heating the portion of said material in said zone, and means for repeating pressing the electrode against the work in the same portion thereof.

2,472,821
SENSITIVE FUSE
Raymond L. Graumann, Alexandria, Va.
Application August 3, 1940, Serial No. 350,635
4 Claims. (Cl. 102—79)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A fuze armable by rotation about its axis, comprising a body, a booster charge in said body, an axially extending booster lead connecting with said booster charge, a detonator holder mounted in said body to be translationally slidable transversely of the axis of said body and having a detonator therein to be alined with said booster lead when said holder is in the armed position, spring pressed detents engaged with said holder to retain said holder in the unarmed position but releasable therefrom by centrifugal force, said holder being moved to armed position by centrifugal force after release of said detents, a firing pin disposed along the axis of said body, said pin having a heavy collar adjacent its inner end and a light shearable flange adjacent its outer end, spring pressed detents engaging the inner face of said collar to hold said firing pin in unarmed position but releasable therefrom by centrifugal force, an impact firing head secured on the outer end of said firing pin seated against the outer face of said light flange and adapted to shear said flange in case of impact on said head when said firing pin is in unarmed position, and a puncturable separator disk between the inner end of said firing pin and said detonator holder.

2,472,822
LIGHTER
Howard B. Greene, Cheshire, Conn.
Application February 14, 1946, Serial No. 647,505
1 Claim. (Cl. 67—7.1)

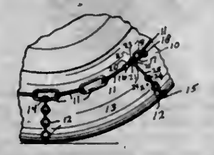


In a pyrophoric lighter, a casing in the form or an open-ended tube, the side walls of the tube being indented to form the casing into a pair of substantially parallel tubular chambers, a spark-creating device including a flint-holding tube of less outside diameter than the inside diameter of the chamber in which said tube is located, the tube being spaced from the wall of said chamber, a lug projecting radially from one end of the flint-holding tube and extending to and being connected to the wall of said chamber, the opposite end of the flint-holding tube being provided with a pair of lugs between which a rotative abrasive wheel is mounted, the sides of the tube-containing chamber being indented to form ears between which the lugs on the tube are positioned, an axle carrying the abrasive wheel, said axle extending through the ears and lugs, a fuel container slidably mounted in the second chamber of the casing alongside of the spark-creating means, said fuel container being slidable axially in the tube and having a wick protruding from one of its ends, the end of the fuel container from which the wick protrudes being substantially dome-shaped and being recessed, the rotative abrasive wheel being adapted to extend into the recess in the domed head of the fuel container when the container is slid to the limit of its movement in a direction to project the end of the wick beyond one end of the casing.

2,472,823
COMBAT CAMERA HAVING HANDGRIP OPERATING MEANS
William R. Harlow, United States Navy
Application September 13, 1946, Serial No. 696,976
1 Claim. (Cl. 95—11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

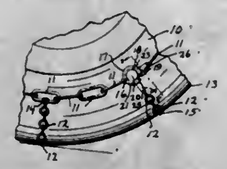
In a camera for one hand operation the combination of a case, a hand-grip member secured to the bottom of said case, a lens and shutter unit arranged telescopically in said case, a lens cover hinged to said case, a two-element view finder hinged to said case, both said lens cover and said view finder having the same hinge and being spring-loaded to a closed position, gripping pressure responsive means in said hand-grip member adapted to simultaneously open said lens cover and move said view finder to operative position, a spring motor in said hand-grip member, a film transport gear train in said case driven by said spring motor, trigger means on said hand-grip member operable by the thumb of the gripping hand to open the shutter of said lens and shutter unit and to initiate operation of said film transport gear train, and locking means on said gripping pressure responsive means for restraining operation of said trigger means when said lens cover is closed.

2,472,824
RADIO SCANNING APPARATUS
Robert F. Hays, Jr., Syosset, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application June 16, 1945, Serial No. 599,855
11 Claims. (Cl. 250—33.65)



11. The combination of a frame having a gimbal mounted thereon to move about a horizontal axis, a gyro vertical having a housing mounted on said gimbal to move about a horizontal axis perpendicular to the gimbal axis, a rotor case mounted in said housing to move about two mutually perpendicular normally horizontal axes, the major axis of which is normally coincident with the axis of the gimbal and the minor axis of which is normally coincident with the axis of the housing, a pickoff for detecting tilt of the housing relative to the rotor case about the minor axis thereof, and means mounted on said gimbal responsive to the output of said pickoff for moving said housing to restore the casing to a tilt-free condition.

2,472,825
PIPE LIGHTER
James F. Head, Washington, D. C.
Application May 29, 1947, Serial No. 751,228
1 Claim. (Cl. 67—7.1)

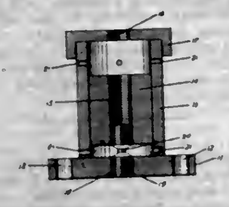


In a lighter, the combination which comprises a cylindrical casing having a longitudinally disposed slot adjacent one end and having a transverse V-shaped recess at a point therein opposite the slot, a fuel container slidably mounted in the casing having a button thereon positioned in the longitudinally disposed slot and having a threaded plug forming the bottom thereof, an elongated tubular wick carrying post mounted on the fuel container at a point thereon adjacent the slot in the casing and offset from the center thereof, said post extended upwardly to the upper end of the casing with the container positioned in the lower part thereof, the upper end of said container from which the post extends positioned about midway of the height of the casing with the container in the lower part thereof, an arcuate flint tube extending from the upper side of the V-shaped notch in the casing to the upper end thereof, an abrading wheel having a pinion thereon rotatably mounted on the upper end of the casing and positioned to engage a flint extending from the end of the flint tube, a cap having a snuffer pocket therein hinged to the upper end of the casing with the said snuffer pocket positioned to receive a wick in the said wick-holding tube as the cap is closed, and an arcuate gear rack carried by the cap and positioned to mesh with the pinion on the said abrading wheel, whereby the rack actuates the wheel to engage the flint as the cap is opened.

2,472,826
TIRE CHAIN RELEASE DEVICE
Milton B. Herbrick, Sterling, Colo.
Application February 9, 1948, Serial No. 7,144
1 Claim. (Cl. 152—213)

A tire chain release device including an inner side chain divided and forming two end portions, a cross chain, and clamp means including a clamp member connected to one end portion of the inner side chain, said clamp means including a keeper pivotally attached thereto, said keeper provided with a recess receiving a link of the other end portion of the side chain, an arm having a collar receiving said clamp means and said keeper, said collar having a releasing opening, said cross chain being attached to said arm whereby release of said cross chain will provide means for rotating said arm so that said keeper will be released through said opening, for releasing said link and said inner side chain from a tire.

2,472,827
TIRE CHAIN RELEASE DEVICE
Milton B. Herbrick, Sterling, Colo.
Application February 9, 1948, Serial No. 7,145
2 Claims. (Cl. 152—213)

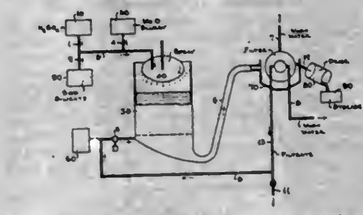


1. A tire chain release device including an inner side chain divided and forming two end portions, a cross chain, and clamp means including a ring member connected to one end portion of the inner side chain having a releasing opening, a stud member to which is attached a link of the other end portion of the side chain, said stud member having an extending ear, and being attached to said cross chain whereby release of the cross chain will provide means for rotating said stud member so that said ear will pass through said receiving opening to release said inner side chain from a tire.

2,472,828
TIRE CHAIN RELEASE DEVICE
Milton B. Herbrick, Sterling, Colo.
Application February 9, 1948, Serial No. 7,146
1 Claim. (Cl. 152—213)

A tire chain release device including an inner side chain divided and forming two end portions, a cross chain, and clamp means including a ring connected to one end portion of the inner side chain, said ring having a releasing opening, said ring receiving a link of the other end portion of the side chain, wedging members received in said ring adapted to snugly retain said link within said ring member, said wedging members having reduced portions, and being attached to said cross chain whereby release of said cross chain will provide means for reception of said reduced portions within said ring to allow release of said link through said releasing opening for releasing said inner side chain from a tire.

2,472,829
PEAK ACCELEROMETER
William H. Hoppmann, Valley Stream, N. Y.
Application August 11, 1945, Serial No. 610,387
8 Claims. (Cl. 264—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



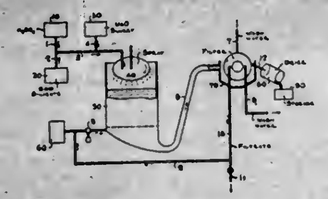
7. In an instrument for determining shock acceleration to which a structure is subjected, a guide in the form of a cylinder, a weight of predetermined mass in the form of a piston movable in the cylinder, a base plate for the instrument closing one end of the cylinder, a screw-threaded attachment embodied in the plate coaxial with the cylinder, a like screw-threaded attachment embodied in the weight coaxial with the attachment of the base plate, a gage specimen of predetermined tensile strength and comprising screw threads at its opposite ends companion to the threads of the attachments.

8. A gage specimen for peak accelerometers comprising a plug of inelastic material with a predetermined tensile strength, a circumferential notch in the plug positioned intermediate its ends, the cross-sectional area of the plug at the base of the notch being predetermined for rupture when subjected to a predetermined shock load, attaching means at opposite ends of the plug.

2,472,830
PREPARATION OF SILICA CONTAINING CATALYSTS
Edward A. Hunter, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 16, 1946, Serial No. 703,479
6 Claims. (Cl. 252—451)

1. Improved process for the preparation of a hydrogel comprising silica and alumina which comprises preparing a silica-magnesia hydrogel, soaking said hydrogel in a solution of a salt of aluminum, maintaining said hydrogel in contact with the aluminum salt solution for a sufficient period of time to cause the magnesia of the hydrogel to react with the aluminum salt to form a silica-alumina hydrogel and a magnesium salt and washing the silica-alumina hydrogel free of magnesium salt.

2,472,831
PROCESS FOR THE PREPARATION OF A SILICA-METAL OXIDE HYDROGEL CATALYST
Edward A. Hunter and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 28, 1947, Serial No. 731,562
11 Claims. (Cl. 252—457)

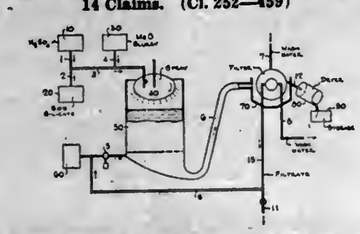


1. Improved process for the preparation of a hydrogel comprising silica and an oxide of a metal, other than magnesium, selected from groups 2, 6 and 7 of the periodic table which comprises admixing a silica sol and an aqueous slurry of magnesia, converting the resulting mixture to a silica-magnesia hydrogel, contacting said hydrogel with a solution of a salt of a metal, other than magnesium, selected from groups 2, 6 and 7 of the periodic table for a sufficient period of time to permit the magnesia of the hydrogel to react with the said metal salt to form a silica-metal oxide hydrogel and a magnesium salt, and washing the silica-metal oxide hydrogel free of the magnesium salt.

2,472,832
PROCESS FOR THE PREPARATION OF A SILICA-GROUP IV METAL OXIDE CATALYST
Edward A. Hunter and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 28, 1947, Serial No. 731,563
14 Claims. (Cl. 252—454)

1. Improved process for the preparation of a hydrogel comprising silica and an oxide of a metal of group 4 of the periodic table which comprises admixing a silica sol and an aqueous slurry of magnesia, converting the resulting mixture to a silica-magnesia hydrogel, contacting said hydrogel with a solution of a salt of a metal selected

from group 4 of the periodic table for a sufficient period of time to permit the magnesia of the hydrogel to react with the said metal salt to form,



by double decomposition, a silica-metal oxide hydrogel and a magnesium salt, and washing the silica-metal oxide hydrogel free of the magnesium salt.

2,472,833

PROCESS FOR THE PREPARATION OF A SILICA-GROUP VIII METAL OXIDE CATALYST

Edward A. Hunter and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

Application February 26, 1947, Serial No. 731,564
14 Claims. (Cl. 252—459)

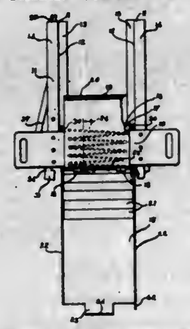
1. Improved process for the preparation of a hydrogel comprising silica and an oxide of a metal of group 8 of the periodic table which comprises admixing a silica sol and an aqueous slurry of magnesia, converting the resulting mixture to a silica-magnesia hydrogen, contacting said hydrogel with a solution of a salt of a metal selected from group 8 of the periodic table for a sufficient period of time to permit the mangesia of the hydrogel to react with the said metal salt to form, by double decomposition, a silica-metal oxide hydrogel and a magnesium salt, and washing the silica-metal oxide hydrogel free of the magnesium salt.

2,472,834

CRACKING CATALYST

Robert E. Schexnailder, Jr., and Edward A. Hunter, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application October 18, 1947, Serial No. 780,768
5 Claims. (Cl. 252—455)



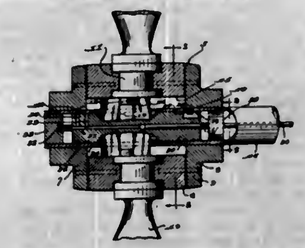
1. A method of preparing synthetic silica-metal oxide gels suitable for use in the catalytic conversion of hydrocarbon oils which comprises preparing a mixed hydrogel of silica and an alkaline earth metal oxide, soaking said mixed hydrogel with a solution of a salt of a metal, the oxide of which exerts a substantial catalytic effect upon the conversion of hydrocarbon oils, thereby forming the corresponding alkaline earth metal salt and precipitating an equivalent amount of said metal within the hydrogel as a hydrous oxide, washing, drying and calcining the hydrogel.

2,472,835

DISPENSING CIGARETTE LIGHTER

Alton E. Hutchinson, Milwaukee, Wis., and Gerald G. Thomas, Detroit, Mich., assignors, by mesne assignments, to Dowi Products, Inc., Milwaukee, Wis., a corporation of Wisconsin

Application December 26, 1944, Serial No. 569,882
9 Claims. (Cl. 312—86)



1. In a combination cigarette dispenser and lighter, a frame, a receptacle adapted to contain cigarettes in side by side relation slidably mounted in said frame, means for limiting the sliding movement of said receptacle in opposed directions, said means including a hinged cover movable to open position only when said receptacle is in one of its limiting positions, said receptacle having a discharge opening at one end thereof, means tending to urge said cigarettes sidewise toward said opening, supporting means on said receptacle for a cigarette discharged through said opening, and means for lighting a cigarette on said supporting means.

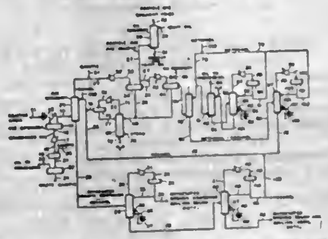
2,472,836

REVERSIBLE PROPELLER

Earnest R. Kennedy and Lowell E. Kennedy, Defiance County, Ohio

Application July 31, 1946, Serial No. 687,451
1 Claim. (Cl. 170—160.32)

A reversible propeller comprising a housing having a chamber therein, a pair of propeller blades each including a root journaled in diametrically opposite sides of the housing, a piston working in the chamber, interconnecting means



between the roots and the piston operable to transmit reciprocating movement of the piston to rotary movement of the root to vary the pitch of the blades, a tube extending through the housing having ports communicating with the chamber at opposite sides of the piston and adapted to subject the piston to fluid pressure, said piston being slidable on the tube, a sliding reversing valve in the tube controlling the ports in the tube to oppositely actuate the piston, said valve having a passage therethrough, and a fluid pressure supply pipe connected to the passage at one end of the valve to supply fluid pressure behind an opposite end of the valve to move the valve in one direction, the first named end of the valve being subjected to fluid pressure in the tube to move the valve in an opposite direction, and said tube and said supply pipe alternately providing fluid pressure supply and return conduits for the chamber upon reversing of the valve.

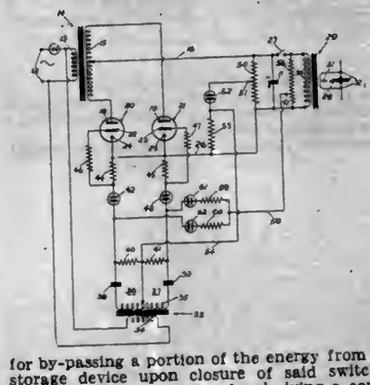
2,472,837

SEPARATION OF ORGANIC COMPOUNDS

Charles C. King, Roselle, N. J., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware

Application February 27, 1947, Serial No. 731,267
16 Claims. (Cl. 260—450)

1. A process for recovering the products of hydrogenation of oxides of carbon which comprises cooling said products to effect substantial condensation of normally liquid components of said products to form an oil product liquid phase and gases containing oxygenated organic compounds and hydrocarbons, separating the oil product liquid phase and gases, subjecting said gases to extraction with a solvent for oxygenated organic compounds to absorb substantially all oxygenated organic compounds contained in said gases as components of the resulting extract, subjecting said extract to fractionation to separate the oxygenated organic compounds contained therein into a first fraction comprising oxygenated organic compounds boiling below the boiling point of said solvent and a second fraction comprising said solvent and oxygenated organic compounds boiling above the boiling point of said solvent, separating said solvent from said last mentioned oxygenated organic compounds, and passing the solvent thus separated to said extraction step.



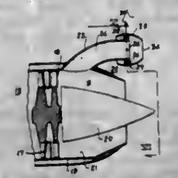
2,472,838

SYSTEM FOR CHARGING AND DISCHARGING ENERGY STORAGE DEVICES

Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application March 26, 1947, Serial No. 737,327
4 Claims. (Cl. 320—1)

1. In combination, a load circuit, an energy storage device, a source of alternating current, a charging circuit connecting said storage device to said source, a discharge tube including a control electrode in said charging circuit for controlling the flow of current to said storage device, a source of control potential for controlling the charging of said energy storage device, a discharge circuit for discharging said storage device into said load circuit, switching means controlling the discharge of said storage device into said load circuit, a shunt circuit connected across said load circuit

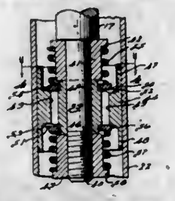


for by-passing a portion of the energy from said storage device upon closure of said switching means, and circuit means for deriving a control potential from said shunt circuit for applying a blocking potential to said control electrode to electrically isolate said storage device from said source when said switching means is closed, and a glow-discharge device in said circuit means for preventing the shunting of said control potential through said circuit means.

2,472,839

STEERING NOZZLE FOR JET-PROPELLED AIRCRAFT

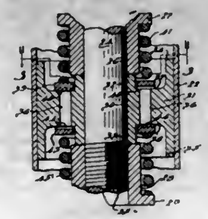
Fred S. Kramer, Prospect Park, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania



Application June 1, 1945, Serial No. 597,968
1 Claim. (Cl. 60—35.55)

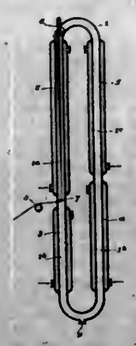
In apparatus for propelling an airplane, a main nozzle fixedly mounted relative to the airplane with its axis extending in the direction of flight and arranged to expand motive fluid exhausting from a turbine and to discharge such motive fluid as a high velocity jet for propelling the airplane; an auxiliary nozzle for expanding motive fluid to provide an auxiliary propulsion jet; said auxiliary nozzle having a discharge flow area which is relatively much smaller than that of the main nozzle and being arranged to discharge motive fluid to one side of the latter; said auxiliary nozzle including a body portion fixed in relation to the airplane, a hood encompassing the discharge end

of the body portion and extending rearwardly of the latter, and gimbal means for supporting the hood on the body portion; said hood being spaced circumferentially about the body portion to provide an annular passage which entrains air from the atmosphere to flow over the gimbal means and join motive fluid issuing from the discharge end of the body portion to form the jet discharging from the hood; and means for effecting movement of the hood in a universal manner to change the direction of thrust of the auxiliary jet in relation to that of the main jet to turn the airplane.



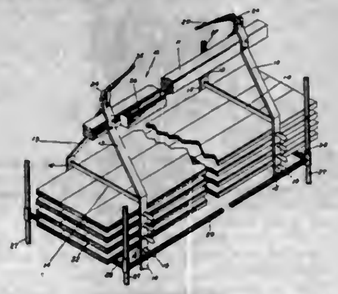
2,472,840
VALVE CONSTRUCTION
Ross Lewton, Highland Park, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application February 9, 1945, Serial No. 577,014
13 Claims. (Cl. 188—100)

1. A valve construction for a shock absorber, comprising a body having a plurality of parallel passages extending therethrough and arranged in a ring, a first set of V-shaped depressions formed in one face of the piston at certain alternate passages, and a second set of V-shaped depressions formed in the other face of the piston at the remaining alternate passages, a first valve ring engaging the said one face of the body so as to close the said remaining alternate passages and to lie within the limits of the first set of V-shaped depressions for leaving open the said certain alternate passages, means yieldingly holding the first valve ring in engagement with the first face of the body, a second valve ring engaging the said other face of the body so as to close the said certain alternate passages and to lie within the limits of the second set of V-shaped depressions for leaving open the said other alternate passages, and means yieldingly holding the second valve ring in engagement with the second face of the piston.



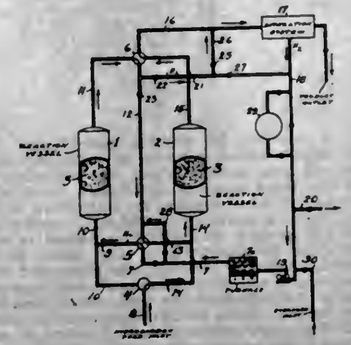
2,472,841
VALVE CONSTRUCTION
Sidney A. Ochs, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application February 9, 1945, Serial No. 577,015
17 Claims. (Cl. 188—100)

10. A piston valve construction for a shock absorber comprising a piston having a body portion, peripheral skirts extending from opposite faces thereof, central hub extensions at the opposite faces, and a ring of passages extending from one opposite face to the other opposite face, a first valve ring positioned at the said one face of the piston in surrounding relation to one hub extension and having reentrant portions causing positioning of the first valve ring at the said one face to close certain alternate passages and to leave open the remaining alternate passages, means yieldingly maintaining the first valve ring in the aforesaid position, means preventing substantial rotative movement of the first valve ring with respect to the piston, a second valve ring positioned at the said other face of the piston in surrounding relation to the other hub extension and having reentrant portions causing positioning of the second valve ring at the said other



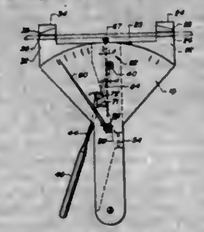
face to close the said remaining alternate passages and to leave open the said certain alternate passages, means resiliently maintaining the second valve ring in the aforesaid position, and means preventing substantial rotative movement of the second valve ring with respect to the piston.

2,472,842
APPARATUS AND METHOD OF DRY SPINNING VINYL COMPOUNDS
Antoine Francisque Gaston Mouchiroud and Joseph Aime Trillat, Lyon, France, assignors to Societe "Rhodiaceta," Paris, France
Application December 1, 1945, Serial No. 632,270
In France August 24, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 24, 1962
2 Claims. (Cl. 18—8)



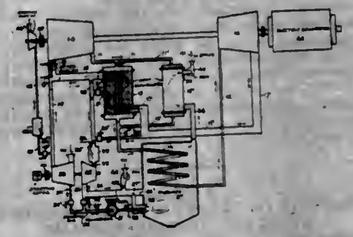
1. A process of manufacturing products such as filaments and the like which consists in causing a solution of vinyl polymers in a volatile solvent to be extruded into an evaporative atmosphere substantially free from solvent vapor in a closed circuit, and moving the extruded filaments thereby to cause movement of the evaporative atmosphere at substantially the same speed and in the same direction as the filaments, causing the spun filaments to emerge from said evaporative atmosphere, and, after such emergence cooling the evaporative atmosphere thereby to ensure condensation of the solvent vapor contained therein.

2,472,843
MATERIAL HANDLING DEVICE
Robert K. Muise, Congers, N. Y.
Application July 25, 1945, Serial No. 607,073
7 Claims. (Cl. 294—67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A sling carriage comprising a rigid framework having an open bottom, multiple readily removable article-supporting means disposed at two ends of said framework at spaced intervals upwards along said rigid framework, and article-retaining means on said article-supporting means.

2,472,844
MAINTENANCE OF CATALYST ACTIVITY IN HYDROCARBON CONVERSION PROCESSES
John C. Munday, Cranford, N. J., and Edward W. S. Nicholson, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application June 25, 1942, Serial No. 448,338
6 Claims. (Cl. 196—50)



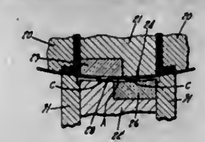
1. The method of conducting a hydrocarbon conversion conducted in the presence of added hydrogen and a solid catalyst material at elevated temperatures which process normally results in the deposition of activity impairing contaminants on the said catalyst, which comprises forcing said oil and a hydrogen-containing gas into contact with said catalyst in a reaction zone maintained at elevated temperatures and periodically interrupting a conversion period by discontinuing the oil supply to said reaction zone at intervals of from a fraction of a second to about 15 minutes, whereby only hydrogen is forced into said zone periodically to retard deposition of coke on the catalyst.

2,472,845
TENSIOMETER
Robert South Neiswander, United States Navy
Application August 31, 1944, Serial No. 552,116
8 Claims. (Cl. 73—143)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device for measuring the tension in a tensioned member comprising a pair of levers pivotally joined at one end and having gripping member at their opposite ends adapted to engage the tensioned member at spaced points, one of said levers being deformable, an eccentric mounted on one of said levers between the pivot point and the gripping member, said eccentric being adapted to fit into an opening formed in the other lever in a corresponding position, an arm operable to rotate said eccentric thereby to oscillate the levers toward or away from each other about their pivot, and means associated with the deformable lever, and operable by the amount of deformation produced therein by movement of said gripping members toward each other to indicate the tension in said tensioned member.

2,472,846
HEAT POWER PLANT
Frederick Nettel, Manhasset, and John Kreitner, New York, N. Y.
Application January 9, 1945, Serial No. 572,085
7 Claims. (Cl. 60—49)

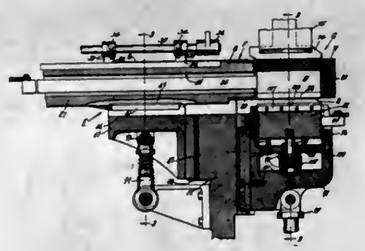
1. In a combustion turbine power plant of the continuous heating type, including air turbo-compressor means, one or more turbine type air expansion means, air preheater means for compressed air arranged on the heated side in two parallel flow paths, surface type fuel burning air heater means, furnace means, air cooler means, conduit means for admitting to said compressor means air of substantially super-atmospheric



pressure, conduit means for the further compressed air issuing from said turbo-compressor means connected to both said parallel flow paths of said air preheater means, thence to the heated side of said surface type fuel burning air heater means for transferring to said further compressed air combustion heat released in said furnace under near-atmospheric pressure, thence to the inlet of said air expansion system, coupling means connecting one turbine of said expansion system to said compressor means for driving same, coupling means connecting one turbine of said expansion system to power consuming means for driving same, conduit means for the air issuing from said expansion system at substantially the same super-atmospheric pressure as at the inlet to said turbo-compressor means for leading said air stream through the heating side of one branch of said air preheater means, thence through said air cooler means, and thence back to the inlet of said turbo-compressor means in a substantially closed main circuit, secondary air compressor means for taking in air from the ambient atmosphere, conduit means for connecting the outlet of said secondary compressor means to said main circuit at a point between the outlet from said air preheater means and the inlet to said turbo-compressor means, secondary gas turbine means, coupling means for connecting said secondary turbine means to said secondary compressor means for driving same, conduit means for branching off part of the air issuing from the main circuit expansion system at a point between the outlet from said expansion system and the inlet to said air cooler means for leading said air to said secondary turbine means for expansion therein to near-atmospheric pressure, conduit means for leading said expanded air from the outlet of said secondary turbine means to said furnace to serve therein as combustion air, conduit means for passing the combustion gases from said furnace, after heat exchange in said air heater means to the compressed air issuing from said air preheater means, through the heating side of the second branch of said air preheater means, and thence exhausting them to the atmosphere.

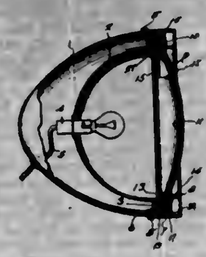
2,472,847
FUNGICIDAL LACQUER
Walter S. Osborne, Sumter, S. C.
No Drawing. Application September 6, 1945, Serial No. 614,801
6 Claims. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A fungus-inhibiting lacquer comprising a substantial proportion of a fungicide consisting of 5–95% by weight of ortho-cresyl-azo-diamino benzene hydrochloride, and 95–5% by weight of tetra-bromo-ortho-cresol and a larger proportion of clear lacquer.



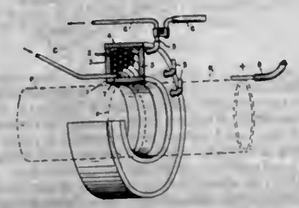
2,472,848
METHOD OF ELECTRIC BUTT-WELDING METALLIC CONTAINER SEAMS
Horace J. Paynter, Union, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application January 23, 1946, Serial No. 642,930
6 Claims. (Cl. 219—10)

1. A method of electric butt-welding the full length simultaneously of complementary edges of thin metallic sheet material such as the side seam edges of can bodies, which comprises forming in said material corrugations disposed adjacent to and extending longitudinally of the edges to be welded, bringing the edges into abutting relation along their full length, clamping the material to hold the edges in abutting relation and against separation, exerting a pressure on said corrugations in a lateral direction to flatten them thereby



forcing the abutting edges together under a high pressure and in a transverse edgewise direction, closely covering said abutting edges, and passing an electric current through said material from one of said abutting edges to the other and across the seam to be welded to heat said edges to a welding temperature for fusing and welding the edges together.

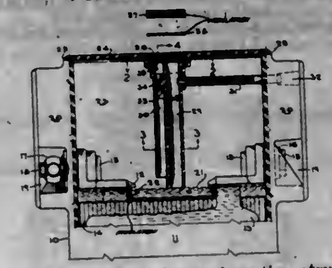
2,472,849
APPARATUS FOR ELECTRICALLY WELDING CONTAINER SEAMS
Horace J. Paynter, Union, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application January 23, 1946, Serial No. 642,931
8 Claims. (Cl. 219—6)



1. A machine for electric butt-welding the full length simultaneously of complementary edges of thin metallic sheet material such as the side seam edges of can bodies, comprising in combination a mandrel for supporting a can body, forming means secured in part in said mandrel for forming corrugations adjacent to and extending longitudinally of the edges to be welded, means for shifting said edges and corrugations to a second position on said mandrel devices for bringing the body edges together and holding them in abutting relation along their full length while on said mandrel at said second position, electrodes facing opposite sides of said corrugations and edges for passing an electric current through the can body from one of said abutting edges to the other across the seam to heat the edges to a welding temperature and to weld the edges together, and means for pressing said electrodes together with the corrugations of the body therebetween and while said devices hold the material for flattening out the corrugations thereby forcing the abutting edges together under a high pressure for the welding operation.

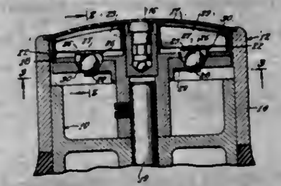
2,472,850
ANTIGLARE LENS STRUCTURE FOR HEADLIGHTS AND THE LIKE
John H. Plant, Aurora, Ill.
Application July 14, 1945, Serial No. 605,087
3 Claims. (Cl. 240—46.58)

1. In a headlight comprising a casing, a lens structure comprising a front circular lens of clear transparent material, and a rear lens of colored transparent material opposed flat against the front lens, a channeled binder ring in which the edges of the lenses are frictionally fitted, and means to secure said structure in said casing comprising a keeper ring having forwardly projecting right angled lugs in which the binder ring is fitted and provided with edge pairs of ears interlocked with said casing against play crosswise of the same.



2,472,851
APPARATUS FOR ELECTROMAGNETICALLY CONTROLLING WELDING ARCS
George G. Landis, South Euclid, and Norman J. Hoenie, Cleveland Heights, Ohio, assignors to The Lincoln Electric Company, Cleveland, Ohio, a corporation of Ohio
Application September 23, 1944, Serial No. 555,508
4 Claims. (Cl. 315—347)

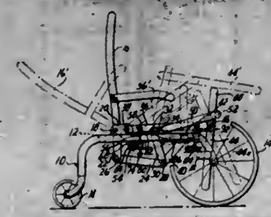
1. In an apparatus for heating a metallic workpiece by an electric arc, the combination of an annular electrode transversely split to permit relative movement of its parts and adapted to be supported with one face thereof in spaced relation to such work-piece, a conductor for electric current electrically connected at one end to said electrode and formed into a plurality of insulated turns concentric with the axis of the latter, and a second conductor adapted to be connected to said work-piece, whereby upon connecting said conductors with a suitable source of current an arc will be formed between such electrode face and work-piece and the magnetic field induced by flow of current through the turns of said first conductor will cause such arc to travel in a circular path defined by such electrode face.



623 O. G.—29

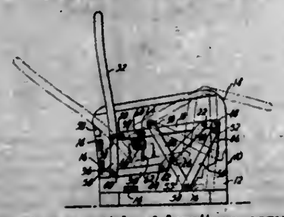
2,472,852
FILLING AND VENTING STRUCTURE FOR STORAGE BATTERIES
Lester E. Lighton, Glenside, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application November 14, 1945, Serial No. 628,567
7 Claims. (Cl. 136—177)

1. A non-overfill filling and venting structure for a double chamber type non-spill battery having a container, the lower portion of which contains storage battery elements and electrolyte and the upper portion of which is adapted to hold all of the electrolyte when said battery is inverted, comprising a cover sealed to the upper walls of said container, a filling well in said cover, an imperforate plug closing said filling well from above, a floor in said filling well, a duct defined by walls extending from the floor of said filling well down to the normal electrolyte level of said battery when said battery is in an upright position, a second filling duct defined by walls extending from the floor of said filling well down to a point in proximity to but above the lower end of said first mentioned duct, said second duct having the opening thereof at its upper end restricted by a section of reduced diameter, whereby liquid passing therethrough forms a liquid seal the lower end of both of said ducts being constructed to lie above the electrolyte level when said battery is inverted and a vent passage establishing communication between the upper end of said first mentioned duct and the external atmosphere.



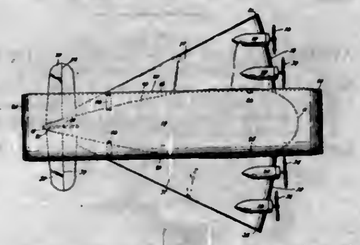
2,472,853
SHAVING APPARATUS
John Lorenz, Forest Hills, N. Y., assignor, by mesne assignments, to Eleanor U. Andrews, Greenwich, Conn.
Application March 1, 1945, Serial No. 580,376
9 Claims. (Cl. 30—43)

1. In a shaving device, the combination of a handle, a thin apertured skin contacting shear plate mounted on said handle, a member adjacent to the under surface of said shear plate and rotatable on an axis substantially normal thereto, a cutter blade mounted on said member for movement toward said shear plate, means for



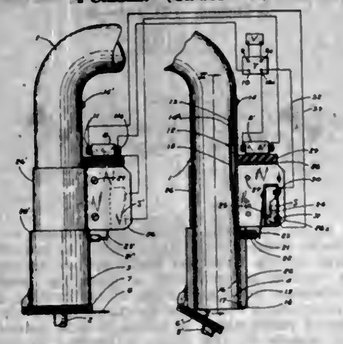
rotating said member, and separate centrifugally operated means on said member for urging said cutter blade into engagement with said shear plate as said member rotates.

2,472,854
RECLINING ARTICLE OF FURNITURE
Anton Lorenz, Buffalo, N. Y.
Application September 17, 1946, Serial No. 697,502
7 Claims. (Cl. 155—105)



7. A reclining article of furniture, comprising: a support, a back-rest pivoted to said support, said back-rest having an extension projecting downwardly beyond the pivotal connection between the back-rest and the support, a lower link, the rear portion of said lower link being pivoted to said extension of the back-rest below said pivotal connection between the back-rest and the support, a connecting link, one end portion of said connecting link being pivoted to the front portion of said lower link, the other end portion of said connecting link being pivoted to said support at a point spaced from the pivotal connection between the back-rest and the support, said extension of the back-rest, said lower link, said connecting link and the stationary portion of the support between the pivotal connections of the connecting link with the support and of the back-rest with the support forming links of a four-bar link-mechanism, a seat, the rear portion of said seat being pivoted to said support at a point spaced from the pivotal connection between the back-rest and the support, a front link, one end portion of said front link being pivoted to the front portion of said seat, the other end portion of said front link being pivoted to the lower link, a leg-rest swingably mounted on the front portion of said seat, and a controlling mechanism in operative relation with a member of the article and said leg-rest for controlling the movements of the latter.

2,472,855
RECLINING ARTICLE OF FURNITURE
Anton Lorenz, Buffalo, N. Y.
Application September 17, 1946, Serial No. 697,503
5 Claims. (Cl. 155—105)

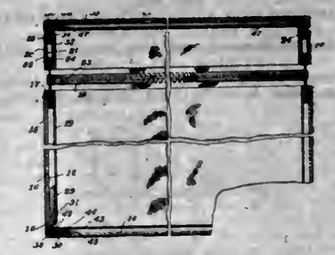


2. A reclining article of furniture, comprising: a support, a seat, the rear portion of said seat being pivoted to said support, a front link, the upper portion of said front link being pivoted to the front portion of said seat, a connecting link, one end portion of said connecting link being pivoted to said front link at a point below the pivotal connection between the front link and the seat, the other end portion of said connecting link being pivoted to said support at a point spaced from the pivotal connection between the seat and the support, said seat, said front link, said connecting link and the stationary portion of the support between the pivotal connections of the connecting link with the support and of the seat with the support forming the links of a four-bar link-mechanism, a back-rest, said back-rest being pivoted to said support at a point spaced from the pivotal connection between the seat and the support, said back-rest having an extension projecting downwardly beyond the pivotal connection between said back-rest and said support, a lower link, the rear portion of said lower link being pivoted to said extension of the back-rest below the pivotal connection between the back-rest and the support, the front portion of said lower link being pivoted to a point of the front link spaced from its pivotal connection with the connecting link, and locking means associated with at least one member of the link-system of the article for locking the movable members thereof.

2,472,856
AIRPLANE
Harry Alexan Manookian, Chicago, Ill.
Application August 2, 1944, Serial No. 547,673
1 Claim. (Cl. 244—13)

In an aircraft of the character described, the combination of: a fuselage of a generally elongated formation defined by a slightly concave bottom with convex sides merging in with a curved top, said fuselage including a nose at one end and a tapered tail at the other with a main body portion of uniform cross section therebetween, the cross section of said main body portion being the maximum cross section of said fuselage; an upper plane carried by and positioned above said fuselage in spaced relation with respect thereto, said plane being of a generally rectangular formation and having a width substantially corresponding to the width of said maximum cross section and a length greater than the length of said fuselage whereby said plane projects beyond the nose and tail thereof at its respective ends; and a pair of wings extending from the opposite side edges of said fuselage bottom, each of said wings having a curvature substantially corresponding to that of said concave bottom and of which it is a continuation, an arcuate swept back leading edge which joins the fuselage bottom substantially where said nose merges with said main body portion, and a side edge extending from the free end of said leading edge to said tail.

2,472,857
PNEUMATIC DISPATCH SIGNALING SYSTEM
Dott W. G. McClure, Pasadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application December 13, 1944, Serial No. 568,036
4 Claims. (Cl. 243—36)

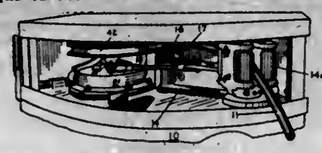


3. In a pneumatic conveyor system, the combination which comprises a conduit of substantially uniform cross section, a carrier slidably fitted within the conduit, a brake in the form of a long leaf spring mounted lengthwise in the conduit adjacent an end thereof with a substantial portion of its length bowed into the path of the carrier in the conduit but depressable out of the path by the sliding carrier, the spring being sufficiently strong to decelerate the carrier substantially, the end of the spring remote from the end of the conduit being anchored to the conduit and the other end being free to move longitudinally, and a switch having a contactor that is operated by the brake, the contactor being disposed behind the leaf spring adjacent the conduit wall in such position that the spring, on being depressed by the carrier, touches the contactor for a substantial portion of the period during which the carrier is in contact with the spring.

2,472,858
LAMP-ROTATING CLAMP FOR ATTACHMENT TO TUBULAR LAMPS
Robert T. Riker and Joseph H. Molat, New York, N. Y.
Application December 14, 1945, Serial No. 635,128
8 Claims. (Cl. 240—51.11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

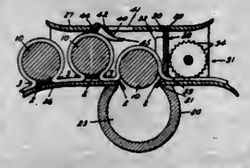
1. A lamp-rotating device for attachment to elongated lamps of the type interlocked and released from their fixtures by rotation of the lamp about its longitudinal axis, comprising a ring-shaped clamp adapted to be positioned on said elongated lamp, a pair of projecting lugs upon said clamp, means connecting said lugs for securing said clamp to said lamp, a pair of hooks positioned upon the periphery of said clamp facing in opposite directions whereby said clamp and tube can be rotated in either direction, and a projecting element upon the periphery of the clamp spaced from said hooks and said lugs, said projecting element and said lugs being adapted to cooperate with said fixture to limit the degree of rotation of said clamp and tube to approximately 90 degrees within said fixture and said hooks being spaced relative to said lugs and projecting element to extend substantially horizontally outward and substantially vertically downward respectively from said clamp when said tube and clamp are at one limit of rotation within said fixture.

2,472,859
CYLINDRICAL HANDBAG HAVING FLEXIBLE SIDE WALLS
Isaac Rubin, New York, N. Y.
Application November 23, 1946, Serial No. 711,957
4 Claims. (Cl. 190—50)



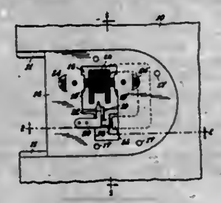
1. In a handbag in combination a curved peripheral wall having a curved edge; a curved annular member having a curved edge and fitting into said curved peripheral wall of said handbag in spaced relation thereto, said curved annular member arranged within said curved peripheral wall with its curved edge adjacent to said curved edge of said curved peripheral wall; a flexible side wall covering the opening formed by said curved annular member and reaching over said curved edge of the same into the space between said curved peripheral wall and said curved annular member and secured to the latter; a curved expansion member having substantially the shape of said curved edge of said curved annular member and arranged within said handbag adjacent said curved edge of said curved annular member and said side wall of said handbag and permanently stretching the same so as to keep it taut; and a lining unit consisting of a curved ring member having substantially the shape of said curved edge of said annular member and of a highly flexible lining cover entirely covering the opening formed by said curved ring member and secured to the same, said lining unit fitted into said handbag inside the same adjacent to said flexible side wall so that said curved ring member is positioned between said curved edge of said curved annular member and said curved expansion member preventing unintentional removal of said lining unit.

2,472,860
COMBINED CABLE GUIDE ARM AND TORQUE CONTROL SWITCH
John D. Russell, Cranberry Township, Venango County, Pa., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application September 2, 1944, Serial No. 552,536
40 Claims. (Cl. 191—12)



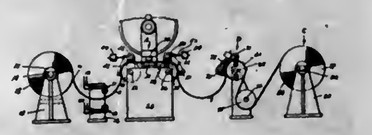
16. A control system for a motor operating a cable reel on a vehicle for a cable supplying elec-

trical energy to the vehicle from an extraneous source comprising, means operable to vary the torque of the cable reel motor, and means re-



sponsive to change in the angle of the cable, as the latter extends away from the vehicle, to the path of reel movement operable to control the torque varying means.

2,472,861
MACHINE GUN AMMUNITION FEED BELT
Wilbur A. Schaich, Springfield, Mass.
Application November 30, 1945, Serial No. 632,099
2 Claims. (Cl. 89—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



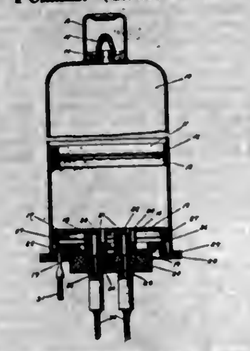
1. A cartridge belt comprising a single strip of flexible material shaped to provide a plurality of open cartridge receiving pockets, and frangible means bridging said open pockets to yieldingly secure a cartridge in each of said pockets, said means being frangible at a substantially lower tensile force than said flexible strip.

2,472,862
CUTTING ATTACHMENT FOR SEWING MACHINES
Victor J. Sigoda, Great Neck, N. Y., assignor to Man-Sew Corporation, New York, N. Y., a corporation of New York
Application November 5, 1946, Serial No. 707,895
9 Claims. (Cl. 112—127)

1. A shear-action cutter for a sewing machine comprising, a support plate having an opening, a fixed blade mounted on said support plate and having a shearing face extending over said opening, a yoke having two arms joined to the opposite ends of a bridge member which extends beneath said blade, the free ends of said arms being pivotally mounted on said support plate, and a reciprocating blade carried on said bridge member in shearing relation to the fixed blade.

2,472,863
APPARATUS FOR PERFORATING METALLIC STRIPS
John E. Socke, Pelham Manor, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 16, 1945, Serial No. 629,130
5 Claims. (Cl. 164—89)

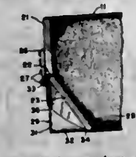
1. In an apparatus for feeding metallic strips for perforating and the like incident to providing a strip having potential blank spaces arranged in a cutting pattern with cooperating feeding perforations, the combination of perforating dies for punching a row of perforations in a strip in an exact relationship to a row of said potential blank spaces in the strip, a feeding sprocket mounted adjacent said perforating dies for drawing the strip through the dies by engagement in the perforations as they are cut, actuating means for rotating said feed sprocket intermittently to cause the strip as perforated to extend into a varying size loop, a second feed sprocket located on the opposite end of said loop and having engagement in the perforations of the strip, means for constantly rotating said second sprocket at a speed of rotation to maintain the length of said loop within predetermined limits, and devices for holding the strip on said feed sprockets for portions of their peripheries to insure exact operation of each of said sprockets.



2,472,864
COMPOSITION FOR AND METHOD OF CHEMICALLY COATING ALUMINUM
Frank Palin Spruance, Jr., Ambler, and James H. Thirsk, Wyncote, Pa., assignors to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
No Drawing. Application February 7, 1947, Serial No. 727,270
12 Claims. (Cl. 148—6.16)

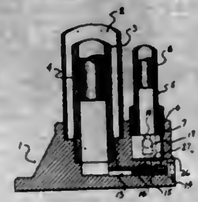
3. In a process for coating surfaces of aluminum and alloys thereof in which aluminum is the principal ingredient, the step which consists in subjecting the surface to the action of an acid aqueous solution the essential active coating-producing ingredients of which are fluoride ion, dichromate ion, phosphate ion, arsenate ion and hydrogen ion, the ions being present in amounts stoichiometrically equivalent to

	Grams per liter
Fluorine	0.9 to 12.5
Chromic acid (CrO_3)	3.75 to 60.0
Phosphate plus arsenate (calculated as PO_4)	6.0 to 285.0
Arsenate (As_2O_5)	0.2 to 3.0



the ratio of fluoride ion to dichromate, expressed as $F:CrO_3$, being between 0.135 and 0.405; and the pH of the solution being between about 1.6 and 2.2, as measured by the lowest value indicated by a glass electrode pH meter within the first ten minutes of immersion of the electrode in the solution.

2,472,865
GASEOUS DISCHARGE DEVICE
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 26, 1946, Serial No. 650,359
4 Claims. (Cl. 250—27.5)



1. A gaseous discharge device comprising an envelope containing an ionizable gas, at least one electrode supported within said envelope, means for supporting an electron-emissive material within said envelope, shielding means electrically insulated from and surrounding said electrode, insulating means surrounding said shielding means, and electrically conductive means surrounding said insulating means, said insulating means being shorter than said shielding and conductive means to provide an annular space between said last-named means which is less than the mean free path of the particles of said electron-emissive material, said insulating means being terminated a distance from the effective ends of said shielding and conductive means which is at least twice the distance between said last-named means.

2,472,866
MARINE MINE
John I. Thompson, Edgewater Park, N. J., and Donald E. Marlowe, Takoma Park, Md.
Application February 19, 1944, Serial No. 523,088
9 Claims. (Cl. 102—7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

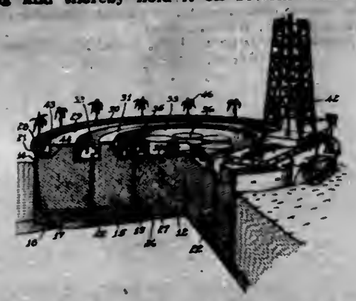
2. An aircraft planted marine ground mine, a casing for said mine, a faired device secured to the casing and having an exposed forward flat surface normal to the line of free flight of the mine through the air and adapted to be detached therefrom as the mine strikes the surface of the water, and means on said casing including an inclined surface to which the faired device is secured in matching relation and effective when said faired device has been detached for suddenly reducing the rate of the downward movement of the mine within the water.

2,472,867
HYDRAULIC JACK
Herbert A. Thorndike, Oshkosh, Wis., assignor, by mesne assignments, to Vulcan Manufacturing Co., Inc., Winona, Minn.
Application June 20, 1946, Serial No. 678,048
3 Claims. (Cl. 103—228)

1. In a reciprocating type hydraulic pump: a body having a bore open at one end and closed at the other, and having inlet and outlet passages opening to the bore through its closed end; a cylindrical plug, of a size to fit freely into said bore, received therein, said plug having parallel ends and having inlet and outlet ports extending axially therethrough, the spacing of said ports being such as to align with the mouths of the inlet and outlet passages in the closed end of the bore; oppositely acting check valves in said ports; means for removably securing said plug in position; and means engageable between the closed end of the bore and either end of the plug for properly locating the same for alignment between its ports and the mouths of the inlet and outlet passages so that said plug may be inserted with either end innermost.

2,472,868
STABILIZED AROMATIC COMPOUNDS AND METHODS OF OBTAINING THE SAME
Edward W. Tillitson, Grosse Pointe, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application June 4, 1945, Serial No. 597,599
19 Claims. (Cl. 260—619)

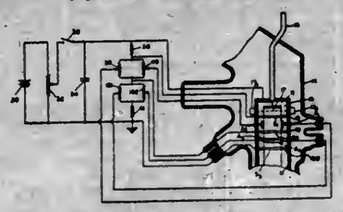
1. A stabilized aromatic carbocyclic compound containing a nuclear substituent of the class consisting of hydroxyl and amino groups and acid addition salt groups corresponding to said amino groups, said carbocyclic compound having incorporated therewith at least a small fraction of 1% of an iminoaminomethanesulfinic acid of the formula,



$$R'NH-\underset{\displaystyle NH}{\overset{\displaystyle \|}{C}}-SO_2H$$

to stabilize said carbocyclic compound against deterioration, R' of the formula being a member of the class consisting of hydrogen and lower alkyl radicals.

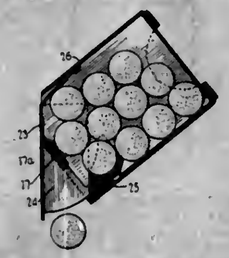
2,472,869
ISLAND FOR WELL DRILLING
William J. Travers, Jr., Los Angeles, Calif., assignor to Richfield Oil Corporation, Los Angeles, Calif., a corporation of Delaware
Application February 24, 1947, Serial No. 730,337
4 Claims. (Cl. 61—46)



1. A device for supporting well drilling apparatus in an offshore marine location, comprising in combination: inner and outer concentric upstanding walls joined by an annular floor, the inner wall defining a central opening completely

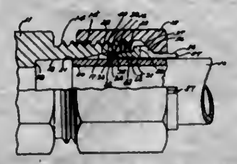
through the device, the annular space between the walls being filled with material to sink the ring and thereby hold it on bottom with the

outer wall extending above the water level, and the central opening being filled with water-displacing material resting on bottom to thereby resist lateral shift of the device.



2,472,870
MASS SPECTROMETRY
Harold W. Washburn, Pasadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application November 21, 1944, Serial No. 564,424
7 Claims. (Cl. 250—41.9)

1. In a mass spectrometer having an ionization chamber provided with a first electrode having an ion outlet slit that is elongated in cross-section, and means for propelling ions through the slit, the combination which comprises a second electrode disposed outside the chamber and provided with an elongated ion outlet slit disposed substantially in line with that of the first electrode, means for impressing a potential between the first and second electrode to propel ions issuing from the chamber through the slit in the second electrode, at least one auxiliary focussing electrode mounted between the first and second electrodes adjacent an end of a slit, means for impressing a potential on the auxiliary electrode to affect the focussing of ions passing through the space between the slits, means for introducing molecules into the ionization chamber, and means for directing an electron beam against the molecules in the chamber.



2,472,871
DISPENSING CONTAINER
Marshall I. Williamson, New Haven, Conn.
Application April 17, 1946, Serial No. 662,801
7 Claims. (Cl. 206—42)

1. A dispensing container for unit items, comprising a receptacle shell of flat, substantially rectangular, pocket formation made up of a pair of oppositely disposed, broad side walls joined by top and bottom walls and a front wall; a deep notch formed at the upper, front corner of said receptacle shell, said notch cutting through the upper part of said front wall and into adjacent portions of said broad side walls and said top wall; a bias formed at the upper, rear corner of said receptacle shell opposite said deep notch, said bias cutting across said broad side walls and said top wall, and forming a corner opening in the said receptacle shell; a cover pivoted to said receptacle shell at the top thereof, the pivot axis extending transversely across the top wall of said receptacle shell and being disposed between the said deep notch and the said bias, said cover having its front end formed as a delivery chute which fits into said deep notch and extends longitudinally

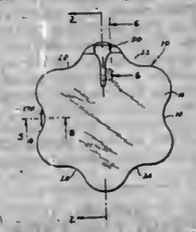
therealong between front and rear thereof, normally closing the top of same, said delivery chute having an open, receiving, rear end and an open, discharge, front end, and said cover having its rear end fitting snugly about the said corner opening formed at the upper rear corner of the receptacle shell by said bias, the said rear end of the cover serving to close said opening and being slidable with respect to the defining walls of said opening, but normally extending above such defining walls so as to be depressible under downward pressure exerted upon said rear end of the cover, whereby the discharge end of said delivery chute may be elevated; and an external sleeve snugly covering the said receptacle shell laterally, and normally closing the discharge end of said delivery chute.

2,472,872
FLARELESS TUBE COUPLING
George V. Woodling, Cleveland, Ohio
Application June 20, 1947, Serial No. 755,833
3 Claims. (Cl. 285—122)

1. In a coupling device for a tube, first and second coupling members adapted to be connected together, said first coupling member having a passageway to receive the tube and an internal annular cam surface at the entrance of the passageway, said second coupling member having an inner annular surface terminating in an internal annular clamping shoulder, a contractible sleeve of harder material than the tube and having a bore to receive the tube and comprising a continuous annular body having at its forward

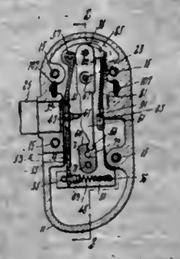
end an outer cam surface for camming into said annular cam surface of the first coupling member, said sleeve having at its forward end on its inner surface an internal substantially V-shaped rib with forward and rearward sides defining a cutting edge to bite into the tube and make a sealing engagement therewith, said sleeve on its inner face having a longitudinally recessed wall extending outwardly from the bore thereof and meeting with the rearward side of the rib to define a relief bore, said sleeve having an external shoulder adapted to be engaged by the clamping shoulder of the second coupling member, whereby when the coupling members are drawn together the outer cam surface at the forward end of the sleeve is cammed into the internal annular cam surface of the first coupling member for forcing the rib into the tube and contracting the recessed wall in substantial alignment with the said bore, said recessed wall on the inner face of the sleeve having a greater length than the rearward side of the rib and meeting with said rearward side of the rib to define a minimum sleeve wall section at a place substantially opposite where the outer cam surface of the sleeve engages the internal annular cam surface of the first coupling member, the wall thickness of the sleeve at said minimum section being sufficiently thin to allow the rib to be cammed inwardly and bite the tube and to permit the recessed wall to be contracted in substantial alignment with the bore.

2,472,873
HAIR DRIER
Myrtle A. Woodrum, Forest Hills, N. Y.
Application February 3, 1945, Serial No. 576,011
5 Claims. (Cl. 34—99)



1. In a drier, a cap having a flexible resilient

air distributing manifold adapted to be fastened about the scalp line with the mass of hair to be dried contained within the cap, an insulating casing attached to said cap at the distributing manifold and communicating with the ends thereof, a bellows air supplying unit within said casing, electrical means disposed in said bellows for operating the same and an electrical heater disposed within said bellows for heating the air, said distributing manifold having perforations formed therein on the inner side of the manifold and said cap having an outlet opening on the top thereof for the air admitted through the manifold.



2,472,874
LADY'S PORTABLE POWDER DISPENSER
Philip Wolfers, Valley Stream, N. Y., assignor to Powdermaster Products Inc., New York, N. Y., a corporation of New York
Application November 2, 1944, Serial No. 561,508
2 Claims. (Cl. 132—83)

1. A powder compact comprising an approximately round base, a cover, a hinge to connect the cover to said base, said hinge being disposed adjacent the periphery of the base and having its axis of rotation perpendicular to a line running from the center of the base to the hinge, a spring connected to the cover and base to resiliently urge said cover to open position, a mirror mounted interiorly of said cover, whereby when said compact with its cover open lies in a user's palm and is grasped by the fingers at the periphery of the base on both sides of the hinge and approximately half way between the hinge and the diametrically opposite part of the compact at points about 90° away from the hinge with the center of the base as a reference point, the mirror will be positioned for inspection of the user's features, said base

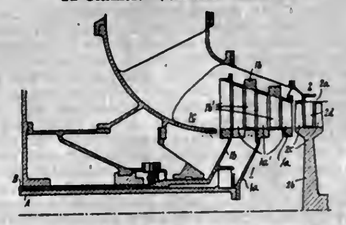
having opposed peripheral indentations approximately half way between the hinge and the diametrically opposite part of the compact at points about 90° away from the hinge with the center of the base as a reference point, said indentations serving as finger holds, a powder tray in said base, a latch for detachably securing said cover to said base at a point approximately diametrically opposite to the hinge, and a manually operable element disposed in one of said indentations for releasing the latch, said latch-releasing-element being shiftable radially with respect to the center of said base, whereby said latch may be released by pressing against the base of the compact and the latch-releasing-element, the fingers of the hand holding the compact in proper position for use subsequent to opening.

2,472,875
MICROMETER CALIPER
Arthur A. Adams, Brookline, Mass., assignor to Robert G. Morse, Marblehead, Mass.
Application October 10, 1944, Serial No. 557,995
1 Claim. (Cl. 33—172)

In an internal micrometer having a casing and a split expansible calipering plug projecting therefrom, a plunger having a wedge surface for expanding the plug, actuating means for said plunger comprising a pivotally mounted actuating lever connected to the plunger within the

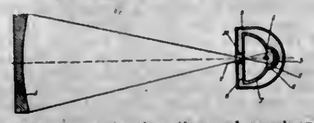
casing, a spring connected to the lever and forcibly urging the plunger in wedging direction to expand the calipering plug, manually-actuatable means engaging the lever for rocking the same in a direction to retract the plunger and contract the calipering plug, indicating means carried by the casing, and actuating and amplifying connections between the plunger and the indicating means, said connections comprising a pivoted amplifying lever in separable contact with the plunger for positive actuation thereby in one direction when the plunger is moved in plug-contracting direction, a spring urging the amplifying lever into contact with the plunger, a short pivoted lever in separable contact with the amplifying lever and adapted to be positively actuated thereby when the amplifying lever is spring-moved in the direction corresponding to plug-expansion, connections between the short lever and the indicating means for actuating the latter responsively to movement of the short lever, and a spring maintaining contact between the short lever and the amplifying lever during normal axial movements of the plunger but permitting separation of said levers upon sudden retraction of the plunger from wedged condition in the plug.

2,472,876
ROTARY DISK KNIFE
Arthur H. Ahrndt and Paul H. Meyer, La Porte, Ind., assignors to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application April 21, 1944, Serial No. 532,052
1 Claim. (Cl. 146—95)



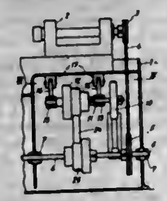
A circular knife for meat slicing machines and the like comprising an outer peripheral thin circular rim having straight, flat, parallel sides extending in a direction perpendicular to the axis of the knife and terminating in a cutting edge, an inner integral section extending from the inner end of the rim at an angle from the plane of the rim and having parallel sides, a dish shaped central portion extending inwardly from the inner section and integral therewith, said central portion increasing in thickness toward its center, and a central circular reinforcing section fixed to the concave part of the central dish shaped portion and conforming in shape thereto and of less diameter.

2,472,877
WASHING CELLULOSE
John William Allquist, Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 28, 1944, Serial No. 542,627
3 Claims. (Cl. 8—137)



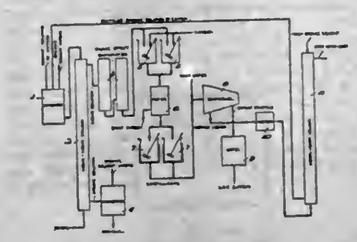
1. The improved method of washing cellulosic fibers to remove calcium, magnesium, sodium and other cations normally found in industrial water and adsorbed or taken up by the cellulose from the water which comprises washing the cellulose with ordinary salt-bearing industrial water acidified with an inorganic acid to a pH of from 2 to 5 to loosen and displace said cations, and then washing out the displaced cations and the acid with demineralized water.

2,472,878
FLUID TURBINE POWER PLANT WITH SPEED REDUCTION TRANSMISSION GEARING
Karl Baumann, Mere, Knutsford, England, assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application January 6, 1944, Serial No. 517,268
In Great Britain April 29, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 29, 1962
11 Claims. (Cl. 253—16.5)



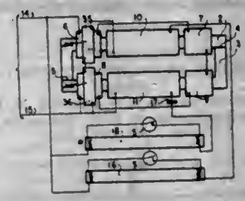
1. A power plant comprising an internal combustion turbine having two mutually-reacting contra-rotational bladed driving elements and a pair of concentric shafts respectively connected to said bladed driving elements, a load shaft, and speed reduction and reversing gearing connecting said concentric shafts with said load shaft including a planetary spider secured to the load shaft, a planet shaft journalled in said spider and operatively connected with said concentric shafts so as to be rotated thereby, a sun wheel geared to said planet shaft, a ring gear wheel geared to said planet shaft, brake means operable to restrain movement of said sun wheel and said ring gear wheel respectively, and means for selectively operating said brake means to stop rotation and then reverse the direction of rotation of said load shaft.

2,472,879
PROTECTIVE DEVICE FOR THERMAL RECEIVERS
André Albert Charles Bayle, Boulogne-sur-Seine, France
Application February 27, 1948, Serial No. 11,674
In France January 2, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires January 2, 1965
6 Claims. (Cl. 250—83)



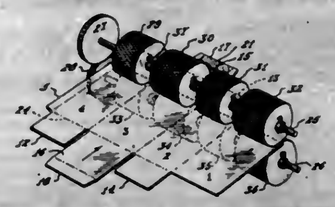
1. Device for protecting thermal receivers, of the class comprising thermoelectric cells, bolometers and the like, from parasitic influences of the temperature, magnetic and electric fields, said device being symmetrical with respect to the receiver axis and consisting of a sealed internal envelope of non-magnetic material enclosing said receiver, and an external outerly polished envelop of magnetic material enclosing and supporting in it said internal envelop, the space between the two envelops being filled up with heat insulating material, said internal envelop including refractive means, cooperating reflective means concentrating the incident thermal rays and sensitive surfaces receiving said concentrated thermal rays.

2,472,880
TRANSMISSION GEAR FOR MACHINE TOOLS
André Bechler, Berne, Switzerland
Application September 20, 1946, Serial No. 698,196
In Switzerland May 3, 1946
5 Claims. (Cl. 74—242.10)



1. In a transmission gear for machine tools, a framework, a drive shaft mounted on said framework, a driven shaft mounted on said framework, a countershaft, wheels on said drive shaft, driven shaft and countershaft, transmission means interconnecting wheels of said drive shaft and said countershaft, other transmission means interconnecting wheels of said countershaft and said driven shaft, a pivot on said framework, a frame carrying said countershaft, suspended on said pivot for rocking and translatory motion in a manner as to allow the distance between said pivot and said countershaft of being changed, a slot on said framework, a slot on said frame, lying across the slot on said framework, releasable locking means going through said slots, allowing in its released condition translatory and rocking motion of said frame and said latter to be locked at any position of said locking means along said slots.

2,472,881
PROCESS OF RECOVERING CAFFEINE
Charles Richard Bender, Teaneck, N. J., assignor to General Foods Corporation, New York, N. Y., a corporation of Delaware
Application June 20, 1946, Serial No. 678,073
8 Claims. (Cl. 260—256)



1. A method of recovering caffein from a solution obtained by organic solvent extraction of coffee products which comprises contacting the solution with water to separate the water-insolubles from the water-solubles therein and form an aqueous solution of the latter, recovering the bulk of the caffein from the aqueous solution, contacting the remaining aqueous solution with an organic solvent to separate the other water-solubles from the residual caffein therein and form an organic solution of the latter, and recovering the residual caffein from such solution.

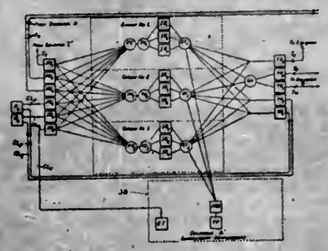
2,472,882
TRANSFORMER
Paul Berger, Chicago, Ill., assignor, by mesne assignments, of one-half to Hirsch Epstein and one-half to Louis R. Duman, both of Chicago, Ill.
Application January 26, 1946, Serial No. 643,664
7 Claims. (Cl. 323—44)

5. A transformer for operating a plurality of glow discharge tubes comprising a core having two opposite side legs connected in a magnetic circuit, a pair of primary coils on each leg, a secondary on each leg between the two primaries on the same leg, the four primary coils being connected in series, each of the secondaries being connected to the primaries in step-up auto transformer arrangement, and each secondary having means for connecting it to one of the tubes, a condenser in series with one of the secondary coils, and an auxiliary coil in series with the other secondary coil and in opposition thereto, said auxiliary coil having less than 10% of the number of turns on said other secondary coil and having closer coupling with one of the primary coils than does said other secondary coil.

2,472,883
METHOD AND APPARATUS FOR PRODUCING CARTONS
Samuel Bergstein, Cincinnati, Ohio, assignor to Robert Morris Bergstein and Frank David Bergstein, trustees
Application September 12, 1946, Serial No. 696,489
11 Claims. (Cl. 93—52)

5. A process of producing protective cartons which comprises providing otherwise completed carton blanks including enclosing body walls in articulation along longitudinal score lines and a glue flap, embossing central portions of body walls of said blank while leaving said blank unembossed in areas adjacent and including said longitudinal score lines a free edge of a wall at one side of the blank and said glue flap, and thereafter tubing said blank by folding with the application of adhesive, and producing pressure on said glue flap and the free edge of said wall in superposition by pressure means acting from the outside of the blank against a rib-like support located interiorly of the tubed blank.

7. In apparatus for the purpose described, parallel shafts, means for driving said shafts in timed relationship, pairs of rotary embossing

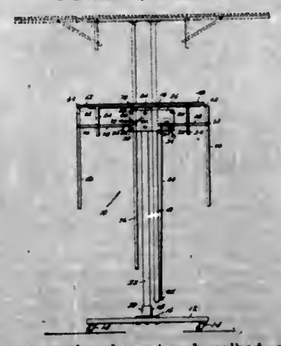


means splined to said shafts to rotate therewith, means for spacing said pairs along said shaft and means for passing carton blanks between the embossing elements of said pairs, the embossing elements of said pairs being configured to form less than continuous bands of embossings, and said means for passing carton blanks therebetween comprising timed conveyor apparatus.

2,472,884
CUSHIONING ATTACHMENT FOR GAME TABLES
Leonardo Colaluca, Somerville, N. J.
Application September 24, 1947, Serial No. 775,887
1 Claim. (Cl. 273—136)

A cushioning attachment for a game table comprising a metal base strip having turned down end portions, set screws in the end portions for fixing the attachment to a game table, a wood piece connected to the top of the metal strip, rubber cushioning elements disposed on opposite sides of the wood piece and a covering extending about the wood piece, the strip, and the cushioning elements and having its meeting edges extending along the longitudinal center line of the wood piece and a top plate fitted over the meeting edges of the covering and extended outwardly over the cushioning elements to retain the covering and cushioning elements in place, said top plate being secured to the wood piece, and the opposite ends of the wood piece being recessed and the covering following the contour of the recesses, angle members fitted over the covering and the wood piece at each end of the wood piece and received in the recesses to provide a smooth surface for the reception of the top plate and means for securing the angle members to the wood piece.

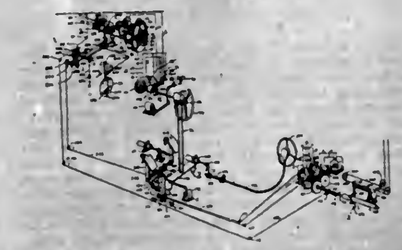
2,472,885
AUTOMATIC MULTIPLE STAGE TELEGRAPH SYSTEM
Howard D. Colman, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application July 19, 1946, Serial No. 346,285
174 Claims. (Cl. 178—4)



1. The method of automatically transferring a telegraph message from a calling subscriber's station to a called subscriber's station through a central exchange which comprises, establishing a transmission path from the calling station to the exchange, transmitting over said path a series of signals representing the body of the message and indicating its destination, storing the signals at the exchange, releasing the transmission path, thereafter establishing a retransmission path to the called station under control of a signal or signals indicating the destination of the message, discarding said signal or signals incident to said control, and automatically transferring the remainder of the signals over the retransmission path.

2,472,886
TURBINE BLADE LASHING
Joseph D. Conrad, Springfield, and William H. Lloyd, Philadelphia, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 1, 1946, Serial No. 707,244
3 Claims. (Cl. 253—77)

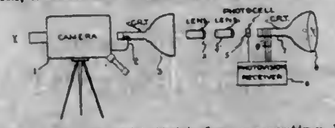
2. In combination, a plurality of forged blades of a moving row and lashing means for connecting the blades; said lashing means comprising lashing structures connecting adjacent blades, each lashing structure including projections which are forged integrally with the blades as the latter are forged and extending from convex and concave blade faces so that their outer ends adjoin approximately midway between the blades and the outer projection ends being slanted, relative to the plane of blade rotation, generally in the same direction as the slant, relative to said plane, of the blade chord passing through the inlet and outlet blade edges at the projection blade section and a weld joint for connecting the slanted projection ends, said projections tapering from the blade faces to the joint.



2,472,887
PLASTERBOARD HOIST
Aaron Franklin Core, Sacramento, Calif.
Application July 12, 1946, Serial No. 683,075
1 Claim. (Cl. 304—9)

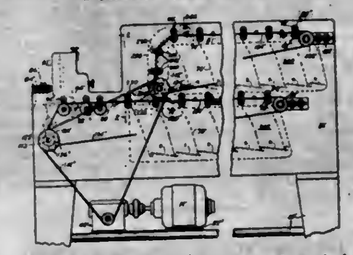
A device of the character described, comprising a base, a standard secured to the base at the center thereof, parallel plates secured to the top of said standard, a sleeve intermediate said plates, a second standard slidably mounted in said sleeve, means for mounting a table on said second standard, leaves pivotally mounted on the opposite

ends of said table, means carried by said leaves and means carried by said table cooperating with said first means to retain said leaves in raised position, a vertically inclined rack secured to the undersurface of said table, arcuate slots provided in said plates in opposed relation to each other, means carried in said slots and engageable with said rack to retain said table in elevated position above said base, a lever pivotally mounted intermediate of said plates and engageable with said last means to release it from engagement with said rack to permit said table to be lowered and means for raising said second standard mounted intermediately said plates.



2,472,888
APPARATUS FOR TRAINING PILOTS AND OTHER AIRCRAFT PERSONNEL
James M. Cunningham, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 21, 1945, Serial No. 579,009
4 Claims. (Cl. 35—12)

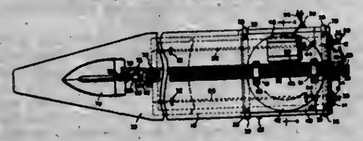
1. In a training apparatus of the character described, in combination, an artificial horizon indicator and ball bank indicator, the horizon indicator comprising a rock shaft mounted for turning movements about a horizontal axis, a dial face carried at the forward end of said shaft and rotatable with the shaft, a movable artificial horizon positioned in front of said dial face in close proximity thereto and spanning the same, means operatively connecting said horizon and shaft whereby turning movements of the horizon in either direction will cause tilting movements of the shaft, said ball bank indicator comprising a stationary dial face, an arm mounted for swinging movements about a horizontal axis, a visible disc carried at the lower end of said arm and cooperating with said latter dial face, and means operatively connecting said arm and rock shaft whereby movement of the shaft will cause displacement of said disc relative to said last mentioned dial face.



2,472,889
PHOTOVISION
Allen B. Du Mont, Upper Montclair, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application December 17, 1946, Serial No. 716,846
4 Claims. (Cl. 178—5.6)

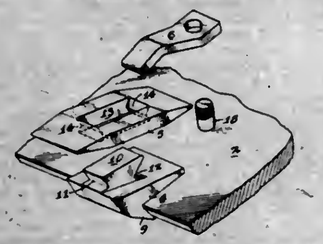
1. A television system comprising a transmitter having a television pick-up tube, a video amplifier connected thereto for amplifying the signal produced therein, horizontal and vertical sweep circuits connected to said tube to control electron beam scanning therein and horizontal and vertical synchronizing pulse generating circuits connected to said amplifier and producing a composite signal therefrom, a cathode ray tube connected to said transmitter and having a fluorescent screen, the cathode ray beam thereof being modulated by the output of said transmitter and following a unidirectional and non-scanning line to said screen producing light modulated by said signal, a receiver comprising a light pick-up tube

in the path of said light for converting light energy into electrical energy, a video amplifying circuit connected to said tube for amplifying the electrical signal therefrom, synchronizing and separator circuits connected to said amplifier and a cathode ray tube connected to and controlled by said receiver circuits for presenting a television image.



2,472,890
MACHINE FOR SORTING RECORD CARDS
Eugene A. Ford, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application May 16, 1947, Serial No. 748,426
4 Claims. (Cl. 271—64)

1. In a sorting machine for record cards having index points, a machine framework including a front plate, a rear plate, a plurality of upper card supporting members extending transversely of the machine in alignment and spaced relationship between said plates adjacent the top thereof, said members defining by their upper surfaces an upper card path, and a plurality of lower card supporting members extending transversely of the machine in alignment and spaced relationship between said plates in the medial regions thereof and likewise by their upper surfaces defining a lower card path, an upper set of card receiving pockets disposed between said upper and lower card supporting members and communicating with the spaces existing between adjacent upper card supporting members, a lower set of card receiving pockets disposed beneath said lower card supporting members and communicating with the spaces existing between the adjacent lower members, a plurality of upper card chute blades resting on the upper surfaces of said upper card supporting members, each blade forming therewith a card passage to one of said upper set of card receiving pockets, a plurality of lower card chute blades resting upon said lower card supporting members, each of said latter blades forming therewith a card passage to one of said lower set of card receiving pockets, the forward regions of said blades converging and

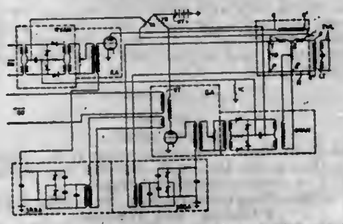


terminating in a common plane, a plurality of additional card supporting members extending transversely of the machine between said plates and defining by their upper surfaces a common card path in the plane of the forward ends of said blades, and means for feeding record cards to said blades along said latter plane.

2,472,891
ELECTRIC IRONING MACHINE
Fred T. Fuge, Fostoria, Ohio
Application January 4, 1946, Serial No. 639,135
1 Claim. (Cl. 38—26)

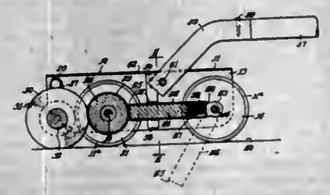
A device of the character described, comprising an ironing board, a supporting frame for said ironing board, a substantially square shaped plate supported on said frame above said board in spaced relation thereto, a circular plate rotatably mounted at the center of said square shaped plate, means for retaining said circular plate on said square shaped plate, a motor mounted on said circular plate, a gear secured to the shaft of said motor, an arm mounted on said circular plate for sliding movement in relation thereto, hangers secured to said circular plate for retaining said arm thereon, a rack on said arm meshing with said gear, a universal joint on the forward end of said arm, an iron, a pivotal connection on said iron adapted to be connected to said universal joint, a knee switch on said frame for controlling said motor whereby said iron is moved along said ironing board, and means is secured to said board and said frame so that said board is movable longitudinally thereof with relation to said frame.

2,472,892
DIGGING TOOTH FOR EXCAVATING BUCKETS
Robert E. George, Columbus, Ohio
Application August 20, 1947, Serial No. 769,639
4 Claims. (Cl. 37—142)



1. A digging tooth attachment for excavating buckets or the like, comprising a holder having a tooth supporting surface with a boss projecting therefrom, a tooth having a digging nose portion of duplicate shape at each end and having a central opening for receiving said boss and permitting the tooth to rest at a side thereof on said supporting surface, the front and rear end walls of said opening being of duplicate form, said tooth being reversible both transversely and lengthwise on said holder, said end walls of the opening and the front end wall of said boss each having a V portion with that of the boss complemental to that of each of the opening end walls, with the apex line of the latter disposed centrally between the boss sides of the tooth, whereby either end wall of the opening may be interengaged with the front end wall of the tooth opening, and means engageable with the rear end portion of the boss and with the portion of the tooth at the rear thereof to hold said interengaging front portions in engagement and to hold the tooth to said supporting surface.

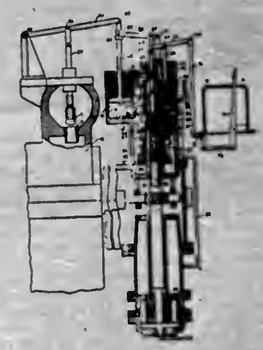
2,472,893
TWIN FINGER RINGS
Jules Gerson, New York, N. Y.
Application November 10, 1945, Serial No. 59,369
4 Claims. (Cl. 63—16)



1. In a twin finger ring combination of the class described, a ring with an ornamental setting, a male locking element on said setting and projecting laterally from the ring, said locking element having undercut side edges, a protuberance formed centrally on said locking element and extending outwardly therefrom, said locking element being relatively thin to permit a flexing thereof under pressure and a companion ring with an ornamental setting containing a female locking element comprising an undercut channel substantially fitting said side edges of the male locking element, the base of the channel being apertured and proportioned to receive said protuberance, whereby the protuberance will extend into such aperture when the two rings are operatively locked by the walls of the channel and said side edges of the male locking element.

2,472,894
ECHO SUPPRESSOR
Charles Gillings, Liverpool, and Percy Edward Alexander Cowley, Coventry, England, assignors to Automatic Telephone & Electric Company Limited, Liverpool, England, a British company
Application September 15, 1943, Serial No. 502,548
In Great Britain November 14, 1942
3 Claims. (Cl. 178—44)

1. For use in telecommunication systems a terminating differential echo suppressor comprising go and return paths, a variable attenuation network in each of the paths, a signal rectifier associated with each path for varying the attenuation of each network under the control of signal currents in the opposite path, a two-wire line, a four wire/two wire hybrid transformer transferring signal currents from the return path to said two-wire line, means for deriving a signal current at one point in said circuit responsive to signal currents incoming over said two wire line, means for feeding said incoming signal currents to the go path, a balancing resistance associated with the hybrid transformer, and means connecting the input circuit of the signal rectifier of the go path across said balancing resistance to derive a control current from said balancing resistance to produce increased attenuation in the go path so as to prevent a signal incoming over the two wire line at a time when the echo suppressor is biassed in favor of an incoming signal over the return path from maintaining this bias against itself.



2,472,895
FLOOR WAXING AND POLISHING DEVICE
James Gordon, Chicago, Ill.
Application April 4, 1945, Serial No. 587,556
5 Claims. (Cl. 91—40)

1. In a floor waxing and polishing device, the combination comprising a frame, a pair of wheels for the frame adapted to contact the floor, a roller carried by the wheels, a rotary brush axled in the frame in brushing contact with said roller and adapted also to contact the floor, a driven element on the brush axle, a driving element on the wheels' axle in engagement with the driven element to drive the brush, carrier means pivoting on and supported by the frame for receiving a bar of wax, the distal end of said carrier means being adapted to swing into proximity with said roller, a spring carried by the carrier means and adapted to urge the bar of wax through the distal end of the carrier means into contact with the roller, a detent carried by the frame for retaining the carrier means in the last mentioned position, and a handle attached to the frame.

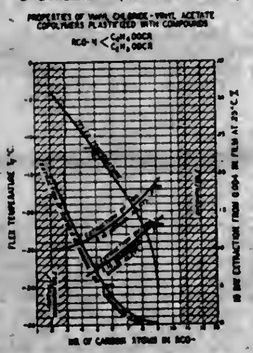
2,472,896
CONTROL APPARATUS
Manious Gottlieb, Philadelphia, and Frank A. Meyer, Sharon Hill, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 26, 1945, Serial No. 601,672
4 Claims. (Cl. 137—158)

1. In mechanism for limiting the extent of opening of the admission valve of a prime mover to limit the flow of motive fluid thereto, an operating piston mechanically connected to the valve, a cylinder for the piston, a relay movable in opposite directions from neutral position to control the admission and exhaust of motive fluid to and from the cylinder at opposite sides of the piston, follow-up mechanism including a member movable in the direction of movement of the relay and in fixed relation to the operating piston and admission valve and a spring interposed between the follow-up member and the relay for exerting force on the latter, a governor responsive to speed of the prime mover for exerting force on the relay in opposed relation to that of the spring, means including the follow-up member to hold the relay in neutral position against movement in a direction for wider opening of the admission valve while providing for movement thereof by the governor in the other direction to move the admission valve in a closing direction, and manual means for adjusting the last-named means to vary the extent of maximum opening of the admission valve.

2,472,897
XYLYL TRICHLOROTHIOLACETATE
Alban Thomas Hallowell, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 19, 1945, Serial No. 617,441
1 Claim. (Cl. 260—455)

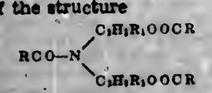
Xylyl trichlorothiolacetate.

2,472,898
LOOSE-LEAF BINDER
Ernest Hazel, Jr., St. Louis, Mo.
Application November 5, 1945, Serial No. 626,655
1 Claim. (Cl. 129—23)



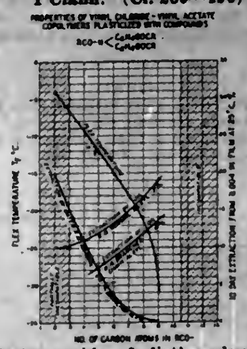
A loose-leaf binder of the kind described comprising a pair of overlapped covers; a sheet holding metal assembly mounted on the covers at their overlapped portions; and common means for securing together the overlapped covers and the metal assembly, one of said covers being relatively stiff and provided with a marginal groove thereacross, the other cover being fitted into the groove, said metal assembly being on top of the other cover along the area thereof fitted into the groove, the cover fitted into the groove being flexible and rebent upon itself over the metal assembly and over one side of the cover having the groove formed therein, the said groove being substantially as deep as the thickness of the flexible cover and one member of the metal assembly whereby to present a smooth planar surface for sheets when placed in the binder.

2,472,899
SANDING AND FINISHING TOOL
Clarence A. Hein, Denver, Colo.
Application October 6, 1947, Serial No. 778,236
2 Claims. (Cl. 51—187)

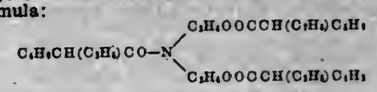


1. A sanding tool comprising, a rigid handle portion terminating at one end in a substantially rectangular base, brackets extending upwardly from the base adjacent its connection with the handle, an abradant carrying cover pivotally connected with the brackets near their upper ends, a brace plate interconnecting the brackets, said plate terminating a distance below the pivot slightly greater than the distance from the pivot to the rear surface of the plate, the upper rear corner of the pivoted member being in the plane of the rear surface of the plate when the parts are in operative position, the upper rear corner of the cover moving in an arc of a circle when the member is moved to open position, whereby its distance from the lower edge will decrease, and a strip of abradant in roll form positioned in the cover, said strip passing over the pivot thence underneath the brace plate and up over the rear corner of the cover, thence along the outer surface of the cover to the free end thereof.

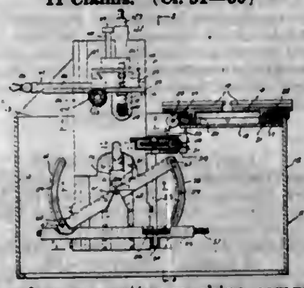
2,472,900
VINYL CHLORIDE RESINS PLASTICIZED WITH DIESTER-AMIDES
Franklin Johnston and William H. Hensley, St. Albans, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
Original application May 1, 1946, Serial No. 666,439. Divided and this application August 27, 1947, Serial No. 770,884
5 Claims. (Cl. 260—31.2)



1. A plastic composition comprising a vinyl resin predominantly composed of vinyl chloride polymerized therein intimately combined with a plasticizer of the structure



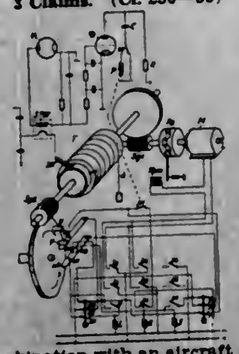
where R_1 is a radical of the group consisting of hydrogen and methyl, and R is an alkyl radical containing from 2 to 8 carbon atoms which is identical in all three positions.



2,472,901
2,2'(2-ETHYLHEXANAMIDO)DIETHYL DI(2-ETHYLHEXANOATE)
Franklin Johnston and William H. Hensley, St. Albans, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
Application May 1, 1946, Serial No. 666,439
1 Claim. (Cl. 260—490)

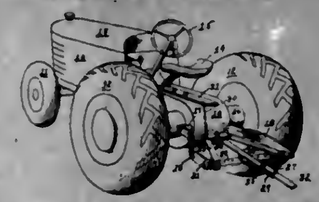
The diester-amide of diethanolamine and 2-ethylhexanoic acid, such diester-amide being a high-boiling liquid effective as a plasticizer for vinyl chloride resins and having the structural formula:

2,472,902
CAM MAKING MACHINE
George X. Johnston, St. Clair, Mich.
Application July 15, 1947, Serial No. 760,973
11 Claims. (Cl. 51—50)



9. A surface-generating machine, comprising a support, a face plate rotatably mounted on said support, means for clamping a work piece to said face plate, a carriage on said support, a tool, means for securing said tool to said carriage, a profiling follower guide reciprocable on said support, means for adjusting said guide for defining a plurality of profiles, means for simultaneously rotating said plate and reciprocating said follower guide, a follower engageable with said guide and reciprocable thereby, and settable means operatively associated with said follower for moving said carriage in axial and normal planes relative to the axis of said face plate in response to reciprocating movement of said follower.

2,472,903
EXTENSION TABLE CONSTRUCTION
Richard Kamholtz, New York, N. Y.
Application March 13, 1947, Serial No. 734,350
6 Claims. (Cl. 211—52)

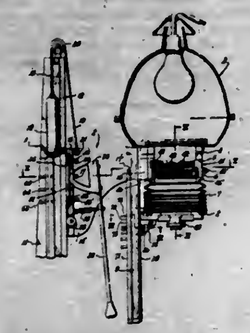


1. In a table, in combination, a framework comprising a pair of grooved side rails, a table top mounted on said framework, and means providing for rotational and translatory movement of said top with respect to said frame, said means comprising a tongued member having the shape of a 90° circle arc mounted on the underside of said table top and extending from one edge of the top towards the center said arc having a radius substantially equal to the distance between said side rails, a second tongued member extending radially inwardly from the said edge of the table and terminating adjacent the end of said arcuate member said second tongued member also having a tongue across its end, said two tongued members interfitting with the grooves in said side rails.

2,472,904
TRANSMITTING ANTENNA WITH AUTOMATIC TUNING, PARTICULARLY FOR AIRCRAFT WIRELESS
Hans Kappeler, Soleure, Switzerland, assignor to the firm Autophon Aktiengesellschaft, Soleure, Switzerland, a joint-stock company of Switzerland
Application January 20, 1945, Serial No. 573,702
In Switzerland December 24, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 24, 1963
3 Claims. (Cl. 250—33)

1. In combination with an aircraft radio transmitter having frequency tuning means, a trailing antenna connected with the output of the transmitter, a reel for the antenna, a reversible motor for rotating the reel to reel the antenna in and out, switching means activated by tuning of the transmitter to supply power to said motor for reeling the antenna out, switching means activated by the reeling of the antenna out to a predetermined limit for reversing the direction of rotation of the motor to reel the antenna in, a current transformer having its primary winding connected in series with the transmitter output, a trip circuit connected with the secondary of said transformer and responsive to changes in the amperage of antenna current and a relay operable by said trip circuit to cut off power from said motor to stop the reel upon passage of the antenna current amperage through a maximum value.

2,472,905
TRACTOR HITCH
John C. Kam, Ravenna, Mich.
Application June 18, 1945, Serial No. 600,151
5 Claims. (Cl. 280—33.44)



1. A tractor hitch comprising a pair of spaced arms, each adapted to be secured to a tractor at one end of each; a cross bar rotatably secured between the opposite ends of the arms; a pair of radius bars disposed between the arms fixedly secured together adjacent one of their respective ends and spacedly fixedly secured adjacent their opposite ends to the cross bar; and a draw bar pivotally secured to and between the radius bars.

2,472,906
STRETCHING DEVICE FOR THE HEEL WIRE OF SKI TIES
Alvar Eskil Petrus Kjellström, Stockholm, Sweden
Application February 4, 1947, Serial No. 726,290
In Sweden February 19, 1946
2 Claims. (Cl. 280—11.35)

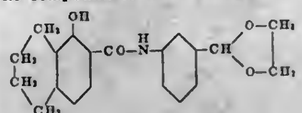
1. Ski-tie having a heel wire and toe supports and provided with a stretching device for the heel wire located in front of said toe supports, and comprising an attachment plate, a stretching arm pivoted in said attachment plate, a fastening member provided with at least one attachment member for the heel wire and so pivoted in said stretching arm that said fastening member is displaced forward by swinging the stretching arm downwards and forwards, a cover plate pivoted in said stretching arm in front of the attachment member for the heel wire covering said attachment member in operative position, said cover plate being provided with an extension projecting beyond its journalling place on the stretching arm, said extension being so formed that when the stretching arm is brought to its operative position, said extension will come into contact with the attachment plate and thereby forcibly hold the cover plate in the position covering the attachment member for the heel wire.

2,472,907
FOCUS AND MAGNIFICATION INDICATOR FOR PHOTOGRAPHIC ENLARGERS
Mark T. Kolesnikoff, Los Angeles, Calif.
Application August 12, 1945, Serial No. 610,451
4 Claims. (Cl. 88—24)

1. In a photographic enlarging device including a fixed vertical support, a vertically movable bracket on said support, and an enlarging camera on said bracket, said camera including a vertical guide and a lens mount movably positioned thereon, the combination of: a series of switch-actuating points on the vertical support, said switch-actuating points being vertically spaced with respect to a fixed enlarging plane and correlated to a series of different magnification; a switch carried by the bracket and provided with an arm arranged to be moved by any one of the switch-actuating points to close the switch; an electrical circuit including the switch-actuating points and switch and an indicator, said circuit being energized when said switch is closed; a series of terminals on the vertical guide, each thereof electrically connected to one of the switch-actuating points; and a shunt circuit including a signal element and a movable terminal, the movable terminal being carried by the lens mount whereby said signal element is energized only when the bracket and the lens mount are in correlated positions both as to desired magnification and focus for such magnification.

2,472,908
PROCESS FOR TREATING A HYDROCARBON MIXTURE WHICH IS CONTAMINATED BY SMALL AMOUNTS OF ORGANIC FLUORINE COMPOUNDS
Carl B. Linn, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application September 26, 1947, Serial No. 776,424
6 Claims. (Cl. 260—683.4)

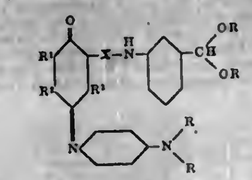
1. A process for treating a hydrocarbon material containing as an impurity a relatively small percentage of organically combined fluorine to remove fluorine therefrom which comprises contacting said hydrocarbon material at defluorinating conditions of temperature and pressure with a substantially anhydrous liquid complex of boron trifluoride and an oxygen-containing organic compound selected from the group consisting of alcohols, ethers, carbonyl compounds, carboxylic acids, their anhydrides and esters, and recovering the treated hydrocarbon material.



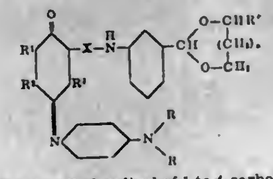
2,472,909
FIRELESS BROODER
Nels Lundstrom, Almont, N. Dak.
Application March 23, 1945, Serial No. 584,305
3 Claims. (Cl. 119—33)

1. In a brooder of the fireless type, the combination which comprises a relatively shallow rectangular shaped frame having spaced side walls with vertically disposed gate receiving grooves in the inner surfaces and spaced from the ends thereof, ventilating openings spaced from the lower edges, and spaced parallel horizontally positioned longitudinally extended bars providing tracks on the inner surfaces, said bars having arcuate upwardly extended ends whereby the tracks extend upwardly at the ends, gates slidably mounted in the grooves in the ends of the side walls, transversely disposed rods extended through the said side walls maintaining the walls in upright position, a plurality of spaced slots extended across the frame with the end thereof positioned to travel in the tracks between the bars, a web providing a protecting covering carried by the slats and extended continuously across the frame and from end to end thereof to substantially seal the lower part of the frame, and upwardly bowed rods positioned above the frame and carried thereby, said rods positioned with the ends thereof at one end of the frame spaced from the gate at that end of the frame and positioned to coact with the ends of the tracks to receive the said web and temporarily support the web above the frame.

2,472,910
TETRAHYDRO-1-HYDROXY-2- AND -3-NAPHTHAMIDOBENZALDEHYDES AND THEIR ACETALS WITH LOWER ALKANOLS AND 1,2- AND 1,3-ALKANEDIOLS
Elmore Louis Martin, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 8, 1948, Serial No. 19,871
4 Claims. (Cl. 260—338)



3. The compound of the formula:

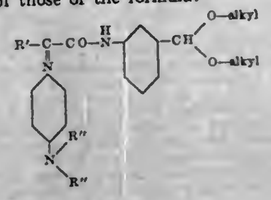


2,472,911
QUINONEIMINE DYES FROM HYDROXYBENZAMIDOBENZALDEHYDE AND HYDROXYBENZSULFAMIDO-BENZALDEHYDE ACETALS OF LOWER ALKANOLS AND 1,2- AND 1,3-ALKANEDIOLS
Elmore Louis Martin, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 9, 1946, Serial No. 20,100
5 Claims. (Cl. 260—336)

1. The quinoneimine compounds taken from

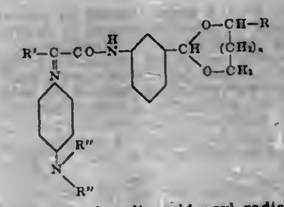
the group consisting of compounds of the formula:

and



where R is an alkyl radical of 1 to 4 carbon atoms, R^1 is a member taken from the group consisting of hydrogen, alkyl of 1 to 4 carbon atoms and allyl, R^2 is a member taken from the group consisting of hydrogen and alkyl radicals of 1 to 4 carbon atoms, R^3 is a member taken from the group consisting of hydrogen and chlorine, R′ is taken from the group consisting of hydrogen and methyl, n is a number taken from the group consisting of 0 and 1, and X is a member taken from the group consisting of —SO_2— and —CO—.

2,472,912
METHOD OF DRYING ALCOHOLS
William S. W. McCarter, Bala-Cynwyd, Pa., assignor to Attapulgus Clay Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,109
6 Claims. (Cl. 210—42.5)



1. A method for drying alcohol containing water, which comprises intimately contacting said alcohol at a temperature above its freezing point but below 100° F. with an argillaceous adsorbent which has been thermally activated between 400° F. and 1200° F., at a space velocity of not more than 0.2 volume of alcohol per volume of adsorbent per hour.

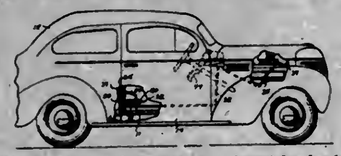
2,472,913
AZOMETHINE DYES FROM ACYLACETAMIDOBENZALDEHYDE ACETALS
David Malcolm McQueen, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 17, 1948, Serial No. 21,761
6 Claims. (Cl. 260—338)

1. The compounds taken from the group consisting of those of the formula:

and

where R′ is a carboxylic acid acyl radical of 2 to 11 carbon atoms, R″ is an alkyl radical of 1 to 4 carbon atoms, alkyl contains 1 to 4 carbon atoms, R is taken from the group consisting of hydrogen and methyl and n is a number taken from the group consisting of 0 and 1.

2,472,914
SAFETY APPARATUS
Stanley M. Mercier, Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application August 19, 1944, Serial No. 550,260
9 Claims. (Cl. 198—232)



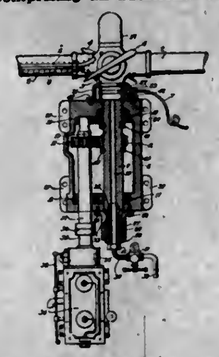
1. Conveyor mechanism including a drive shaft, means including a conveyor chain driven by said shaft, take-up means associated with said chain to take up the slack therein, mechanism including a cylinder and a piston, the latter being movable by said take-up means as it changes position, means associated with said cylinder and piston to provide for their relative movement when said piston moves slowly relative to said cylinder in response to gradual changes of the chain length while preventing rapid relative movement between said piston and cylinder, means mounting said cylinder for free movement by rapid movement of said piston, and control mechanism operated by movement of said cylinder.

2,472,915
HAND BRAKE LEVER CONTROLLED DOOR LOCKING DEVICE
Charles L. Miller, Altoona, Pa.
Application January 22, 1947, Serial No. 723,485
1 Claim. (Cl. 180—82)

In a lock adapted to be attached to an automobile having a door within a door frame and wheel brakes, the combination of a tubular housing adapted to be secured to the door, a rod reciprocally mounted in said tubular housing and adapted to engage a recess in the door frame to

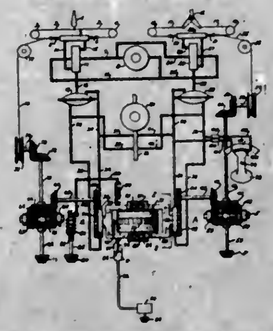
lock the door, a piston means on said rod and mounted for sliding movement in said housing, a spring means about said rod bearing against said housing and piston means for biasing said rod into said housing and out of the door frame recess, conduit means attached to one end of said housing and adapted to be connected to a suction means, a valve body in said conduit means, a valve in said body for controlling communication between said housing and the suction means

through said conduit means, a hand brake lever for actuating the wheel brakes, means connecting said hand brake lever with said valve body whereby actuation of said hand brake lever to set the brakes will move said valve to cause the suction means to withdraw said rod from the door frame recess to free the door for opening movement, and a tube connecting the other end of the housing to the atmosphere, said tube also being adapted to receive lubricant for lubricating the piston means.



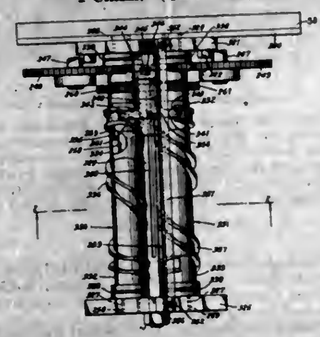
2,472,916
ELECTROMAGNETIC CHECKERBOARD
James M. Moon, Graham, N. C.
Application October 8, 1945, Serial No. 620,895
3 Claims. (Cl. 273—136)

1. In a game apparatus including a playing surface divided into a plurality of squares, a magnetic unit located under each of the squares and including a vertically extending coil adapted to be optionally energized and a vertical slidable core movable to a raised position in the coil when the latter is energized to a position immediately under the playing surface for attracting the game piece on the surface to a position over the magnetic unit.



2,472,917
ROTARY AIRCRAFT ATHODYD MOTOR
Boris A. Nicolaeff, Montreal, Quebec, Canada
Application January 24, 1948, Serial No. 4,162
3 Claims. (Cl. 170—135.4)

1. A rotary aircraft athodyd motor, operating by the force of reaction of high speed jets comprising rotating aero-thermodynamic ducts, radial arms, each duct mounted on the end of an individual arm, with the ducts disposed at the right angles to their respective arms, a shaft, a hub, the individual arms being connected to and fastened to said hub, each of the said ducts having a fuel injector and ignitor plug, with fuel feed pipes and ignition wires running along their respective arms, a fuel feed system to feed the duct's injectors comprising a passage for fuel, bored along the entire length of the shaft, a conical cavity on the end of the shaft and a spring-actuated fuel feed plug with adjustable tension, a support for said plug comprising, a slotted partition to hold said plug in stationary position, the end of said fuel plug engaging the conical cavity of the shaft to establish continuous connection between them, a fuel control valve to control the flow of fuel to the injectors, a case with bearings to hold the shaft and fuel feed support, and means to start the shaft in rotation comprising an additional shaft coupled



to the hub shaft by means of two gears, said additional shaft operated by an auxiliary starting motor equipped with a clutch, spark plugs, an insulated slip ring on the shaft, near the hub, and a sliding brush in contact with the said ring to connect the ignition system to the spark plugs.

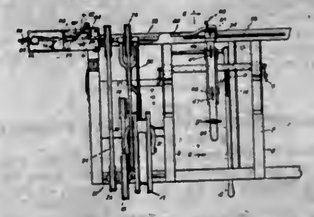
2,472,918
AIRCRAFT BANK AND TURN CONTROL SYSTEM
Carl G. Nyman, Shaker Heights, Ohio, assignor, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application August 23, 1944, Serial No. 550,841
9 Claims. (Cl. 244—79)

1. In an automatic pilot for an aircraft having a rudder and aileron, servos for driving said rudder and aileron, a single gyro and a single axis gimbal therefor to constrain the gyro to one degree of freedom, a rudder pick-off and an aileron pick-off mounted on said gimbal axis to be operated by said gimbal in its single plane movements, separate manual means for operating each of said pick-offs for aileron and rudder trim independently of each other and said gimbal and separate means for adjusting said gimbal to jointly operate both of said pick-offs to jointly energize both of said servos to initiate a combined rudder and aileron operation for effecting a predetermined rate of turn.

2,472,919
MECHANICAL MOVEMENT
Robert E. Paris, Teaneck, N. J., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application April 21, 1943, Serial No. 483,877. Divided and this application March 13, 1946, Serial No. 654,106
1 Claim. (Cl. 74—58)

In a mechanical movement, two cylindrical cam members mounted to revolve on parallel axes, each of said members having a spiroidal cam on its surface, a traveler having cam follower means engageable alternatively with said cams, said cams having middle portions disposed so as to move said traveler in opposite directions and end portions at each end disposed so as to move said traveler in the same direction, and means to move said traveler, while traveling in one of said end portions, so that its follower means are gradually disengaged from one cam member and engaged with the other cam member, and to move said traveler, while traveling in the other of said end portions, so that its follower means are gradually disengaged from said other cam member and engaged with said first cam member.

2,472,920
FOLDING SLED
Richard G. Peenstra, Utica, N. Y.
Application December 15, 1947, Serial No. 791,687
8 Claims. (Cl. 280—20)



6. In a sled of the class described, having an elongated body comprising half sections hinged together to be folded into parallel relation, side runners for said sections swingably mounted thereon to fold toward the same substantially parallel therewith, and means operative by such folding of said sections to fold said runners.

2,472,921
CUP POSITIONING APPARATUS
Anthony A. Quimper, Westfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 21, 1947, Serial No. 756,280
2 Claims. (Cl. 225—21)

1. In a beverage dispensing apparatus, means for positioning a single paper cup beneath a dispensing nozzle when it is dropped from a stack of cups through a chute to a position below the nozzle, said means comprising a platform on which the cup is received, guide means partially encircling the cup, and yieldable means disposed in front of the cup in its dropped position and against which the cup may strike to assume a normal beverage receiving position, said yieldable means comprising a horizontal disposed relatively narrow member having an inner end fixedly attached to a surface adjacent the discharge end of the chute and an outer unattached end disposed just beyond the vertical center line of the cup when the cup is in its normal beverage-receiving position.

2,472,922
LAWN MOWER GRINDER
John T. Russell, Oklahoma City, Okla.
Application April 7, 1947, Serial No. 739,798
2 Claims. (Cl. 51—59)

1. In a power operated machine for grinding the blades of a rotary lawn mower having a traction wheel rotatable with the blades, the combination with a main frame, means for rigidly mounting a mower in the frame, and power transmission for revolving the blades, of a reciprocal carrier mounted in the frame and a power actuated screw bar operatively engaging said carrier for reciprocating the carrier, a grinding tool mounted in the carrier in fixed relation thereto and disposed transversely of the blades

for contact therewith, means for holding the tool to its work, a track on the frame parallel to, and below, the line of travel of the carrier and a roller adjustably secured to said carrier and engaging in said track for guiding and supporting the reciprocating tool, and said power transmission mechanism comprises an operating wheel in frictional engagement with said traction wheel, a drive frame having a pivoted support in the main frame and a shaft journalled therein for the operating wheel, and resilient means co-acting with the drive frame for holding the operating wheel in operative relation to the traction wheel.

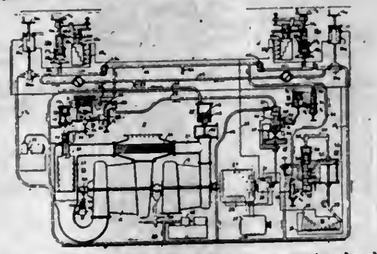
2,472,923

METHOD FOR STRIKING THE WELDING ARC IN AUTOMATIC ELECTRIC-ARC WELDING MACHINES

Raoul Jean Schmerber, Uccle, Belgium, assignor to La Soudure Electrique Autogene, Societe Anonyme, Brussels, Belgium

Application November 18, 1946, Serial No. 710,458
In Belgium November 22, 1945
7 Claims. (Cl. 315—60)

1. In a method for striking a welding arc in automatic electric arc welding machines using a metal electrode consisting in short-circuiting between the metal end of said electrode and the part to be welded, a fuse which is provided on said end, the use of a fuse comprising an iron body and at least a chromic acid compound forming, by a temperature elevation, with the iron of said body a compound having high heat formation and thereby producing an initial ionization of the space between the metal of said electrode and the part to be welded.



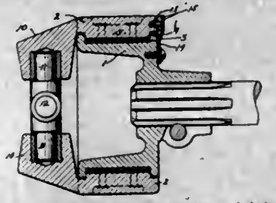
2,472,924

ELECTRIC DRIVE FOR GAS TURBINE LOCOMOTIVES

Anthony F. Schwendner, Ridley Park, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 12, 1946, Serial No. 640,837
10 Claims. (Cl. 290—2)

1. The combination with a gas turbine plant wherein a turbine drives a compressor, wherein fuel is supplied to a gas generator furnished with air from the compressor to support combustion of the fuel and to admix with the products of combustion to form gaseous motive fluid supplied to the turbine, and wherein the turbine drives a generator which energizes one or more motors connected to propelling means; of manually controllable apparatus for controlling the input of fuel to the gas generator and the excitation of the electric generator so that both the fuel input and the electric generator excitation are increased for increase in propulsion speed, said apparatus including means for retarding increase in excitation in relation to increase in fuel input to provide for temporary increase in turbine power in relation to electric generator load to accelerate the turbine and compressor and thereby hasten the increase in the quantity of air required for the increased fuel input to avoid excessive temperature rise of the gaseous motive fluid supplied from the gas generator to the turbine.



2,472,925

OVERLOAD OR FIXED LOAD CLUTCH

Charles B. Spase, Nedrow, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York

Application September 7, 1944, Serial No. 552,962
2 Claims. (Cl. 64—30)

1. An overload clutch including driving and driven members having coacting friction faces concentric with the axis of the clutch, one of said members being composed of opposed arcuate sections, and spring clamping means for clamping the sections together to create a predetermined amount of friction between the friction faces of the members, said members having means for interfitting to hold the same from relative axial movement, diametrically opposed arcuate sections having yoke arms forming a part of a universal joint.

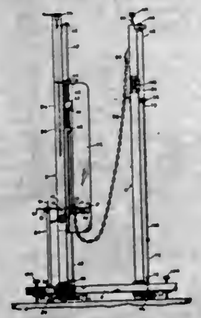
2,472,926

TETHERING POST

Michael Sullivan, Youngstown, Ohio

Application December 6, 1945, Serial No. 633,070
2 Claims. (Cl. 119—121)

1. A tethering post for the staking out of an animal comprising a solid cylindrical metal pin of uniform diameter, said pin having an integral head provided with a substantially segmental spherical top at its upper end and a sharpened lower end which is adapted to be driven into the ground, said head having a flat under surface, an elongated metal sleeve of uniform external diameter and of uniform internal diameter, the internal diameter of said sleeve being substantially the same as the diameter of said pin, whereby it is freely rotatable upon an extended bearing surface of said pin, said sleeve having ends whose surfaces are at right angles to the longitudinal axis thereof, a plate rigidly attached to said post at a position which is more than one-half the distance from the said sharpened end to the said head, the upper flat surface of said plate and the under flat surface of said head forming thrust bearings for the ends of said sleeve, the said surface of the upper end of said sleeve lying in juxtaposed position with the under surface of said head and the said surface of the lower end of said sleeve lying in juxtaposed position with the upper surface of said plate, said plate limiting the penetration of said pin in the ground, a ring rigidly attached to said sleeve in a position intermediate the ends of said sleeve, a spring clasp, and attaching means connecting said spring clasp to said ring, the diameter of the head not exceeding the diameter of the sleeve.

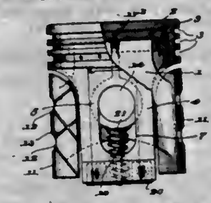


2,472,927

TESTING DEVICE FOR FILAMENTARY MATERIAL

David Taylor, Princeton, W. Va., and Ernest Robert Ward, Narrows, Va., assignors to Celanese Corporation of America, a corporation of Delaware

Application October 10, 1944, Serial No. 557,954
12 Claims. (Cl. 73—95)



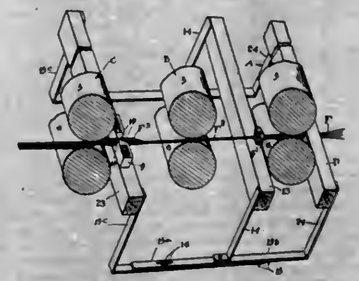
2. In a device for testing filamentary materials, a post, a bracket carried by and movable relative to said post, a clamp carried by said bracket and movable relative thereto, a pointer pivotally mounted on said post, a clamp mounted on said pointer, the specimen to be tested being mounted in said clamps, a chain having one end attached to said pointer for applying a test load on the specimen held in said clamps, a second post for supporting the other end of said chain, means mounted in said second post for permitting the end of the chain supported thereby to be lowered so as to increase the test load on said specimen, said latter means comprising a cylindrical tube movable relative to said second post and having means thereon for supporting said chain, and fluid means cooperating with said tube for controlling the rate of the descent of said tube and said chain.

2,472,928

PISTON FOR USE IN INTERNAL-COMBUSTION ENGINES

Hsin-Ya Tien, Singapore, Straits Settlements

Application January 4, 1947, Serial No. 726,139
4 Claims. (Cl. 123—78)

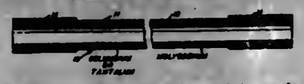


1. A combined piston for an engine cylinder comprising a piston head having the lower part thereof cut away to form two segmental openings, an inner piston body adapted to reciprocate in said piston head and having segmental plates connected thereto and corresponding to the segmental openings, said piston head and segmental plates forming a substantially cylindrical shape to the combined piston, and resilient means between the inner piston body and the piston head thereby permitting movement of the piston head and piston body against the action of the resilient means during the working of the combined piston in the engine cylinder.

2,472,929

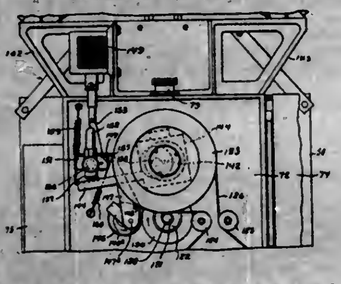
DOUBLE CONDENSER HIGH DRAFT MECHANISM FOR ROVING AND SPINNING FRAMES

Jan V. Weinberger, Truro, Nova Scotia, Canada



Application July 16, 1945, Serial No. 605,343
In Canada March 23, 1945
2 Claims. (Cl. 19—130)

1. A high-draft roving mechanism comprising a roving frame equipped with an entry roll unit,

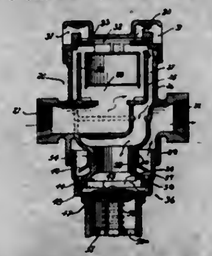


a carrying roll unit and a delivery roll unit through which the slivers are successively passed, sliver condensing or reshaping members through which the slivers are passed from the entry roll unit to the carrying roll unit and by means of which the slivers are reformed into slivers of substantially circular cross section and a second series of sliver condensing or reshaping members through which the slivers are passed from the carrying roll unit to the delivery roll unit and by means of which the slivers are transformed into flattened slivers each having its major cross sectional axis lying in a vertical plane.

2,472,930
ELECTRICAL HEATING UNIT
Donald P. Wilkes, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application August 23, 1945, Serial No. 612,288
3 Claims. (Cl. 201—76)

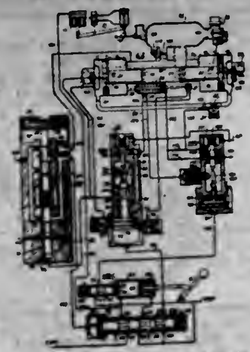
1. An electrical heating element to endure the corrosive action of molten metal such as gold, silver, aluminum and the like in contact therewith at the vaporizing temperatures of the said molten metal, the said element comprising two telescopically interfitted members of which the outer member intended to be in contact with the said molten metal is essentially composed of metallic molybdenum and the inner member protected by the said outer member from contact with the said molten metal is essentially composed of metallic material selected from the class composed of columbium, tantalum and mixtures of columbium with tantalum.

2,472,931
FLOW CAMERA DOCUMENT-COPYING MACHINE
Fred C. Yohn, Norwalk, Conn., assignor to Microstat Corporation, a corporation of Delaware
Application January 11, 1945, Serial No. 572,264
25 Claims. (Cl. 88—24)



1. In a photographic device, a camera, a lens, a rotatable drum for transporting documents to be photographed, a shaft for said drum, means for rotating the drum at a predetermined speed, a plate having an aperture therein through which the documents are photographed, a smooth drum-like film driving member directly connected to and rotated by said shaft, a master film wheel in said camera having a portion of its periphery on the focal plane of said lens, other roller means in said camera cooperating with said master film wheel for supporting film to be transported, and a leverage member adapted to shift said master film wheel with the film thereon to place the film into driving contact with said driving member, electro-magnetic means connected to said leverage member and energized during the time a document is moving past the photographing aperture, the peripheral speed of said drum and driving member being proportioned so as to transport film at a predetermined ratio with respect to the speed of the movement of the documents past said photographing aperture.

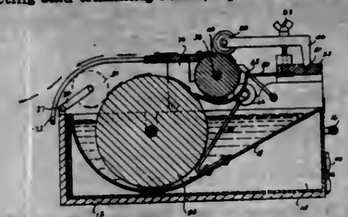
2,472,932
HOUSE MOVING APPARATUS
Bruce Adkins, Pharr, Tex.
Application October 16, 1947, Serial No. 779,082
3 Claims. (Cl. 214—1)



1. In an apparatus for transporting building structures, a pair of elongated carrier beams adapted to be positioned under a structure to be moved, each beam having a pulley journalled at each end thereof, the pulleys being rotatable in planes transverse to the beams, a motor truck, winch means carried on the rear portion of said truck, a transverse beam carried on said truck rear portion, pulleys journalled on the ends of said transverse beam, and a pair of cables extending from said winch means, each cable being looped over a pulley on said transverse beam and engaging under an end pulley of a carrier beam adjacent one end of the structure to be moved, the cable ends being secured to the truck rear portion, whereby the carrier beam ends will be elevated when the cables are wound up on said winch means.

2,472,933
VACUUM BREAKING AND DUMP VALVE
Dwight M. Anderson, South Euclid, Ohio
Application October 22, 1945, Serial No. 623,833
5 Claims. (Cl. 277—50)

1. A device of the character described comprising in combination, a casing having a fluid inlet port in communication with a source of pressure fluid, and a fluid outlet port in communication with a system to be serviced, a passageway through said casing normally establishing communication between said ports, there being a vent opening to atmosphere from said passageway through said casing, a vent valve for said vent opening and biased to closed position by the pressure of fluid normally transmitted through said passageway, a dump opening in said casing disposed in said passageway between said vent opening and said outlet port, a dump valve for said dump opening, spring biased means engaging said dump valve in a direction tending to open said dump valve but said dump valve being normally maintained in closed position by the pressure of fluid normally transmitted through said passageway, whereby, when fluid pressure drops in said passageway, said vent valve and said dump valve open substantially simultaneously to respectively vent said passageway to atmosphere, and provide a dumping outlet for reverse fluid flow from said system.



2,472,934
CONTROL MEANS FOR INTERNAL-COMBUSTION-OPERATED FREE-PISTON MACHINES
Evelyn Stewart Lansdowne Beale, Staines, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a British company
Application June 20, 1944, Serial No. 541,252
In Great Britain June 1, 1943
20 Claims. (Cl. 230—56)

1. An internal-combustion-operated free-piston machine having a free-piston assembly, starting mechanism including means for maneuvering said assembly to a starting position adjacent to one limit of its stroke, means for accelerating said assembly from said position towards the other limit of its stroke, and a starting control member operable to cause at least both said means to operate in the sequence necessary to start the machine, repeater means operatively associated with said starting mechanism for causing automatic repetition of said sequence, and means responsive to starting of the machine for rendering said repeater means inoperative.

2,472,935
WALLPAPER PASTING AND CUTTING DEVICE
Odilon J. Boivin, Gorham, N. H.
Application May 29, 1947, Serial No. 751,205
1 Claim. (Cl. 91—14)

A wall paper pasting and trimming machine comprising a hollow, rectangular frame, a past receptacle removably secured in said frame, a pasting roller journaled at its ends in said frame in position to be partly submerged in paste contained in said receptacle, paper roll supporting means pivotally connected to the front end of said frame to support a paper roll contiguous and substantially parallel to said pasting roller at the front side of the latter, said supporting means being adjustable to receive rolls of paper of different widths, a bracket pivotally secured at its rear end to the rear end of said frame and movable between an operative position in which it rests upon the top edge of said frame and an inoperative position in which it extends upwardly from said frame substantially perpendicular to said top edge, said bracket having two spaced apart sides disposed one at each side of said frame, a trimming roller journaled in said bracket and disposed to the rear of said pasting roller and substantially parallel to the latter when said bracket is in its operative position, a trimming knife supporting arm mounted on said bracket, a trimming knife journaled on said arm and peripherally contacting said trimming roller, a plurality of spaced

fingers secured to said bracket and underlying said trimming roller to guide the paper from said pasting roller onto said trimming roller, a plurality of spaced apart, curved bars pivotally connected to the front end of said bracket to overlie a paper roll supported on the front side of said frame and guide pasted paper from said trimming roller over to said paper roll, and manually operated means connected to said trimming roller for rotating the latter to move paper from said paper roll over said pasting roller and said trimming roller, said bracket being movable from its operative to its inoperative position to expose said paper roll support, said pasting roller and said trimming roller for replenishment of paper on said support, cleaning of said pasting roller and said trimming roller and for removal of said pasting roller and said paste receptacle from said frame.

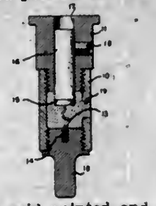
2,472,936
BRACE FOR DOORS AND THE LIKE
James H. Boye, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 19, 1946, Serial No. 684,672
3 Claims. (Cl. 20—38)

1. In a bracing attachment for such doors as have substantially vertical frame members and transverse members, in combination, a channel bar adapted to be secured at one end to one of said vertical frame members of the door and at its other end to a transverse member thereof and being disposed substantially parallel to the transverse member, an abutment member substantially channel-shaped in cross section also having securement to said vertical frame member in associated relation with the channel bar whereby said abutment member overlies the channel bar, a wear plate connected to said abutment member in a manner permitting limited movement of the plate vertically of said abutment member, said plate being interposed between the abutment member and the channel bar, and an adjusting screw carried by the

abutment member and positioned under the channel bar, said adjusting screw having operation to contact the wear plate and through

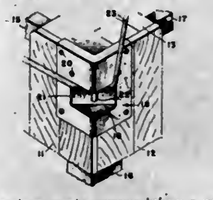
the medium of said plate to apply pressure to the channel bar whereby to eliminate and prevent sagging of the door.

2,472,937
COOLING PLATE
Paul H. Brinkoeter, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas
Application July 19, 1946, Serial No. 684,968
1 Claim. (Cl. 257—258)



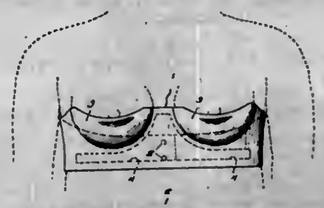
A cooling-coil-plate formed of two metal sheets placed in face to face contact and having outwardly extended parallel rows of elongated embossments, the embossments of one sheet being staggered with respect to and overlapping the embossments of the other sheet to provide continuous-flow passages from first one inner face of the sheet and then to the inner face of the other sheet, each sheet having a row of elongated embossments along one side for connecting alternate rows of the first mentioned embossments at opposite sides of the plate thereby forming a continuous-fluid passage from an entrance adjacent one corner of the plate to an exit adjacent the diagonally opposite corner of the same said passage zig-zagging from one side of the plate to the opposite side and from front face to back face of the plate.

2,472,938
POINT-CONTACT RECTIFIER
Francis Hugh Brittain, Pinner, and Charles Eric Ransley, Sudbury, England, assignors to The General Electric Company Limited, London, England
Application March 1, 1945, Serial No. 580,484
In Great Britain November 8, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 8, 1963
10 Claims. (Cl. 175—366)



1. A method of manufacturing a point contact rectifier comprising a semi-conducting crystal and a metal wire whose pointed end rests upon said crystal which comprises the step of subjecting said pointed end to a hardening treatment.

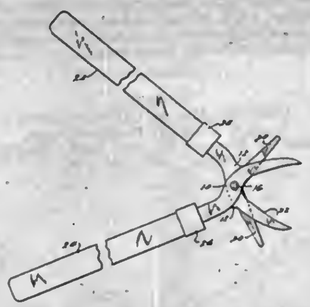
9. A method of manufacturing a point-contact rectifier comprising a semi-conducting crystal and a tungsten wire having a pointed end resting upon said crystal which comprises the step of hardening said pointed end of said tungsten



wire by heating said pointed end to a suitable high temperature in an atmosphere containing a hydrocarbon vapour, said heating of said pointed end being effected by bringing said pointed end into contact with a heated tungsten wire.

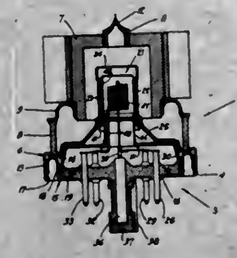
2,472,939
CRATE HAVING LIFTING MEANS
Claire A. Connolly, Detroit, Mich., assignor to the United States of America as represented by the Secretary of Agriculture
Application January 24, 1947, Serial No. 724,217
3 Claims. (Cl. 217—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A packaging crate comprising a rectangular-shaped, reinforced, wooden structure provided at each upright edge with a notch and with a metallic plate fitted and secured to the edge and having a portion mating with the notch, said plate having no outwardly projecting portions and having a downwardly projecting tit located in the notch with clearance space below the tit thus to provide a hook for receiving a rope to lift the crate.



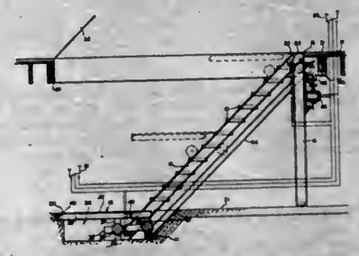
2,472,940
BRASSIÈRE
Arthur H. Cummings, Ventura, Calif.
Application January 4, 1946, Serial No. 639,014
2 Claims. (Cl. 2—42)

1. A strapless brassière comprising a body of flexible rubber comprising a body encircling band



having a relatively wide front portion of substantial thickness, said front portion being formed to provide two breast cups to supportably receive the lower part only of the breasts of the wearer, said front portion being formed in its body contacting side with a suction chamber extending lengthwise of said front portion beneath said cups for holding said front portion in place on the body of the wearer.

2,472,941
WEEDER
Ralph W. Doeg, Highland Park, Mich.
Application March 28, 1946, Serial No. 657,873
5 Claims. (Cl. 294—50.5)

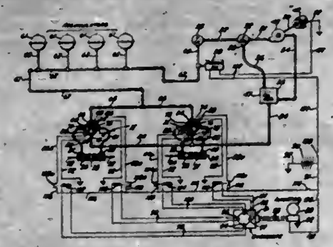


2. In a weeder, the combination of, fork-like jaws pivoted to be operated in the manner of pliers, said jaws being formed of a plurality of tines, a pivot pin for fastening said tines together, spurs integral with some of the tines, each spur being forwardly directed with respect to the face of its respective tine and adapted to sweep through spaces between the tines for cleaning dirt or weed particles therefrom when the jaws are opened widely, and a handle secured to each jaw.

2,472,942
ELECTRON TUBE
Donald Drieschman, Los Altos, and Richard Chamberlin, San Bruno, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application March 18, 1947, Serial No. 735,468
4 Claims. (Cl. 250—27.5)

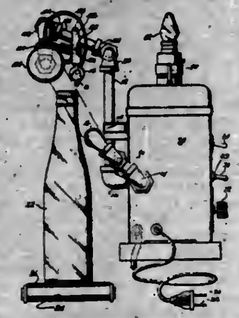
1. An electron tube comprising a lower envelope section having a metallic ring and a disk-like vitreous header sealed to said ring, an upper envelope section having a metallic ring fitted to the ring of the lower section, a fused metallic bond uniting said rings, a plurality of contact prongs sealed to the header, one of said prongs being disposed centrally of the rings, a control grid electrically connected to the center prong, a cathode electrically connected to another prong, and a screen grid electrically connected to one of said rings.

2,472,943
STAIR ELEVATOR
Howard E. Firestone, Salem, Ohio
Application April 17, 1946, Serial No. 662,811
1 Claim. (Cl. 187—12)



An incline elevator for a stairway having side rails supporting the treads thereof and a pit in the lower floor into which said rails extend, comprising an elevator frame having a horizontally disposed load-bearing deck and a pair of spaced depending supports positioned outwardly of each of said rails, a pair of flanged wheels journaled on two of said supports for engaging the upper edges of said rails, a second pair of flanged wheels journaled on the other two of said supports for engaging the lower edges of said rails, a transverse shaft interconnecting the said other two of said supports and positioned below said rails, a sheave freely rotatable on said shaft, a cable, a drum, means at the upper end of said rails to anchor an end of said cable, said cable extending from said anchoring means over said sheave and thence to said drum, and means to rotate said drum, said supports extending below said wheels and sheave whereby the bottom ends of said supports engage the floor of said pit when said frame and deck are in lowermost position.

2,472,944
GYROSCOPICALLY STABILIZED CAMERA BOOM
Edward Furer and Charles Brandon Lonon, Burbank, Calif.; said Lonon assignor to said Furer
Application March 31, 1947, Serial No. 738,464
2 Claims. (Cl. 60—97)

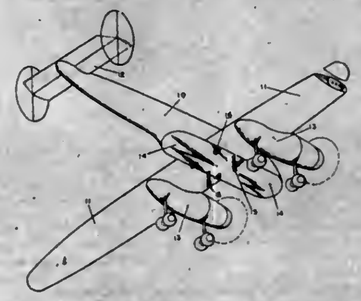


1. An automatically positioned camera boom which includes: a vehicle; a camera boom movably supported on said vehicle; a hydraulic pump; an electric motor for operating said hydraulic pump; a source of electrical energy; an electrical connection between said source of electricity and said motor; a plurality of multi-port solenoid-operated valves in fluid communication with the discharge of said pump; a plurality of hydraulic cylinders in fluid communication with said valves; a piston slidably mounted in each of said cylinders; a piston rod movably connecting each of said pistons with said camera boom; a gyro-

scope adapted to electrically signal any deviation of said camera boom from a predetermined plane; electrical means adapted to be actuated by said signals from said gyroscope and complete an elec-

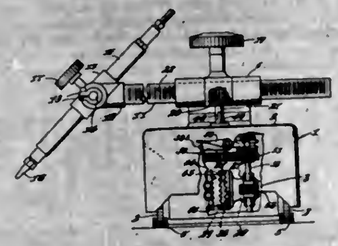
trical circuit between said valves and said source of electrical energy whereby said valves may be actuated to admit hydraulic fluid into said hydraulic cylinders to move said pistons and return said camera boom to its predetermined plane.

2,472,945
APPARATUS FOR DETECTING UNCAPPED BOTTLES
Clair C. Gingrich, Kewanee, Ill.
Application January 31, 1947, Serial No. 725,423
4 Claims. (Cl. 250—220)



1. A control for detecting uncapped bottles passing a detecting station including a first light source, a light sensitive device so located relative to said source and a capped or uncapped bottle passing said station that the bottle itself intercepts the normal passage of light from said source to said device, a second light source so located relative to said device and a capped bottle passing said station that light from said source is reflected by the bottle cap to said device, a normally nonconductive grid controlled gas tube, means including grid biasing means connecting said light sensitive device to said gas tube for rendering said tube conductive when an uncapped bottle passes said station and no reflected light reaches said device, a relay in the output circuit of said gas tube adapted to be operated from one position to another when said tube is rendered conductive, and means operable by said relay for supplying said gas tube with a constant bias sufficient to maintain said tube conductive until said output circuit is broken.

2,472,946
PRODUCTION OF TRICHLOROACETYL CHLORIDE
Edwin J. Hart, Cedar Grove, and Max S. Matheson, Clifton, N. J., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 27, 1947, Serial No. 776,814
5 Claims. (Cl. 260—544)

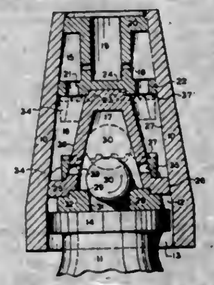


1. The process of making trichloroacetyl chloride from tetrachloroethylene which comprises intimately contacting gaseous oxygen with liquid tetrachloroethylene in the presence of chlorine and in the presence of a quantity of an organic peroxide equal to from 0.1 to 5 per cent of the weight of tetrachloroethylene, said peroxide being selected from the group consisting of acyl peroxides, alkyl peroxides and ascaridole, at an elevated temperature of from 50° C. to 110° C. at which said peroxide decomposes.

2,472,947
UNIVERSAL CARGO AIRCRAFT
Josef S. J. Hlobil, Portland, Oreg.
Application January 19, 1945, Serial No. 573,511
1 Claim. (Cl. 244—118)

The combination of an airplane of the character described having a main bottom surface below the center wing section, the fuselage, empennage and wings of said airplane located above said bottom surface, nacelles in said airplane, said nacelles mounted in the wing structures and spaced from the main fuselage, and a detachable freight compartment adapted to be attached to said airplane below said bottom surface, hoisting means in said airplane for said compartment, said hoisting means extending downward from said bottom surface, said hoisting means including a hook at each side of said bottom surface, said hooks located substantially in the same transverse vertical plane with the center of gravity of the airplane, cooperating means on said compartment for attaching said hooks, said compartment cooperating means being located at corresponding sides of said compartment and so constructed and arranged that the points of attachment of said hooks to said compartment can be adjusted longitudinally on said compartment, whereby said hooks can be attached at points in transverse alinement with the center of weight of said compartment even though the freight in said compartment is not evenly distributed, thereby bringing the center of weight of said compartment in line with the center of gravity of said airplane when said compartment is hoisted to said airplane, locking devices in said bottom of said airplane for holding said compartment locked in position against said airplane bottom when said hoisting means has lifted said compartment into contact with said bottom, said locking devices being located directly below the two main wing spars of the wing center section of the fuselage of said airplane, whereby the weight of said compartment will always be supported at the strongest part of the airplane structure, and whereby said compartment load can be quickly and properly positioned on said airplane, the location of wings, fuselage and empennage with respect to said bottom surface making possible the carrying of oversize objects by said airplane.

2,472,948
CUTTING AND WELDING MACHINE
Harry A. Huff, Jr., Jersey City, N. J., assignor to Air Reduction Company, Incorporated
Application March 20, 1945, Serial No. 583,818
1 Claim. (Cl. 266—23)



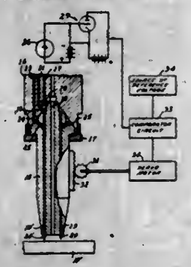
In a cutting or welding machine having a wheeled carriage, an axle for a pair of the wheels to which at least one of such wheels is fixed, an electric motor carried by the carriage, driving connections by which the motor can drive said axle to propel the carriage along a course at uniform cutting or welding speed, said connections including a clutch having a clutch sleeve keyed to the axle and a clutch sleeve loose on the axle and driven by the motor, one of said clutch sleeves being slidable on the axle into and out of engagement with the other clutch sleeve, manually operable means for sliding the slidable clutch sleeve on the axle to engage or disengage the clutch, a torch-arm mounted in a holder on the carriage for movement longitudinally of itself and transversely of the direction of travel of the carriage, a torch carried by the arm, and manually operable means for adjusting the torch-arm in its holder comprising rack teeth on the torch-arm meshing with an actuating pinion fixed to a knob-actuated shaft on the holder, the combination therewith of torch-arm driving connections between said loose clutch sleeve and said actuating pinion for the torch-arm by which rotation of the loose clutch sleeve by the motor may be utilized to drive the torch-arm in its holder at uniform cutting or welding speed, said torch-arm driving connections including a downward extension on the knob-actuated shaft of the pinion coupled to a shaft extending downwardly into the carriage, gearing between said last-named shaft and said loose clutch sleeve, a clutch in said torch-arm driving connections, manually operable means for operating said clutch, a brake surface on the slidable clutch sleeve of the carriage clutch, and a stationary brake surface into contact with which the brake surface on the slidable clutch sleeve can be brought by the manually operable means for the slidable clutch sleeve.

2,472,949
FLEXIBLE NOZZLE FOR SUPERSONIC WIND TUNNELS
James O. Jackson, Crafton, Pa., assignor to Pittsburgh-Des Moines Company, a corporation of Pennsylvania
Application October 31, 1947, Serial No. 783,405
11 Claims. (Cl. 138—45)

1. In an adjustable nozzle or duct structure, a pair of spaced fixed walls, a pair of longitudinally flexible walls arranged between such fixed walls and with the same defining a rectangular duct or nozzle of varying cross section, multiple power operated means for moving such flexible walls toward and from the longitudinal axis of such duct or nozzle, a series of flexible wall contour determining cams, means responsive to movement of such cams for controlling the direction and amplitude of movement of such flexible walls occasioned by such means and means for simultaneously moving such cams.

2,472,950
NONREFILLABLE BOTTLE
Walter Keenan, Little Falls, N. J.
Application May 5, 1947, Serial No. 746,059
1 Claim. (Cl. 215—25)

The combination with a bottle of a device for rendering the bottle non-refillable including a housing provided with conically shaped internal bore, a valve body including a head portion mounted in said housing and provided with three conically shaped flanges adapted to fit the internal bore of the housing and partition off an outer chamber and an intermediate float valve chamber respectively, axial passages inter-connecting said chambers, a ball valve and seat



mounted in the internal bore of the valve body and normally closed when the bottle is held in a vertical position, a radial passage connecting the internal bore of the valve body to the intermediate float valve chamber, an annular float valve mounted on the valve body in the float valve chamber and adapted to move axially and close the radial passage when the bottle is inverted and the float valve chamber filled with fluid, a serrated upper edge on the float valve to prevent the valve from adhering to the ceiling of the intermediate chamber after the bottle has been inverted for pouring.

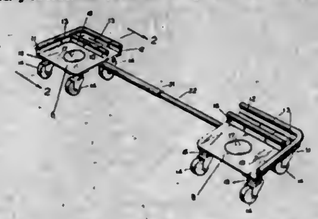
2,472,951

METHOD AND APPARATUS FOR CONTROLLING TORCH SPACING

Henry O. Klinke, Forest Hills, N. Y., assignor to Air Reduction Company, Incorporated, a corporation of New York

Application September 10, 1946, Serial No. 695,910
7 Claims. (Cl. 148—9)

1. In using gas torches in which the inner cone of the flame when viewed internally through the gas supply passage that feeds the flame shows a light area when the cone is out of contact with the work and shows a dark spot at the center of the light area when the cone touches the work which increases in size as to distance between the torch tip and the work becomes less, the method of preserving a substantially constant spacing between the torch tip and the work surface which comprises photo-electrically converting into electric current variations the variations in the amount of light at the area where the flame cone impinges on the work resulting from the change in the size of said dark spot when the spacing of the tip from the work surface departs from a desired normal, and automatically adjusting the spacing of the torch tip from the work surface in accordance with the variations in said electric current.



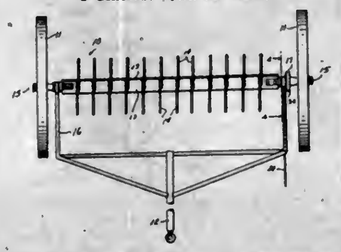
2,472,952

TRUCK DOLLY

Thomas E. Lennard, Portland, Oreg.

Application April 10, 1946, Serial No. 661,137
2 Claims. (Cl. 280—35)

2. A dolly of the character described comprising a pair of substantially similar truck elements, adjustable telescoping means connecting said pair of elements, each of said truck elements having a main frame extending substantially horizontally, an upstanding guard extending upwardly from a portion of the outer edge of said main frame, a similar upstanding inner guard extending upwardly from said main frame substantially parallel to a portion of said first mentioned outer guard and located between the center of said main frame and said last mentioned portion of said outer guard, a plurality of



wheels secured to the underside of said frame, at least one of said wheels being located below the space between said inner and outer guards.

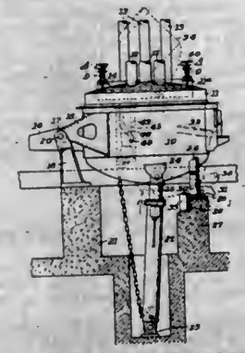
2,472,953

TRACTOR DRAWN HAY RAKE

Chester J. Meyer, Speed, Kans.

Application August 20, 1946, Serial No. 691,720
3 Claims. (Cl. 56—391)

1. In a hay rake, a frame, a transverse axle revolubly mounted on said frame, ground engaging wheels journalled on opposite ends of said axle, two diametrically opposed sets of rake teeth pivoted to said axle on axes parallel to and on opposite sides of the axis of said axle, stop means on said axle limiting gravitational swing of said rake teeth to arcs less than a semi-circle, and clutch means arranged coaxially with respect to said axle and one of said ground engaging wheels and operatively connecting said one ground engaging wheel with said axle to turn said axle only one-half revolution upon each complete revolution of said one ground engaging wheel, said clutch means comprising a clutch plate fixed coaxially on said axle having a pair of similar diametrically opposed peripheral cam surfaces terminating at one end in radial stop surfaces, an operating element mounted on said axle for endwise movement in a direction tangential to said axle and spring retracted to normally occupy a position at one end of the travel of said operating element, a lateral cam follower roller on said operating element rollably engaging one of said cam surfaces and in the retracted position of said operating element engaging the stop surface thereof whereby reverse rotation of said clutch plate and said axle are prevented, a rocker pivoted intermediate its ends on the outboard side of said clutch plate at a point eccentric with respect to the axis of said clutch plate, said rocker having diametrically opposed shoulders projecting outwardly therefrom into the path of said operating element roller whereby one of said shoulders is engaged by said roller while said roller is engaged with a stop surface of said clutch



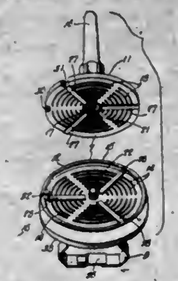
plate, a pair of diagonal levers pivoted intermediate their ends on the outboard side of said clutch plate at diametrically opposite points, said levers occupying generally parallel positions and having detent rollers on their outer ends and spring means connected to their inward ends whereby their rollers are urged outwardly of the periphery of said clutch plate, links pivoted at their opposite ends to and operatively extending between points adjacent to the said shoulders on said rocker and points on said levers between the lever pivotal points and their detent rollers, said clutch means further comprising a clutch rotor fixed coaxially on said one ground engaging wheel and having a ring gear with its teeth surrounding said clutch plate, said soring means urging said detent rollers toward engagement with the ring gear teeth, endwise movement of said operating element away from said retracted position acting to withdraw said cam follower roller from engagement with said stop surface and with the related rocker shoulder in a manner to free said clutch plate and said axle to rotate relative to the ground engaging wheel and said rocker to rock relative to said clutch plate until said cam follower is engaged by the other stop surface of said clutch plate and the other shoulder of said rocker, the freeing of said clutch plate, axle, and rocker permitting said spring means to engage said detent rollers with said ring gear teeth whereby said ground engaging wheel and said axle are connected for rotation together, and engagement of said cam follower with said other clutch plate stop surface and said other rocker shoulder acting to pivot said rocker relative to said clutch plate in a direction to retract said levers against the resistance of said spring means and thereby withdraw said detent rollers from said ring gear teeth, so as to disconnect said ground engaging wheel from said axle and lock said axle against rotating relative to said frame.

2,472,954

ADJUSTABLE ROOF MOUNTING MEANS FOR TOP CHARGED ELECTRIC FURNACES

William Enoch Moore, Pittsburgh, Pa., assignor to Delaware Engineering Corporation, a corporation of Delaware

Application May 12, 1944, Serial No. 535,332
11 Claims. (Cl. 110—99)



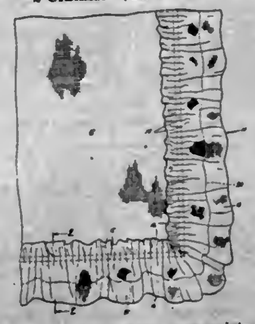
1. A support for a furnace roof comprising a horizontal beam, and means for securing the roof to the beam comprising a load-sustaining member adjustable vertically and longitudinally of the beam and provided with a device adjustable along the periphery of the roof for engaging the member to the roof, and means for locking the adjusted load-sustaining member to the beam.

2,472,955

COFFEE FILTER

Joseph W. Myers, Philadelphia, Pa., assignor, by mesne assignments, to Proctor Electric Company, Philadelphia, Pa., a corporation of Pennsylvania

Application August 11, 1945, Serial No. 610,238
7 Claims. (Cl. 210—162)

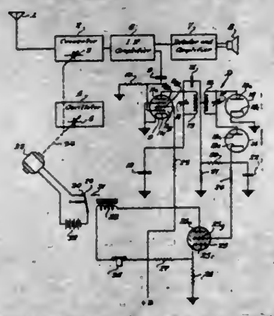


5. A coffee filter, comprising a pair of removably-attached members having confronting faces, each of said members having a substantial number of apertures therein, the apertures of one member being offset with respect to those of the other member, said members being disposable in different relative angular positions, and angularly-spaced projections on the confronting faces of said members adapted to effect different close spacings of said members, according to the different relative angular positions of said members, to provide different sized filter passages between said members according to such different relative angular positions of the members, the projections on each of said members having sufficient angular spacing throughout the radial dimension of the projections to effect the aforesaid different spacings of said members.

2,472,956

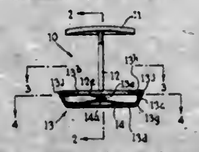
RUFFLE CURTAIN

Frederick S. Nichols, Melrose, Mass.



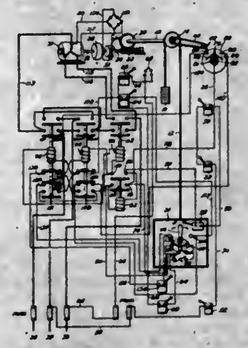
Application January 8, 1946, Serial No. 639,800
2 Claims. (Cl. 2—278)

1. A ruffle on a curtain, comprising a strip pleated intermediate its edges and secured with



its pleats to the curtain by stitching, and a band formed by a marginal portion of said strip folded back upon the latter, said band having pleats interengaged with, and secured to the curtain by the same stitching as, the pleats of said strip, and extending outwardly beyond said stitching only part way across the lateral expanse of said strip.

2,472,957
TUNING CONTROL SYSTEM FOR SIGNAL SEEKING RECEIVERS
Madison G. Nicholson, Jr., Snyder, N. Y., assignor to Colonial Radio Corporation, Buffalo, N. Y.
Application October 4, 1944, Serial No. 557,192
11 Claims. (Cl. 250—40)

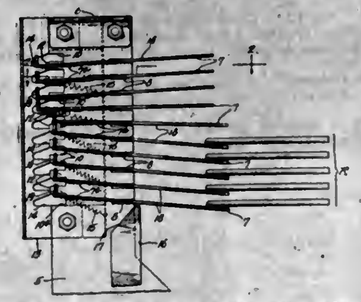


1. In a signal seeking receiver, in combination, signal circuit tuning means, electrical power means for varying said signal circuit tuning means, a normally closed switch controlling said power means, and means for opening said switch to de-energize said electrical power means to stop the variation of said signal circuit tuning means in response to initial reception of an incoming signal of predetermined strength, said last-mentioned means comprising a balanced type of frequency discriminator-rectifier supplied by incoming signals, and a control tube responsive to the output of said frequency discriminator-rectifier as the incoming signal frequency enters the frequency response spectrum of the frequency discriminator-rectifier, for effecting said opening of said switch to deenergize the electric power means.

2,472,958
CUFF LINK CONSTRUCTION
Jacob M. Oldak, Brooklyn, N. Y.
Application June 18, 1948, Serial No. 33,870
4 Claims. (Cl. 24—97)

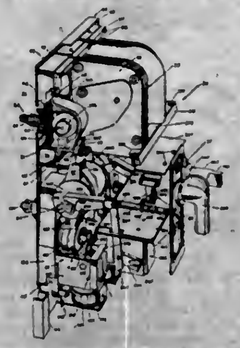
1. A cuff link of the character described comprising a flat yoke link having intermediate spaced apart arms bordering on a central opening, a button mounting portion terminating one end of the yoke, an integrally formed cross-piece of rectangular cross section interconnecting said arms at the other end of said yoke to border on said opening, an elongated bar toggle swivelly mounted through a mid-portion thereof on said cross-piece, said bar toggle formed of an elongated hollow shell having tapering opposite ends and parallelly aligning side walls, a closure strip for said shell having opposite ends thereof formed with cut-backs, tabs integrally formed to extend from said tapering opposite ends bent on a rear side of said shell to neatly fit into said cut-backs for overlappingly securing said strip thereto to provide a smooth rear exterior surface for freely sliding in and out of cuff button holes, and a bowed leaf spring housed within said shell in operative engagement with said cross-piece, the latter extending between said spring and the closure strip to serve as a releasable detent means on pivotal angular movement of said bar toggle with respect to said cross-piece.

2,472,959
ELEVATOR CONTROL MECHANISM
George D. Pettengill, Thomas F. Jarvis, and William L. Fader, Warsaw, N. Y., assignors to Warsaw Elevator Co., Warsaw, N. Y.
Application October 2, 1947, Serial No. 777,396
11 Claims. (Cl. 318—210)



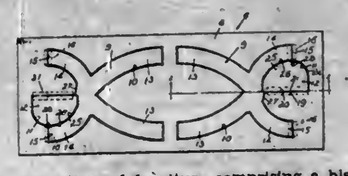
9. In an elevator drive and braking control system, a reversible alternating current electric motor, an elevator drive shaft, a torque connecter intereconnecting the drive shaft of said motor and said elevator drive shaft, and a power supply control system for said motor including manual switch means operable to cause energization of said motor, switch means operable to reverse said motor to impose a counter-torque through said connecter to halt the elevator travel, and means operable automatically upon halting of said travel to deenergize said motor.

2,472,960
MULTIPLE RECORD SUPPORT FOR PHONOGRAPHS
William E. Radolph, Collingswood, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 28, 1943, Serial No. 515,957
9 Claims. (Cl. 274—10)



1. A multiple record support for a phonograph including a record supporting post comprising an upright member provided with a plurality of superimposed generally horizontal slots, a plurality of movable record supporting shelves with

portions thereof received in the slots to be guided thereby during movement of the shelf between record supporting or advanced positions and non-supporting or retracted positions, yielding means adapted to urge the shelves from retracted to advanced position, the slots in the supporting post member being of width providing limited angular oscillation of the shelves in a vertical plane, cooperating stop means on the shelves and the post member for retaining the shelves in

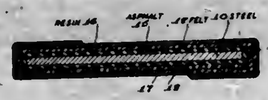


retracted position, the stop means being adapted to engage upon oscillation of the shelves in one direction when the shelves are in retracted position, and means automatically operative upon oscillation of a shelf in the other direction to disengage the stop means of the next higher shelf and thereby provide for movement of the higher shelf from retracted to advanced position under the influence of the means for urging that shelf outwardly.

2,472,961
CIRCUIT BREAKER MOUNTING MEANS
William M. Scott, Jr., Bryn Mawr, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 4, 1945, Serial No. 586,574
8 Claims. (Cl. 200—168)

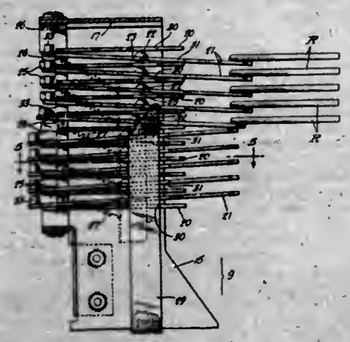
1. A circuit breaker adapted for use with other similar circuit breakers in a dead front switchboard, said circuit breaker comprising a stationary contact element, a movable contact element, operating means for moving said movable contact element and current responsive elements for controlling said operating means; a metal panel for supporting the circuit breaker; molded insulating supporting members individual to each of said elements and carrying each of said elements as a separate unit; and means for securing each of said insulating supporting members to said metal panel; and means for interconnecting said individual elements with each other and with the operating means, said insulating members having insulating extensions to increase the creepage distance between the elements carried thereby and said metal panel; said panel, when the circuit breaker is mounted in a switch board together with other similar circuit breakers, combining with adjacent panels to form a dead front switchboard.

2,472,962
COLLAPSIBLE TABLE OR THE LIKE
Frank Heisel Shuflin, Miami Shores, Fla., assignor of one-third to Max Shlafrock and one-third to Louis Touby, both of Miami, Fla.
Application May 28, 1946, Serial No. 672,791
3 Claims. (Cl. 311—84)



1. An article of furniture comprising a blank formed with cuts made therethrough so as to define at least two legs and a brace for each leg and cut-outs in which said legs and leg braces can nest substantially flush with said blank, and hinge means connecting edges of said legs and leg braces to corresponding edges of said cut-outs whereby the said legs can be swung out of the related cut-outs to positions perpendicular to said blank and returned thereinto and whereby the said leg braces can be swung out of the related cut-outs and can be subsequently returned into their cut-outs, and means for releasably connecting said legs and leg braces to hold said legs in perpendicular positions, said hinge means comprising hinges pivoting said legs and said leg braces to swing outwardly from one side only of said blank and on axes disposed at substantially right angles with respect to each other, the outer edges of said leg braces being convexly curved and an inner edge portion of said legs being concavely curved, the curvatures being substantially similar, said convexly curved outer edges of said braces being formed with notches arranged to slidably engage the said concavely curved inner edges of the legs as the braces are swung out of nested position with said legs in perpendicular position, so as to positively hold the legs in perpendicular position.

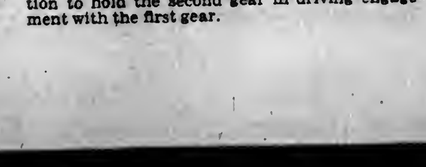
2,472,963
PROTECTED METAL ARTICLE
Fred G. Singleton and Paul W. Jenkins, Pittsburgh, Pa., assignors to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 4, 1946, Serial No. 694,814
9 Claims. (Cl. 154—45.9)



1. As a new article of manufacture, a protected metal building sheet comprising a metal sheet, a layer of bituminous-bearing fibrous material covering a surface of the metal sheet, an interposed

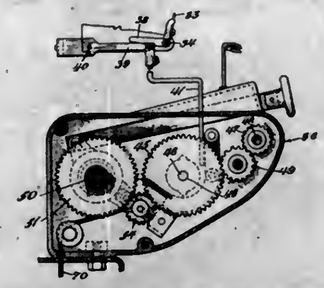
layer of adhesive bonding the fibrous layer to the metal sheet, and an outer weather-proofing coating applied over said fibrous material and comprising an insoluble and infusible layer bonded to the bituminous material carried by said fibrous layer, said coating comprising the resinous reaction product formed by reacting a polymerizable liquid monomeric ethylenic - group - containing solvent for said bituminous material selected from the group consisting of allyl monomers, vinyl monomers and acrylic monomers, with a poly-

ester resin formed by reacting a glycol and an ester-forming dicarboxylic acid material, said material having at least 10 mol percent of an unsaturated alpha-beta-dicarboxylic acid material, and any remainder being selected from the group consisting of aliphatic saturated dicarboxylic ester-forming materials, aromatic dicarboxylic ester-forming materials, and mixtures thereof, said coating being bonded to said bituminous material along a zone at their interface wherein said coating material and said bituminous material are co-mingled.



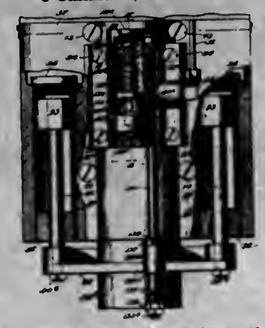
2,472,964
MULTIPLE RECORD SUPPORT FOR PHONOGRAPHS
Harold Walker, Meadowbrook, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 28, 1943, Serial No. 515,959
11 Claims. (Cl. 274—10)

6. In an automatic phonograph, a turntable, a plurality of record-supporting structures adapted to support a group of records above the turntable, each of said supporting structures including a plurality of superimposed relatively spaced record-supporting shelves each adapted to engage one of the records, whereby the records are individually supported in superimposed spaced relation, each record being supported by corresponding shelves of said supporting structures, each of said shelves being movable between supporting and non-supporting positions, means urging each shelf to its supporting position, means for moving the corresponding shelves of said supporting structures to their non-supporting positions in upward progression to cause successive dropping of the supported records onto the turntable, means for latching each shelf in its non-supporting position, excepting the lowermost shelf of each supporting structure, and means whereby the corresponding shelves of said supporting structures are released in upward progression during reloading.



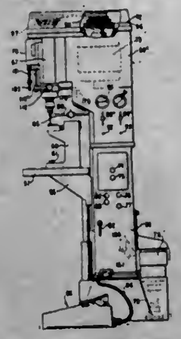
2,472,965
METALLIZED TETRAKISAZO DYES
Walter Wehrli, Basel, Switzerland, assignor to Sandoz Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application June 12, 1947, Serial No. 754,273. In Switzerland July 14, 1941
8 Claims. (Cl. 260—145)

5. A complex metal compound of a substantive polyazo dyestuff of the formula



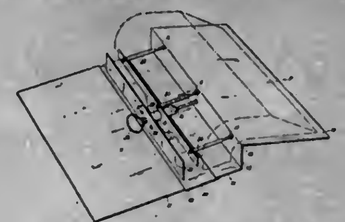
wherein X is a member selected from the group consisting of hydrogen and alkyl, R means the radical of Cleve's acid and R' is a member selected from the group consisting of substituted and unsubstituted phenyl radicals, which complex metal compound dyes cellulose fibres in fast blue-grey shades.

2,472,966
STOP MEANS FOR FEED ROLL UNITS
Albert E. Winslow, Norwich, and Eugene Eppler, Stonington, Conn., assignors, by mesne assignments, to Universal Winding Company, Cranston, R. I., a corporation of Massachusetts
Application May 2, 1946, Serial No. 666,727
8 Claims. (Cl. 57—83)



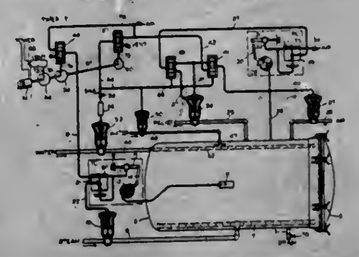
1. A yarn handling apparatus comprising a spindle for a take-up package, feed rolls for feeding yarn to the take-up package, a gear fixed on the axis of one of the feed rolls, a pivoted bracket carrying a second gear movable from driving to non-driving position with the first gear, means for driving said second gear, and means for moving said second gear to non-driving position upon breaking of the yarn end, including catch and latch means for holding said bracket in a position to hold the second gear in driving engagement with the first gear.

2,472,967
DRILLING MACHINE
Herman Goldberg, Chicago, Ill.
Application March 13, 1946, Serial No. 323,648
5 Claims. (Cl. 77—32)



1. The combination in a machine of the class described, of a cylinder block, a pressure platen slidably mounted in said block, a rotatable tool carried by said pressure platen, said block having a cylinder formed therein, a piston mounted in said cylinder and connected to said pressure platen, means for admitting compressed air to said cylinder to move said pressure platen and said tool along the axis of said tool toward the work, dashpot mechanism carried by said cylinder block, an actuating member associated with said dashpot mechanism, and means carried by said pressure platen for operating said actuating member to cause said dashpot mechanism to retard and then arrest the movement of said pressure-platen when said tool reaches the end of its stroke.

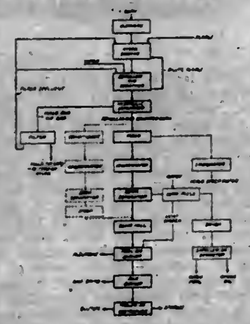
2,472,968
DRILLING MACHINE
Herman Goldberg, Chicago, Ill.
Application June 26, 1942, Serial No. 448,554
7 Claims. (Cl. 77—32)



1. The combination in a machine of the class described, of a movably mounted tool, means for moving said tool axially through forward and reverse strokes, a work holder for gripping a work piece, means for causing a forward stroke of said tool, and means actuated by the starting of said forward stroke for causing said holder to grip a work piece placed therein.

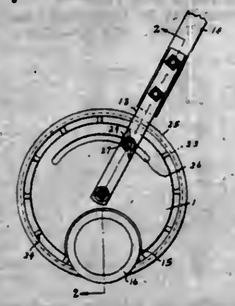
2,472,969
LOOSE-LEAF BINDER
James P. Guinane, Westport, Conn.
Application June 9, 1945, Serial No. 598,588
2 Claims. (Cl. 129—13)

1. In a loose leaf binder comprising a pair of cover members, an elongated socket connected to one of said cover members, a wedge portion disposed at the outer end of said socket and converging away from said socket, a hollow, manually liftable ball carrier slidably mounted in said socket, a plurality of balls carried by the wall of said ball carrier, an elongated locking post on the other of said cover members, and an enlarged head integrally formed on the outer end of said locking post, said head and post being freely slidable within said ball carrier and being adapted to be engaged by the balls of said ball carrier in cooperation with said wedge portion whereby said post and head may slide freely in said ball carrier to permit the free operation of said cover members until said enlarged head meets said wedge portion whereupon said ball carrier and said head are engaged in a locking relationship preventing further relative outward movement when so mutually outwardly disposed so that the locking post head is locked in said ball carrier until the ball carrier is manually lifted to release the balls from engagement with said head.



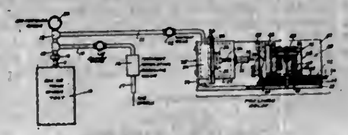
2,472,970
APPARATUS FOR THE HEAT PROCESSING OF CANNED PRODUCTS
Edward J. Hanna, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application May 18, 1946, Serial No. 670,689
4 Claims. (Cl. 99—370)

1. In combination, a retort arranged to have containers temporarily sealed therein for processing, means for introducing steam into said retort in amounts to maintain a desired temperature condition therein, means for maintaining a substantially given pressure condition within said retort, means for introducing into the retort a cooling liquid in the form of a spray and sub-



sequently in the form of a stream whereby the steam within the retort tends to condense with the resultant reduction in its pressure, and means for introducing a compressed gas into the retort in amounts tending to compensate for the reduced steam pressure therein.

2,472,971
MANUFACTURE OF CORN PRODUCTS
Donald W. Hansen, Decatur, Ill., assignor to A. E. Staley Manufacturing Co., Decatur, Ill., a corporation of Delaware
Application November 7, 1945, Serial No. 627,275
5 Claims. (Cl. 127—68)



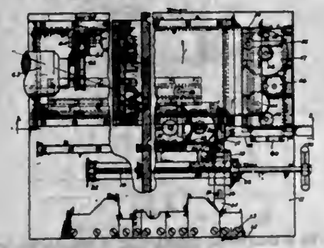
1. In the process of manufacturing starch from corn kernels, the improvement which comprises immersing corn kernels in an aqueous caustic alkali solution of not less than 0.2 per cent concentration at a temperature in the range of 160° F. to 212° F. for a period of time not exceeding 15 minutes, thereby loosening only the hulls and tip caps of the kernels prior to their subsequent removal.

2,472,972
LAWN EDGER
Hilton W. Hearn, Houston, Tex.
Application September 10, 1945, Serial No. 615,333
1 Claim. (Cl. 30—276)

A lawn edger comprising, a circular frame having a marginal inwardly turned flange extending entirely around the frame, said frame having a central, laterally extended spindle, a circular end plate having an annular, inwardly extended marginal flange formed with an internal master gear and having an inwardly extended hub which fits over said spindle, the flanges of the frame and end plate being aligned with their free margins in adjacent relation to form an enclosure, a bolt fitted axially through said spindle, a handle, brackets secured to the sides of the handle at one end and whose other ends have bearings through which the bolt extends, means for securing said bolt in the spindle and also securing the brackets on the bolt, a semicircular recess located eccentrically in the outer side of the frame, a rotatable cutting disc in said recess, a shaft on which the disc is fixed, a bearing in the frame through which said shaft extends, a spur gear on the inner end of the shaft and in mesh with said master gear, a one way clutch whereby the spur gear may be connected with and disconnected from said shaft, an annular rim surrounding said flanges and connected to said plate, a guide flange on the rim adjacent said disc, said frame having an arcuate slot which is concentric with the frame and a clamp bolt fitted through said slot and through the adjacent handle bracket for clamping said adjacent bracket in a selected fixed position relative to the frame.

2,472,973
PRESSURE TESTING APPARATUS AND CONTROL CIRCUITS THEREFOR
Harry William Hoffman, Anoka, and Grover H. Helmer, Minneapolis, Minn., assignors to Federal Cartridge Corporation, Minneapolis, Minn., a corporation of Minnesota
Application January 20, 1944, Serial No. 518,962
12 Claims. (Cl. 73—40)

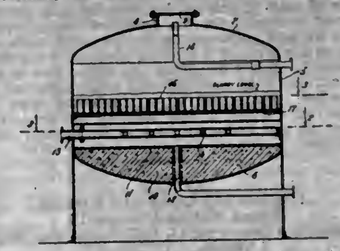
8. In a system for testing vessels for leaks under sustained pressure, including means for applying a charge of fluid under pressure to a vessel undergoing test, a pressure responsive switch having a pressure element connectable to said vessel and a pressure operated contact movable into a closed position against a movable contact for establishing a normally closed control circuit, the improvement comprising, means including an operator controlled switch at a first station for locking said movable contact in any position to which it is moved by the pressure operated contact, relay means connected to and operated in response to closure of said operator controlled switch at said first station; and cyclic timing means responsive to said relay means for opening a shunt circuit around said pressure responsive normally closed switch contacts in said normally closed control circuit, means responsive to the de-energization of said normally closed control circuit due to the opening of said normally closed pressure responsive contacts when said shunt circuit is open for initiating energization of a work circuit.



2,472,974
CORSET ATTACHMENT
Josephine L. Holt, Oakland, Calif.
Application March 2, 1946, Serial No. 651,534
1 Claim. (Cl. 2—38)

A corset having an insert for varying the size of the corset, comprising a narrow strip permanently secured to the corset, said strip having a row of hook eyelets on the free edge thereof; a single relatively stiff but flexible strip having on one side thereof a row of hooks engaging said hook eyelets; and on the other side thereof a row

of lacing eyelets; said corset having a vertical portion having a row of lacing eyelets; and a lacing passing through the eyelets of said second mentioned strip and said corset portion and flexibly connecting the same.



2,472,975
MACHINE FOR MAKING CIRCULAR FORM TOOLS
Guy R. Houghtaling, Rochester, N. Y.
Application August 23, 1946, Serial No. 692,550
1 Claim. (Cl. 51—50)

A machine of the character described comprising, in combination, a rotatable spindle in which the work is mounted, a pair of superimposed movable tables, one of which is carried by and movable on the other, a cutting element mounted on the upper table, an enlarged template mounted on said machine with the contours thereof in exact relation to the contours to be cut in the work, a stylus, and means including a bodily movable gear train between the stylus and each of said tables for moving said tables in reduced relation to the dimensions of the stylus and at right angles to each other to move said cutting element over the work in accordance with, but in reduced relation, to the contour of said stylus.

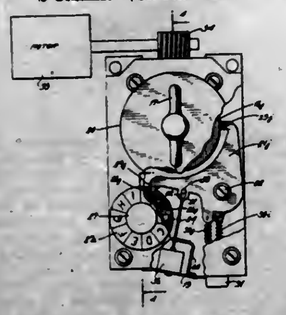
2,472,976
METHOD OF SEPARATING SOLIDS FROM LIQUID SUSPENSIONS
Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application February 21, 1945, Serial No. 579,115
1 Claim. (Cl. 210—42.5)

The method of separating solid particles from liquids to be treated which comprises establishing a slurry of liquid and finely-divided filtering particles in which the finely-divided particles constitute from 25% to 75% of the volume of the liquid of the slurry, introducing the slurry into a first zone of a separation vessel, introducing liquid containing the solid particles to be separated into said zone with resultant mixing of said liquid and the solid particles carried thereby with the slurry and elevation of at least a part of the slurry to a quiescent zone above said first zone consisting of a plurality of upwardly-extending passages of relatively small cross section where the mixture of liquid to be treated and slurry is maintained in a quiescent state,

continuing the introduction of liquids and solid particles to be separated therefrom into said first zone, passing the liquid and solid particles to be separated therefrom upwardly from said first zone into and through the quiescent zone in which the slurry is maintained in a quiescent state, the linear velocity and rate of flow of the liquid containing the solid particles to be separated upwardly through said quiescent zone being so correlated to the density of the slurry therein that solid particles are separated from the rising liquid as the liquid passes upwardly through the slurry in said quiescent zone, and withdrawing the filtered effluent liquid from a zone above the quiescent zone.

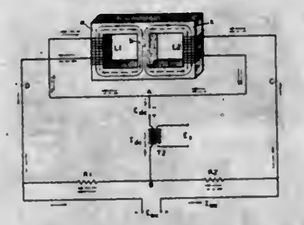
2,472,977
FLUORESCENT LAMP SOCKET
Harry Yale Magcoch, Havertown, and Andrew J. Shaback, Philadelphia, Pa., assignors to Electric Service Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 25, 1947, Serial No. 782,126
3 Claims. (Cl. 173—328)

1. A socket for a tubular fluorescent lamp of the type having a single axially projecting terminal pin at each end thereof comprising a cylindrical body member closed at one end thereof, a centrally apertured disk fitted in the open end of said body member for axial movement therein, a collar member fixedly secured to the open end of said body member, said collar member having an opening therein of an area sufficiently less than the internal cross-section area of said cylindrical body member to provide an internal shoulder which is engageable by said disk to limit axial movement thereof outwardly of said body member, a spirally coiled compres-



sion spring disposed interiorly of said cylindrical body member with its reduced end convolution engaging said disk and in substantial registry with the central aperture thereof for resiliently urging said disk toward said internal shoulder, said spring being adapted to conduct current to the terminal pin of a tubular lamp inserted into said socket and said collar member being of an axial length sufficient to embrace a substantial portion of the inserted end of said tubular lamp when the terminal pin thereof is projected into and through the aperture of said disk and into engagement with the registering end convolution of said spring, and a conductor plate fitted in the base of said cylindrical body member to provide a rear abutment for the enlarged base convolution of said compression spring, said plate being in the form of a circular plate of a diameter adated to snugly fit within the closed end of said cylindrical body member and being adapted for electrical connection to a conductor wire for supplying current to the terminal pin projecting from the end of the lamp embraced by said collar member.

2,472,978
UNIVERSAL GOLF CLUB HEAD
Frank Mahon, Chicago, Ill.
Application December 13, 1947, Serial No. 791,521
4 Claims. (Cl. 273—77)

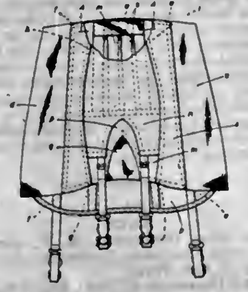


1. A universal golf club head comprising, a wedge-shaped body tapering from the head portion toward the toe portion thereof to form a top portion of triangular cross-sectional configuration and a bottom portion of trapezoidal configuration, the faces of the said club head being of partially conical and concave configuration formed by generating imaginary geometrical cones with their apices at the said heel portion.

2,472,979
SEMIAUTOMATIC TUNER DEVICE FOR RADIO APPARATUS AND THE LIKE
Richard W. May, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application May 23, 1946, Serial No. 671,686
8 Claims. (Cl. 192—142)

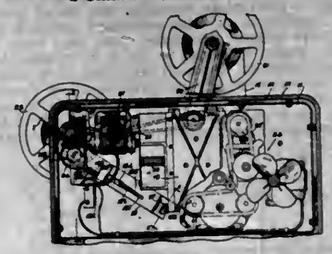
1. A device for selectively setting a control shaft of radio apparatus and the like, comprising a manually settable selector cam shaft having a series of selector cams, a plurality of shiftable stop pawls one for each cam, a plurality of stop rings arranged to be selectively stopped under control of a selected one of said pawls, each of said pawls having a toe and heel portion with the heel portion in coacting engagement with a corresponding one of said cams and with its toe portion in coacting engagement with a corresponding one of said stop rings, a motor for rotating said stop rings and said control shaft as a unit, manual means for rotating said cam shaft to move a selected one of said pawls to a preliminary stopping position, a common switch operating ball mechanically linked to all said pawls, and a power supply circuit for said motor completed through said switch and which is automatically closed upon initial manual rotation of said cam shaft and which remains closed until said selected pawl is moved to its final stopping position where it is in selective stopping engagement with its associated stop ring said selected pawl thereupon moving said ball to open said motor circuit.

2,472,980
MEASURING SYSTEM AND SATURABLE REACTOR FOR USE THEREIN
Carlton W. Miller and Nathaniel B. Nichols, Rochester, N. Y., assignors to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 3,758
4 Claims. (Cl. 332—51)



1. In a magnetic modulator, a reactance bridge comprising four arms connected together to provide two pairs of conjugate points, two of said arms each having a fixed impedance connected therein, the other two arms each having a bridge coil connected therein, core means provided with two magnetic paths of magnetic material capable of being saturated, each bridge coil being in inductive relation to one of said magnetic paths, a source of magnetizing alternating current at a given frequency supplied through two conjugate points to said bridge coils to produce original magnetizing forces at a value to saturate said magnetic paths to approximately the saturation knee thereof, a source of variable electrical signals, means for supplying to the core means magnetizing forces proportional in value to said signals whereby the resulting magnetizing force at any instant assists the original magnetizing force in one bridge coil and opposes the original magnetizing force in the other bridge coil so that in each half cycle of the alternating current source the bridge coils alternately saturate said magnetic circuits, and output terminals coupled to said bridge whereby output voltages are developed at said terminals of a magnitude proportional to the signals and at a frequency twice that of the alternating source.

2,472,981
WALL PANEL JOINT CONSTRUCTION
Karl H. Miller, North Canton, Ohio, assignor to Diebold, Incorporated, Canton, Ohio, a corporation of Ohio
Application March 27, 1946, Serial No. 657,444
5 Claims. (Cl. 189—36)

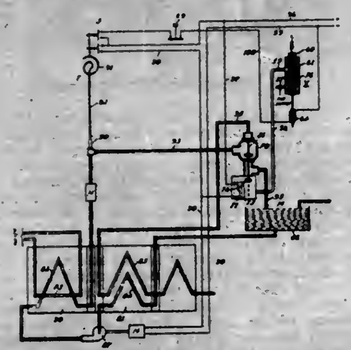


1. Wall panel joint construction including abutting panel flanges coextensive with said joint, matching projections on said flanges, each projection having at its upper end an outwardly tapered portion, and a channel locking strip having tapered slots in its web receiving abutting pairs of said projections with those portions of the web forming the edges of the slot wedgeably engaging the sides of said projections for drawing them together, and other portions of the web adjacent the upper end of the slot in engagement with the tapered portions at the upper ends of the projections for aligning the panels.

2,472,982
FORM OF CORSET
Wilfred Namegah, Ipswich, England, assignor to William Pretty & Sons (1930) Limited, Ipswich, England, a British company
Application August 4, 1945, Serial No. 608,861
In Great Britain May 23, 1945
2 Claims. (Cl. 2—43)

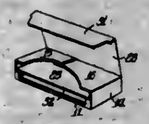
1. In a corset, a body portion having a front section of non-elastic material, a panel in the center of the front section, extending vertically therein, the panel comprising two layers of non-elastic cloth, both layers being stitched at their vertical edges near the sides of the front section and constituting the central portion thereof, the rear layer having spaced vertical pockets therein for stays, stays in said pockets, the front layer forming a smooth covering over the rear layer and its pockets, said layers being stitched together across the top, an elastic band joined at its ends to the sides of the rear layer, the elastic band being located between the front and rear layers at the top of the corset and extending across the stays and pockets and contracting the top of the panel and forming an integral concealed part of the panel to hold the upper ends of the stays snugly against the wearer's body in all positions thereof and in normal wear, the front layer presenting a smooth unruffled outer appearance.

2,472,983
MOTION-PICTURE PROJECTOR
Otto B. Nemeth, Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc., a corporation of Illinois
Application December 4, 1944, Serial No. 568,541
2 Claims. (Cl. 242—55)



1. In combination in a motion picture projector, a vertical mounting panel, a supply reel shaft, a horizontal take-up reel shaft mounted for vertical movement, a drive shaft, means on said take-up reel shaft and said drive shaft cooperating to provide a separable driving connection effective through gravitational inclination of the take-up reel shaft toward the drive shaft, a drive motor in gear with said drive shaft, and electrical motor circuit including a master switch and a normally open auxiliary switch having an operating arm, means for effecting a rewind driving connection for said supply reel shaft with said drive shaft including means fixed upon the drive shaft and a clutch member axially slidable on said drive shaft and normally biased toward clutching interengagement with said fixed means, and a manually operable elongated rectilinearly reciprocable member including means for holding said clutch member inactive during film take-up operation but releasable from the clutch member upon rectilinear movement in one direction to effectuate the rewind driving connection for said supply reel shaft, said reciprocable member having means operable simultaneously with clutch release for engaging and lifting said take-up reel shaft away from said drive shaft and separating the driving connection therewith and means acting at the same time to motivate said operating arm for closing said auxiliary switch.

2,472,984
HEAT EXCHANGE SYSTEM
Raymond E. Olson, Pittsford, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application December 14, 1946, Serial No. 716,222
2 Claims. (Cl. 257—2)

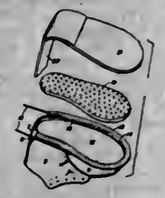


2. In a pasteurizing system for a liquid such as milk or the like, a heat exchange unit, means including a flow diversion valve for said liquid communicating with the outlet of said unit, said valve being provided with a forward flow port and with a diversion port, a plug provided at its ends with closure members respectively closing said forward flow port and said diversion port in the alternate positions of the plug, a valve stem connected to the lower end of said plug, a restoring spring normally biasing said stem to move said plug and its closure members into a position to open said diversion port and to close said forward flow port, a pneumatic motor comprising a top part and a diaphragm having its margin sealed to said top part to form a chamber, a pipe

for pressure fluid communicating with said chamber, means including a solenoid valve for controlling the flow of pressure fluid through said pipe, a thermal switch responsive to a given temperature of said liquid, a circuit for said solenoid valve including normally closed contacts of a manual switch as well as contacts of said thermal switch, a push plate engaging the under side of said diaphragm, a stem extension connected to the lower end of said valve stem, said stem extension being mounted to move in substantially airtight relation through said top part and to pass in substantially airtight relation through said diaphragm into connection with said push plate, said push plate being provided with a spring cup axially alined with said stem extension,

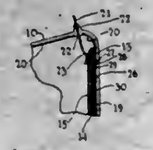
said restoring spring having its lower end restrained and having its upper end retained by said spring cup, said cup having a recess in the surface thereof, a valve operated switch having contacts and an actuator movable alternately by the wall of said recess and by the surface of the cup proper for reversing the position of said contacts, said groove and actuator being so related that the switch contacts are moved to their alternate position at the closing of said forward flow port, a pump for advancing said liquid through said unit and through one or the other of said ports, a motor for driving said pump, a circuit for operating said motor including closed contacts of said thermally operated switch, and another circuit for said motor completed through contacts of said valve-operated switch.

2,472,985
CONTAINER
Edward A. Pardee, Mount Vernon, Ohio, assignor to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application October 23, 1946, Serial No. 705,064
6 Claims. (Cl. 229—15)



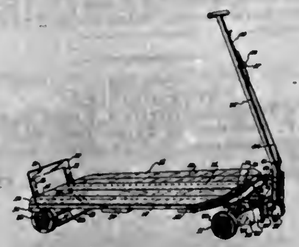
3. A folding self-locking razor blade utility carton comprising a single cut and crease lined blank having bottom wall, front, rear and side walls, and a cover member, said rear and side walls being of the same height and said front wall being only approximately half the height of said rear and side walls an extension panel connected along the top edge of said front wall and at its ends and foldable against said rear wall, said panel having a tab engageable with an aperture in said rear wall and adapted to hold said panel in raised position above said bottom wall to provide a partition separating said carton into upper new blade and lower used blade compartments, an extension member on each of said side walls having end portions adapted interlockingly to engage each other above said extension panel and immediately underlying said cover member and supporting the same to hold said folded blank in carton formation, and said front wall having an aperture below said extension panel and between the connecting ends thereof and the front wall for the reception of used blades into the lower compartment.

2,472,986
CORD PROTECTOR AND STRAIN RELIEVER FOR USE WITH ELECTRICAL CONNECTORS
Emil E. Reder, Jr., Chicago, Ill.
Application May 23, 1946, Serial No. 671,707
4 Claims. (Cl. 173—322)



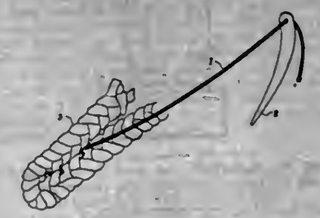
1. A cord protector for electrical connectors comprising companion elongated bodies, each being of substantially semi-circular cross-sectional form and being adapted to embrace an extension cord, said bodies terminating at one end in radially spaced grippers for engaging in an electrical connector and terminating at the other end in segmental cord clamping elements, means disposed intermediate the ends of each one of said bodies and arranged to cooperate with similar means associated with the companion body to form interlocking fulcrum bearings between the companion bodies, and clamp closing means operably associated therewith.

2,472,987
SHOE
Joseph D. Rizzo, Rochester, N. Y., assignor to Artisan Shoe Company, Rochester, N. Y., a corporation of New York
Application December 27, 1946, Serial No. 67,270
5 Claims. (Cl. 36—8.5)



1. A shoe comprising an upper, a sole welt attached to the lower margin of the upper, a backstay welt attached to the back of said upper and having welt edges merging with said sole welt, and a backstay and a sole attached to said welts.

2,472,988
APPARATUS FOR REPRODUCING ELECTRIC SIGNALS, PARTICULARLY TELEVISION REPRODUCERS
Adolph H. Rosenthal, New York, N. Y., assignor to Scophony Corporation of America, New York, N. Y., a corporation of Delaware
Application October 28, 1944, Serial No. 560,776
6 Claims. (Cl. 250—164)



1. In an apparatus utilizing incident visible light, particularly diffuse day or room light, for visibly reproducing intelligence represented in a screen by local changes of its qualities to transmit or absorb visible light incident upon it, in combination, a screen essentially comprised of ionic crystal material of the type which is permeable to visible light and in which an impinging electron beam which is modulated by signals representative of intelligence to be reproduced creates color centers which absorb visible light, and a backing associated with said screen essentially of aluminum, the thickness of said backing not exceeding about 5 microns in order to minimize absorption of impinging electrons, so that visible light incident upon and transmitted through portions of said screen instantaneously permeable to said light is reflected by said backing through such screen portions.

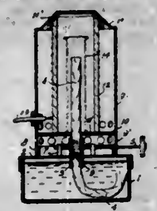
2,472,989
PORTABLE TRUCK
James Skipper, Howard Marble, and Ernest Frisell, Omaha, Nebr.
Application May 2, 1946, Serial No. 666,753
6 Claims. (Cl. 280—46)

1. In combination, a hand truck having a body member provided at the front end with a rolling supporting means and at the rear end with a cross bar having a foot piece to rest on the floor when the body member is lowered so as to be approximately parallel to the floor, and an auxiliary truck adapted to be inserted under said cross bar and raise it far enough to lift the foot piece from the floor, the auxiliary truck having thereon elements that extend forward on opposite sides of the foot piece and up in front of said bar.

2,472,990
NEEDLE FOR SEWING BRAIDED RUGS
Avie F. Smylie, Houston, Tex.
Application October 29, 1947, Serial No. 782,857
1 Claim. (Cl. 223—103)

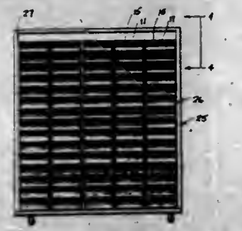
A braided rug-making tool comprising a needle for lacing together the elements of adjoining braids, said needle having a flat head wide enough to accommodate a hole for heavy twine but not wider than a bight of an element of the braided material and thin enough to pass easily under a bight of an element of the braided material and having a dull, blunt point that will not easily penetrate the fabric of an element of the braided material although it will easily slip between the elements of the braid, said needle being curved with the plane of the flat head making a large angle with the plane of the curve.

2,472,991
OPTICAL LIGHT WEDGE
Thomas W. Sukumlyn, Los Angeles, Calif.
Original application July 13, 1940, Serial No. 345,361. Divided and this application March 5, 1945, Serial No. 581,061
4 Claims. (Cl. 88—1)



4. An optical unit having a supporting surface, and a thin transparent wedge thereon, one surface of said wedge conforming in shape and being adjacent to said supporting surface, said wedge comprising a series of steps, the thickness of each step to the said supporting surface being uniform, and adjacent steps having progressively reduced thickness, the difference in thickness between adjacent steps being of the order of a few wave lengths of light.

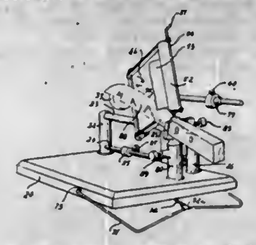
2,472,992
EVAPORATOR FOR THERAPEUTIC, STERILIZING, AND INSECTICIDAL LIQUIDS
George Szekely, Tel Aviv, Palestine
Application April 15, 1947, Serial No. 741,570
Section 1, Public Law 690, August 8, 1946
Patent expires March 17, 1966
2 Claims. (Cl. 21—117)



1. In a device for evaporating liquids for hygienic, medicinal, insecticidal and the like purposes, a receptacle for the liquid to be evaporated,

a liquid absorbent body projecting partly into and partly out of the receptacle and means for

heating by radiation the part of the absorbent body which projects out of the receptacle.

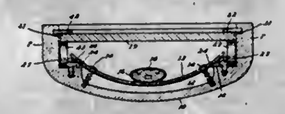


2,472,993
MEANS FOR DELIVERING BREAD
Robert W. Thomas, Larchmont, N. Y., assignor to Quality Bakers of America Cooperative, Inc., New York, N. Y., a corporation of New York
Application August 14, 1946, Serial No. 690,579
1 Claim. (Cl. 211—49)

Means for delivering freshly baked soft loaves of bread, comprising a plurality of tubes each being rectangular in cross section and of a width and height to accommodate one loaf of bread positioned with its ends snugly against the sides of said tube and of a length to accommodate a plurality of loaves of bread and having diagonally opposite corners foldable for folding the tubes flat when not in use and said opposite corners having inherent resiliency requiring that each tube be held in rectangular shape or it will fold closed, and means for receiving said tubes in a plurality of horizontal layers comprising a base with upright sides at the ends thereof perpendicular to said base, the upright sides being spaced a distance which is a multiple of the outside widths of said tubes for holding and supporting said tubes in rectangular shapes in order to hold them from deforming the ends of said loaves of bread.

2,472,994
KNIFE SHARPNESS TESTER
Ethan W. Vars, Duncannon, Pa., assignor, by mesne assignments, to The Aldon Products Company, Duncannon, Pa., a corporation of Pennsylvania
Application September 8, 1947, Serial No. 772,762
14 Claims. (Cl. 73—104)

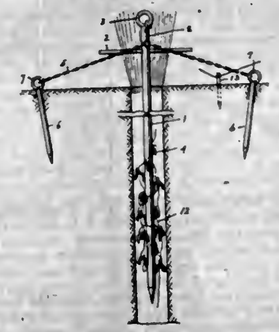
14. A knife sharpness tester, including, in combination, a knife support means for holding a knife blade, cutting edge up, a paper-holding means mounted on a rotatable shaft alongside the knife support means in position to hold a piece of paper edgeways across the plane of the knife blade, a weight-biased means holding the paper against the knife blade and means for permitting relative movement, longitudinally of the knife edge, between the paper-holding means



and the knife support means so that the paper is moved edgewise downwardly on the knife cutting edge as the knife support and paper-holding means move relatively.

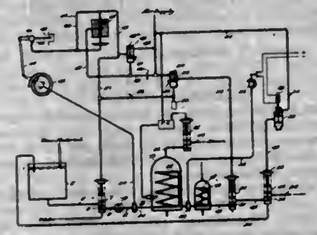
2,472,995
APPARATUS FOR SEPARATING SUSPENDED PARTICLES FROM GASES
John E. Waison, Westport, Conn., and Charles B. McBride, Port Chester, N. Y., assignors to The Aerotec Corporation, Greenwich, Conn., a corporation of Connecticut
Application July 13, 1946, Serial No. 683,332
7 Claims. (Cl. 183—80)

1. Centrifugal separating apparatus which comprises a centrifugal tube, an off-take pipe extending axially into said tube at one end thereof, said tube having an inlet delivering in a rotatory direction to the space about said pipe and having a converging particle discharge passage at the opposite end of said tube, the axis of said discharge passage being inclined to the axis of said tube.



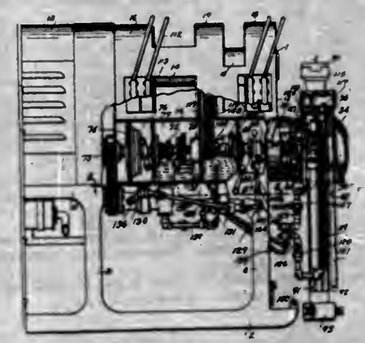
2,472,996
THERMOMETER
Cecil L. Wilder and Harvey A. Klumb, Rochester, N. Y., assignors to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application October 26, 1945, Serial No. 624,654
5 Claims. (Cl. 73—374)

4. A thermometer comprising a case having a back and side and end walls, a shoulder formed on the inner surface of each side wall and facing the front of said case, spaced ribs within said case, each rib having an arcuate surface facing the front of the case and extending at right angles to the sides of the case, an arcuate scale anchored on said ribs, a thermometer tube having its stem



supported in close relation to said scale plate, a transparent cover plate for approximately closing the front of said case and receivable within said side and end walls, a bezel overlying the margin of said cover plate and engaging the case to retain the cover plate in said case, and an undulating spring secured on each shoulder, said springs engaging the inner surface of said cover plate.

2,472,997
FIRING LINE CATCHER
Jerry D. Williams, Chickasha, Okla.
Application December 19, 1946, Serial No. 717,158
3 Claims. (Cl. 102—22)

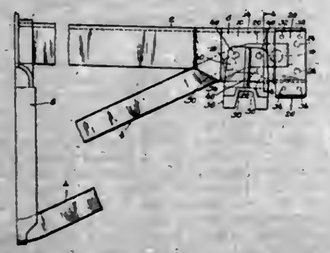


1. A safety device for use in bore hole blasting wherein firing lines are employed for detonation purposes, comprising a bar adapted to be inserted in an earth bore hole, downwardly directed hooks arranged about the bar and distributed longitudinally therealong and secured thereto, means connected to the bar and adapted to be anchored at the ground surface to limit the upward movement of the bar whereby upon insertion of the bar member in the bore hole said hooks are adapted to impede and entangle the firing lines in response to an explosive force in the bore beneath the bar.

2,472,998
METHOD AND APPARATUS FOR HEAT-TREATING LIQUIDS
John G. Ziegler, Walnut Creek, Calif., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application April 18, 1946, Serial No. 663,229
5 Claims. (Cl. 257—2)

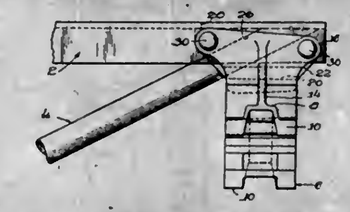
5. In a liquid treating system, a heater, a source of primary liquid to be treated, a source of substitute liquid, means for advancing the primary liquid through the heater, mechanism responsive to a drop in the volume of the primary liquid below a given value for disconnecting said primary liquid from the heater and for supplying the substitute liquid to the heater, said mechanism including locking means effective on operation to maintain the connection of the substitute liquid to said heater to the exclusion of the primary liquid, and manually controlled means operated at the will of the operator for releasing said locking means whereby said mechanism reconnects the primary liquid to said heater and disconnects substitute liquid therefrom when the volume of said primary liquid is restored.

2,472,999
PORTABLE DRILLING RIG
Emmett Lee Alexander and Albert Wood Braithwaite, Enid, Okla., assignors to The George E. Failing Supply Company, Enid, Okla., a corporation of Oklahoma
Application June 4, 1945, Serial No. 597,512
4 Claims. (Cl. 255—22)



4. In a drilling apparatus, a supporting frame including a pair of laterally spaced skids, legs supported on the skids, an elongated housing carried on the legs at one end of the skids, a power unit carried on the legs on the opposite ends of the skids, partitions dividing the housing into a series of compartments, interconnected driving shafts connected with the power unit and extending through the compartments, a drilling means carried by the supporting frame adjacent the endmost compartment opposite the power unit, said drilling means including a drill rotating mechanism and a hydraulic mechanism for controlling pressure on a drill bit to be operated by said drilling unit, a pump carried by the supporting frame, a driving connection between the power unit and said pump, one of said compartments forming storage for a hydraulic fluid, a duct connecting said storage compartment with the inlet of said pump, a control valve, a duct connecting the discharge of the pump with said valve, ducts connecting the valve with the hydraulic mechanism, a hoisting unit supported above the housing, a driving connection in the storage compartment for connecting the driving shaft with the hoisting unit, means in said endmost compartment for connecting the driving shaft with the drilling unit, and a speed change gearing in another of said compartments having connection with the driving shafts.

2,473,000
HANDLE AND SOCKET STRUCTURE
Paul W. Bader, Chicago, and Frederic E. Oakhill, Wilmette, Ill., assignors to O-Cedar Corp'n, Chicago, Ill., a corporation of Illinois
Application May 29, 1947, Serial No. 751,174
3 Claims. (Cl. 306—30)



1. In a handle and socket structure of the character set forth, a socket member provided with a spiral groove, a handle member provided with a slot extending inwardly from the end thereof and longitudinally of the handle end, a plate of a length substantially equal to the length of said slot and having a slot in the end portion thereof, said plate being received within said slot, and a transverse pin extending through said handle and through the slot in said plate, said plate having spiral teeth projecting slightly beyond the periphery of said handle and adapted to engage the spiral groove of said socket.

2,473,001
TRUSSED BRAKE BEAM
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application March 24, 1944, Serial No. 527,898
21 Claims. (Cl. 188—223.1)

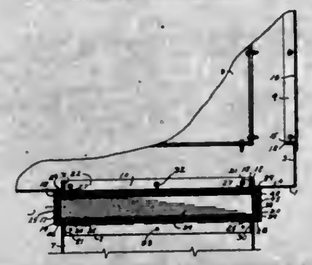
1. In a truss type brake beam, a U-section compression member comprising spaced top and bottom webs and an intervening rear wall, a tension member welded at each end thereof to the corresponding end of said compression member intermediate the spaced webs thereof, a filler block welded to said compression member at each end thereof intermediate said spaced webs, said block extending forwardly of said webs and presenting top and bottom surfaces forwardly thereof and substantially co-planar with the top and bottom surfaces of the adjacent portions of said top and bottom webs respectively, wear plates welded to the top and bottom surfaces of said block and said adjacent portions of said webs, and a brake head secured to each end of said beam and spaced inwardly of the adjacent plates, each of said filler blocks having a portion extending between and bearing against adjacent surfaces of said tension member and the associated brake head aligned transversely of the beam, whereby rigidity of said brake beam is increased.

2,473,002
BRAKE BEAM
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 30, 1945, Serial No. 607,755
15 Claims. (Cl. 188—228)

1. In a fabricated truss type brake beam, a brake head comprising a recess, a U-section compression member fitted within said recess, a filler block fitted within said compression member in abutment with the rear web thereof and with the surface of said head defining the inner extremity of said recess, said block having a portion extending outwardly of said head and adapted for engagement with associated support means, a diagonal passage through said block, a tension member extending through said passage and seated against said web, a weld securing said web to said tension member and said block, and means securing said brake head to said block and said compression member.

2,473,003
PURIFICATION OF CHLORAL CONTAINING UNDER-CHLORINATED CONSTITUENTS
Harold C. Beachell, Lakewood, and Michael Sveda, Cleveland, Ohio, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 1, 1945, Serial No. 632,274
4 Claims. (Cl. 202—57)

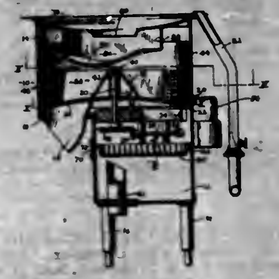
1. In a process for purifying crude chloral containing under-chlorinated materials, the steps comprising adding not more than about 5% by weight of concentrated sulfuric acid to said crude chloral, allowing the mixture to stand for at least one hour whereby the said under-chlorinated constituents are polymerized, and separating the constituents so polymerized from the chloral.



2,473,004
GALVANIZING FLUX
Ernest R. Boller, Marion, Ind., Lowell D. Eubank, Cleveland, Ohio, and Raymond J. Kepfer, La Grange, Ill., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 2, 1945, Serial No. 597,382
4 Claims. (Cl. 148—26)

1. A galvanizing flux for continuous strip galvanizing consisting essentially 7 to 15% of a mixture of sodium and potassium chlorides, and the balance ammonium chloride, the mixture of sodium and potassium chlorides containing 70 to 30 per cent by weight of potassium chloride and the balance being sodium chloride.

2,473,005
METHOD AND CATALYSTS FOR POLYMERIZING VINYL AND VINYLIDENE COMPOUNDS
Joseph W. Britton and Robert C. Dosser, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application August 2, 1943, Serial No. 497,060
2 Claims. (Cl. 260—88)

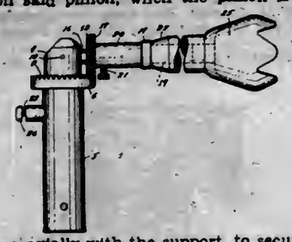


1. The method which comprises polymerizing a vinyl halide in the presence of an aqueous inert ionizing solvent as a reaction medium and a small amount of an acidic complex polymerization catalyst containing, as its essential ingredients, a metal salt containing as the positive ion a metal selected from the class consisting of chromium and aluminum, which metal salt is present in amount such as to contain at least 0.0005 gram atomic weight of said metal per gram mole of the material to be polymerized, and a peroxide in amount sufficient to co-act in catalytic manner with said salt, the polymerization mixture as a whole being of a pH value between 1 and 6.

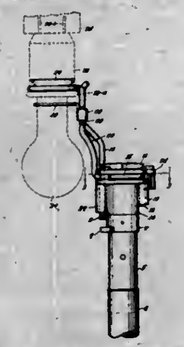
2,473,006
FURNACE
Shirley Pollard Campbell and Roderic Grubb, Wichita, Kans., assignors to The Coleman Company, Inc., Wichita, Kans., a corporation of Kansas
Application May 8, 1946, Serial No. 668,125
4 Claims. (Cl. 183—44)

1. In a heating device, a casing having a cold air return opening surrounded by a lateral flange, a filter housing comprising a frame of channel cross section providing inwardly disposed side flanges terminating in lateral flanges at opposite sides of the filter housing with the lateral flange on one side of the filter housing engaging the flange surrounding the cold air return opening and the corresponding side flange of the housing overlapping the casing surrounding the return opening, fastening devices extending through said flanges, a cold air duct sleeved over the other lateral flange of the filter housing, fastening devices extending through the cold air duct and said last named flange to connect the cold air duct with the filter housing, said housing having a filter insert opening intermediate the side flanges at one side of the frame, a filter adapted for insertion through said opening and having marginal portions overlapping inner faces of said side flanges, and a closure for said insert opening.

2,473,007
DISH CLEANING AND GARBAGE COLLECTING MACHINE
Russell M. Carson, Red Oak, Iowa, assignor of fifty per cent to George C. Hohl, Kansas City, Mo.
Application July 22, 1945, Serial No. 606,520
3 Claims. (Cl. 210—151)



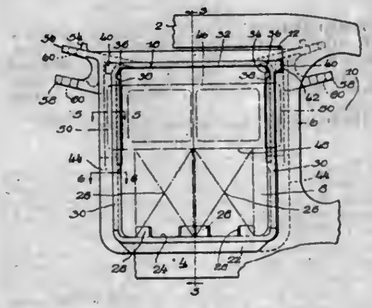
1. In a machine having a tank provided with an open top for receiving liquid and solid materials and means for recirculating said liquid from the bottom of the tank to the open top thereof; the improvement which consists of means for separating the liquid and solid materials in said tank, said means comprising a sump forming a bottom section of said tank; a top section of said tank having a portion overhanging the said sump; a partition setting off said sections of the tank, said partition having a solid portion overlying the sump and a discharge opening adjacent the overhanging portion of the top section; means for moving said solid material on the partition into the discharge opening as the liquid flows from the partition into the sump; means for holding the solid material against falling into the sump as the same is moved on the partition, said holding means comprising a perforated wall extending upwardly from the partition at the periphery thereof; and a perforated tray in said sump disposed to receive and strain the liquid passing into the sump of parts of the solid materials escaping through the perforations of said wall.



2,473,008
BULB MANIPULATING DEVICE
George R. Chadsey, East Hampton, Conn.; Inez M. Davis and Ida D. Dickerson, both of Middletown, Conn., executrices of said George R. Chadsey, deceased, assignors to Chadsey Corporation, Hartford, Conn., a corporation of Connecticut
Application April 12, 1946, Serial No. 661,795
6 Claims. (Cl. 294—21)

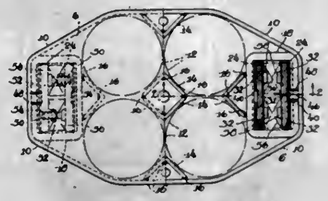
6. A bulb manipulating tool of the character described comprising a support, a member slidable in said support and adapted to be positioned therein for rotation relatively to the support, the said member having a slot therein including a plurality of positioning recesses in the walls of said slot, a post swivelly secured to said member, a pinion rotatable on said post, a hub on said pinion adapted to selectively fit within said recesses for positioning the pinion at different angles, relatively to the support, a gear member surrounding said support and interengageable with said pinion for rotating the pinion on the post, the said pinion being slidable on said post to permit movement of said hub into different recesses for positioning the pinion at different

angles, and means including teeth projecting inwardly from said gear and interchangeable with teeth on said pinion, when the pinion is positioned co-axially with the support, to secure the pinion to the support and against relative rotation.



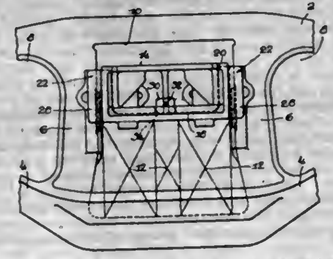
2,473,009
BULB SOCKET MANIPULATOR
George R. Chadsey, East Hampton, Conn.; Inez M. Davis and Ida D. Dickerson, both of Middletown, Conn., executrices of said George R. Chadsey, deceased, assignors to Chadsey Corporation, Hartford, Conn., a corportaion of Connecticut
Application April 12, 1946, Serial No. 661,796
10 Claims. (Cl. 294—20)

2. A device of the character described comprising a supporting member adapted to be secured to the end of a pole or the like, a sleeve rotatable on said supporting member, a pair of gripping members swivelly secured to said sleeve, a cam portion on said gripping members, an operating member slidable on said gripping members and having an extension in operative engagement with said cam portion, for operating said gripping members, and stop means rotatable with said supporting member and relatively to said sleeve for controlling the operation of said operating member and thereby the movement of said extension relatively to said cam portion.



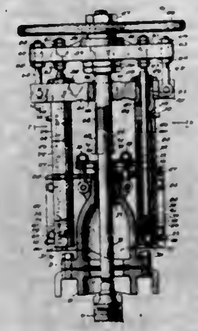
2,473,010
QUICK WHEEL CHANGE RAILWAY CAR TRUCK
Claus J. Werner Clasen, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application November 20, 1943, Serial No. 511,018
28 Claims. (Cl. 105—197.2)

28. In a bolster and side frame interlocking member, a frame having top and bottom walls and spaced side walls, a spring seat on said bottom wall, and interlocking means formed on the inboard and outboard sides of three of said walls



for cooperation with the inboard and outboard sides of an associated side frame, and other interlocking means on one side of said member for interlocking an associated load-supporting member therewith.

2,473,011
SPRING GROUP
Robert B. Cottrell, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 3, 1944, Serial No. 543,225
10 Claims. (Cl. 267—9)



1. In a spring group, a friction device comprising opposite housings of rectangular sections, each presenting opposed internal friction faces with the corresponding faces of respective housings in coplanar relationship, and a friction shoe assembly in cooperative relation with said housings and comprising opposed interlocked friction shoes each having flat face engagement with both of said housings and at least one of said shoes having interlocking engagement with means on a wall of each housing to limit the expansion of the device, the interlock between opposed shoes comprising oppositely arranged dowels and hollow lugs on respective shoes adjacent the upper ends thereof operative to limit relative movement therebetween other than to and fro, each of said shoe assemblies comprising a plurality of resilient means positioned by said dowels and hollow lugs at one end of the shoe assembly and a plurality of positioning means adjacent the other end of the assembly confining other resilient means therebetween.

2,473,012
TRUCK BOLSTER INTERLOCKING DEVICE
Robert B. Cottrell, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 9, 1944, Serial No. 548,642
6 Claims. (Cl. 105—197)

3. In a railway car truck, a side frame having a bolster opening, a bolster extending through said opening and movably supported from said frame, and means interlocking said bolster and frame comprising stops on said bolster bearing against one side of said frame, and a pair of separable elements removably interlocked with said bolster and slidably engaged with the opposite side of said frame, said elements having their adjacent extremities overlapping transversely of said frame and comprising lugs projecting through a complementary vertical opening in a wall of said bolster, and aligned openings through said lugs extending transversely of said frame and adapted for reception of associated key means.

2,473,013
VALVE ACTUATING MECHANISM
Charles R. Crane, II, Chicago, and Alfred Mueller, Berwyn, Ill., assignors to Crane Co., Chicago, Ill., a corporation of Illinois
Application January 22, 1944, Serial No. 519,387
5 Claims. (Cl. 137—139)

1. In a valve, the combination with a valve bonnet having a closure stem reciprocably mounted therein for operating a closure member, of a yoke sleeve for threaded engagement with said stem, a pair of cylinders secured to said bonnet, piston means for reciprocating movement in said cylinders, a crosshead connecting the said cylinders, a yoke sleeve bearing member mounted on said piston means and engaging the yoke sleeve for relative rotational movement, means inhibiting relative axial movement, and stop means cooperating with said crosshead and stem for yieldably resisting movement of the piston means in one direction.

2,473,014
PREPARATION OF HALO-SUBSTITUTED ACETALS
Willard J. Croxall, Bryn Athyn, and Harry T. Neher, Bristol, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 30, 1948, Serial No. 5,493
9 Claims. (Cl. 260—615)

1. A process for preparing halohydrin acetaldehyde acetals which comprises reacting at between 10° and 90° C. in the presence of a strongly acidic catalyst and a mercury catalyst a vinyl ester of a monocarboxylic acid, RCOOCH=CH$_2$, wherein R is an alkyl group of one to three carbon atoms, and a halohydrin, XR'OH, wherein X is a halogen, R' is a saturated divalent hydrocarbon group, and OH is an alcoholic hydroxyl group, destroying the acid catalyst in the reaction mixture, and separating therefrom an acetal.

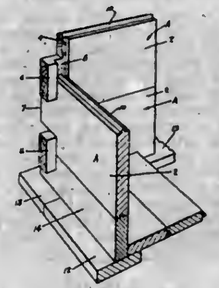
2,473,015
ACID TREATMENT OF HETEROCYCLIC IMIDE AND IMIDAZOLE VAT DYESTUFFS
John F. Cullinan and Lawrence D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 13, 1944, Serial No. 526,341
7 Claims. (Cl. 260—282)

1. The method of converting a vat dyestuff of the group consisting of naphthoylene (1,8,4,5)-bis-imidazoles and perylene-3,4,9,10-tetracarboxylic acid diimides into very finely divided particles of substantially uniform size which comprises forming a slurry of the dyestuff with about 20–40 parts of sulfuric acid per part of dyestuff, said acid being used in such concentration and amount that at the reaction temperature at least a part, but not more than 10%, of the total dyestuff is in solution at any one time, agitating this slurry until conversion of the dyestuff to the substantially insoluble sulfate is substantially complete, and hydrolyzing the sulfate to the dyestuff.

2,473,016
METHOD OF REDUCING CUT-GROWTH RATE OF RUBBERLIKE BUTADIENE-STYRENE COPOLYMER
Arnold R. Davis, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 29, 1945, Serial No. 575,191
3 Claims. (Cl. 260—41.5)

1. A method of reducing the cut-growth rate of flexible, vulcanized, rubber-like butadiene-styrene copolymer compositions obtained by vulcanizing a composition comprising an unvulcanized, vulcanizable, rubber-like butadiene-styrene copolymer, sulfur, an organic accelerator and zinc oxide in amount sufficient to fully activate the organic accelerator; which method comprises forming a composition of said unvulcanized, vulcanizable butadiene-styrene copoly-

mer, sulfur, organic accelerator, and zinc oxide, adding thereto from 0.1–0.6% by weight of the polymer of a substance selected from the group consisting of the oxides of calcium and magnesium mechanically working said composition until the components thereof are substantially uniformly disseminated therein, and then subjecting the composition to vulcanization.



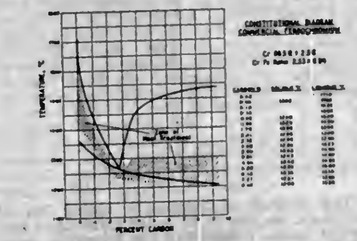
2,473,017
BUILDING STRUCTURE
Thomas J. Edwards, Klamath Falls, Oreg., assignor, by mesne assignments, to Burke H. Critchfield, Berkeley, Calif.
Application November 1, 1943, Serial No. 508,529
1 Claim. (Cl. 20—4)

In a multiple room building including an outer wall and a partition wall extending inwardly from said outer wall at right angles thereto, each of said walls being composed of a series of timbers arranged in superimposed edgewise relation, and each series of timbers in the outer wall comprising at least first and second timbers disposed in substantially longitudinal alignment, each of said first timbers having its opposed edges notched at each end thereof to provide a pair of opposed shoulders and a terminal tenon at each end of each timber, and each second timber having its opposed edges notched at each end thereof to provide a pair of opposed shoulders and a terminal tenon at each end of the timber, the tenons of said second timbers being relatively shorter than the tenons of the first timbers, and said first and second timbers each having one side face only thereof transversely grooved at each terminal tenon thereof whereby the shoulders of the first timbers are relatively narrower than the shoulders of the second timbers, thereby to provide interlocking elements for locking adjacent ends of said first and second timbers together against relative longitudinal movement, and each timber of said partition wall having its opposite edges notched at each end thereof to provide a pair of opposed shoulders and a terminal tenon at each end of each of said timbers, which tenons are relatively longer than the tenons of said first and second timbers and are receivable in aligned openings provided by the notched ends of said first and second timbers, and each of said partition wall timbers having its tenons transversely grooved on one side face only to receive the relatively narrower shoulders of said first wall timbers, the shoulders, tenons, and transverse grooves of said timbers cooperating to interlockingly secure together the timbers at the corners of the structure and providing weather-proof joints therebetween.

2,473,018
BUILDING STRUCTURE
Thomas J. Edwards, Klamath Falls, Oreg., assignor to Burke H. Critchfield
Application July 25, 1947, Serial No. 763,705
2 Claims. (Cl. 20—4)

1. A building structure comprising a pair of walls joined together at the corner of the structure to provide a square corner, each wall being composed of a plurality of horizontally disposed flat first and second wall members set on edge, one on top of another, and the adjacent ends of said wall members being formed with like terminal tenons whereby the end of each wall member is provided with transversely aligned shoulders and with the tenons extending beyond the shoulders for the same width throughout their length, said first wall member having a transverse groove cut in one face of its tenon adapted to receive the full cross-sectional thickness of said second wall member, said groove extending partially into the body of said first wall member beyond its shoulders whereby the shoulders of said first wall member are of less thickness than the thickness of said member, said second wall member having a relatively narrower transverse groove cut in one face of its tenon, one side wall of which is disposed in the plane of its respective shoulders and whereby the width of the shoulders of the second wall member is equal to the full thickness of said member, the tenoned ends of said first and second wall members being disposed in overlapped relation at the outside corners of the structure with the relatively narrower shoulders of the first of said members being received in the relatively narrower groove of the second wall

member, and the relatively wider shoulders of the second wall member being received in the relatively wider groove of the first wall member whereby the interfitting of said grooves and shoulders cooperate to provide an interlocked, light-tight, weather proof joint at the corner of the structure, and whereby corner joints are formed having tenons overlying each other only at the outer corners of the building structure and with the overlapping contacting portions of said tenons covering an area extending from the grooves to points in line with the outside vertical surfaces of the building structure at the corners, and with said contact surfaces of the overlapping tenons in substantial horizontal alignment with the upper and lower horizontal edge surfaces of adjacent tenons throughout their length, each of said corner joints comprising at least three vertical contacting surfaces between the shoulder ends of said interlocked wall members and the coacting grooves all located inwardly from the overlapping area of the tenons, and with each pair of the contacting surfaces disposed at right angles to its adjacent pair of contacting surfaces.

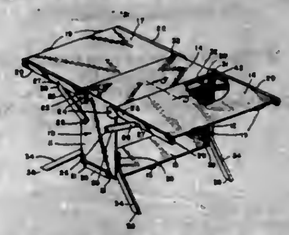


2,473,019
PRODUCTION OF FERROCHROMIUM
Hendrik de W. Erasmus, Lewiston, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application April 13, 1948, Serial No. 20,851
4 Claims. (Cl. 75—28)

1. Method of decarburizing and desulfurizing ferrochromium containing carbon and sulfur which comprises mixing comminuted ferrochromium and a comminuted oxidant at least 10% of the combined oxygen of said oxidant being supplied as silica, the quantity of said oxidant being in excess of that required to supply oxygen sufficient to combine with the carbon to be eliminated from said ferrochromium; and heating said mixture under sub-atmospheric pressure at a temperature sufficient to promote reaction but below the fusion point of any part of the charge.

2,473,020
FERROCHROMIUM
Hendrik de W. Erasmus, Lewiston, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application April 13, 1948, Serial No. 20,852
3 Claims. (Cl. 75—176)

1. A highly compacted, uniformly porous, strongly cohesive, fine-grained, non-friable, coalesced aggregate of ferrochromium containing chromium between 50% and 90%, carbon in an amount not exceeding 2%, at least 4% silicon, remainder essentially all iron.



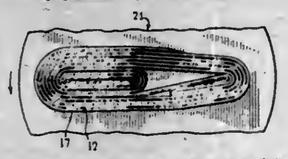
2,473,021
PRODUCTION OF LOW CARBON FERROCHROMIUM
Howard R. Spendelow, Jr., Kenmore, and Hendrik de W. Erasmus, Lewiston, N. Y., assignors, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
Application May 26, 1948, Serial No. 29,256
4 Claims. (Cl. 75—28)

1. In the vacuum decarburization of high-carbon ferrochromium-oxidant pellets in the solid state, the improvement which comprises heating said pellets in the vicinity of the solidus temperature of the ferrochromium in said pellets until the composition of said ferrochromium approaches the eutectic concentration of carbon; adjusting the temperature of said pellets to below the melting point of said eutectic composition and maintaining said temperature until the carbon in said ferrochromium is below the eutectic composition and thereafter heating said pellets at a temperature above the solidus temperature and below the liquidus temperature of said ferrochromium at a rate insufficient to destroy the porosity in said pellets by partial fusion.

2,473,022
COMBINED CARRYING CASE AND TABLE
Otto E. Fenske, Jr., Skokie, Ill.
Application June 10, 1946, Serial No. 675,652
3 Claims. (Cl. 311—90)

1. A portable traveling case adapted to be readily convertible into a table, and comprising a rectangular frame member having opposed hinged sides swingable to form the leaves of the table, members normally carried within said frame member and movable to positions constituting same legs therefor, and bracing members normally carried externally of said frame member and movable to positions constituting same as braces for said table leaves, said frame member having a pair of cross-members extending be-

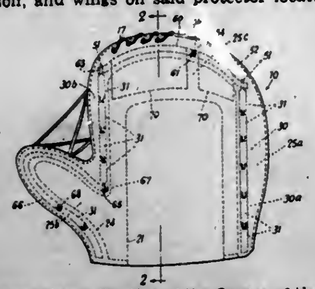
tween two sides thereof and adjacent the sides to which said leaves are hinged, said cross-members having beveled edges adapted to cooperate with beveled edges provided on said leaves whereby when said case is in a closed position the sides thereof present a substantially smooth surface, and when in an open position, the leaves present a table top having a smooth surface.



2,473,023
HALFTONE SCREEN HOLDER
Herbert Gelb, New York, N. Y., assignor to Joseph Gelb, doing business as Joseph Gelb Company, New York, N. Y.
Application September 11, 1944, Serial No. 553,488
4 Claims. (Cl. 95—81)

1. Means for selectively photoprinting in halftone a sensitized plate upon which an image is projected by light reflected from a subject, comprising a frame having a central rectangular opening the edges of which are successively rabbeted and thereby provide a plurality of stepped surfaces of decreasing periphery from the front to the rear portion of said frame, said frame being adapted to be fixedly positioned before and in parallelism with said plate with the rear portion of said frame nearest said plate, and a plurality of screens of different peripheral dimensions and of different line-counts, the periphery of each such screen being an index of the line-count thereof and the line-count of said

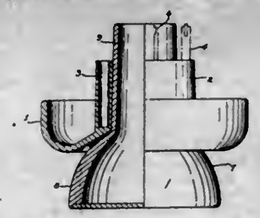
screens decreasing as the peripheries thereof increase, the screen of greatest line-count having substantially the periphery of the smallest of such surfaces and each other screen having a periphery substantially that of another of said surfaces, so that any surface against which a screen is fitted constitutes a gage to insure that said screen is properly positioned at a distance from said plate in accordance with the line-count of said screen.



2,473,024
METHOD OF MAKING FABRICATED ARTICLES
Jon Gregg, New Hope, Pa.
Application September 29, 1944, Serial No. 556,399
3 Claims. (Cl. 12—146)

1. A process of making a layered article, comprising arranging strip portions of semicured rubber between strip portions of flexible fibrous material of the same width so that the semicured material is disposed between the strip portions of the flexible fibrous material, and then subjecting the article to heat and pressure in a mold for curing the semicured rubber to unite the flexible strip portions.

2,473,025
BASEBALL GLOVE
Jon Gregg, New Hope, Pa.
Application August 2, 1946, Serial No. 687,848
3 Claims. (Cl. 2—19)



1. A catching glove, and a protector within said glove, said protector comprising rods interpivoted at adjacent ends, and extending around the periphery of the glove, said rods having knuckle joints to permit the glove to be bent forwardly but not back beyond a predetermined position, and wings on said protector located at

opposite sides of the tips of the fingers of the user of the glove to protect said fingers.

2,473,026
NUT DISH
Charles W. Heath, near Seattle, Wash.
Application August 17, 1945, Serial No. 610,925
5 Claims. (Cl. 65—15)

2. A nut dish comprising a central stand having a hollow bulbous lower portion closed at its bottom, and a relatively slender upper hollow stem admitting to the lower portion, and open at its top for reception of shells, and a relatively

shallow separable annular nut bowl having a central collar closely embracing said stem and upstanding above the peripheral rim of the bowl, said collar being vertically socketed for the reception of nut crackers, nut picks, and the like.

2,473,027
SPRING PRODUCT AND METHOD OF FORMING SAME
Harold C. Keysor, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application May 4, 1945, Serial No. 591,977
9 Claims. (Cl. 267—61)

1. The method of forming a spring bar of round stock adapted to be coiled right hand into a helical spring comprising the following steps, cutting to length a bar of spring stock, forming two converging tapering planes at one end thereof and forming two planes of taper at the other end thereof disposed at an angle in degrees with respect to the first-mentioned planes in accordance with the following equation:

$$180° \times \left[\frac{2(H-d)}{\pi D}\right],$$

wherein

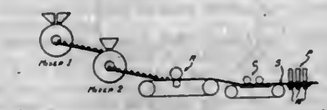
$$\left[\frac{2(H-d)}{\pi D}\right],$$

represents the fractional part of the quantity obtained by substituting numerical values for H, d, π, and D in the function

$$\left[\frac{2(H-d)}{\pi D}\right]$$

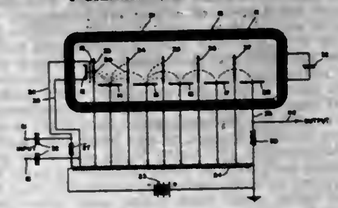
H being the free height of the helical spring into which the bar is to be coiled, d the bar diameter, and D the mean coil diameter of said spring, whereby said bar upon coiling into a helical spring will have one of the surfaces at each end thereof substantially perpendicular to the helix axis of said spring.

2,473,028
COPPER BASE ALLOY
Kenneth H. Koopman, Kenmore, N. Y., assignor to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application December 10, 1946, Serial No. 715,335
7 Claims. (Cl. 75—159)



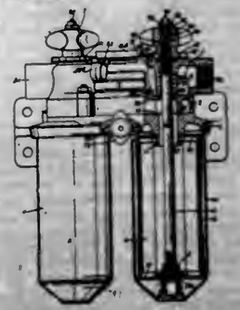
3. A copper base alloy containing 25% to 27% nickel; 30% to 32% zinc; 8.5% to 9.5% tin; 0.2% to 0.4% silicon; the remainder copper; the sum of the zinc and tin contents being less than 41% of the alloy.

2,473,029
NECKTIE RACK
Louis Kovacs, Astoria, N. Y.
Application April 16, 1946, Serial No. 662,593
4 Claims. (Cl. 211—96)



1. A necktie rack comprising a pair of spaced parallel bars, each comprising a metal channel member having side walls and a strip of wood positioned in said channel member, said channel members having inwardly turned flanges on the side walls thereof securely to clamp said strip in position, opposed side walls of said channel members and said strips each having longitudinally spaced holes therein substantially transversely aligned respectively across said parallel bars, said bars being adapted to be secured to a support, a series of wire forms, each composed of a single length of wire bent between its ends into a plurality of parallel reversely turned hanger arms extending in a common plane and at right angles to said ends, the extremities of said reversely turned arms being enlarged and substantially rounded, the wire connection means between consecutive hanger arms of each wire form being substantially aligned with the pivoting ends of said wire form, said ends being frictionally but pivotally mounted in a pair of transversely aligned holes in said bars, respectively.

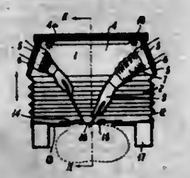
2,473,030
COMPOSITION COMPRISING A COPOLYMER OF VINYL CHLORIDE-VINYL ACETATE AND GROUND PEANUT HULLS AND METHOD OF MAKING SAME
Herman M. Kulman, Atlanta, Ga., assignor to Kulastic Company, Inc., Atlanta, Ga., a corporation of Georgia
Application January 7, 1943, Serial No. 471,563
4 Claims. (Cl. 260—17.4)



1. A composition of matter containing approximately 33%–22.57% by weight of a copolymer of vinyl acetate and vinyl chloride, up to approximately 20.72% by weight of plasticizer, approximately 10%–40.24% by weight of clay and approximately 57%–16.46% by weight of ground peanut hulls or shells.

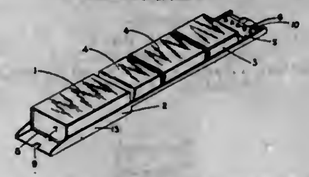
2,473,031
ELECTRON MULTIPLIER FOR ULTRA HIGH FREQUENCIES
Christian C. Larson, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application April 14, 1945, Serial No. 588,315
6 Claims. (Cl. 250—175)

1. An electron multiplier system comprising a plurality of secondary electron emissive electrodes, a primary emitter of primary electrons mounted adjacent said electrodes, voltage means coupling said primary electron emitter and the first one of said electrodes for directing primary electrons from said primary emitter towards the first one of said electrodes, means magnetically coupling said electrodes for directing secondary electrons liberated from each of said electrodes towards the succeeding electrode, means coupled to one of said electron emitters for controlling the number of electrons passing between said electrodes in accordance with an input signal, means including members mounted between said electrodes for passing only electrons within a predetermined velocity range between successive electrodes, and means mounted adjacent the last one of said electrodes for collecting the electrons from the last one of said electrodes to derive an amplified output signal, thereby to reduce the electron transit time spread and to raise the frequency cut-off of said multiplier.



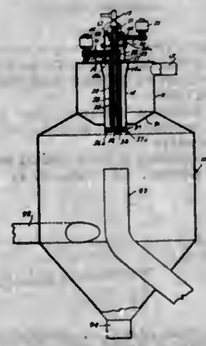
2,473,032
MULTIFILTER ASSEMBLY FOR FILTERING OIL OR LIQUIDS
Camille Clare Sprankling Le Clair, Acton, London, England, assignor to Tecalemit Limited, Brentford, England, a corporation of Great Britain
Application March 15, 1945, Serial No. 582,883
In Great Britain February 17, 1944
3 Claims. (Cl. 210—168)

1. A duplex filter of the class described, comprising a multi-unit common head, a carrier forming one of said head units, two spaced sepa-



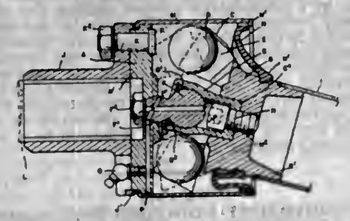
rate containers supported by said carrier, each container housing a filter element, said carrier being provided with spaced outlet ports communicating with the filter element outlets and with spaced inlet ports communicating with the filter element inlets, a valve plate forming a second of said head units and superimposed upon said carrier, said valve plate being provided with spaced outlet ports each of which communicates with one of said carrier outlet ports, said valve plate being provided with a main outlet port isolated from said first mentioned outlet ports and which communicates with an outlet passage formed in said valve plate, said valve plate being provided with spaced inlet ports each of which communicates with one of said carrier inlet ports, a valve cover forming a third of said head units and superimposed on said valve plate, said cover being formed with an inlet connection and a main inlet chamber in communication therewith and with said valve plate inlet ports, said cover being formed with an outlet passage in communication with said valve plate outlet passage, and a control valve turnably mounted on said valve plate controlling the flow of liquid through said valve plate ports, said control valve being provided with spaced inlet ports separated by an unperforated sector in face-to-face contact with said valve plate, said spacing being such that when one of said control valve inlet ports registers with one of said valve plate inlet ports, the other valve plate inlet port is masked by said unperforated sector, said control valve also being provided with a transfer passage in constant communication with said main outlet port in the valve plate and with one of said first mentioned valve plate outlet ports depending upon the position of the control valve, the arrangement being such that the inlet and outlet of a single filter element are operatively connected to the inlet and outlet of the duplex filter.

2,473,033
STERILIZED AND AIR-CONDITIONED CHAMBER FOR SURGICAL USES
Roger Letac, Marseille, France
Application October 10, 1946, Serial No. 702,512
In France September 3, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 3, 1965
2 Claims. (Cl. 128—1)



1. A sterilisable and air and heat-conditioned operating chamber of the kind comprising a flexible membrane at the lower part thereof adapted to be cut away at the time of incision, a sight glass for the operator at the upper part of said chamber, and a plurality of flexible glove members extending into said chamber, characterised in that the chamber is a rectangular prism at its upper part and a compressible bellows construction of reduced cross-section at its lower part, whereby the chamber can be manipulated to a relatively small size permitting of its introduction as a complete entity into an autoclave for sterilisation purposes, said flexible membrane being adjustable vertically relatively to the upper part of the chamber within wide limits by means of the said bellows construction so facilitating correct and air-tight positioning of the said flexible membrane onto the body of the patient.

2,473,034
DISCHARGE LAMP BALLAST ASSEMBLY
John Shaheen, West Roxbury, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application August 23, 1945, Serial No. 612,274
1 Claim. (Cl. 175—298)



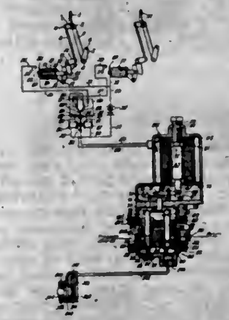
A ballast assembly for electric discharge lamps, said ballast assembly comprising: a unitary elongated metal supporting piece having its bottom portion substantially flat and having upwardly-extending longitudinal flange portions along substantially its entire length and having along part only of its length a pair of re-entrant steps, each step extending upwardly from said bottom portion and inwardly from a flange portion, a plurality of inductors placed end to end and mounted between said flanges and resting on said steps to form a duct, and a condenser extending between the flanges and fixed to the bottom of said metal piece at the end of said pair of reentrant steps at the end of the duct.

2,473,035
SPRAY DEVICE
Reginald E. Meade, Newell E. Taylor, and John F. Crews, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California
Application November 2, 1945, Serial No. 626,219
6 Claims. (Cl. 299—63)

1. In an atomising device, a rotatable atomiser member having an axis of rotation, a plurality of circumferentially spaced teeth on said member disposed in an annular zone about said axis, means for rotating said member in one direction of rotation, said teeth having forward faces with respect to said direction of rotation of substantial area extending from the inner and forward edges of said teeth outwardly and inclined backwardly from the radius of said axis of rotation with respect to said direction of rotation, a distributor for liquid material disposed radially inwardly of said teeth for directing substantially all of said liquid material into the path of said forward surfaces during said rotation, whereby said liquid material is struck by said forward surfaces to atomise said liquid material and direct the atomized material outwardly from said atomizing device.

2,473,036
CONSTANT VELOCITY UNIVERSAL JOINT
Fred F. Miller, Jr., Berkley, Mich., assignor to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application July 5, 1944, Serial No. 543,522
3 Claims. (Cl. 64—21)

2. A torque transmitting universal joint comprising a pair of rotary main members having oppositely axially extending interspersed lugs, the opposed faces of the lugs in the two members being fashioned with complementary grooves each extending obliquely to and outwardly diverging from a point in the axis of its corresponding member, balls in said grooves, and a central axial tie connection between said members independent of and spaced from said lugs, said tie connection including members rigidly connected respectively with said main members and having a non-torque transmitting ball and socket fixed center universal joint therebetween said socket completely surrounding said ball whereby said main members are always held to a fixed center of oscillation.

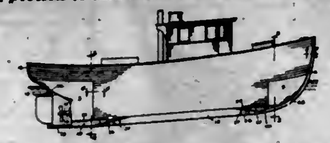


2,473,037
CHAIR WITH FOLDING TABLE LEAF
Erving B. Morgan and Royce W. Clay, Grand Rapids, Mich., assignors to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application June 7, 1947, Serial No. 753,344
2 Claims. (Cl. 155—138)

1. In a chair structure provided with an upright supporting standard having a light emitting opening through its wall near the upper end thereof, having a lamp positioned on the inner side of the standard adjacent said opening, and having a table leaf mounted on a bracket associated with the standard for swinging movements to a forwardly extending position with the table leaf extending forwardly of the chair for use and to a downwardly extending position with the table leaf beneath the chair seat: a unitary member secured to the inner side of the standard and having a cover portion forming with the standard a housing for the lamp and a depending bearing

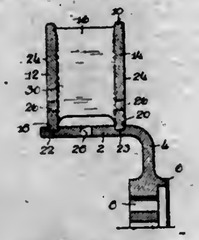
portion on which the bracket is swingably mounted.

2,473,038
ELECTRICALLY CONTROLLED VALVE MEANS
Edward A. Rockwell, Cleveland, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application May 24, 1945, Serial No. 595,578
14 Claims. (Cl. 121—41)



1. In combination, a source of fluid pressure, a modulating valve controlling the delivery of increasing pressures to a device to perform work, and an electrical control mechanism remote from said modulating valve and connected thereto by an electric circuit having a valve-operating solenoid therein provided with a lever connection to said valve arranged to control the operation of said valve and affording a decreasing mechanical advantage between said valve and solenoid, said control mechanism having a manually operated reaction device in said circuit for effecting energization of said solenoid and adapted to produce a reaction corresponding to the pressures delivered.

2,473,039
COMPOSITE SHIP CONSTRUCTION
Rolland C. Sabins, Seattle, Wash.
Application July 1, 1944, Serial No. 543,106
16 Claims. (Cl. 114—65)



1. A boat hull comprising a hollow metal stern hull bottom portion, a hollow metal bow hull bottom portion, a wooden hull portion between said stern hull portion and said bow hull portion, and further extending from stem to stern of the hull.

above said metal stern and bow hull bottom portions, and means securing said central wooden hull portion to said metal stern and bow hull por-

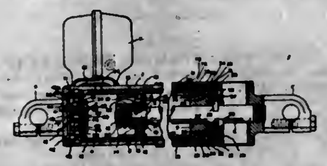
tions so that the exterior surfaces of said metal hull portions and said central hull portion conjointly form a smooth hull contour.

2,473,040
BRAKE ROTOR
Walter L. Schlegel, Jr., Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 19, 1944, Serial No. 550,197
6 Claims. (Cl. 188—264)

1. In a brake rotor, a substantially cylindrical support member, a brake ring cast about said member and comprising a pair of spaced annular friction plates defining a fluid chamber, and a plurality of blades extending therebetween, each plate having a serrated inner perimeter providing projections radially extending into openings adjacent the outer peripheral edge of said member for interlocking said ring and member, each projection being slidably fitted in the associated opening to permit radial movement of said ring relative to said member and encompassed by the sides of said opening to prevent movement of said ring axially and circumferentially of said member, fluid inlets through said member communicating with said chamber, and fluid inlets through said plates adjacent their juncture with said member, said member having on its inner periphery an annular flange intermediate the edges of said member and connected to a hub member.

2,473,041
HIGH-FREQUENCY ELECTROSTATIC FIELD APPARATUS FOR EGG PASTEURIZATION
Walter M. Urbain, Western Springs, and Paul Schauert, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
Application August 9, 1945, Serial No. 609,772
2 Claims. (Cl. 99—253)

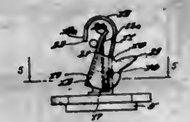
1. A device to pasteurize and stabilize shell eggs by heating the egg meat in its shell without appreciable coagulation comprising means to produce an alternating electrostatic field of the order of between 1 to 40 megacycles per second, said means including a pair of condenser plates disposed oppositely to each other and adjustable toward and away from each other, each of said plates being provided with a plurality of cooperating pairs of impressed shaped portions each of which impressed portion is adapted to generally surround the end of the shell of an egg, each of said plates being associated with the shell eggs to be treated by being spaced therefrom to provide an air gap between the ends of the eggs and each of the impressed portions of the plates, means in the form of a ring concentrically fixed in said impressed portions of the plates, said ring means being formed of a material having a relatively low loss factor as compared with the egg



meats to be treated, said ring meahs each having an internal diameter to engage around the outside surface of the end of an egg to support the egg in a substantially upright position and generally concentrically with respect to the cooperating impressions in the plates, said condenser plates being operative to distribute said field substantially uniformly throughout the individual meats of shell eggs positioned between the impressed portions and between the plates, the meat of said eggs being subjected to the action of said field whereby the egg meat is heated to a pasteurizing temperature.

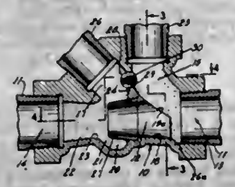
2,473,042
3,5-DIHYDROXY-4-DIHYDRO-THIADIAZINE-1-DIOXIDE AND ITS PREPARATION
Henry A. Walter, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application August 6, 1947. Serial No. 766,894
2 Claims. (Cl. 260—243)

1. 3,5-dihydroxy-4-dihydro thiadiazine-1-dioxide.



2,473,043
SHOCK ABSORBER STRUCTURE
Ralph H. Whisler, Jr., Monroe, Mich., assignor to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Application August 28, 1944, Serial No. 551,531
9 Claims. (Cl. 277—45)

7. A valve assembly of the class described com-

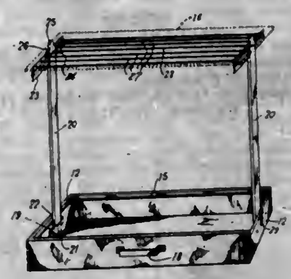


prising a pair of relatively movable members forming a hollow enclosure, one of said members having a passage for supplying hydraulic medium to the interior of said enclosure, the other of said members having one or more passages for discharging hydraulic medium from said enclosure, a disc valve within said enclosure controlling the flow of hydraulic medium through said supply passage, means including an abutment member within said enclosure for limiting the opening movement of said valve, said abutment member extending through a wall of said enclosure and having a passage for discharging hydraulic medium from said enclosure, and spring means sleeved on said abutment member and normally closing said valve.

2,473,044
SELF-LOCKING SAFETY CATCH
Morton Yasnor, Brooklyn, N. Y.
Application February 3, 1945, Serial No. 575,982
1 Claim. (Cl. 24—157)

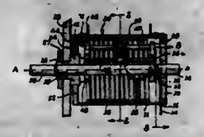
A self-locking safety catch, comprising a bar having a base and a hook overlying the base and spaced therefrom, the bar being formed with integral trunnions on the opposite side thereof, a guard having side wings provided with bearing openings which receive the trunnions and provided with a terminal portion which engages the inner side of the hook, said first-named bar having an integral lug disposed in clamping relation thereto, and a flat spring having a hooked lower end secured by said lug and a curved upper end disposed in pressure engagement with the inner surface of the guard, whereby said guard will be held in pressure contact with the hook, the guard being displaced inward by the pressure of a pin against the same and one of the wings of the guard being formed with an integral lever arm to move the guard against the pressure of the spring.

2,473,045
PIPE FITTING
Charles Adams, Jr., Croton on Hudson, N. Y.
Application December 21, 1944, Serial No. 569,157
3 Claims. (Cl. 237—59)



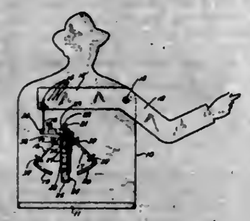
1. A pipe fitting comprising a body having a main inlet and a main outlet for connection in a circulating main of a heat-transfer system, a main passage connecting said inlet and outlet, a supply branch leading from said main passage near said inlet to supply fluid to heat transfer means, means for diverting fluid from the inlet end of said main passage to said supply branch, means including a return branch to return fluid from said heat transfer means to said main passage beyond said supply branch, a wall separating the supply branch and the return branch and having a shunt passage connecting said branches, and a valve extending across said passage for controlling the flow of water therethrough.

2,473,046
PIPE CLAMP
Charles Adams, Jr., Croton on Hudson, N. Y.
Application November 29, 1945, Serial No. 631,692
1 Claim. (Cl. 285—194)



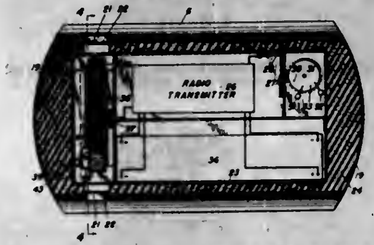
In a device of the character described, a housing for pipe having at its inner surface recesses extending in the same general direction as the axis of the housing, each recess having an inclined bottom whereby the recess increases in depth toward one end and a transverse bearing angle at said end, and a wedge with a transverse edge pivotally engaging said bearing angle, a straight toothed bottom to engage a pipe and a top extending from said transverse edge at a greater inclination than the bottom of the recess when the toothed bottom of the wedge is parallel to the axis of the clamp.

2,473,047
PORTABLE CLOTHES DRIER
Israel Bershad, Brooklyn, N. Y.
Application August 17, 1944, Serial No. 549,875
1 Claim. (Cl. 211—177)



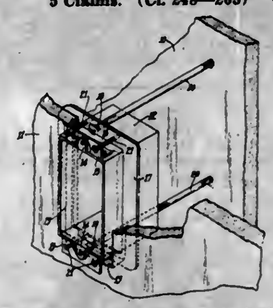
A clothes dryer comprising a support having two opposed vertical and parallel walls, said walls having brackets secured to the inner faces thereof, said brackets having vertical openings therethrough, posts rectangular in cross-section and having reduced lower extremities providing horizontal shoulders near the lower ends of said posts, said lower extremities of said posts removably registering in said bracket openings with said shoulders resting on said brackets, said posts thereby being removably and loosely mounted in said brackets, said posts having cross-arms secured thereto near the upper ends thereof, cords strung between said cross-arms, a rigid roof-like panel member removably mounted on said posts to provide a cover for said cords and simultaneously a rigid spacer between the upper ends of said posts to prevent tipping of said posts toward each other, said member having centrally positioned lateral rectangular slots therein near the ends thereof, said upper ends of said posts having reduced dimensions and registering in said slots of said rigid member.

2,473,048
VARIABLE RESISTANCE UNIT
Arnold O. Beckman, Altadena, Calif., assignor to National Technical Laboratories, South Pasadena, Calif.
Application October 22, 1945, Serial No. 623,643
17 Claims. (Cl. 201—56)



1. In a variable resistor, the combination of: a resistance element providing a plurality of turns disposed spirally about an axis, the sides of adjacent turns forming a spiral space; a rotor journalled to turn about said axis; a guide member rigidly secured to said rotor and extending transversely of said turns to move a predetermined distance from said turns, said guide member providing an axis; and a contact assembly slidable along said guide member parallel to the axis thereof and providing a guide element extending into said spiral space, the axis of said guide member being disposed at such an angle relative to the axis of said turns as to dispose said guide element substantially parallel to the sides of adjacent turns, said contact assembly including a contact engaging said resistance element.

2,473,049
ELECTRIC MOTOR
William E. Bledsoe, Jr., Milwaukee, Wis., assignor to Badger Carton Co., Milwaukee, Wis., a corporation of Wisconsin
Application July 30, 1948, Serial No. 41,541
8 Claims. (Cl. 172—126)

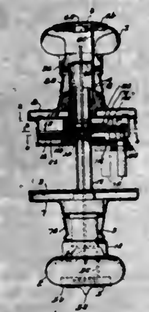


7. In combination, a portion of an animated display card forming a support, a pendulum, means mounting the pendulum for swinging movement to and fro relative to a face of the display card, an electric coil carried by a lower portion of the pendulum, a pair of spaced armatures fixedly mounted relative to the pendulum along the arc of movement of said coil, a dry cell carried by the pendulum, a normally open electrical circuit including the coil and dry cell, a switch mounted on said pendulum and included in said circuit, said switch operating automatically to momentarily close and then open said circuit during certain swinging movements of the pendulum, a movable element carried by and forming part of the animated display card, and a motion transmitting extension connected between the pendulum and said movable element.

2,473,050
EMERGENCY RADIO SIGNAL FOR AIRPLANES
Charles J. Camp, Palo Alto, Calif.
Application January 13, 1947, Serial No. 721,848
12 Claims. (Cl. 250—17)

1. A signalling unit for expulsion from an airplane, comprising an outer casing having concaved sides and convexed ends, an inner casing shock mounted in said outer casing and having a broadcasting transmitter positioned therein, a collapsible antenna rotatably positioned therein, and means for ejecting said antenna through said outer casing and in substantially vertical position.

2,473,051
ADAPTER
Louis C. Carlson, South Ozone Park, N. Y.
Application January 17, 1945, Serial No. 573,288
5 Claims. (Cl. 248—205)

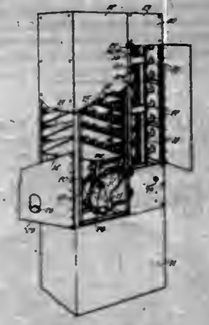


1. An adapter for mounting a device in an opening in a front wall accessible from the exterior only comprising a flat frame of rectangular form conforming in shape substantially to said opening and having a central opening for a receptacle and having upper and lower threaded bores therein, screws passing through said bores and engaging a spaced rear wall to jam the frame against the inner surface of the front wall in register with said opening at the top and bottom thereof, and means for attaching to said frame a receptacle to be supported in said wall and receptacle openings.

2,473,052
KEYLESS LOCK
Hancil Cordrey and Walter J. Duvall, Chula Vista, Calif.
Application May 24, 1948, Serial No. 28,818
8 Claims. (Cl. 292—150)

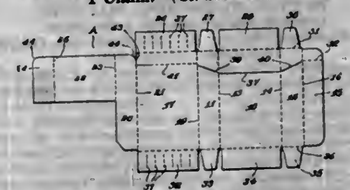
1. A keyless lock having an inner door knob assembly, an outer door knob assembly, tubular

cores secured to each door knob, separate operating stems engaging with said cores, a casing intermediate said door knob assemblies, a pair of shuttle plates arranged in said casing and guided for movement in parallel planes to one another, one being operated by one stem and the other shuttle plate by the other stem, the latch of the lock being directly operated by one shuttle plate and indirectly by the other shuttle plate through the first mentioned shuttle plate, locking means comprising an operable member mouned on each door knob assembly; a locking



and unlocking member extending between and engaged by the operable members; a stationary plate positioned in said casing between said shuttle plates; and locking means carried by one of said shuttle plates and operated by the operable member mounted on one door knob to lock said shuttle plate carrying the locking means to the stationary plate and prevent operation of the lock by the other door knob until release of said locking means by actuation of said operable member mounted on either door knob assembly.

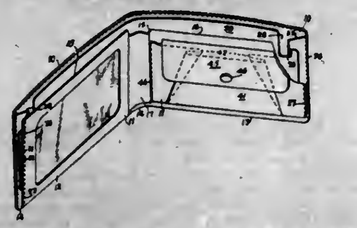
2,473,053
REGISTER CONSTRUCTION
William C. De Roo, Holland, Mich., assignor to Hart & Cooley Manufacturing Company, Holland, Mich., a corporation of Delaware
Application September 15, 1947, Serial No. 774,017
1 Claim. (Cl. 98—114)



In a structure as described, a conduit having an open end, a plurality of ears extending into said conduit near the open end, each ear having a screw threaded opening therethrough, an open grille frame having an outer face adjacent the open end of the conduit, inturned flanges on said face insertable into the open end of the conduit, said flanges having openings therethrough aligned with said ears and bracket members removably insertable into said openings and each having a ledge extending inwardly from the flange adjacent an ear and each ledge having a screw passing hole therethrough each bracket having a leg extending upwardly from the ledge, a section at right angles to the leg and a terminal portion on said section bearing against the outer wall of the flange.

2,473,054
BOTTLE VENDING MACHINE
Jefferson R. Donaldson and Newton M. Hulse, Dallas, Tex., assignors of thirty-three and one-third per cent to Dora E. Carter, Dallas, Tex.
Application November 29, 1945, Serial No. 631,632
3 Claims. (Cl. 312—48)

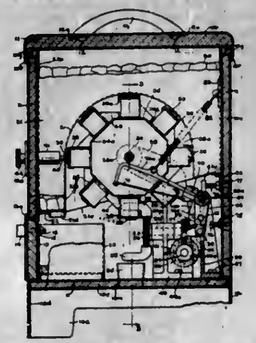
1. A bottle vending machine including juxtapositioned storage and delivery compartments, inclined superimposed bottle supporting plates in said storage compartment defining magazines from which bottles are transferred into said delivery compartment individually and successively from the uppermost to the lowermost magazine, endless conveyor means in said delivery compartment, outwardly hanging means depending from each of said plates, restrained by bottles on said conveyor means for holding bottles against release from a magazine until the next highest magazine is depleted, spaced means on said conveyor means for receiving bottles singly from said magazines and for maintaining axial alignment thereof during transfer and means at the lower end of said storage compartment for receiving bottles singly from said conveyor means and for reversing their positions for delivery.



2,473,055
RECLOSING CARTON
Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota
Application January 5, 1945, Serial No. 571,442
1 Claim. (Cl. 229—37)

A carton blank comprising a series of four side wall panels foldably connected together, a glue flap connected to one panel at one end of the series, a series of three liner panels foldably connected to a second side wall panel of the first

named series, a fold line in said glue flap and a corresponding fold line in said second side wall panel, a cut line substantially the width of said glue flap forming that portion of the said corresponding fold line to be overlapped by said glue flap, a cut line in said one side wall panel and in the remaining side wall panels of said first series, said cut lines being in continuation of one another and connecting the fold line in said glue flap with the fold line of said second side wall panel, closing flaps hingedly connected to the top and bottom edges of said side wall panels of said first named series, all of the liner panels with the exception of the one connected to said second side wall panel being less than one-half the height of said side wall panels of said first named series.



2,473,056
BILLFOLD WITH GUSSET POCKET
Roe F. Henderson, Springfield, Ohio, assignor to The Springfield Leather Products Co., Springfield, Ohio, a corporation of Ohio
Application October 16, 1944, Serial No. 558,789
2 Claims. (Cl. 150—38)

1. A billfold comprising, a front wall, a rear wall, gusset end walls V-shaped in transverse cross-section having opposite edges thereof secured to said front wall and said rear wall, one of said gusset end walls being positioned in each end of the billfold with the apex of the gusset end wall disposed inwardly of the bill receiving compartment formed between the front wall and the rear wall, a partitioning wall disposed in the bill receiving compartment and connected to said gusset end walls along the apices thereof, and means extending from said partitioning wall through the apex of at least one of said gusset end walls and having means thereon to regulate the maximum outward extension of the gusset walls and thereby prevent the same from extending beyond the end edges of the billfold.

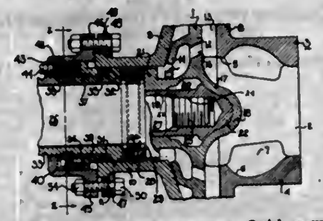
2,473,057
BUTTER DISPENSING MACHINE
Leonard Herber, Minneapolis, Minn.
Application February 25, 1946, Serial No. 649,964
12 Claims. (Cl. 31—20)

2. A butter-dispensing machine having in combination, a member rotatable about a central longitudinal axis, a plurality of chambers carried by said member arranged in radially disposed and circumferentially spaced position, each of said chambers being open at one side and adapted to receive and guide an elongated block of butter, a pair of sprockets, an endless chain running over said sprockets and having a side extending substantially parallel to said chambers, said chambers being successively positioned adjacent said side of said chain by rotation of said first mentioned member, butter-propelling members carried by said chain adapted to extend through the open side of the chamber adjacent said chain, enter one end thereof and pass out at the other end thereof, said chain being movable only in one direction, a substantially three-sided swinging frame having an open side, a rectilinear wire secured at its ends in said frame and movable across

the end of said chamber adjacent said chain, a handle, and means actuated by movement of said handle for swinging said frame to cut a slice of butter and means for then moving said frame upwardly and moving said chain and butter-propelling members a distance equal to the thickness of said slice.

2,473,058
AWNING BRACKET
Martin Hoeldtke, St. Petersburg, Fla.
Application May 24, 1947, Serial No. 750,230
3 Claims. (Cl. 160—23)

1. An awning structure having an inclosure formed by an attaching backing, ends, a forwardly and downwardly curved front and bottom, respectively, a trough at the lowermost portion of the front and open adjacent to the ends, a roller journaled in the enclosure, the bottom being open, a flexible sheet-like awning section movable thru the opening in the bottom for winding on and from the roller, and adjustable hook bolt means coacting with the enclosure and the roller for relieving strain upon the latter when the awning has been extended or retracted.

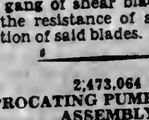


2,473,059
BEARING ALLOY
Harold Y. Hunsicker, Cleveland, and Louis Walter Kempf, Shaker Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application November 14, 1945, Serial No. 628,659
5 Claims. (Cl. 75—138)

1. A bearing composed of an alloy consisting of 5 to 25 per cent by weight of tin, 5 to 12 per cent by weight of silicon and 0.5 to 10 per cent by weight of silver, the balance being principally aluminum with impurities not exceeding 2 per cent by weight of the alloy.

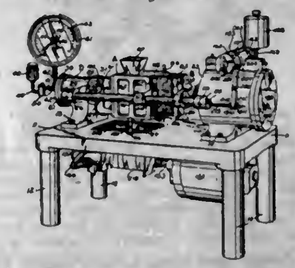
2,473,060
BEARING ALLOYS
Harold Y. Hunsicker, Cleveland, and Louis Walter Kempf, Shaker Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application November 14, 1945, Serial No. 628,660
6 Claims. (Cl. 75—140)

1. A bearing composed of an alloy consisting of 5 to 25 per cent by weight of tin, 5 to 12 per cent by weight of silicon and 2 to 10 per cent by weight of copper, the balance being principally aluminum with impurities not exceeding 2 per cent by weight of the alloy.



2,473,061
SHAFT SEAL
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application October 4, 1943, Serial No. 504,826
6 Claims. (Cl. 103—111)

1. A seal for a high pressure fluid pump including a shaft adapted to receive an impeller, a casing adapted to be mounted about the impeller, said casing having a hollow hub like portion surrounding the shaft but spaced therefrom to leave an annular compartment, a sealing ring in said compartment adapted to bear against said impeller and a cylindrical member surrounding the shaft and contained within said compartment for applying pressure to said ring to prevent leakage in the radial direction, said member having a flange which bears at one side against the ring and at the other side is adapted to receive a packing ring, and means for applying pressure against said packing ring to prevent leakage in the longitudinal direction, said means comprising a spacing ring containing equidistantly disposed compression springs which bear against a metal ring, said metal ring being in contact with said packing ring whereby said compression springs apply yielding pressure to said packing ring.

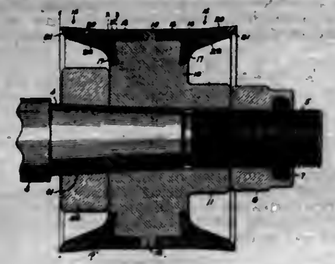


2,473,062
SURGICAL BANDAGE
Carlton L. Kennedy, South Braintree, and Kenneth W. Macdonald, Watertown, Mass., assignors to The Seamless Rubber Company, New Haven, Conn., a corporation of Connecticut
Application June 14, 1947, Serial No. 754,662
2 Claims. (Cl. 128—156)

1. A bandage of the type described, comprising an adhesive-coated strip provided intermediate of its ends with a pad, the end portions of the strip adapted for folding down to an overlapping position over the face of the pad, said end portions carrying interiorly relatively stiff protective layer elements for the adhesive, each element at its end adjacent the pad having a short reversely angled outstanding tab portion free from the strip and adapted to assume its outstanding position with reference to the strip when the bandage is in unfolded position, the tab portions in the folded position of the bandage overlapping only

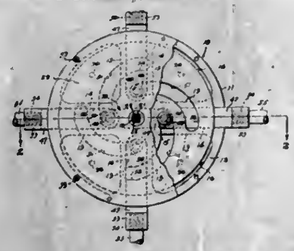
respective small areas at the ends of the pad face, and both tab portions being released and brought to their respective outstanding positions to facilitate stripping off of said protective elements when and as the bandage is unfolded.

2,473,063
SHEAR TENDERNESS TESTER
Charles E. Kerr, Hoopeston, Ill., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application February 25, 1946, Serial No. 650,013
20 Claims. (Cl. 73—101)



3. An apparatus for testing the tenderness of a product comprising a receptacle having a chamber therein for the reception of the product to be tested, said receptacle being provided with a plurality of slots in an end wall thereof and a series of aligned grooves in opposite side walls, a gang of shear blades slidably mounted in said grooves for reciprocation through said slots and the product in said chamber, means for reciprocating said gang of shear blades, and means for measuring the resistance of said product to the shearing action of said blades.

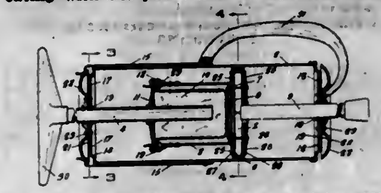
2,473,064
RECIPROCATING PUMP PISTON AND ASSEMBLY
Arthur L. Leman, Houston, Tex.
Application September 21, 1945, Serial No. 617,733
10 Claims. (Cl. 309—4)



1. A double-acting reciprocating-pump piston comprising a metallic core with a medial flange and a smaller circular surface on either side of the flange extending axially to an inwardly receding substantially transverse surface that is closer to the mid-section than to the end of the piston, and a rubberous packing molded on the core with its outside surface substantially flush with the periphery of the medial flange, and having an inner surface open to the fluid from the outer end of the packing to a transverse plane at not greater axial distance from the inner than from the outer end of the packing, said trans-

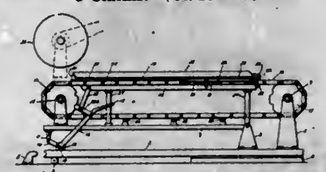
verse plane also being at a less distance from the inwardly receding substantially transverse sur-

face than the latter is from the piston mid-section.



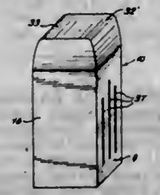
2,473,065
LOCK FOR CLOSURES
Karl Miller, Detroit, Mich.
Application May 23, 1946, Serial No. 671,773
1 Claim. (Cl. 292—37)

A closure lock comprising a casing member attachable to the closure, a cover member secured to said casing member and having a circular cavity therein, said casing member having a plurality of radial ribs with guide grooves therein, a plurality of locking plungers reciprocably mounted in said guide grooves, a circular cam of substantially the same size as said cavity rotatably mounted in said cavity with its opposite faces abuttingly engaging the top surfaces of said radial ribs and the bottom surface of said cover member cavity respectively, the bottom surface of said cover member cavity engaging the cam over substantially the entire area of one face thereof, and the other face of the cam engaging substantially the entire area of the outer faces of the locking plungers whereby the locking plungers will be retained in the guide grooves in the radial ribs, said cam having a plurality of outwardly extending arcuate cam portions thereon, cam followers engaging said cam portions and connected to said plungers, and a handle connected to said cam for rotating said cam.



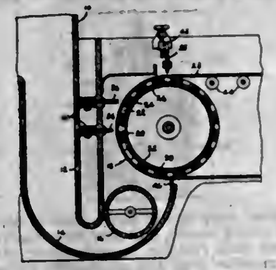
2,473,066
VACUUM CLEANER
Camille Miller, Hamilton, Ontario, Canada
Application July 26, 1946, Serial No. 686,599
In Canada April 25, 1946
9 Claims. (Cl. 183—37)

1. In a suction cleaner of the character described, a cylinder, a hollow piston reciprocal therein to create a reduced air pressure in the cylinder on one side of the piston, said piston having an air port in each of its side faces, air suction operated valves controlling passage of air through the ports, a chamber carried by the piston and reciprocating therewith and communicating with the portion of the cylinder having



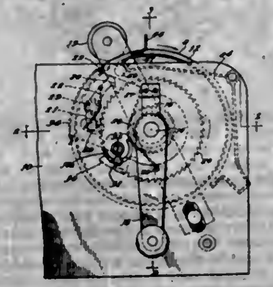
a reduced air pressure, a dust receiving filter bag contained within the chamber, and a suction tube extending into the cylinder and into the chamber and having its inner end contained within the dust receiving bag.

2,473,067
MACHINE FOR APPLYING RUBBER TIRE TREADS TO CARCASSES
Edwin Miller, Jeannette, Pa.
Application November 21, 1946, Serial No. 711,413
3 Claims. (Cl. 154—9)



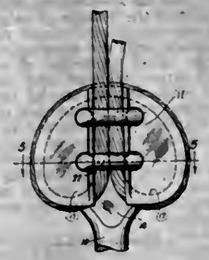
3. Apparatus for applying a rubber tire tread to a tire carcass that is mounted on a rotatable drum, comprising a conveyor mounted for traveling movement past the drum, guide bars on the conveyor and relatively adjustable to respectively engage the ends of a tread that is placed on the conveyor, and pointed studs on the conveyor, between the guide bars for engagement with the adjacent face of a tire tread to hold it against slipping.

2,473,068
SYRINGE
Rebecca Nalpantian, San Francisco, Calif.
Application July 24, 1945, Serial No. 606,772
3 Claims. (Cl. 128—227)



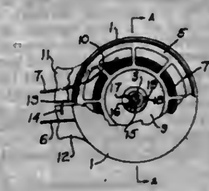
1. In a cabinet syringe; a cabinet having a main reservoir for reception of liquid to be employed; a hollow hose-supporting extension on the reservoir, the interior of which communicates with the main reservoir to increase the capacity of the reservoir; and a discharge hose connected to the reservoir and arranged to be coiled around the extension when the hose is not in use.

2,473,069
APPARATUS FOR MANUFACTURE OF PAPER
Nicholas J. Niks, Munising, Mich.
Application April 27, 1945, Serial No. 590,627
7 Claims. (Cl. 92—44)



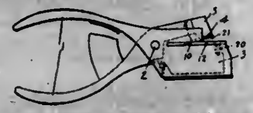
2. The combination in a paper making machine of a rotatably supported breast roll, a wire belt supported thereby and contacting the same over substantially half of its periphery, means for supplying paper stock to said belt, means comprising a plurality of slices for controlling the thickness of the layer of paper stock which is carried away by said belt, and means for controlling the moisture content in said layer comprising perforations in said roll, an adjustable valve member within said roll for adjustably effecting fluid communication with the greater portion of the perforations in the said one-half of the periphery of said roll, and conduit means for supplying fluid to the interior of said valve member.

2,473,070
LINE PRINTER DEVICE FOR DUPLICATING MACHINES
Eric W. Peterson, Spring Lake, Mich.
Application January 2, 1947, Serial No. 719,653
10 Claims. (Cl. 101—132)



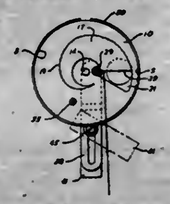
1. In a duplicating machine a master drum having means to mount a master copy on its surface, heading master supports at opposite ends of the drum, means mounting the supports and drum for relative circumferential movement about the axis of the drum, said supports having means thereon to mount a heading master sheet over a portion of the drum in overlying position with respect to a portion of the master copy receiving surface of the drum, drive means to rotate the supports and the drum including a releasable drive connection between the drum and said supports, and means operable upon each rotation of the supports to release said drive connection temporarily, and power means, acting while the drive connection is released, to advance the drum a short distance in the direction of rotation with respect to said heading master mounting means.

2,473,071
CABLE CLAMPING DEVICE
Chester R. Pieper, Warrenton, Mo.
Application July 9, 1947, Serial No. 759,771
3 Claims. (Cl. 24—135)



1. A rod having means for securing a cable thereto, said means comprising a discoidal body formed on said rod with the plane of said body disposed at an angle to the axis of said rod, said body having a diametrical cable-receiving channel in alignment with the rod and a peripheral cable-receiving channel communicating with the lower end of said diametrical channel, and cable clamping means extending transversely of said diametrical channel.

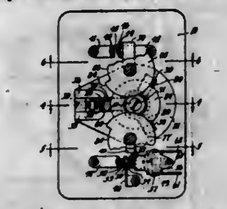
2,473,072
LINE DISPENSING CONTAINER
Clifford E. Plouff, Seahurst, Wash., assignor, by mesne assignments, to Pacific Manufacturing & Engineering Corp., Seattle, Wash., a corporation of Washington
Application March 11, 1946, Serial No. 653,580
7 Claims. (Cl. 242—142)



1. A container for line, comprising two parts complementally shaped to contain such a line, means joining said parts for limited relative movement about a common, centrally disposed axis, a pair of complemental snipping elements, one carried by each container part, and means reacting between said two complemental parts, yieldably urging said complemental snipping elements apart, said snipping elements upon approach being relatively disposed to snip a line interposed therebetween.

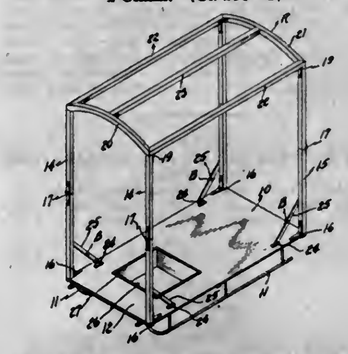
2,473,073
PUNCH
Albert A. Remboldt, San Francisco, Calif.
Application February 1, 1947, Serial No. 725,864
3 Claims. (Cl. 164—120)

1. A punch comprising a punch member and a die member complementary thereto, two pairs of spring arms supporting said punch member spaced from said die member for movement into the latter against the tension of said arms upon force being applied to said punch member in a direction toward said die member, one of said pairs of arms being connected at one of their ends to said punch member, the other pair of arms being connected at one of their ends to said die member, the opposite ends of said other pair being respectively connected to one of the opposite ends of the arms of said first mentioned pair, the pair of arms connected to said die member being disposed outwardly of the pair of arms connected to said punch member and said arms, punch member and die member being integrally united.



2,473,074
REEL FOR MOTION-PICTURE FILMS
Robert J. Reynolds, Trotwood, Ohio
Application August 6, 1946, Serial No. 688,674
15 Claims. (Cl. 88—18.7)

1. A reel for a motion picture film comprising laterally spaced side member and having means whereby it may be mounted on a supporting structure and held against rotation, one of said side members having an opening through which the inner end portion of a film wound on said reel may be withdrawn, a normally extended retractible film supporting device mounted between said side members adjacent the center of the reel and on which the film is wound, and means controlled by the mounting of the film on said supporting structure for retracting said film supporting device and thereby releasing the inner end portion of the film for free movement with relation to the reel.

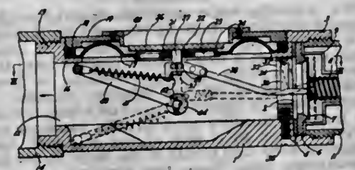


2,473,075
CONDITION RESPONSIVE SWITCH
John O. Roesbe, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 13, 1943, Serial No. 502,097
6 Claims. (Cl. 200—138)

1. In a control device, in cooperation, a unitary driving member, a first driven member having a limited movement, a second, driven member having a larger movement, means for limiting the movement of said first and second driven members, and means for holding said first and second driven members in frictional engagement with said unitary driving member, said means comprising a plurality of frictional elements radially positioned within said first and second driven members in slip frictional engagement with said driv-

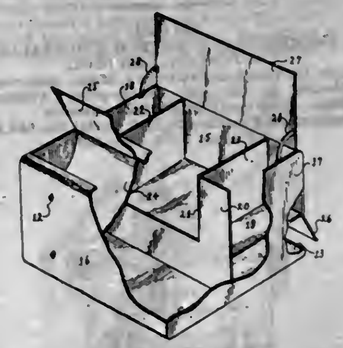
ing member, only one of said elements being adjustably spring biased, and said elements being so positioned with relation to each other and said driving member that the adjustable spring bias of said one element causes an equal distribution of frictional engagement among all of said elements.

2,473,076
COLLAPSIBLE STRUCTURE FOR ICE FISHING
Carl Schelbner, Bay City, Mich.
Application June 27, 1947, Serial No. 757,353
1 Claim. (Cl. 296—1)



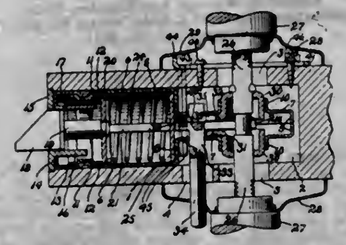
A collapsible unit of the character described, comprising a sled having a floor, a collapsible superstructure mounted thereon and foldable entirely within the marginal limits of the sled floor, said superstructure comprising a plurality of vertical corner uprights, each upright comprising a plurality of hingedly connected sections with the lower sections hingedly connected to the floor, foldable braces hingedly connected to the sled floor and to the lower section of each corner upright, a rigid roof frame hingedly connected to the upper ends of the upper sections, said superstructure being adapted to be entirely covered and enclosed by a canvas covering, an opening in the sled floor, a bottomless, vertically adjustable box mounted therein and forming a closed passage from the sled floor to the ice, when the box is in its lowered position, a continuous, outwardly-projecting shoulder provided on the upper edge of the box, said shoulder engaging the floor when the box is in lowered position and forming a light-proof and weather-proof joint between the box and said floor.

2,473,077
TREPANNING TOOL
Robert M. Starbuck, Jr., Hartford, Conn.
Application July 6, 1946, Serial No. 681,688
1 Claim. (Cl. 145—120)



A trepanning tool comprising a thin walled hollow cylindrical body member having a continuous row of integral uninterrupted cutting teeth extending around one end, a head secured thereto at the opposite end and having a central axially extending driving member for said tool formed thereon, said body member having spaced inclined slots formed in its cylindrical wall and extending approximately to said cutting teeth, and a central axially extending twist drill mounted within said head and extending beyond the plane of the annular cutting teeth.

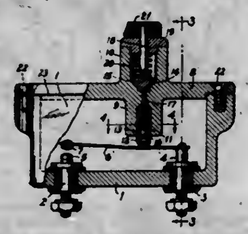
2,473,078
VALVE
John P. Strange, Wilkinsburg, and William P. Yant, Murraysville, Pa., assignors to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 5, 1946, Serial No. 652,078
14 Claims. (Cl. 128—142)



6. A combined positive pressure and inhalation valve through which oxygen under pressure may be supplied to the wearer of breathing apparatus, said valve comprising a housing provided with an open side and with an inlet and an outlet for said oxygen, a flexible diaphragm covering said open side of the housing and provided centrally with a plurality of ports, an exhalation valve member outside the housing adapted to seal said ports, a stem secured to said member and extending slidably through one of said ports, a valve member for said inlet urged toward closed position, a lever pivotally mounted in the housing for opening said inlet valve, and means operatively connecting said stem to the lever for actuating it to open the inlet valve when said exhalation valve member is pressed inwardly manually or is drawn inwardly by inhalation of said wearer.

2,473,079
TRAVELING BAG
Clair P. Thompson, Lansing, Mich., assignor, by mesne assignments, to The Tot Traveler Corporation, Toledo, Ohio, a corporation of Ohio
Application June 28, 1945, Serial No. 602,048
4 Claims. (Cl. 155—1)

1. A combined traveling bag and seat comprising a receptacle having top and bottom walls, said top wall having an opening therein adjacent an edge thereof, a partition spaced from said bottom and top walls and parallel thereto, said partition being of substantially less area than the area of the top wall and adapted to form a seat, and a closure for said opening pivotally connected to a wall of said receptacle at one side of said opening, said receptacle having a compartment adjacent said seat and in open communication with the space within the receptacle between the top wall and the partition and entirely enclosed within said receptacle, said compartment being adapted to receive the feet of an occupant of said seat.

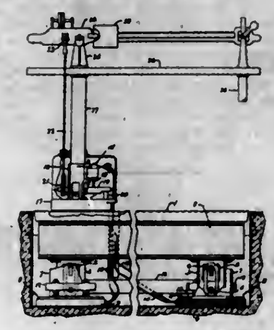


2,473,080
BATHROOM LOCKING LATCH
Abraham Vander Henst, Grand Rapids, Mich., assignor to National Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application March 14, 1945, Serial No. 582,604
5 Claims. (Cl. 292—169)

4. A latch comprising a casing, a latch bolt slidably mounted in said casing, means for retracting said latch bolt, two independently rotatable knobs each having means for operating said retracting means, means extending adjacent one knob for locking the other knob, a spring acting to

move the locking means to unlocked position, means on said retracting means for holding said locking means in locking position and for releasing the locking means upon retraction of said retracting means, and means extending adjacent said other knob manually operable to retract said retracting means.

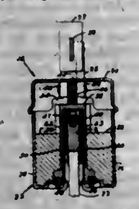
2,473,081
THERMOSTATIC SWITCH AND SEALED ADJUSTING CONTROL
Victor G. Vaughan, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application February 8, 1946, Serial No. 646,383
3 Claims. (Cl. 200—139)



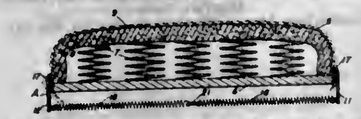
1. In a control for adjusting a member within a sealed casing, one of the walls of the casing being formed with aligned inner and outer bosses, a screw adjustably threaded in the inner end of the inner boss with its inner end engaging the member to be adjusted, an adjusting stem rotary in said bosses having its inner end splined to the screw and extending out of the outer boss, an adjusting knob on the outer end of the stem, an outwardly facing valve seat surrounding the stem at the inner end of the outer boss, a valve member fixed on the stem engaging the valve seat, and a spring compressed between a cap on the outer end of the outer boss and the valve member for biasing the stem and valve member inwardly and holding the latter in gastight sealing engagement with the valve seat.

2,473,082
TOILET SEAT LIFTER
Robert B. Warner, Los Angeles, Calif.
Application February 5, 1946, Serial No. 645,557
1 Claim. (Cl. 4—251)

A self-cushioning seat lifting lever for toilet bowls of the type having a seat supported from hinge brackets mounted on an apron on the bowl, comprising: an elongated supporting strap adapted to be held in place on said apron by said brackets; a downwardly-turned leg member on one extremity of said strap; a hinge pin supported by and extending outwardly from said leg member; an air compression cylinder hingedly mounted at its one extremity on said hinge pin; a piston in said cylinder; a seat lifting rod extending from said piston through the other extremity of said cylinder in a plane substantially parallel to the plane of said seat; and forwardly of the middle of the latter to provide a hand grip; means pivotally connecting the mid-portion of said rod to said seat; and means maintaining said rod in axial alignment with said cylinder so that said rod and said cylinder will act together as a telescoping, effort-multiplying, prying lever to lift said seat when the free extremity of said rod is swung upwardly about the axis of said hinge pin.



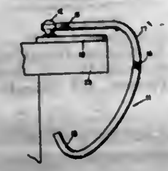
2,473,083
HYDRAULIC WEIGHING SCALE
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application June 23, 1945, Serial No. 601,225
1 Claim. (Cl. 265—47)



In a weighing scale employing hydraulic systems for transmitting force from a load receiver to a load counterbalancing mechanism, in combination, a base, a pair of posts erected from the base and carrying fulcrum bearings, a lever pivotally mounted on the fulcrum bearings, a standard erected from the base and bridging over the lever, a plurality of hydraulic pressure receivers secured to a side of the standard and positioned over load pivots of the lever, struts for transmitting force from the pressure receivers to the load pivots, said receivers being adjustable along the axes of the struts, a load counterbalancing mechanism operatively connected to the lever, and a support for the load counterbalancing mechanism, said support being erected from and transmitting the reaction force of the load forces applied to the counterbalancing mechanism directly to said standard upon which the pressure receivers are mounted.

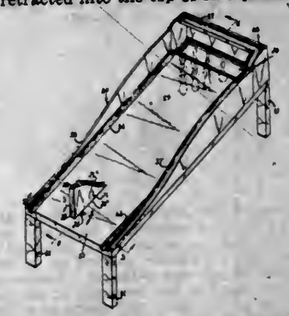
2,473,084
WEIGHING SCALE POISE
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application January 29, 1946, Serial No. 644,031
3 Claims. (Cl. 265—56.5)

1. A poise for a weigh beam, the poise comprising a bifurcated casting adapted to straddle the weigh beam, each leg of the bifurcated casting being hollow and open at the top, and covering means for closing the openings.



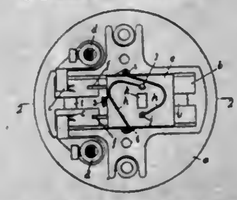
2,473,085
COVER CLAMP FOR PRESSING MACHINES
Harold W. Winters, San Francisco, Calif.
Application October 1, 1947, Serial No. 777,161
1 Claim. (Cl. 24—243)

In a device of the character described, a pair of substantially U-shaped members having their ends in parallel relation slidably and pivotally connected one to the other, the middle portion of each of said U-shaped members having opposed prongs along their upper edges adapted to engage the cover of a pressing buck at a point above the base of said buck, and springs interposed between the bottom portions of said U-shaped members and adapted to be disposed at a point beneath the bottom of said buck.



2,473,086
HOLDER
Ricardo Gonzalez Montero, New York, N. Y.
Application January 12, 1949, Serial No. 70,487
6 Claims. (Cl. 248—308)

3. A new article of manufacture consisting of a supporting plate and a hook pivotally mounted thereon for swinging movement about an axis parallel to said plate, said hook being hinged at a pair of points intermediate its ends, said hinges permitting folding of said hook to and from load-carrying position.



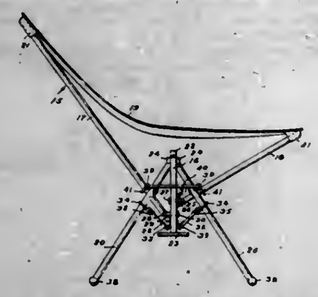
2,473,087
BOWLING GAME BALL PROJECTOR
Ludwig Almasi, New York, N. Y.
Application July 21, 1947, Serial No. 762,284
6 Claims. (Cl. 273—129)

1. In a bowling game having a flat playing board, means for projecting a ball, comprising a rod extended vertically from the front end of the board, a block having a downwardly and rearwardly inclined grooved top face for guiding a ball rolling downward thereon, said block being formed at its rear end with a passage communicating at its top end with the grooved top face and into which said rod extends turnably and vertically slidably supporting said block, resilient means retaining said block in a slightly raised position off the board in which the top end of said rod is retracted into the top of said passage, and

a lever arm pivotally mounted on said block at the top end of the grooved top face thereof to rest over the top end of said passage in the slightly raised position of said block, said lever arm being formed in its top face with a cup-shaped recess in which a ball rests, said rod being of a length to extend from the top end of said passage and pivot said lever arm to spill a ball from said cup-shaped recess onto the grooved top face of said block when said block is pushed downward against the action of said resilient means.

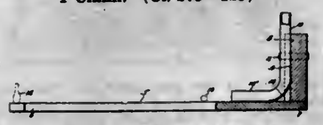
2,473,088
ELECTRIC SWITCH
Robert Bain, Handsworth, Birmingham, England, assignor to Henry Allday & Son (1922) Limited, Birmingham, England
Application October 24, 1947, Serial No. 781,995
In Great Britain November 6, 1946
6 Claims. (Cl. 200—76)

1. An electric switch comprising the combination of a base, a pair of fixed contacts on the base, a slide mounted on the base, a pair of relatively slidable contacts carried by the slide and adapted at one end to effect mutual contact and at the other end to engage the fixed contacts, a finger piece for actuating the slide, and spring means for imparting rapid movements to the slide independently of the finger piece after the latter has been moved through a predetermined initial distance, the arrangement being such that when closing the switch, the contiguous ends of the movable contacts are brought together be-



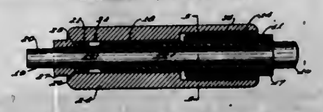
fore engagement of one of their opposite ends with the corresponding fixed contact, and when opening the switch the said contiguous ends are separated before the opposite ends are disengaged from the fixed contacts.

2,473,089
ANCHOR LEADER
James Barone, Alamosa, Colo.
Application August 22, 1944, Serial No. 550,645
1 Claim. (Cl. 43—52)



The combination with a leader of an anchor having an opening extending from end to end thereof, the opening at all points being of comparatively small diameter relative to its length, the opening at one end being of a diameter approximately equal to the diameter of the leader, the opening at the other end being of a diameter approximately equal to double the thickness of the leader, said opening being formed with a slight taper extending from its smaller end to its larger end, the taper being coaxial throughout its length with the axis of the opening, and the leader being extended through the opening, and having one end folded back upon itself a short distance and retained in the larger end of the opening.

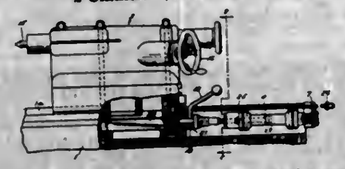
2,473,090
TELESCOPING COLLAPSIBLE CHAIR
Frank J. Becker, Arlington, Va.
Application September 23, 1947, Serial No. 775,644
13 Claims. (Cl. 155—139)



1. In a collapsible folding chair, the combination of a support structure including a plurality of legs pivotally mounted at one of their respective ends and spaced apart circumferentially on a ring member, adapted to swing freely thereon to and from a first position in which the said legs are substantially axially parallel to a second position in which the said legs are extended to form a support for said chair, a superstructure including a plurality of standards, two said standards being adapted to define a back rest portion for said chair and two relatively shorter standards being adapted to define a seat portion, means interconnecting one end of each said standard for pivotal movement to and from a first position in which the said standards are substantially axially parallel to a second position in which the said standards are extended to define the back rest and seat portions of said chair, the said interconnecting means for said standards being adapted to pass through the ring member connecting the said legs when the said legs and said standards are in their respective first positions whereby the said superstructure is telescoped within the said support structure, cooperative connecting means carried jointly by said support structure and said superstructure for releasably interlocking said structures when said legs and said standards are in their respective second positions, and a flexible cover member arranged to engage the free ends of each said standard to form a seat and back rest for said chair.

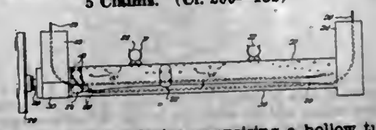
2,473,091
MARBLE PROJECTOR
Desmond B. Brooks and Cornelius J. Van Boven, Haxtun, Colo.
Application March 18, 1946, Serial No. 655,231
1 Claim. (Cl. 273—129)

In a device of the class described, a supporting block having a vertical groove in the front wall thereof, a projector tube curved intermediate its ends providing a long vertical end mounted within the groove, and a substantially short horizontal end at the base of the long vertical end, means for holding the tube within the groove, said means embodying an elastic band stretched around the block in engagement with the vertical end, the elastic band gripping the vertical end, whereby the short horizontal section may be adjusted laterally, and said tube adapted to direct a game piece in the form of a marble, dropped into the tube, forwardly in front of the supporting block.



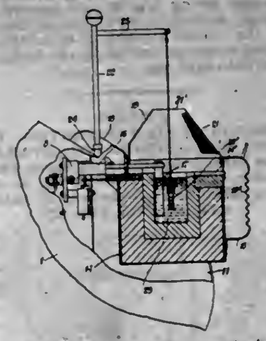
2,473,092
HOSE CLAMP
Don M. Buffington, Grandfalls, Tex.
Application September 22, 1947, Serial No. 775,553
7 Claims. (Cl. 285—86)

1. A hose clamp comprising a cylindrical bushing adapted to be positioned over a hose in a position displaced from one end thereof, said bushing being provided with a tapered bore having a minor diameter larger than the major diameter of the hose, a plurality of wedges of arcuate cross-section and tapered longitudinally adapted to be positioned within the bore of said bushing encircling the hose in the position displaced from one end thereof, said wedges provided with teeth on their under sides adapted to be embedded in the peripheral wall surface of the hose, a connecting element having a hollow cylindrical shank projecting into the open end of the hose whereby said shank is extended beneath said



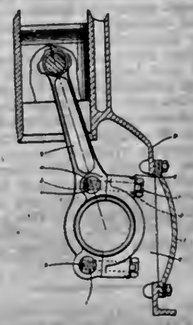
wedges to act as a mandrel therefor, an external sleeve having one end thereof disposed in threaded engagement with said bushing and operative to move the same with respect to said sleeve whereby said wedges may be forced into gripping contact with the outer surface of the hose, and a cylindrical member enveloping the end of said hose adjacent said wedges and confined in sealing relation to said hose by said external sleeve.

2,473,093
MACHINE TOOL
Alfred J. Conn, Oak Park, and Richard B. Stanley, Maywood, Ill., assignors to La Salle Designing Company, Chicago, Ill., a partnership composed of Alfred J. Conn and Martha Conn
Original application November 22, 1943, Serial No. 511,298, now Patent No. 2,399,594, dated April 30, 1946. Divided and this application January 24, 1946, Serial No. 643,124
2 Claims. (Cl. 82—31)



1. In a machine tool having a bed and a member slidably mounted on such bed, the improvement comprising a sliding wedge arranged to engage between said bed and said member, an operating rod secured to said wedge, hydraulic means operative to move said operating rod, a collar rotatably mounted between two positions on said rod, and a projection on said collar engageable with said member and arranged to maintain said wedge out of engagement with said member in one such rotative position of said collar whereby said hydraulic means may advance said member along the bed and in the other position of said collar to disengage said rod from said member whereby said hydraulic means may advance said wedge with respect to said member to lock said member to the bed.

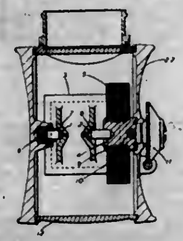
2,473,094
CONTROL MECHANISM
Asa K. Gaylord, Portland, Oreg.
Application December 27, 1945, Serial No. 637,350
5 Claims. (Cl. 200—152)



1. A switching device comprising a hollow tubular member mounted for rotation in bearing means, a plurality of switches mounted on said member for operation by the rotation of said member, and flexible wires extending longitudinally through the interior of said tubular member from each switch to an end of said member sufficiently remote from the said switch to provide a twisting length for the wires within the tubular member sufficient to accommodate a relatively large angular movement of the tubular member without damaging the wires and without imposing an appreciable torque load on the tubular member.

2,473,095
TILTING SALT BATH FURNACE
George Henry Stanley Grene, Watford, England, assignor of one-half to Wild-Barfield Electric Furnaces Limited, Watford, Hertfordshire, England
Application October 26, 1945, Serial No. 624,491
In Great Britain November 1, 1944
8 Claims. (Cl. 13—23)

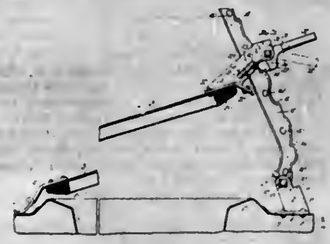
1. An electrode salt bath furnace to treat solid work pieces including a bath having an open top, means for carrying solid work pieces in the bath by suspension from above the open top of the bath, means for tilting the bath, electrodes for heating the bath mounted in the bath, electrode contact making and breaking means for making contact when the bath is in normal position and breaking contact when the bath is tilted, and means separably attached to the bath for receiving the whole of the salt from the bath when the bath is tilted.



2,473,096
CONNECTING ROD
William Wilson Hamill, Little Aston, and Robert Strange Crump, Birmingham, England
Application October 27, 1944, Serial No. 560,624
In Great Britain December 1, 1943
4 Claims. (Cl. 74—579)

1. In combination, separable bearing members for forming a sleeve bearing and being separated longitudinally of the axis of the bearing, said members having formed therein registering bores, one of the members having formed therein a

bore extending parallel with the bearing and transversely coincident with the registering bore of said member and having a curved surface on the side thereof toward the other of said members, a bolt for clamping together the separable members and having a threaded shank extending through the registering bores and with the threaded shank extending across said transverse bore, and a nut having a curved peripheral surface and fitting within said transverse bore with said curved peripheral surface seated against the curved surface of said bore to provide a self aligning action as the bolt shank is threaded into said nut.

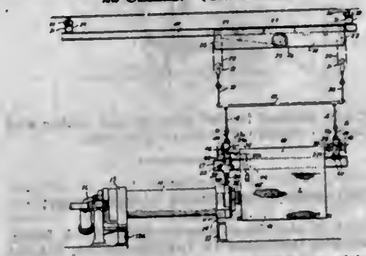


2,473,097
THERMOSTATICALLY-OPERATED REGULATING OR CONTROLLING APPARATUS
William Wilson Hamill, Little Aston, England
Application January 31, 1946, Serial No. 644,549
In Great Britain February 17, 1945
6 Claims. (Cl. 236—93)

1. A control apparatus comprising, in combination, a body member having a bore therein, ports in said body member and opening into said bore, a spindle mounted in one side of said bore and pivotally supported by said body member, means for regulating the pivotal displacement of said spindle, spaced antifriction bearing members supported by said body member and said spindle, said bearing members being in opposed relation and axially aligned relative to each other and to the pivotal axis of said spindle, a control member mounted in said bore and pivotally supported by said bearing members, said control member being mounted between said bearing members and having axially aligned, anti-friction bearing elements on opposite sides thereof for cooperating with said spaced bearing members, one of said bearing members being resiliently biased axially toward the other of said members to take up wear, said control member having a control portion substantially in contact with the wall of said bore in the region of said ports and movable relative to said ports upon pivotal action of said control member, and a thermostatic element within said bore and secured between said spindle and said control member to pivotally actuate the latter in accordance with temperature conditions within said bore in relation to the pivotal displacement of said spindle.

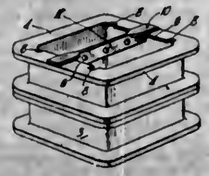
2,473,098
HATCH COVER OPERATING DEVICE
Clarence R. Hamilton, Roseville, Calif.
Application February 13, 1946, Serial No. 647,311
4 Claims. (Cl. 98—7)

2. A device for operating a railway car hatch cover comprising a bracket having spaced walls secured to a car roof adjacent said hatch cover and having a laterally projecting stop surface, a bar pivotally mounted at one end to said bracket between the walls thereof, spaced walls secured to said cover adjacent and overlapping said bracket when the cover is closed; a combined handle and pawl member pivotally mounted between the walls of said cover adjacent said bar so as to move with



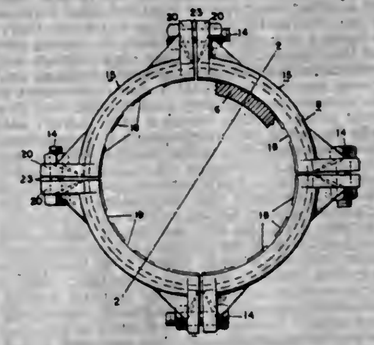
said cover, said pawl portion of said member selectively engageable with said laterally projecting stop surface or said bar to hold said cover in a predetermined position, said handle portion being offset and extending outwardly and laterally from said bracket providing means for manually operating said cover and providing an overbalancing weight to bias said pawl portion toward engagement with said stop surface or said bar.

2,473,099
TRAPPER'S HIP-LENGTH BOOT
James Merton Hatch, Castine, Maine
Application July 3, 1947, Serial No. 758,965
3 Claims. (Cl. 36—1)



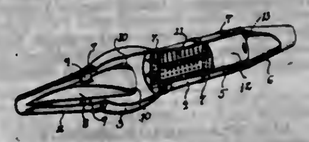
1. A boot of the class described comprising a foot portion and a knee-high lower leg portion, the latter being provided on its interior, adjacent its top, with a pocket and said lower leg portion being further provided with an extensible and retractable upper, said upper being of comparatively flexible stock and being inwardly and downwardly collable in a manner to permit same to be conveniently and compactly housed and protected within the confines of said pocket, the latter having entrance closing means including availably usable circumferentially spaced tabs, and snap fasteners on said leg portion for accommodation of said tabs.

2,473,100
PAPER MACHINE WIRE STRINGING DEVICE
Lloyd Hornbostel, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application June 14, 1944, Serial No. 540,260
23 Claims. (Cl. 92—44)



2. In combination a paper making machine of the Fourdrinier type having a couch roll with a removable front bearing support for opening up a gap accommodating passage of a forming wire, an overhead crane movable longitudinally and laterally of the machine, a wire bundle carrier suspended from said crane, spreader poles on said carrier for holding a portion of a forming wire from a bundle on the carrier in an open depending loop large enough to freely encompass the couch roll, a dolly movable longitudinally on said carrier in said loop for suspending the front of the couch roll to maintain said gap, and said crane arranged to move the carrier laterally for conveying an open wire loop thereon into the line of the machine to encompass the couch roll while said dolly rides on the carrier within the loop.

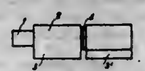
2,473,101
MOLDER'S FLASK
Walter J. Jones, Lomita, Calif., assignor to Columbia Steel Company, a corporation of Delaware
Application November 13, 1945, Serial No. 628,072
2 Claims. (Cl. 22—111)



1. In a molder's flask having a cope with upright side walls defining an opening and having flanges with flat upper surfaces on the upper end of at least two of the oppositely disposed side walls, said flanges extending inwardly of said walls on two oppositely disposed sides of said opening, the combination therewith of a flask bar having flattened ends the undersides of which are adapted to be disposed on the flat upper surfaces of said flanges, said bar having a depending portion adapted to substantially extend across the opening between the oppositely disposed walls of said cope having the inwardly extending flange thereon whereby said depending portion is adapted to extend under said inwardly extending flanges, notched out portions in the upper end portions of said depending portion directly beneath said flattened ends, said notched out portions closely engaging the inwardly extending flanges to hold said flask bar at any desired position in said cope, said flanges having means for entering the depending portion of the flask into said cope.

2,473,102
COUPLING FOR BRITTLE PIPES
John H. Kreese, New York, N. Y., assignor to Victaulic Company of America, New York, N. Y., a corporation of New Jersey
Application February 6, 1947, Serial No. 726,889
1 Claim. (Cl. 285—194)

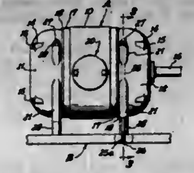
A coupling for two frangible pipes having ungrooved smooth cylindrical exterior surfaces arranged with the ends adjacent each other comprising, a housing formed of more than two arcuate-shaped segments each being resilient to lengthwise bending, means for drawing the ends of the housing segments towards each other and clamping the segments around the ends of said pipes, a pair of inwardly projecting axially spaced lips carried by each segment providing a circumferentially extending groove within the housing, circumferentially spaced teeth carried by the inner edges of said lips for engaging the exterior surfaces of said pipes, and each of said teeth at its free end having a greater dimension measured circumferentially than the dimensions of the teeth measured axially of the coupling.



2,473,103
BAFFLE TYPE MUFFLER
Matthew F. Lathers, St. Augustine, Fla.
Application April 11, 1946, Serial No. 661,306
1 Claim. (Cl. 181—49)

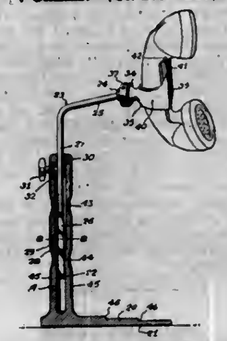
A muffler comprising a tubular casing having inlet and outlet openings at opposite ends thereof and adapted to receive through its inlet opening the exhaust gases from an internal combustion engine or the like, said casing including a first section the inner wall of which gradually diverges from the inlet end of the casing toward

the outlet end of said casing to form a substantially conical first section; an imperforate, elongated member of substantially conical configuration within said first section having its apex disposed adjacent the inlet opening of said casing and its base extending beyond the large end of said first section; a second section adapted to receive the exhaust gases from the first section and being of bulbous or barrel-shaped configuration, said section enclosing the base portion of said conical member and having a maximum diameter greater than the maximum diameter of said conical section and a minimum diameter corresponding substantially to the maximum diameter of said first section, the outer surface of said conical member being spaced from the inner surfaces of said first and second sections to provide therebetween a flow path of constantly increasing area for the exhaust gases as they pass through said sections; a spiral vane positioned between said spaced surfaces to impart a spiral movement to the exhaust gases as they pass through said flow path; a third section having a baffle therein, said baffle including two substantially flat perforated plates arranged in parallel spaced relation and extending longitudinally throughout substantially the length of said section, and at least two other substantially flat perforated plates arranged in parallel spaced relation and being coextensive with the first mentioned plates, said first mentioned plates and said second mentioned plates being disposed in cross-like or honeycomb formation within said third section; and a fourth section having a baffle secured therein, said baffle extending longitudinally throughout substantially the length of said third section and having two perforated portions arranged in a V formation with the apex of the V directed toward the inlet of the fourth section and the total area of the perforations in said V formation being greater than the total area of the perforations in the baffle in said third section.



2,473,104
ARRANGEMENT FOR SAWING STONES
Martial Aristide Lefevre, Crepy-en-Valois, France
Application August 7, 1947, Serial No. 767,024
In France February 2, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires February 2, 1966
4 Claims. (Cl. 125—21)

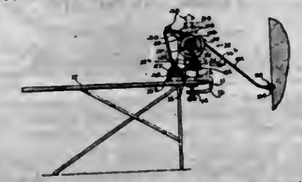
1. In a device for sawing stone, an elongated flexible element, a plurality of sawing elements of very hard material threaded on said elongated element, and resilient spacer means threaded on said flexible element between each successive pair of said sawing elements, said sawing elements and said spacer means being movable to a limited extent axially of said elongated element.



2,473,105
ELECTRIC MOTOR MOUNTING
Frederick O. Luenberger, Los Angeles, Calif., assignor to U. S. Electrical Motors, Inc., Los Angeles, Calif., a corporation of California
Application April 24, 1948, Serial No. 23,123
16 Claims. (Cl. 172—36)

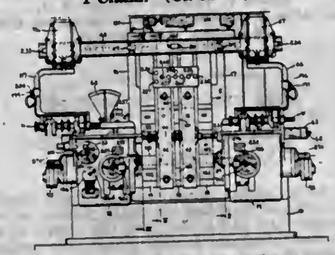
1. In an electric motor: a casing including a motor frame and adjacent end bells on opposite sides thereof; means securing said frame and end bells together; and means for mounting said casing on a base, comprising bosses on said bells sub-

stantially normal to the axis of said motor and adapted to receive fastening elements.



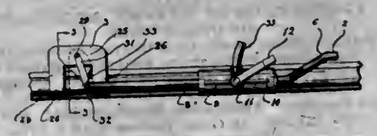
2,473,106
TELEPHONE HANDSET SUPPORTING FIXTURE
Roderick R. Mathieson, Grosse Pointe Park, Mich.
Application December 14, 1945, Serial No. 634,940
7 Claims. (Cl. 179—147)

1. A telephone fixture in combination with a receiver and transmitter unit of a telephone having a hand-holding portion between the receiver and transmitter of greater thickness intermediate its ends and gradually decreasing in thickness as it extends towards the receiver and transmitter, comprising a supporting bracket with opposed faces rigidly spaced apart a distance slightly less than the greatest thickness of said hand-holding portion, said opposed faces engaging opposite sides of said hand-holding portion for supporting the receiver and transmitter unit of the telephone, and spaced ears on said bracket extending to opposite sides of the hand-holding portion where it joins the receiver for preventing excessive lateral movement of the receiver and transmitter unit with respect to the bracket.



2,473,107
DUAL REEL WIRE CONNECTOR FOR IRONING BOARDS
Irving Mendelsohn, Brooklyn, N. Y.
Application November 15, 1946, Serial No. 709,965
6 Claims. (Cl. 242—107)

1. In a wire connector for ironing boards, in combination, a standard, means for attaching said standard to an ironing board, a removable standard rotatably attached to the first standard and a tubular member extending transversely to both sides of said second standard, spools for electrically conductive cords rotatably mounted on said member on each side of said standard, a spring operatively connected to one of said spools so as to be loaded upon rotation of said spool in a given direction, a spring operatively connected to the other of said spools so as to be loaded upon

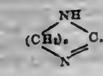


rotation of said other spool in the opposite direction, standards located within said tubular member and bosses mounted on said last mentioned standards coaxially with said tubular member, said springs further being connected to said bosses.

2,473,108
CENTER DRIVE LATHE POWER CHUCKING MECHANISM
Walter R. Meyer and Harold J. Siekmann, Cincinnati, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application December 5, 1945, Serial No. 632,910
1 Claim. (Cl. 82—9)

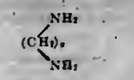
In a center drive lathe having a base, a rotatable center drive spindle on said base, means for stopping said spindle in a predetermined position including driving means for rotating said spindle, a tailstock on said base, a tool feeding device on said base located between said spindle and said tailstock, a center in said tailstock located on the axis of rotation of said spindle, the combination of a chuck in said spindle having a work loading opening to one side of said axis to facilitate axial loading of a work crankshaft over said tailstock into or out of said chuck when the spindle is stopped in said predetermined position, an operating wrench socket on said chuck located below said opening and axis of rotation of the spindle when the spindle is stopped in said predetermined position, a power wrench mounted in said tailstock below said axis and movable parallel to said axis to engage said operating socket of the chuck, means for actuating said tool feeding device to and from a retracted position relative to said axis, and a passageway formed in said tool feeding device located so as to align itself with said operating socket and said power wrench when said tool feeding device is in retracted position to allow passage of said power wrench through said tool feeding device to engage said socket, and interlock mechanism operable by the movement of said power wrench into engagement with said socket to prevent rotation of said spindle by said driving means and the actuation of said tool feeding device from retracted position.

2,473,109
CAR MOVER
Joseph A. Schneider, Hirsch, Saskatchewan, Canada
Application March 1, 1947, Serial No. 731,809
4 Claims. (Cl. 254—35)



1. A fluid pressure railroad car mover, comprising in combination with a double-acting cylinder and piston unit connected to a source of power, a car coupling attached to said unit, a rail clamping assembly, said assembly embodying a plate having claws thereon overlying the head of said rail, a cam positioned beneath said plate to engage one flank of said rail head, a crank arm keyed to said cam and being journalled in said plate, the main portion of said crank arm overlying said plate, a connecting rod pivotally attached to said crank arm and said piston at the opposite ends thereof, said claws exerting a horizontal pressure against the opposite flank of said rail head to that engaged by said cam, upon the application of thrust by said connecting rod.

2,473,110
PREPARATION OF COLLOIDAL TRISULFIDE OF ARSENIC
Fernando F. Schwartz, Santiago, Chile
No Drawing. Application September 15, 1947, Serial No. 774,185
1 Claim. (Cl. 252—313)



A method of preparing a stable colloidal trisulphide of arsenic consisting of admixing ammonium sulpharsenate with about an equal quantity of colloidal sulphur, and treating this mixture with a sufficient amount of about a 30% formaldehyde solution to fix the ammonia radical of the sulpharsenate compound to produce a colloidal arsenic trisulphide stabilized with colloidal sulphur.

2,473,111
PROCESS FOR PRODUCTION OF 2-AMINO PYRIMIDINES AND 2-AMINO GLYOXALINES
Wallace Frank Short and Peter Oxley, Nottingham, England, assignors to Boots Pure Drug Company Limited, Nottingham, England, a company of Great Britain
No Drawing. Application June 3, 1946, Serial No. 674,032. In Great Britain June 19, 1945
6 Claims. (Cl. 260—251)

1. A process for the production of salts of heterocyclic compounds represented by the ring system

which comprises the steps of reacting dicyandiamide with a salt of a diamine of the formula

where x is an integer selected from the group consisting of 2 and 3 and recovering the heterocyclic compound formed by the reaction.

2,473,112

PREPARATION OF SULFONIC ACID SALTS OF DIGUANIDES

Wallace Frank Short, Gordon Ivan Hobday, and Peter Oxley, Nottingham, England, assignors to Boots Pure Drug Company Limited, Nottingham, England, a company of Great Britain

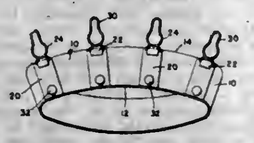
No Drawing. Application March 28, 1947, Serial No. 737,994. In Great Britain April 3, 1946

3 Claims. (Cl. 260—501)

1. A process for the production of sulphonic acid salts of diguanides of the general formula

$$RN.C(:NH).NH.C(:NH).NH_2$$

where R is a member of the class consisting of the divalent pentamethylene radical and pairs of members of the class consisting of hydrogen atoms and alkyl, aryl, aralkyl and alicyclic radicals which comprises heating a mixture of dicyandiamide with substantially one molecular proportion of a salt selected from the class consisting of benzene sulphonic acid salts and toluene sulphonic acid salts of substances of the general formula RNH at a temperature within the range from the fusion temperature of the mixture to 180° C.



2,473,113

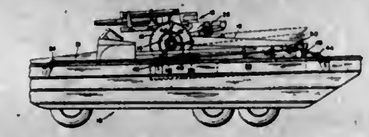
HOSIERY SUPPORT OR GARTER

Raymond J. Steere, Rockwood, Tenn.

Application March 21, 1946, Serial No. 656,085

6 Claims. (Cl. 2—312)

1. A garter for supporting hose at full length from the thigh, comprising a band of rubber or the like having an inner surface which widens toward the upper edge of the band when the band is relaxed in order to assume the tapered form of the leg when worn and to grip the same by uniform skin surface tension, said band having a plurality of clasps pivoted thereto adjacent its upper edge and a plurality of cooperating buttons similarly spaced and located on the outer face of said band adjacent the lower edge thereof, said band being adapted to receive the welt of the hose thereover when worn on the thigh with the top edge of the hose just below the top edge of the band and beneath said clasps and with said welt covering said buttons, said clasps and buttons being positioned and arranged to secure the welt of the hose at spaced points directly to and within the confines of the top and bottom edges of said band, whereby to maintain the hose in neat and even condition and avoid creeping of the hose seam.



2,473,114

HARNESS

Edwin Thayer Todd, Pontiac, Mich., assignor to the United States of America as represented by the Secretary of War

Application February 20, 1946, Serial No. 649,066

4 Claims. (Cl. 248—119)

1. A supporting harness for the temporary transport mounting in firing position of a wheeled field piece having tires and trails on a vehicle, which comprises height supports securable on said vehicle to support the wheels and tires of said piece thereon in elevated position, wheel anchoring means securable to the top and rear portions of said tires and to said vehicle forwardly of the bottom of said tires, trail securing means for securing the ends of said trails in spread position to said vehicle rearwardly of said trails, and additional trail securing means for securing the ends of said trails in spread position to said vehicle forwardly of said trails.

2,473,115

HAIR CURLER

Albert E. Vaughn, Orange, N. J.

Application November 19, 1945, Serial No. 629,617

4 Claims. (Cl. 132—41)

1. A hair curler, comprising: a flexible resilient tube; flexible resilient clamping means of substantially the same width as the width of said tube and integrally joined to said tube adjacent one end thereof, said clamping means extending longitudinally of and adjacent the outer surface of said tube and being transversely curved; a U-shaped clip pivotally connected at its ends to one end of said tube and adapted to be pivoted to a position longitudinally of said tube in which its bight portion extends across the opposite end of said tube, said bight portion having an integral conical retaining lug; and retaining means on the said opposite end of said tube in position to engage said lug to resiliently hold said clip in said position.

2,473,116

PIN-FORMING AND BUTTON-PINNING MACHINE

Jules G. Wegman, Rochester, N. Y., assignor to Bastian Brothers Company, Rochester, N. Y., a corporation of New York

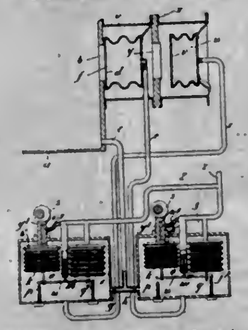
Application August 21, 1945, Serial No. 611,739

6 Claims. (Cl. 79—3)

1. In a machine of the type in which pin fasteners are formed and assembled with buttons, and which includes an assembling station, button feeding means including a pair of reciprocating button feeding members, means forming a gauge opening to which the buttons are fed by one of said members, the other of said members

receiving the buttons passing through the gauge opening for feeding such buttons to the assembling station, connections between said members constraining the same to uniform movement, spring means engaging one of said members for moving the members in one direction corresponding to feeding movements of the buttons, and power-actuated means for moving the members in the opposite direction and for placing said spring means under tension, including an actuating element, one of said feeding members having a longitudinal slot in which said actuating element is disposed.

2,473,117



SYSTEM FOR CONTROLLING THE PRESSURE IN THE CABIN OF AN AIRCRAFT OR THE LIKE

William Macey Widgery, Yeovil, England, assignor to Westland Aircraft Limited, Yeovil, England

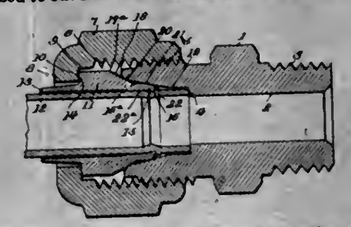
Application September 13, 1945, Serial No. 616,051

In Great Britain June 26, 1944

4 Claims. (Cl. 98—1.5)

1. A pressure control system for aircraft cabin spaces or the like embodying a pair of essentially similar cabin pressure release valves disposed in cascade relationship, pneumatic actuating means for opening and closing each of said valves, a control chamber for each of said pneumatic actuating means, pressure responsive bellows and a control valve for releasing cabin pressure to atmosphere in each of said control chambers and a connection between each control chamber and said space.

2,473,118



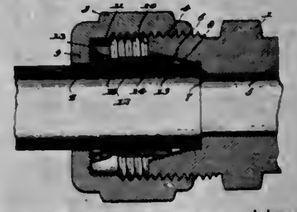
COUPLING FOR TUBES

John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio

Application June 26, 1944, Serial No. 542,856

1 Claim. (Cl. 285—87)

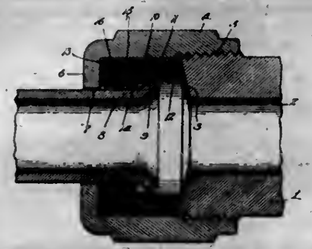
A coupling for tubes comprising a body member having a bore adapted to receive the end of a flareless tube, a nut having threaded engagement with said body member, a sleeve interposed between the nut and the body member, said body member being shaped within the bore to provide a camming surface having a gradual taper, said sleeve at the inner end thereof having a reduced portion of a substantially uniform diameter, which diameter is greater than the diameter of the inner end of the camming surface and less than the diameter of the outer end of the camming surface so that the inner end of the sleeve will be forced by the nut into engagement with the camming surface and will be contracted and caused to cut into the tube and grip the same, said sleeve having an outwardly abruptly tapering surface at the outer end of the reduced portion so that when the sleeve has been moved along the camming surface into firm gripping engagement with the tube, said abruptly tapered portion will contact with the body member at a point spaced outwardly from said reduced portion for limiting further endwise movement of the sleeve under normal wrench pressure.



2,473,119

COUPLING FOR FLARELESS TUBES

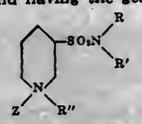
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio



Application November 13, 1944, Serial No. 563,172

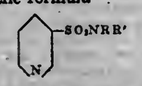
1 Claim. (Cl. 285—122)

A coupling for flareless tubes comprising a body member and a nut having a threaded connection, said body member having a bore to receive the end of the tube with the wall of the bore tapering outwardly toward the open end thereof to form a camming surface, said nut having an inwardly projecting flange at its outer end which is spaced from said body member to provide a recess, a clamping sleeve disposed in said recess and extending into the bore and contacting with said camming surface, said clamping sleeve having near the outer end thereof an annular recess in its outer face, said sleeve being uniformly tapered from said recess outwardly with the end thereof abutting against the flange of the nut whereby pressure of the nut against the flared end will cause the sleeve to contract inwardly at the inner end of the tapered portion and at the outer portion of the recess for firmly contacting the tube for damping vibrations therein, the inner end of said sleeve when forced along the camming surface being contracted into tight gripping engagement with the tube for holding the same in the coupling.



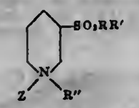
2,473,120
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application January 8, 1945, Serial No. 571,817
6 Claims. (Cl. 285—120)

1. A coupling for tubes having a flared end comprising a body member, a nut having threaded connection therewith, a metal sleeve disposed within said nut and forced thereby into direct metal to metal sealing contact with the body member said sleeve having means adapted to be engaged by the flared end of a tube joined to the coupling for preventing withdrawal of the tube from the coupling, said sleeve and said nut being shaped so as to provide with the nut a gasket housing and a deformable gasket disposed in said housing and adapted to make sealing contact with the tube.



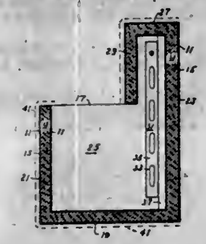
2,473,121
3-ALKYLSULFONAMIDO-PYRIDINIUM SALTS
Mitchell F. Zienty, Elkhart, Ind., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan
No Drawing. Application January 28, 1948, Serial No. 4,044
6 Claims. (Cl. 260—295)

1. A compound having the general formula



wherein R is a member of the group consisting of the alkyl radicals containing from 8 to 16 carbons, inclusive, R′ is a member of the group consisting of hydrogen and the alkyl radicals containing from 8 to 16 carbon atoms, inclusive, R″ is a member of the group consisting of the lower alkyl, lower alkenyl and aralkyl radicals, and Z is a member of the group consisting of the alkylsulfate and halogen radicals.

6. The method which includes: heating a compound having the formula

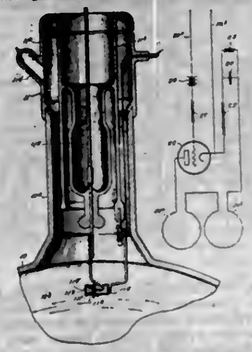


wherein R represents a member of the group consisting of the alkyl radicals containing from 8 to 16 carbon atoms, inclusive, and R′ represents a member of the group consisting of hydrogen and the alkyl radicals containing from 8 to 16 carbon atoms, inclusive, with a compound from the group consisting of the lower alkyl, lower alkenyl and aralkyl halides and sulfates; and separating from the reaction mixture a compound having the formula

wherein R″ represents a member of the group consisting of the lower alkyl, lower alkenyl and aralkyl radicals and Z represents a member of the group consisting of the alkylsulfate and halogen radicals, R and R′ having the values given.

2,473,122
OPEN-TOP REFRIGERATED DISPLAY CASE
Nicholas Achs, Detroit, Mich.
Application January 26, 1948, Serial No. 4,394
1 Claim. (Cl. 62—89.6)

Refrigeration apparatus comprising a front wall, a bottom wall, two end walls, a back wall, said walls being of a hollow thermal insulating construction and disposed enclosing an open top storage compartment of substantially rectangular cross-section, said back wall extending up substantially above the open top of said compartment, a finned tube cooling member disposed adjacent said back wall both in the storage compartment and thereabove, a thermal insulating hood enclosing a space around the cooling member on the front side of the upwardly extended portion of said back wall, said hood opening downwardly into said storage compartment, and said hood having a front wall disposed vertical and parallel to the back wall which is coextensive with the back wall of said storage compartment.



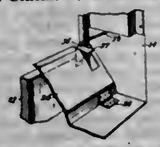
2,473,123
ELECTRONIC INDUCTION ACCELERATOR APPARATUS AND METHOD
Gail D. Adams, Jr., Champaign, Ill., assignor to The Board of Trustees of the University of Illinois, Urbana, Ill.
Application July 27, 1945, Serial No. 607,416
15 Claims. (Cl. 250—27)

1. A magnetic induction accelerator for charged particles, comprising: a closed vessel defining an annular chamber within which such particles may move in a circular path; a magnetic structure outside said vessel and comprising opposed, generally circular pole pieces which are coaxial with said annular chamber, said pole pieces being of outwardly tapered configuration and having additional field-influencing apparatus associated therewith such that the magnetic field strength varies inversely with the radial

displacement r, at and about said path, according to the proportionality

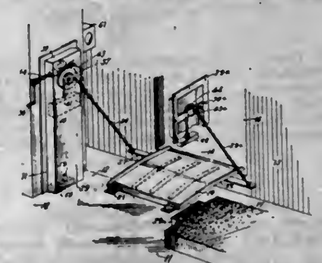
$$H\alpha\frac{1}{r^n}$$

where n is a rapidly changing variable, at least at the time charged particles are injected; means for producing a time-varying magnetic



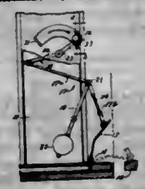
field between said pole pieces; and means for projecting charged particles within the annular chamber with a substantial initial velocity.

2,473,124
POLYALLYL TYPE ALCOHOLS AND PROCESS FOR PRODUCTION THEREOF
David E. Adelson, Berkeley, and Theodore W. Evans, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application December 31, 1941, Serial No. 425,118
10 Claims. (Cl. 260—80)



10. A process for the production of a polymer of a beta,gamma-monoolefinic monohydric alcohol having the carbon atom of a terminal methylene group as one of the olefinic carbon atoms, which comprises heating and reacting a carboxylic acid ester of said polymeric alcohol with a monohydric alcohol from the class consisting of primary and secondary alcohols containing not more than 6 carbon atoms, said reaction being effected while separating the formed carboxylic acid ester of said monohydric alcohol from the reaction mixture substantially as fast as formed.

2,473,125
ELEVATOR DOOR AND BRIDGE
Elisha E. Alexander, Chicago, Ill.
Application April 17, 1946, Serial No. 662,782
1 Claim. (Cl. 20—19)



An elevator door and bridge assembly comprising a vertically movable door, a bridge horisontally pivoted at its inner margin adjacent the door and movable through an angle of less than 90° from a lowered substantially horizontal position to an inclined raised position, a clip carried by the door and movable, when the door is lowered, into a slot in the bridge extending from the outer margin thereof inwardly toward the pivoted margin of the bridge, and a laterally extending ear on the clip adapted to ride upon the top surface of the bridge adjacent the slot as the door is lowered, and to initially contact the bridge adjacent its outer margin, whereby continued downward movement of the door causes the ear of the clip to smoothly cam the bridge to horisontal position with minimum shock and use of power.

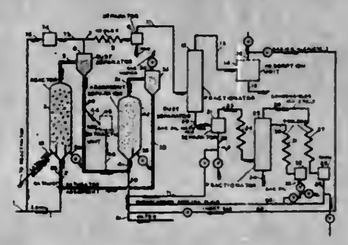
2,473,126
FREIGHT PLATFORM BRIDGE
Elisha E. Alexander, Chicago, Ill.
Application April 26, 1946, Serial No. 665,142
2 Claims. (Cl. 14—71)

1. In combination, a bridge member hinged to a platform adjacent an edge thereof, an upright support attached to said platform, flexible means attached at one end to the bridge and extending over pulley means carried by said support with the other end of the flexible means being secured to the uppermost of a superposed series of counterweights, and with spring means interconnecting the series whereby the effective number of counterweights increases as the bridge is lowered with the interposed spring means cushioning and graduating the application of the series of counterweights.

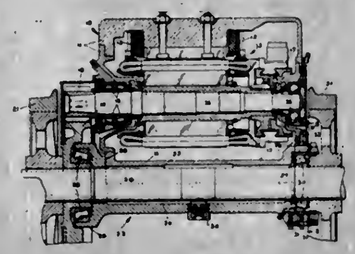
2,473,127
ELEVATOR BRIDGE
Elisha E. Alexander, Chicago, Ill.
Application April 26, 1946, Serial No. 665,143
5 Claims. (Cl. 187—1)

5. A bridge for spanning the gap between two platforms, one of which is movable relative to the other, comprising an upright member secured to one of the platforms and extending above the floor thereof, a bridge pivoted adjacent its inner margin to said one platform and adapted when lowered to span the gap between the two platforms, a counterbalancing mechanism for the bridge mounted at least in part on said upright

member and comprising a lever pivoted on said upright member and having one end connected to the bridge adjacent its outer margin and having a counterweight on the other end of the lever, the arrangement of pivots and lever arms being such that said lever and bridge are substantially parallel at all times with the moment of the counterweight about its pivot being substantially equal to the opposed moment of the bridge about its pivot, and a crank arm pivotally mounted on said upright member and operatively connected to the bridge for moving the bridge to and from its lowered position.



2,473,128
ELEVATOR DOOR BRIDGE
Elisha E. Alexander, Chicago, Ill.
Application May 10, 1946, Serial No. 668,972
1 Claim. (Cl. 20—68)



An elevator door bridge of the type adapted to be moved from a raised position to a lowered position to span the gap between an elevator car floor and a building floor, said bridge being hinged along its inner margin to one of said floors and having a counterweight mounted on the opposite side of the hinge and projecting in a substantially horizontal direction above said one floor when the bridge is in raised position, thereby to effectively counterweight the bridge in such position, and spring means effective after the bridge has moved a given distance toward its lower position for yieldingly and increasingly resisting continued movement of the bridge to its lowered position, thereby to supplement and complement the decreasing effectiveness of the counterweight due to its shortened lever arm, and to spring-bias the bridge, when in lowered position, toward its raised position.

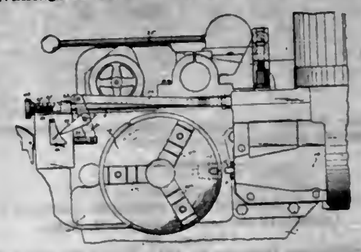
2,473,129
METHOD OF CARRYING OUT EXOTHERMIC REACTIONS
Harold V. Atwell, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application February 16, 1945, Serial No. 578,307
13 Claims. (Cl. 260—449.6)

1. In a conversion reaction process involving a reaction of exothermic character the method of removing heat of reaction and controlling the reaction temperature which comprises effecting said exothermic reaction in a reaction zone at a predetermined elevated temperature, continuously passing to the zone a stream of solid granular adsorbent carrier material containing adsorbed fluid which is vaporizable therefrom under the conditions of temperature and pressure prevailing within the reaction zone, passing said carrier through the reaction zone in intimate contact with the reactants undergoing reaction therein, vaporizing fluid from the carrier during said passage through the zone by said exothermic heat of reaction, removing vaporized fluid and reacted material from the reaction zone, continuously removing from the reaction zone a stream of carrier from which fluid has been vaporized, reducing the temperature of removed carrier substantially below said predetermined temperature, absorbing further said fluid in the cooled removed carrier during its absence from the reaction zone, and returning it to the reaction zone substantially free of unabsorbed liquid.

2,473,130
ELECTRIC TRACTION MOTOR
Walter J. Bauroth, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application September 5, 1947, Serial No. 772,360
9 Claims. (Cl. 172—286)

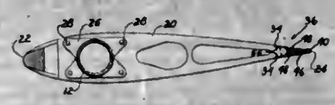
2. An electric locomotive motor including a frame housing an electric motor, said frame having means providing a transverse groove of generally semi-cylindrical shape adapted to cooperate selectively with either of two caps to support a shaft either in journal bearings or antifriction bearings, said frame being formed adjacent said groove to receive spaced journal bearings of generally semi-cylindrical shape, said frame also being formed adjacent one end of said groove to provide bearing surfaces at right angles to each other extending for approximately 180 degrees and adapted to receive a ring portion of a cap and to have direct contact therewith over a circumferential and a lateral face thereof extending for approximately 180 degrees.

2,473,131
COLOR PHOTOGRAPHY
Robert D. Bensley, Chicago, Ill.
No Drawing. Application July 5, 1945, Serial No. 603,401
3 Claims. (Cl. 95—2)



1. The method of natural color photography which comprises exposing a photosensitive silver halide medium to an image through an orange-red filter, developing and fixing the medium to produce a first negative, exposing a second photosensitive silver halide medium to the same image through a blue-green filter, developing and fixing the second medium to produce a second negative, lightly exposing a third photographic silver halide medium through said first negative, developing and fixing the third medium to produce a positive print, immersing the print in a 1.7% silver nitrate solution and then immersing the print in a 10% ammonium chloride solution to convert the silver nitrate to silver chloride, then re-exposing the print through the second negative and then developing the re-exposed print in a developer consisting of one hundred parts by weight of water, one part by weight of glycine, ten parts by weight of sodium sulphite and containing approximately two parts by weight of 1.7% silver nitrate solution.

2,473,132
SNAP FASTENER ATTACHMENT FOR BUTTON SEWING MACHINES
Frank Berube, Brockton, Mass.
Application June 26, 1947, Serial No. 757,673
5 Claims. (Cl. 112—114)

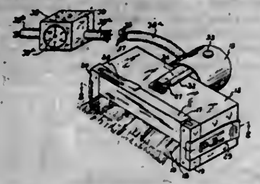


1. A device of the class described, comprising a base plate having opposed side edges adapted to be engaged by the side jaws of the button clamp of a button sewing machine and a rear side edge adapted to be engaged with the rear jaw of said clamp, said plate being notched inwardly from its forward edge and having spaced shoulders to receive thereon marginal portions of a snap fastener inserted into said notch and with its stitch-receiving holes in position corresponding to the holes of a four-hole button held in said button clamp, a clamp plate having a portion engageable with the top face of the snap fastener, a pair of spaced posts extending upwardly from said base plate and loosely through said clamp plate, at least one of said posts being headed at its upper end, and a coil spring surrounding said headed post and reacting between said head and said clamp plate to yieldingly hold said clamp plate pressed toward said base plate.

2,473,133
MACHINE TOOL
Fred H. Bogart, South Euclid, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application December 11, 1946, Serial No. 715,356
13 Claims. (Cl. 279—1)

1. In a machine tool having a chuck and power driven means including a friction clutch for actuating the jaws of the chuck, the improvement which comprises automatic means for maintaining said friction clutch engaged with a substantially constant pressure throughout the useful life of the friction members of said clutch including means to exert a clutch-engaging force and means to transmit said force to said clutch with a mechanical advantage, the force exerting means and the force transmitting means being so constructed and arranged that the mechanical advantage of the latter increases as the force exerted by the former decreases due to wear of the friction members of said clutch, whereby the clutch-engaging pressure remains substantially constant so that the clutch transmits a substantially constant torque for actuating the jaws of the chuck and slips when said torque is exceeded.

2,473,134
ADJUSTABLE ROTOR BLADE
Horace W. Bonnett, Fairfield, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 9, 1945, Serial No. 627,754
3 Claims. (Cl. 170—159)



1. A rotor blade comprising, in combination, a spar, transverse ribs for shaping the blade secured to said spar, a leading edge forming member secured to said ribs for forming the leading edge of the blade, a trailing edge forming cable, and pliable cable supporting means extended aft of the extremities of said ribs having forward rib attaching portions and aft cable attaching portions for securing said cable in chordwise spaced relation to the aft extremities of said ribs and for providing an adjustment for the trailing edge of the blade and having chordwise strengthening ribs extending between the aft extremities of said ribs and said cable.

2,473,135
METHOD OF AND APPARATUS FOR WAVING HAIR
Adelbert E. Bronson, Shaker Heights, and Leonard S. Speth, Cleveland, Ohio, assignors to Adelbert E. Bronson, Jr.
Application January 3, 1943, Serial No. 471,694
9 Claims. (Cl. 132—36)

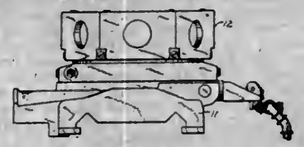
9. In hair waving apparatus, a pair of cooperating housing and cover members adapted to form an enclosure for a wound strand of hair, said cover having means thereon for supporting the wound strand, and a transversely curved electric heating element of the resistance type mounted in said housing member so as to receive

the wound strand when the cover member is applied to the housing member, said heating ele-

ment having terminal connections accessible from the outside of the enclosure.

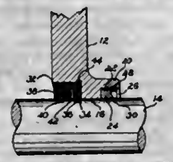
2,473,136
ABDOMINAL PILLOW
Lazetta D. Brose and Horace B. Brose, Chicago, Ill.
Application January 31, 1946, Serial No. 644,556
1 Claim. (Cl. 128—96)

An abdominal duplex pillow comprising two flexible cushions, each wedge-shaped from end to end, a band interconnecting the two cushions and secured to the thin edge of each without the creation of any substantial bulge at such point, the length of the band and cushions being such that, when worn around the abdominal region with the band at the back, the two cushions will extend along the body sides toward the front and partly over the latter with the points of maximum thickness over the body front, said cushions presenting substantially flat exterior surfaces at each side of the body of the wearer and affording complete abdominal support when the wearer is lying upon either side and means releasably interconnecting the cushions at their thick ends.



2,473,137
SHROUD FOR MULTIPLE RUNNER FLUID COUPLINGS
Robert P. Clifton, Dearborn, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application December 12, 1945, Serial No. 634,418
7 Claims. (Cl. 60—54)

1. A fluid coupling having an impeller, a primary runner and a secondary runner, a shroud carried by the impeller; shrouds carried by the runners, said shrouds being disposed in cooperative relation such that upon rotation of the impeller a plurality of fluid circulating circuits are provided, one of said circuits disposed radially outside said impeller shroud and including only the impeller and the primary runner.



6. A runner for a fluid coupling, said runner comprising a hub, a plurality of vanes extending radially outward from said hub, and fluid directing shrouds extending across the vanes, each shroud defining a portion of different sized toroidal fluid circuits through the coupling and neither shroud overlapping the other in a radial direction.

2,473,138
MACHINE TOOL
Nicholas P. Darash, Cleveland, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Original application November 11, 1943, Serial No. 509,841. Divided and this application October 21, 1944, Serial No. 559,738
8 Claims. (Cl. 29—48)

1. In a machine tool, a support, an indexible member thereon and provided with a plurality of faces adapted to mount tool holders, passages in said member extending from centrally thereof to each of said faces, fixed means located centrally of said member and provided with a passage and a port extending laterally from said passage and adapted to register successively with each one of said first named passages as said member progresses through its different indexed positions, said fixed means being provided with spaced passages and laterally extending drainage openings adapted to communicate with the other of said first named passages in each indexed position of the member whereby coolant can be introduced into said one passage of the member and drained from the remaining passages thereof.

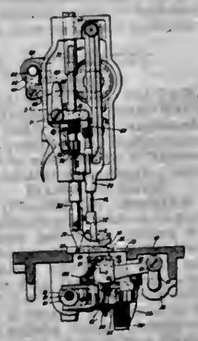
2,473,139
PISTON ROD PACKING LUBRICATOR
Fred N. Dickerman, Nichols, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 7, 1945, Serial No. 627,110
5 Claims. (Cl. 286—17)

1. A hydraulic strut having a cylinder cap and a piston rod reciprocable in a passage in said cap, said piston rod being reciprocable in response to fluid under pressure in said strut, a fluid-tight packing between said cap and rod for sealing said passage around said rod, wiping means carried by said cap for wiping the surface of said piston rod as the latter moves into the cylinder prior to its engagement with said packing, and means operative during movement of said rod into the cylinder for applying portions of said fluid as a lubricant to the wiped surface of said rod prior to its contact with said packing.

2,473,140
SELF-ADJUSTING SLIP BOX
Robert W. Erlbacher, Cape Girardeau, Mo.
Application January 8, 1947, Serial No. 720,855
6 Claims. (Cl. 22—112)

5. In a slip box, a plurality of horizontal side members disposed with each having one end overlapping an end of the next adjacent member, each of said members having an opening in the overlapping end, a pin on the overlapped end of each adjacent member, near the middle of said end, extending through said opening and terminating in a head, stops disposed upon each overlapping end on each side of the pin and in position to contact the exterior of the overlapped member to limit the pivotal motion about the pin, said members, individually, being formed as a regular trapezoid with the ends inclined and said stops being arranged parallel to the adjacent end of the member on which they are disposed.

2,473,141
OUTSIDE MOUNTED AUTOMOBILE ANTENNA
Milton R. Friedberg, Cleveland Heights, Ohio, assignor to The Gabriel Company, Cleveland, Ohio, a corporation of Ohio
Application April 19, 1947, Serial No. 742,636
10 Claims. (Cl. 250—33)



1. In an automobile antenna mounting adapted to be positioned on the outside of a car body and over an opening formed therein, a non-conducting base member engageable with the outside of the car body and extending over said opening, an antenna carrying member mounted in the outer side of the said base, a lead-in bore in said base extending from the inner side thereof to said antenna carrying member and adapted to register with the car body opening, a bolt spaced laterally from said lead-in bore and extending through said base and positioned also to pass through the car body opening and rotatable from the outer side of said base, and a clamping nut threadedly mounted on the end of said bolt inwardly of the inner side of the base and adapted to be passed through the car body opening in positioning the mounting on the car body and then brought into clamping engagement with the inner side of the car body by rotation of said bolt from the outer side of said base thereby effecting the securing of the mounting to the body solely from the exterior thereof.

2,473,142
ARTIFICIAL FISH LURE
Basil E. Gilmore, Windsor, Mo.
Application August 4, 1944, Serial No. 548,004
5 Claims. (Cl. 43—43)

2. An artificial lure of the class described comprising a fish-hook including a shank having an eye at one end, a hook at the opposite end and a hump intermediate its ends, a sponge-rubber body, the shank being embedded in said body, and the crest portion of the hump being exposed and protruding completely below the body, a plurality of lateral dangling latex feelers, the intermediate portions of said feelers being tied and secured to the exposed crotch portion of the hump, and a wrapping around the return bend portion of the hook, said wrapping contacting the adjacent underside surface of the body.

2,473,143
ELECTROSTATIC BONDING MACHINE
Joseph P. Graham and Robert D. Lowry, Midland, Mich., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 7, 1945, Serial No. 576,657
8 Claims. (Cl. 154—42)

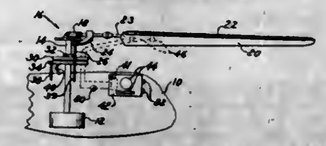
1. A machine for bonding plies of dielectric material comprising, a frame including a work-sup-

port, a shaft journaled in said frame, electrodes carried by said frame and located relative to each other to provide a bonding zone, an electronic high frequency oscillator electrically connected to said electrodes for establishing a high frequency field in said zone, means operated by said shaft for imparting relative movement to said electrodes toward each other to cause them to clamp the material and for imparting feed and return movements to said electrodes to intermittently advance the material through said zone, and a presser-member for holding the material against said work-support on the return movement of the electrodes.

2,473,144
WINDING ARRANGEMENT IN ALTERNATING CURRENT MACHINES
Sven Gynt, Vasteras, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application July 2, 1947, Serial No. 758,645
In Sweden July 8, 1946
4 Claims. (Cl. 171—252)

1. Arrangement in electric alternating current machines, comprising windings with conductors having a plurality of strands which change their relative positions in the slots of the machine when proceeding from one slot to another, a reactor at each end of the said windings, two opposing reactor windings, a connection between alternate strands in the winding of the machine and one end of one reactor winding, a connection between the remaining strands of the winding of the machine and one end of the other reactor winding, and means coupling the other ends of the reactor windings.

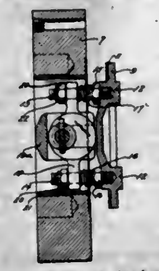
2,473,145
PREPARATION OF WATER-SOLUBLE THERMOSETTING RESINS
Robert C. Hesselbart, Toledo, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company, a corporation of Ohio
No Drawing. Application October 15, 1942, Serial No. 462,119
6 Claims. (Cl. 260—57)



1. A method of preparing a fusible thermosetting resin of greatly improved water-solubility which is capable of serving as an air-drying, tack-free adhesive that comprises condensing formaldehyde and phenol in an acid aqueous solution in a molar ratio from ½:1 to 0.9:1 until the condensation product has formed a phase separate from the aqueous phase, adding a small proportion of alkali sufficient to convert the composition substantially into a single phase, and after conversion of the composition substantially into a single phase carrying on a reaction in the alkaline solution, with additional formaldehyde sufficient to bring the molar formaldehyde-phenol ratio to a valve from 1:1 to 2½:1, and continuing such reaction until a resin is produced that is a solid when dry at room temperature.

2,473,146
PAPER AND TRASH PICKUP TONGS
Nelson V. Hunt, Colorado Springs, Colo.
Application August 1, 1945, Serial No. 608,159
1 Claim. (Cl. 294—104)

Tongs of the class described comprising a pair of elongated handles of bar-like form one turned edgewise toward the broadside of the other, U-shaped guides carried by one of the handles with cross pins therein, the other handle being slidable in said guides and having longitudinal slots therein through which said pins extend whereby said other handle is slidably connected to the one handle, a hand grip extending laterally at the inner end of one of said handles and a finger grip at the adjacent end of the other handle and spaced from said hand grip, the outer end of said second named handle constituting a fixed jaw, a movable jaw pivoted to said first-named handle and including a shank extending transversely of said handle therethrough, spring means connected to the movable jaw to open the jaw, and means pivotally connecting the shank of the movable jaw to the outer end of the other of said handles and operable to close the movable jaw upon a movement of the finger grip toward the hand grip.

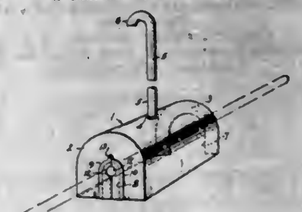


2,473,147
SLIP-RING STRUCTURE
Harry T. Jensen, Milford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 15, 1946, Serial No. 641,396
7 Claims. (Cl. 244—134)

6. The combination in a helicopter having a rotor blade turned by a drive shaft, of control means for changing the pitch of said blade including two parts, one part being universally

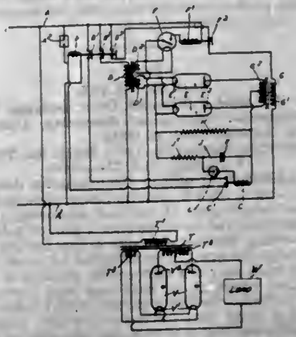
mounted upon and rotatable with said shaft, and the other part being mounted upon said one part but not rotatable therewith, a source of electric power, electro-responsive means associated with said blade, and means connecting said source and said electro-responsive means comprising, an insulating plate connected with said one part having a plurality of annular grooves, conductor rings in said grooves connected to said electro-responsive means and rotatable with said one part, and non-rotating contacts associated with said other part in slideable electrical contact with said rings and connected to said source.

2,473,148
RADIATOR VALVE ASSEMBLY
August G. Joos, Velda Village, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application September 26, 1945, Serial No. 618,703
2 Claims. (Cl. 251—39)



1. A valve comprising a body member provided with a valve seat; a valve member having a portion engageable with said seat; a pair of studs on said valve member; a bridging member provided with spertures through which the studs extend; resilient means associated with each stud to maintain said bridging member in predetermined spaced relation with said valve member; a shaft rotatably mounted in said body member and disposed between said bridging member and said valve member; eccentric means on said shaft engageable with said valve member to open the valve and engageable with said bridging member to close the valve; and a nut on each stud in engagement with said bridging member to adjust the spacing between said bridging member and said valve member to thereby adjust the pressure between the seat engaging portion of the valve member and said seat when the valve is in closed position.

2,473,149
MECHANICAL PENCIL WITH STEP-BY-STEP LEAD FEEDING MEANS
David Jueiss, Brooklyn, N. Y., assignor to American Lead Pencil Company, Hoboken, N. J., a corporation of New York
Application September 7, 1945, Serial No. 614,863
5 Claims. (Cl. 120—17)



1. In a mechanical pencil, a casing, a tapered extension secured to one end thereof, actuating means within and extending from the other end of the casing and lead feeding means operable by the actuating means and forming a unit with the tapered extension, including a movable collet having leading gripping means and a restricting collar surrounding and movable within limits with the collet.

2,473,150
GAS TRAP
Warren C. Kimbrough, Portland, Oreg.
Application October 4, 1947, Serial No. 778,016
2 Claims. (Cl. 48—193)

1. A gas trap consisting of a bottomless housing of inverted U shape in cross section closed at one of its ends by a wall having an elongated vertical opening therein, a pair of closure plates pivoted to said wall and adapted when drawn together to seal off said opening, a pair of aligned cut-outs in said closure plates adapted to encircle a pipe extending through the housing to prevent escapement of gas through said wall about the pipe and to lock the housing to the pipe against accidental displacement, the opposite end of the housing being formed with a wall having an enlarged opening therein to straddle said pipe, a vent opening formed in the top of the housing in open communication with a conduit in open communication with the atmosphere.

2,473,151
MERCURY VAPOR RECTIFYING APPARATUS
Stanley George King, London, England, assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application July 24, 1945, Serial No. 606,817
In Great Britain May 22, 1944
10 Claims. (Cl. 315—210)

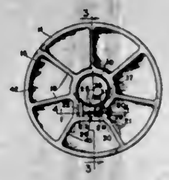
1. Hot cathode mercury vapour rectifying apparatus including at least one operative mercury

vapor rectifier tube in a main circuit, at least one spare mercury vapor rectifier tube, auxiliary apparatus controlled by the operation of the equipment whereby currents can be caused to pass through the anode and filament circuits of the said spare tube, and a time switch which is automatically closed when the rectifying apparatus is switched on and opens automatically to switch the auxiliary apparatus off after a predetermined period.

2,473,152
TOOL FOR REAPING ASPARAGUS AND THE LIKE
Casper Kreutzer, Millitown, N. J.
Application November 21, 1946, Serial No. 711,381
5 Claims. (Cl. 294—50.8)

1. A tool for the purposes described comprising a handle staff, a cutting blade affixed to the lower end of said handle staff, a stalk receiving trough affixed to the handle staff adjacently above the cutting blade, a bearing yoke also affixed to said handle staff to project laterally therefrom adjacent to said trough, a spindle journaled in said bearing yoke, a gripper arm fixed on said spindle so as to be swung by rotary movement thereof transversely across said trough, a shaft rotatably mounted on and parallel to said handle staff, said shaft having a lever arm at its upper end for rotating the same, a driver crank wheel fixed on the lower end of said shaft, a driven crank wheel fixed on said spindle, and a transmission link interconnecting said crank wheels.

2,473,153
BLOOD FILTER
Roger K. Lager, Lakewood, Ohio, assignor to The Continental Pharmacal Company, Cleveland, Ohio, a corporation of Ohio
Application August 22, 1947, Serial No. 770,074
6 Claims. (Cl. 210—170)

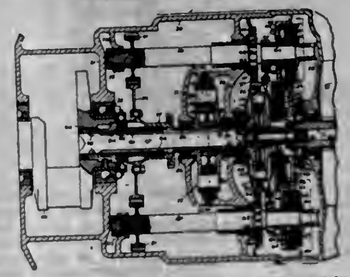


5. A blood filter unit of the character described comprising a hollow tubular body provided with a blood intake port at one end and with a blood discharge port at its other end, a wall of said body surrounding said intake port, a cap having a depending peripheral flange adapted for attachment to said wall, an elongated needle passing through a central aperture in said cap and having an inner portion extending through said intake port into said body and an outer portion extending outwardly beyond said cap and adapted to pierce a closure portion of a blood container, said needle being provided with a blood flow passage extending completely longitudinally therethrough, transverse partition means within said cap and surrounding said needle to define a chamber in said cap out of communication with said body and said needle, a tubular sleeve surrounding part of the outer portion of said needle, and spaced radially outwardly therefrom to provide an annular passage, the inner end of said sleeve extending through said aperture in said cap whereby to establish air flow communication with said chamber, the outer end of said sleeve stopping somewhat short of the outer tip of said needle but being likewise adapted to pierce said blood container closure, the cap portion constituting the outer chamber wall being provided with a vent opening whereby to permit outer air to flow into said chamber and then through said annular passage, air filter means in said chamber in the path of said air flow, an outlet port closure, a blood outlet tube passing through said last named closure for the discharge of blood from said tubular body, said outlet tube having a portion extending inwardly into said body, a filter sack of woven material having a neck portion telescopingly applied to the inner end of said outlet tube whereby blood flow from said body passes from said body through said sack and thence outwardly through said outlet tube, and means for maintaining the sack substantially above the bottom of the tubular body when in normal operating position, whereby clots in the blood stream are intercepted by the outer surface of the sack, and settle by gravity to the bottom of the receptacle.

2,473,154
PRODUCTION OF SOAP FROM HYDROGENATED VEGETABLE OILS
Willy Lange and Robert G. Folzenlogen, Cincinnati, Ohio, assignors to The Procter & Gamble Company, Ivorydale, Ohio, a corporation of Ohio
No Drawing. Application December 12, 1945, Serial No. 634,612
11 Claims. (Cl. 260—419)

5. The process of preparing soap from a vegetable oil containing gamma tocopherol which comprises treating the vegetable oil with hydrogen gas in the presence of a metallic hydrogenating catalyst and a hydroperoxide of the formula R·O·O·H wherein R is selected from the group consisting of hydrogen and an organic radical, under conditions which produce a reduction of the iodine value of the oil, and saponifying the hydrogenated oil, the amount of hydroperoxide present during hydrogenation being sufficient to inhibit the formation of gamma tocopherol orthoquinone but not substantially more than 0.5 per cent based on the weight of the oil.

2,473,155
WARP BEAM FOR LOOMS
Frank D. Lindquist, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application September 30, 1948, Serial No. 51,930
6 Claims. (Cl. 242—124)

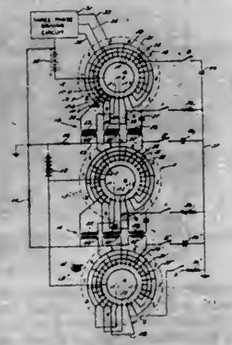


1. In a warp beam having a cylindrical barrel member provided with external screw threads, a warp head having internal screw threads fitting the screw threads of said barrel member, means on the warp head having a flat surface substantially parallel to the axis of said barrel member but spaced from said barrel member, a wedge member slidable on said surface and having a concave surface configured to fit said screw threads of the barrel member, and means on the warp head to effect movement of the wedge member along said surface relatively to said head in a direction laterally of the barrel member to force the concave surface of the wedge member into tight holding relation with the screw threads of the barrel member.

2,473,156
PROCESS FOR DEVELOPING HIGH MAGNETIC PERMEABILITY AND LOW CORE LOSS IN VERY THIN SILICON STEEL
Martin F. Littmann, Middletown, Ohio, assignor to Armco Steel Corporation, a corporation of Ohio
Application November 16, 1944, Serial No. 563,750
6 Claims. (Cl. 148—12.5)

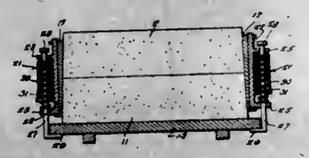
1. A process of producing very thin silicon steel of substantially .5 to 7 mils in thickness, having low hysteresis loss and a high permeability in the rolling direction which comprises producing from silicon steel containing substantially 2% to 4.5% silicon a starting material with a thickness substantially between 7 and 25 mils, low in carbon, and having a [100] (110) type of crystal orientation, and thereafter reducing said silicon steel starting material by cold rolling it in at least one stage with a cold rolling reduction of substantially between 60 and 90%, following each such stage of the said cold rolling with a recrystallizing heat treatment at a temperature substantially between 1200 and 2200° F.

2,473,157
TRANSMISSION MECHANISM
Carroll J. Lucia, Toledo, Ohio, and Forest R. McFarland, Huntington Woods, Mich., assignors to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application March 15, 1945, Serial No. 582,892
7 Claims. (Cl. 74—681)



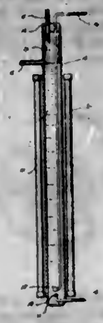
1. A variable speed transmission comprising a driving shaft, a driven shaft, speed ratio varying means interposed between the driving and driven shafts and including a power input gear set and a power output gear set, the power input gear set having a nonrotatable ring gear, a planet carrier operably connected to the driving shaft, and a driving sun gear, the power output gear set having a planet carrier operably connected to the sun gear of the power input gear set, a sun gear operably connected to the driven shaft, and a rotatable ring gear, a plurality of spaced ring gear control shafts extending parallel with and operably connected to the driving shaft, one-way driving means between the ring gear and the control shafts, and manually operable braking means to lock said ring gear against rotation.

2,473,158
SKI POLE
Claude A. Luckens, Jr., Steamboat Springs, Colo.
Application July 1, 1946, Serial No. 680,761
2 Claims. (Cl. 280—11.37)



1. In a ski pole having a handle portion and an internally threaded socket at one end; a removable ski pole tip comprising an elongated body having an externally threaded shank receivably engaging said socket, said body having a reduced integral extension forming a screw driver blade.

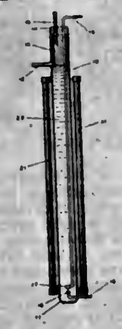
2,473,159
COUNTING TUBE TRANSFER CIRCUIT
Harold T. Lyman, Jr., Glen Arm, Md., assignor to Remington Rand Inc., New York, N. Y., a corporation of Delaware
Application January 29, 1949, Serial No. 73,568
8 Claims. (Cl. 315—323)



1. A counting tube transfer circuit for transmitting a counting pulse from one counting tube to another counting tube comprising; a first order counting tube for registering received pulses from an outside source, including three electrodes, each with a plurality of discharge fingers, and three independent discharge fingers with separate lead-in conductors; a second order counting tube for registering a carry pulse from the first order counting tube; and transfer circuits between each of the three independent discharge fingers of the first order counting tube and the three corresponding electrodes of the second order counting tube.

2,473,160
MOLD JACKET
Frank L. Madrigal, Tulsa, Okla.
Application July 14, 1944, Serial No. 544,851
3 Claims. (Cl. 22—109)

3. A mold jacket provided with a bottom board, said jacket comprising sections, provided with means for joining them at the lateral vertical edges to form a closed frame, each section being further provided with a recess in its outer side wall, the lateral walls of the recess facing each other being undercut and tapering towards the bottom, a removable clamping and locking means for holding the bottom board removably towards the jacket, said clamping and locking means including a base plate with tapering inclined lateral walls, dovetailing with the undercut tapering recess walls, said base plate carrying a spring pressed locker bar, provided with a projecting member at its end for gripping and holding the said bottom plate.

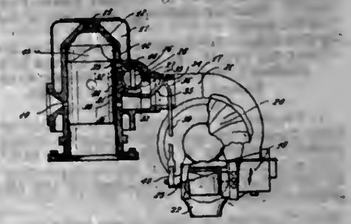


2,473,161
PROPANE CHLORINATION
Earl T. McBee, La Fayette, Ind., and Lawrence W. Devaney, Fishkill, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
Application September 26, 1945, Serial No. 618,789
5 Claims. (Cl. 204—163)

1. The method which includes: (1) maintaining a body of liquid polychloropropanes (A) having a specific gravity greater than the starting material (B), said specific gravity of (A) being greater than about 1.3; (2) continuously introducing through diffusion means into said liquid body (A) at a point in a first region thereof, a starting material (B) selected from the group consisting of propanes and partially chlorinated propanes, said starting material (B) having a specific gravity less than about 1.3 and less than that of the body of liquid polychloropropanes (A) into which said starting material (B) is introduced; (3) introducing chlorine into a second region of said liquid body (A); (4) causing liquid polychloropropanes (A) containing dispersed starting material from the one region to move continuously into the other region in the liquid body (A); (5) catalysing the chlorination reaction with actinic light; (6) maintaining a temperature above about —40 degrees centigrade and below about 90 degrees centigrade in the reaction zone; (7) maintaining a chlorine to starting material (B) molar ratio between about 2 to 1 and about 7 to 1; and, (8) continuously withdrawing a liquid polychloropropane product (C) having a substantially constant specific gravity greater than about 1.3 and greater than that of the starting material (B) from an upper portion of the said body of liquid (A) at a point removed from said first and second regions.

2,473,162
LIQUID PHASE CHLORINATION
Earl T. McBee, West Lafayette, Ind., and Lawrence W. Devaney, Fishkill, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
Application December 20, 1945, Serial No. 636,267
13 Claims. (Cl. 204—163)

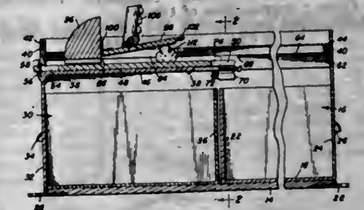
1. The method which includes: (1) maintaining a body of liquid polychlorohydrocarbons (A) having the same number of carbon atoms in the molecule as the starting material (B) and a specific gravity greater than the starting material (B), said specific gravity of (A) being greater than about 1.3; (2) continuously introducing, through diffusion means into said liquid body (A) at a point in a first region thereof, a starting material (B) selected from the group consisting of aliphatic and alicyclic hydrocarbons and partially chlorinated aliphatic and alicyclic hydrocarbons, having in the molecule between three and eight carbon atoms, inclusive, said starting material (B) having a specific gravity less than that of the body of liquid polychlorohydrocarbons (A) into which said starting material (B) is introduced; (3) introducing chlorine into a second region of said liquid body (A); (4) causing liquid polychlorohydrocarbon (A) containing dispersed starting material (B) to move continuously from



the one region into the other region in the liquid body (A); (5) catalyzing the chlorination reaction with actinic light; (6) maintaining a temperature between about zero degrees and about 150 degrees centigrade in the reaction zone; (7) maintaining a chlorine to starting material (B) mole ratio between about 2 to 1 and 18 to 1; and, (8) continuously withdrawing a liquid polychlorohydrocarbon product (C) having a substantially constant specific gravity greater than about 1.3 and greater than that of said starting material (B) from an upper portion of the said body of liquid (A) at a point removed from said first and second regions.

2,473,163
PLATING NICKEL ON ALUMINUM
Ewald H. McCoy, Chicago, Ill.
No Drawing. Application June 25, 1945, Serial No. 601,545
2 Claims. (Cl. 204—42)

1. In a process for plating nickel upon a metal piece selected from a group consisting of aluminum and aluminum alloys, the steps of dipping said piece in ammonium bifluoride water solution, in which the ammonium bifluoride is from 5 to 20% by weight, anodically oxidizing the piece in an aqueous solution of orthophosphoric acid in which the acid is from 5 to 20% by volume at a potential of at least four volts to form an adherent conductive coating on the piece, and electroplating nickel thereon in a bath having a pH below six.



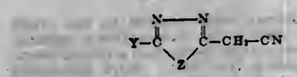
2,473,164
TWO-CYCLE ENGINE
John Joseph McCoy, Los Angeles, Calif.
Application December 7, 1946, Serial No. 714,791
5 Claims. (Cl. 123—65)

3. In combination with a two-cycle internal combustion engine having an inlet for a fuel charge to a cylinder thereof, one or more release ports arranged along the length of the cylinder toward the cylinder head from the inlet through which a portion of the charge taken into the cylinder may be released, said ports being arranged to be opened and closed by the piston in the cylinder in the course of its strokes, a rotary

valve, time driven, with relation to the crank shaft of the engine for consecutively opening and closing said release ports, and a ported sleeve valve surrounding the rotary valve selectively adjustable to open or close any of the release ports to the rotary valve.

2,473,165
THREE-WAY VEGETABLE SLICER
Horace C. McKinney, Rocksprings, Tex., assignor of one-half to Evelyn R. Minter, Rocksprings, Tex.
Application December 26, 1947, Serial No. 793,795
1 Claim. (Cl. 146—78)

A food slicer comprising an elongated box-like casing open at the top, a carrier longitudinally slidably mounted in an upper portion of the casing, a table mounted on the casing immediately beneath said carrier, a transversely disposed knife secured to the casing intermediate the ends of the casing and slightly above the level of the table, and a multiple bladed cutter mounted on said casing and disposed adjacent to and parallel with said knife, said cutter being rotatable into operative and inoperative positions, a transverse bolt positioned on the casing to limit rotation of the cutter in one direction, said table being slotted to receive blades of the multiple bladed cutter when said cutter is in operative position, said table being slidable in one direction longitudinally of the casing to hold the cutter in operative position and in engagement with said transverse bolt and slidable in the opposite direction to allow rotation of the cutter into inoperative position, means to fasten said table in either position, said table being also slidable in said one direction when the cutter is in inoperative position to provide support for vegetables being processed immediately in front of said knife, and said carrier having a plurality of depending ribs adapted to slide between said blades when the carrier is moved in one direction.



2,473,166

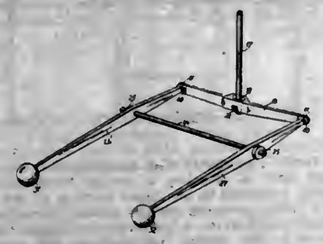
PROCESS FOR THE PRODUCTION OF PHOTOGRAPHIC IMAGES BY COLOR DEVELOPMENT

Philibert Raymond Merckx, Mortsel-Antwerp, Belgium, assignor to Gevaert Photo-Producten N. V., Mortsel-Antwerp, Belgium, a company of Belgium

No Drawing. Application February 26, 1948, Serial No. 11,324. In Belgium August 3, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires August 3, 1965
8 Claims. (Cl. 95—6)

1. Process for the production of photographic color images by color development, which comprises developing a reducible silver salt image with a primary aromatic amino developing agent in the presence of a compound of the following general formula:

wherein



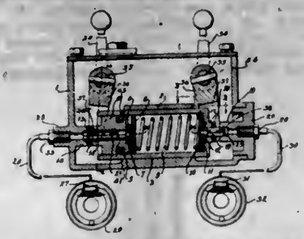
Z is a member selected from the group consisting of O and S,
Y is a member selected from the group consisting of aliphatic-, homo- and heterocyclic groups.

2,473,167

TWO-HAND CONTROL

Howard Mills, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio

Application December 9, 1944, Serial No. 567,424
1 Claim. (Cl. 74—480)



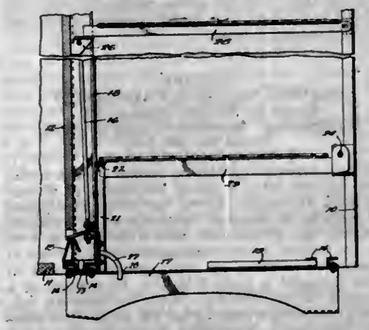
In mechanism of the character described, two normally horizontal levers mounted to turn about a common horizontal axis for rocking movement in spaced vertical planes, a shipper rod disposed for longitudinal movement in a vertical direction, a yoke disposed at right angles to said planes, said levers having work arms of equal length with cylindrical extensions at the ends thereof, said yoke having holes therethrough aligned with said extensions in the normal positions of the levers, said holes being flared outwardly toward the front and rear of the yoke to provide sliding universal joints adapted to compensate for the arcuate travel of the work arms, and a horizontal transverse pivot carried by said yoke midway of its length upon which the lower end of said shipper rod is mounted, whereby operation of one only of said levers turns said yoke member upon said pivot and shifts the other lever in the opposite direction, while operation of both levers in the same direction raises said shipper rod.

2,473,168

SELECTIVE OPERATION OF SYSTEMS BY A UNIT CYLINDER

Arthur N. Milster, St. Louis, Mo., assignor to Wagner Electric Corporation, a corporation of Delaware

Application December 14, 1946, Serial No. 716,269
7 Claims. (Cl. 60—54.5)



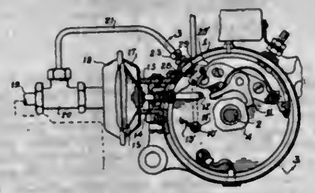
4. A mechanism for selectively actuating a plurality of devices comprising a casing; a cylinder reciprocably mounted in said casing; a piston reciprocably mounted in said cylinder; a pair of systems; means for establishing communication between the interior of said cylinder and said systems; valve means associated with said piston and cylinder mechanism actuated upon relative movement of said piston and cylinder; and means for selectively relatively moving said cylinder and said piston to thereby selectively actuate said system.

2,473,169

REFRIGERATOR CAR WITH A MOVABLE BULKHEAD

Charles L. Moorman, Millington, Ill., assignor to Union Asbestos & Rubber Company, a corporation of Illinois

Application October 22, 1945, Serial No. 623,714
5 Claims. (Cl. 62—19)



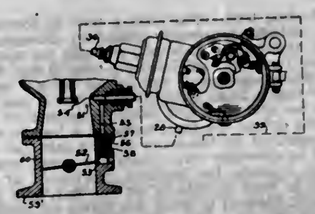
1. In a refrigerator car or the like having a lading rack above its floor and terminating at a point spaced from the end of the car, a bulkhead in the car extending substantially from the top to the bottom thereof and mounted for movement from a retracted position adjacent the end of the car to an extended position adjacent the end of the lading rack, a transversely extending beam adjacent the end of the lading rack and in horizontal alignment therewith to support the bulkhead when it is in its extended position, and a floor rack pivoted adjacent the end of the lading rack for movement from a horizontal position in which it forms a continuation of the lading rack to a vertical position against the inner surface of the bulkhead when the bulkhead is in its extended position.

2,473,170

AUTOMATIC SPARK ADVANCE MECHANISM

William Ostling, Los Angeles, Calif., assignor to California Machinery and Supply Company, Ltd., Los Angeles, Calif., a corporation of Delaware

Application February 3, 1947, Serial No. 726,112
6 Claims. (Cl. 200—31)



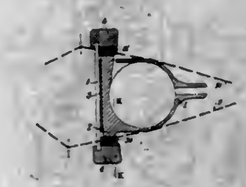
2. An automatic spark advance mechanism for spark ignition engines, which comprises a rotatably mounted breaker cam, a cam shaft for rotation of said breaker cam, a circuit breaker in operative association with said breaker cam, a mounting for said circuit breaker, said mounting being angularly adjustable about said cam, a pneumatically operated power means including an air tight chamber, a diaphragm in said chamber and a rod connecting said diaphragm to said mounting, a conduit connected to said chamber, a bleed by-pass line connected to said chamber, a valve in said bleed by-pass line, and a cam positioned on said circuit breaker mounting and in operative association with said valve to open said valve in a predetermined relation to the angular position of said circuit breaker around said breaker cam.

2,473,171

AUTOMATIC SPARK ADVANCE MECHANISM

William Ostling, Los Angeles, Calif., assignor to California Machinery and Supply Company, Ltd., Los Angeles, Calif., a corporation of Delaware

Application February 18, 1947, Serial No. 729,374
21 Claims. (Cl. 123—117)



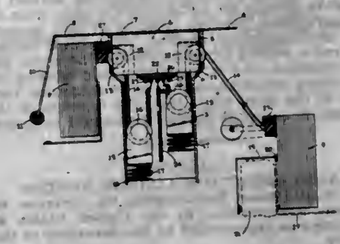
1. An automatic spark advance mechanism, which comprises a breaker cam, a cam shaft, a circuit breaker in operative association with said breaker cam, a rotatable mounting for said circuit breaker, means for rotating said breaker mounting about the axis of said cam, comprising a fluid pressure power means, a driving connection between said power means and said mounting, said driving means including a cam actuated linkage in said driving means, said cam actuated linkage including a plurality of cam surfaces, a cam follower, and selective positioning means for selecting the cam surface contacting said follower.

2,473,172

SHUTTLE-GUIDING DEVICE IN CIRCULAR LOOMS

Henri Pelcé, Paris, France, assignor to Societe dite: Saint Freres (Societe Anonyme), Paris, France

Application February 21, 1947, Serial No. 730,029
In France January 17, 1947
5 Claims. (Cl. 139—13)

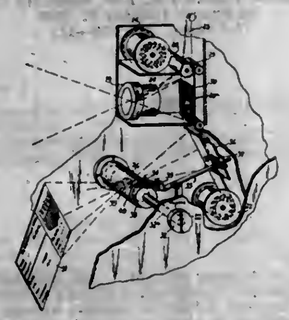


1. In a circular weaving loom comprising a shuttle raceway composed of a ring of platens retained between a pair of parallel annular supports, adapted to guide the shuttle in its circular motion and across the intervals of which the warp threads can be shifted up and down, the provision on the inside of either support of a lining of bristles in the interstices of which the threads belonging to either sheet of the warp can lodge clear of the shuttle in either open condition of the shed.

2,473,173

OUTDOOR THEATRE LOUDSPEAKER SUPPORT POST

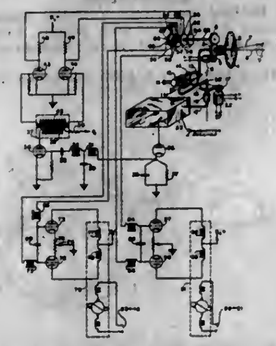
George M. Petersen, Cleveland, Ohio



Application June 29, 1945, Serial No. 602,287
4 Claims. (Cl. 179—150)

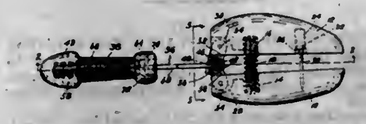
1. A support for loud speakers or the like comprising a hollow standard, a speaker unit adapted

to be supported on the standard, a head block in said support, a flexible electrical cable connected to said block and to said unit to permit said units to be used at points remote from said support, and means acting on said cable normally to retract said unit to be supported on said support when released from said remote points, and means co-acting with said last named means to ease the return of said unit to said support.



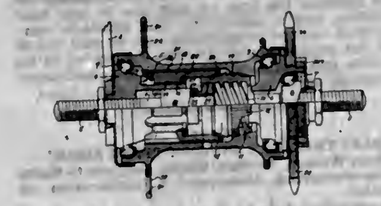
2,473,174
DOUBLE EXPOSURE PHOTOGRAPHING AND DEVELOPING APPARATUS
George N. Pifer, Cleveland Heights, Ohio, assignor to Speedtype, Inc., Cleveland, Ohio, a corporation
Application December 4, 1944, Serial No. 566,429
3 Claims. (Cl. 95—14)

1. In a photographic apparatus including a housing, a camera therein having a shutter and lens, means for moving a sensitized strip in photographing relationship to said camera, and a window in said housing in alignment with said lens; the improvement which comprises the provision of means for exposing to said camera a fractional area only of said strip, a second lens and shutter within said housing, a slide within said housing and having an opaque area and a transparent area, means for moving said slide just prior to the opening of said second shutter to position the opaque area of the slide over the fractional area of the strip which was exposed during the first exposure and the transparent area of the slide over the unexposed portion of the strip, means for advancing the strip from its photographing position relative to said camera to a photographing position before said second lens for a second exposure thereon adjacent the first exposure, and means within said housing for developing simultaneously the two exposed portions of the strip while the strip remains in the position it occupied during the second exposure.



2,473,175
RADIO DIRECTION-FINDING SYSTEM
Louis N. Ridenour, Philadelphia, Pa., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application December 30, 1943, Serial No. 516,299
17 Claims. (Cl. 343—7)

13. Radio direction finding apparatus comprising, means to receive electromagnetic waves from a remote object, a directive antenna system associated with said receiving means and having an axis of directivity and an axis of orientation, means to move said axis of directivity about said orientation axis in a predetermined manner, means responsive to said waves received during the motion of said axis of directivity including

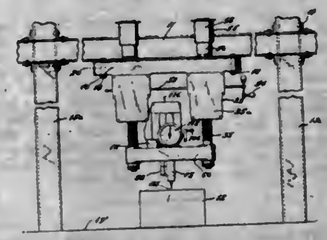


a detector to detect said waves, an amplifier to amplify the output of said detector, and a phase sensitive rectifier associated with the output of said amplifier, and means to utilize the response of said responsive means to operate servomotor means to cause said axis of orientation to seek alignment with said object.

2,473,176
EXPANSIBLE SHOE TREE
Arthur Schoshusen, West Somerville, Mass.
Application April 30, 1946, Serial No. 666,074
3 Claims. (Cl. 12—128.2)

1. A shoe tree comprising a pair of fore-part form sections constantly biased in direction to spread them laterally apart, a toggle for operating said form sections laterally toward and from each other, said toggle comprising a rigid bar, a pair of toggle links pivotally mounted at one end of the bar and each link pivotally connected to a different one of the form sections, a handle slidably mounted on the other end of said bar and biased in direction away from the toggle end of the bar, means for limiting movement of the handle in both directions on the bar, said toggle being adapted to move the fore-part sections laterally toward each other in response to a pull on said handle while the fore-part sections are held against movement in the general direction of the pull.

2,473,177
BICYCLE COASTER BRAKE
Henry Allan Sherwood, New York, N. Y.
Application July 25, 1947, Serial No. 763,554
3 Claims. (Cl. 192—6)



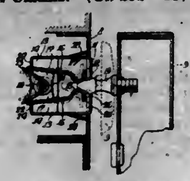
1. A coaster brake including a stationary axle, a hollow screw rotatively encircling said axle and receiving the operating force, a hub rotatively encircling said axle and screw with an inwardly facing clutch cone adjacent said screw, a nut screwed on said screw with its outside having an outwardly facing clutch cone cooperating with said clutch hub cone and an inwardly facing brake operating cone, a stationary inwardly facing brake operating cone encircling said axle and spaced opposite said brake operating nut cone, a plurality of brake shoe segments encircling said axle between said brake operating cones with operating ends cooperating therewith so said segments can be wedged radially into contact with the inside of said hub, guides rotatively locking said segments relative to said stationary brake operating cone while leaving them free for longitudinal and radial movement, and a device for at least retarding rotation of said nut and positioned entirely between it and said axle and free from said brake shoe segments and said hub, said guides being formed in a cantilever hub nonrotatively encircling said axle and extending toward the adjacent end of said nut, and said device comprising a hub fixed to said end of said nut and projecting inside the first-named hub, the latter having a bore for receiving the second-named hub and the adjacent surfaces of the two frictionally interengaging.

2,473,178
ICE TRAY
Maximilian Siebigteroth, Detroit, Mich., assignor to Charles B. Kemp., Grosse Pointe, Mich.
Application June 23, 1947, Serial No. 756,352
3 Claims. (Cl. 62—108.5)

1. In a sharp freezing container the combination of a tray and a grid adapted to be removably positioned in said tray, said grid comprising a longitudinal partition which comprises an upper and lower member, a plurality of transverse partitions forming transverse walls and dividing the tray into a plurality of compartments, one transverse wall of each compartment being connected to and movable with said upper member and the other transverse wall of each compartment being connected to and movable with said lower member, manually operable means cooperating with said upper and lower members for imparting bodily movement to said upper member relative to said lower member so that one transverse wall of each of said compartments is bodily moved with respect to the other transverse wall of said compartment and means for bodily moving said lower member with respect to said tray so that the transverse walls connected to said member are bodily moved with respect to the walls of said tray.

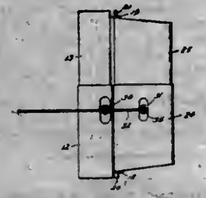
2,473,179
BRIDGE-TYPE HARDNESS TESTER
David F. Sklar, Brooklyn, N. Y., assignor to Wilson Mechanical Instrument Co., Inc., New York, N. Y., a corporation of New York
Application July 15, 1946, Serial No. 683,610
20 Claims. (Cl. 73—83)

1. In combination, a horizontally elongated member adapted to be fixedly supported above a test piece and having axially vertical bearings therein; pending screws slidable in the bearings and extending below the bearings and member; an internally threaded rotary collar on each screw in threaded engagement with the screw; means holding said collar against upward or downward movement relative to the member; means for rotating the collars; a movable bridge supported on the lower ends of the screws; a downwardly pointed penetrator vertically movably mounted on the movable bridge; and means for applying a testing force to the penetrator.



2,473,180
SMOKING PIPE CLEANER
Alfred L. Sohm, Van Nuys, Calif.
Application August 26, 1947, Serial No. 770,723
6 Claims. (Cl. 131—246)

5. In a pipe cleaner, a tubular body member, a pair of opposed members having their upper



portions fulcrumed in said body members, sharp edged fingers depending from said opposed members, threaded studs having their outer ends seated in said opposed members, and a disc nut screw on said threaded studs.

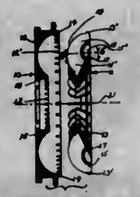
2,473,181
CATCH
Roy A. Stone, Rockford, Ill., assignor to National Lock Company, Rockford, Ill., a corporation of Delaware
Application December 19, 1945, Serial No. 636,013
4 Claims. (Cl. 292—18)

1. A catch, comprising a sheet metal frame structure including a base, a pair of side walls projecting from said base and formed at their outer ends to provide opposed overlapping projections, a pintle extending through said overlapping projections, a pair of holding jaws pivotally mounted on said pintle and extending between said side walls toward said base, and a spring mounted on the pintle and engaging said jaws whereby said jaws are yieldingly held in position to retain an interposed strike.

2,473,182
ADJUSTABLE FLUE OR CHIMNEY DAMPER FOR FIREPLACES, FURNACES, AND THE LIKE
Ernest A. Stretz, Compton, Calif.
Application October 6, 1944, Serial No. 557,536
1 Claim. (Cl. 126—288)

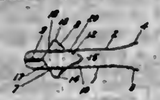
In a damper assembly, the combination of two elongated base members of L-shape in cross section longitudinally and slidably secured in nested contact with each other with the outer surfaces of the legs of one member in face to face contact with the inner surfaces of the corresponding legs of the other member, whereby the two members are capable of longitudinal sliding movement relative to each other for fitting the damper in a flue, a pair of flat members extending longitudinally of said base members, the same being in face to face contact and movable with respect to each other longitudinally of the base members, such movement corresponding to the relative movement of the base members with respect to each other, one edge of said flat members being disposed adjacent the outer flat side of one of the legs of said L-shaped base members and pivotally mounted upon said flat side of said base members on an axis extending longitudinally thereof, a pair of lugs struck from one of said base members and a corresponding pair of lugs struck from one of said flat members, the lugs of each pair being in alignment with each other and with those of the other pair, a damper operating lever pivotally connected intermediate its ends between the lugs on said one of said base members, and a connecting link pivotally connected at one end between the lugs on said one of said flat members and pivotally connected at its opposite end to the adjacent end of said damper operating lever.

2,473,183
ELECTRICALLY CONDUCTIVE FABRIC
William Watson, Auburn, Maine, assignor to Bates Manufacturing Company, a corporation of Maine
Application July 16, 1947, Serial No. 761,178
10 Claims. (Cl. 219—46)



1. Electrically conductive fabric having a film of material comprising from about 90 to about 100 parts by weight of a carbon black and from about 60 to about 110 parts by weight of plasticizer to 100 parts by weight of vinyl resin.

2,473,184
PROCESS FOR PREPARATION OF DEHYDRATED FOOD PRODUCTS
Wells Alan Webb, San Jose, Calif.
Application December 2, 1947, Serial No. 789,211
10 Claims. (Cl. 99—204)

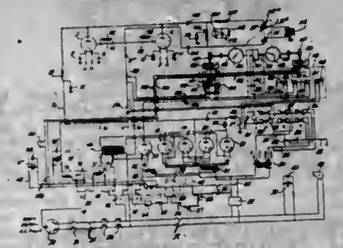


1. A process for dehydrating fruit comprising subjecting fruit to contact with an edible liquid of low vapor pressure at a temperature of 70°–100° C. and to a reduced pressure of less than about one half pound per square inch absolute pressure to reduce the water content of the fruit to less than 6% by weight, momentarily increasing the temperature of the liquid to about 100°–125° C. while said fruit is subject to said reduced pressure to puff said fruit, and cooling the dehydrated fruit under substantially said reduced pressure to maintain the puffed condition in the fruit.

2,473,185
FLUID COUPLING WITH UNITARY DIE CAST VANE STRUCTURE
Erwin A. Weiss, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application January 19, 1946, Serial No. 642,375
6 Claims. (Cl. 103—115)

1. A fluid coupling vane member suitable for die-casting comprising a plurality of radially extending vanes, bridging means forming the sole integral support of said vanes, said means connecting the vanes at an intermediate point so that the vanes project from two sides of the bridging means, and said vanes tapering parallel with the axis of rotation of the vane member in both directions from said bridging member to their free edges.

2,473,186
HAIR CURL HOLDER PIN
Alma Wittman, Petersburg, Mich.
Application May 18, 1946, Serial No. 670,662
1 Claim. (Cl. 132—46)

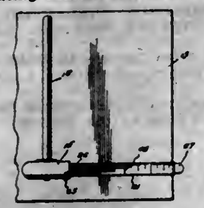


In a hair curl holder pin comprising a single strand of resilient wire having two opposite end lineal portions extending substantially in spaced parallel relation and a pair of intermediate lineal portions immediately adjoining each of said end portions extending in helical continuity and close wrapped relation to each other and conjointly extending in spaced parallelism with and between said end lineal portions through a plane parallel to the plane of extension of said end lineal portions, characterized by the provision of a central lineal portion whose opposite ends immediately adjoin said pair of intermediate lineal portions and which extends therebetwen in loop continuity of the form substantially like that of a trapezium with three U-shaped vertices, said closely wrapped intermediate lineal portions adapted for supporting the trapezium looped central lineal portion spaced from opposite ends of said parallel end portions to locate one of said U-shaped vertices at a point on a plane extending parallel to and spaced from said plane of extension of said end lineal portions and equi-distant from and between said end lineal portions and each of the other two of said U-shaped vertices at a point on said plane of extension of said end lineal portions exterior to the space between said end lineal portions and spaced from each of said end lineal portions, said intermediate and central lineal portions providing means adapted to span one side of a hair curl, spiderwise, and clamp the hair curl against the end lineal portions, the hair of perimetrical coils of the curl being crimped and locked between each of said last named U-shaped vertices and one of said end lineal portions.

2,473,187
AUTOMOBILE DISAPPEARING WARNING SIGNAL
George S. Zelk, Vallejo, Calif.
Application February 17, 1947, Serial No. 729,036
4 Claims. (Cl. 177—329)

2. A disappearing warning signal adapted to emit light through the rear window of a vehicle, comprising a plurality of lamps attached to a shaft, means for rotating said shaft so as to raise said lamps in front of said rear window or to lower the same so as to make invisible from outside of the vehicle.

2,473,188
RADIO-FREQUENCY DIELECTRIC HEATER WITH CONSTANT HEATING RATE CONTROL
Frederick G. Albin, Los Angeles, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Application June 17, 1944, Serial No. 540,767
5 Claims. (Cl. 250—36)



1. An electrical generator system for heating a load with current from said system comprising a vacuum tube having an anode, grid, and a cathode, a feedback circuit between said anode and said grid, a tuned circuit connected to said anode, grid, and cathode, said tuned circuit including inductance and capacitance determined by the capacitance of a multiple-electrode variable condenser having two adjustable electrodes and the capacitance of said load connected to said system, the capacitance of said variable condenser and said load capacitance determining the feedback current in said feedback circuit connected to the grid of said tube, means for supplying said generator with direct current for the anode of said tube, and plural motor means for varying the adjustment of the multiple electrodes of said variable condenser to maintain the total capacitance of said variable condenser and said load at a substantially constant value, said last-mentioned means including a first motor connected to one adjustable electrode of said variable condenser, a second motor connected to another adjustable electrode of said variable condenser, a power supply for said motors, and means for rotating one of said motors in one of two directions according to the variations in grid current caused by changes in the capacity of said load.

2,473,189
GLASS CUTTER
William M. Baker, Clyde, N. Y.
Application February 2, 1945, Serial No. 575,809
3 Claims. (Cl. 33—42)

1. In combination, a housing including a pair of spaced and parallel side walls, a pair of glass cutting wheels including cutting edges, means mounting said wheels between said walls with said cutting edges in alignment and extending below said walls for rolling engagement with a glass work piece, a coiled measuring tape including a free end, means mounting said tape on said walls across one end thereof, said free end being adapted to be extended laterally of said walls whereby to provide an extended portion of said tape extending across a vertical plane defining said aligned cutting edges and at right angles

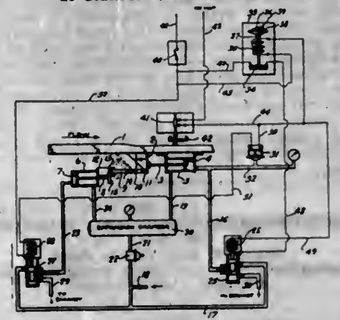
thereto, a hook fixed to said free end of said tape and depending therefrom, said hook being adapted to slidably engage an edge of said work piece, a finger grip formed on said free end of said tape, said tape being formed and inscribed with calibrating indicia selectively and visually

alignable with said aligned cutting edges, and means for locking said tape in a selected extended position, whereby said extended portion of said tape, hook and finger grip comprise a combined gauge and handle for the cutting of said work piece parallel to a hook-engaged edge thereof.

2,473,190
METHOD OF PRODUCING FIBROUS BUILDING COMPOSITIONS
Charles M. Baskin, Toronto, Ontario, and Norman W. McLeod, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application July 1, 1944, Serial No. 543,198. In Canada July 19, 1943
13 Claims. (Cl. 92—21)

1. A method of preparing a building composition which comprises breaking up a fibrous material into a state of fine subdivision, adding about ½ part of a flux oil to about 1 part of the divided fibrous material, adding an alkaline solution to the mixture of fibrous material and flux oil, digesting at 100 lbs. per square inch steam pressure for two hours the fibrous material, flux oil and alkaline solution to form a fibrous pulp, dispersing in the fibrous pulp an asphalt and flux oil, picking up the mixture of fibrous material, flux oil and asphalt in layers on a continuous blanket to form sheets, and submitting the said sheets of fibrous material, asphalt and flux oil to pressure and heat to remove water.

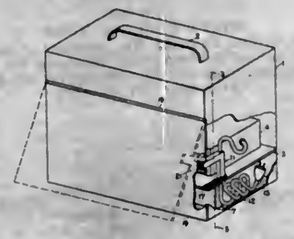
2,473,191
LARDING AND SEASONING NEEDLE
Alfred S. Bettencourt, East Orange, N. J.
Application March 31, 1947, Serial No. 736,419
5 Claims. (Cl. 17—42.1)



1. In a larding needle having a handle on one end and having a straight hollow tube body serving as a reservoir for the larding ingredients, and a tubular sharp tip portion extending from the free end of said body portion, the improvement comprising a long slot in said tube body wall, said slot being narrower than the diameter of the tube body and extending from near the handle to the free end of said tip portion, and said tip portion is gradually raised as the point is approached so that the sharp tip is disposed above the tube body, thereby making it possible to insert said needle in the material to be needled without disturbing the contents exposed in the slot and disposed within said hollow tube body.

2,473,192
COIL FOR WEED BURNERS AND PEAR BURNERS
John B. Blackwell, San Antonio, Tex.
Application August 12, 1945, Serial No. 610,469
1 Claim. (Cl. 158—79)

A weed burner, comprising an inlet pipe bent to form a coil, a hood having an open end and a closed head enclosing the coil, air inlet openings in said hood adjacent the closed head thereof, an air vent in said closed head, an opening in said hood adjacent the open end thereof, a fuel inlet pipe on said coil extending outwardly of said hood through the opening adjacent the open end thereof, said pipe being curved throughout a part of its length, and lying in a plane substantially parallel with said coil, and having a coupling on the free end thereof, a fuel outlet on said coil leading through the closed head of said hood adjacent said air vent, a jet nozzle on the fuel outlet, an L-fitting coupling said jet with said first outlet, a T-fitting mounting the jet, means for regulating the jet, a detachable wind guard having a closed end and an open end about the jet nozzle, and frictionally engaging the hood by means of the open end and an inlet opening in said wind guard.

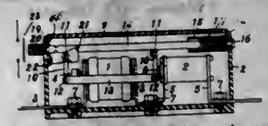


2,473,193
RECIPROCATING CONVEYER
Donald C. Campion, Detroit, Mich., assignor to Loftus Engineering Corporation, Pittsburgh, Pa., a corporation of Maryland
Application November 21, 1944, Serial No. 564,477
19 Claims. (Cl. 198—220)

1. A conveyor comprising in combination a pan upon which the work is placed and along which the work is conveyed, means for moving said pan forwardly in the direction which the work is being conveyed at a relatively slow speed so that the work moves with the conveyor, means for releasably latching said pan in its forward position, means in which fluid pressure is built up after the pan completes each forward stroke, control means actuated after said fluid pressure is built up to suddenly release said fluid pressure, means actuated by said released fluid pressure for moving said pan in the opposite direction at

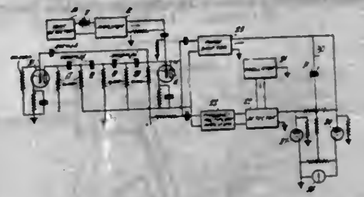
a relatively faster speed sufficient to jerk the pan from under the work whereby for each cycle of operation comprising a forward and reverse movement of the pan the work is advanced a distance less than the stroke of the pan, said last mentioned means being ineffective to move the pan in the opposite direction while the pan is latched in its forward position and effective to jerk the pan from under the work when the latching means is released.

2,473,194
POWER SUPPLY SWITCHING SYSTEM
Ching-Ih Chou, West Webster, N. Y., assignor to Stromberg-Carlson Company, a corporation of New York
Application March 4, 1948, Serial No. 13,039
8 Claims. (Cl. 171—97)



8. In a radio receiver of the type to be adapted to operate selectively from first and second power sources, a line cord adapted to be connected to said first power source external to said receiver, a rotary changeover switch having first and second positions displaced approximately 90° for adapting said receiver to operation respectively from said first and second power sources, a housing for said receiver having a rear opening and a removable closure therefor, an opening in said closure, and actuating means for said switch comprising a member having a first hollow arm portion and a second arm portion disposed in quadrature and adapted selectively to protrude into and to substantially fill said closure opening, said switch being in said first position when said first arm protrudes and in said second position when said second arm protrudes and said line cord passing through said hollow arm portion, whereby said closure must be displaced before said switch can be actuated and said hollow arm portion must occupy said opening to permit said line cord to extend outside of said closure.

2,473,195
TREATMENT OF OILS CORROSIVE TO COPPER
Charles A. Cohen, Roselle Park, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 10, 1946, Serial No. 696,051
4 Claims. (Cl. 196—40)



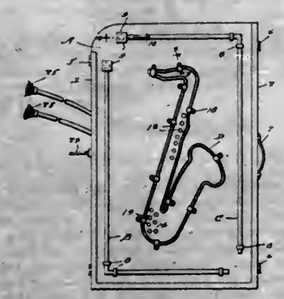
1. A process for preparing petroleum hydrocarbon oil non-corrosive to copper, said oil having been treated with strong sulfuric acid, the sludge having been removed, the acid treated oil having been neutralized with a neutralizing agent, the product of neutralization having been extracted with an immiscible solvent, and the residual immiscible solvent having been removed from the oil, and the resulting oil having been treated with clay, which comprises treating the said oil with an aqueous solution of a normal alkali metal sulfite.

2,473,196
COMBINED THERMAL-MAGNETIC CIRCUIT BREAKER
Kurt Dannenberg, Stoke-on-Trent, England
Application November 13, 1943, Serial No. 510,180
In Great Britain November 13, 1942
13 Claims. (Cl. 200—88)

1. An electric cut-out comprising, in combination, a cartridge fuse of current limiting type, a striker operatively connected for displacement by operation of said cartridge fuse immediately after fault clearance thereby, an overload protection device for said cartridge fuse and a striker operatively connected for displacement by operation of said overload protection device, said overload protection device being adapted to be made effectively responsive by fault currents in that range of overloads against which the cartridge fuse is immune, said cartridge fuse being adapted to be made effectively responsive prior to the effective response of said overload protection device, which is slower acting than said cartridge fuse in response to fault currents in overload ranges of higher magnitudes from which said overload protective device should be protected, and trip gear having members positioned in operative relation with said strikers for tripping said gear upon operation of either said fuse or said overload device.

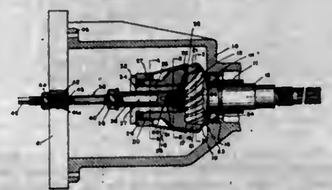
2,473,197
HEAT DETECTING SYSTEM
John Evans, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 21, 1945, Serial No. 600,713
2 Claims. (Cl. 250—83.3)

1. An amplifier system for an electronic heat detector, comprising in combination, a resistance-capacitance oscillator having an output section including the anode-cathode resistance of a grid-controlled electronic-tube amplifier as the shunt resistance element thereof, a source of variable grid potential for said tube responsive to received heat wave variations to vary the oscillator output frequency, a pair of diode rectifiers coupled in parallel through separate signal paths with said output circuit, a 180° phase-shift network in one of said paths, a frequency multiplier and a detector connected serially in the other of said



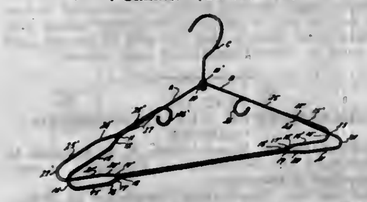
paths, a beating oscillator coupled to said detector to provide a beat frequency output substantially at the first oscillator frequency, and a common balanced output circuit for said diode rectifiers providing a differential output current in response to frequency variation of said first oscillator.

2,473,198
HAIR WAVER
Lucynda I. Fink, Liscomb, Iowa
Application August 28, 1946, Serial No. 693,432
4 Claims. (Cl. 132—38)



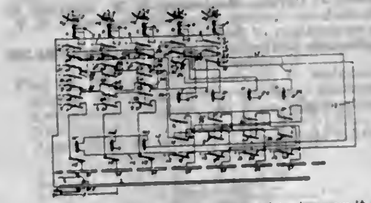
1. A hair waving device comprising a supporting bar, a plurality of longitudinally-curved tines arranged in superposed, spaced relation and connected to an end of said bar adapted to embrace the head, longitudinally-curved cover elements interposed between said tines and mounted for swinging movement about said supporting bar, each element being provided with a longitudinally-extending slot, a longitudinally curved hair-positioning member arranged underneath each of said cover elements and slidably mounted on the latter, each of said members having a series of spaced, vertical transversely-curved rows of teeth projecting from its under surface adapted to penetrate the strands of hair, a pin projecting from the outer surface of each of said members, said pin extending through the slot of the cover element complemental thereto, and means for securing the pin to said cover element to thereby lock the positioning member to the cover element.

2,473,199
MUSIC STAND
Max M. Garcia, Los Angeles, Calif.
Application January 24, 1947, Serial No. 724,131
2 Claims. (Cl. 84—464)



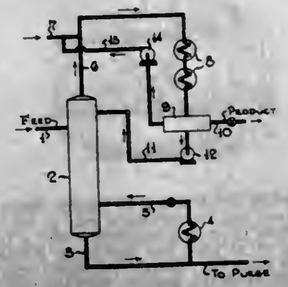
1. A decorative music stand for dance bands and the like, comprising an upstanding panel, sides hingedly connected to the panel to be arranged at the rear of the same, Lucite border elements mounted upon the front face of the panel and arranged near and following the marginal edge of the panel, light bulbs disposed adjacent to the ends of the Lucite border elements, means to supply current to the light bulbs, a Lucite frame design simulating a musical instrument and mounted upon the front face of the panel, light bulbs mounted upon the panel behind the Lucite frame design, opaque clips securing the Lucite frame design to the panel and covering the light bulbs of the Lucite frame design, means to supply current to the last named light bulbs, a plurality of light bulbs mounted upon the front face of the panel and arranged within the Lucite frame design, selective means to cause the last named bulbs to intermittently glow independently of the illumination of the Lucite frame design, and means mounted upon the rear face of the panel to support sheet music.

2,473,200
SHAFT-PULLING TOOL
Linnie Griffin, Roanoke, Va., assignor of one-half to Earl A. Fitzpatrick, Roanoke, Va.
Application February 20, 1946, Serial No. 649,027
5 Claims. (Cl. 29—283)



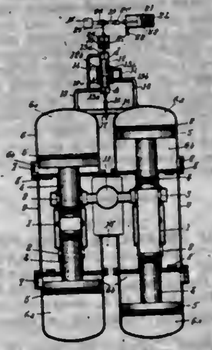
1. A device for removing spiral gears from a bearing support comprising, a sleeve having a socket provided with spiral grooves adapted to receive the teeth of a spiral gear, a shell having complementary sections of such internal diameter as to fit around said sleeve, said shell sections each having inturned peripheral flanges engaging over the gear in said socket, and means for detachably securing the sections on the sleeve.

2,473,201
GARMENT HANGER
Robert C. Hefferman, Great Neck, N. Y.
Application May 17, 1947, Serial No. 748,720
7 Claims. (Cl. 223—91)



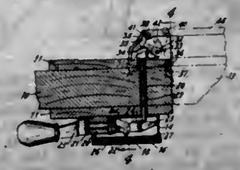
1. A garment hanger made of two pieces of wire, each bent to isosceles triangular shape in side elevation, except that one side falls short of reaching the apex of the triangle so as to leave an opening, the two pieces being fixedly secured together so that the apex portion of one bridges the opening formed by the other, means to secure the pieces together at the apex, the pieces forming a spring clip wherein the triangle bases are urged toward one another to grip a garment inserted therebetween.

2,473,202
TELEGRAPH SYSTEM WITH CODE CONVERSION AND ERROR DETECTION
Harry Vernon Higgitt, London, England, assignor to Cable & Wireless Limited, London, England, a British company
Application September 21, 1948, Serial No. 50,311
In Great Britain September 22, 1947
9 Claims. (Cl. 178—26)



1. A telegraph system arranged to transmit signals in an error-detecting code all the signals of which consist of the same number of marking and the same number of spacing units, comprising transmitting apparatus arranged to convert signals in a primary equal-length code into signals in said equal-length error-detecting code, said second-mentioned signals consisting of a greater number of units than the signals in said primary code, said transmitting apparatus comprising means for passing forward and transmitting one group of units in each of at least the majority of the signals in said primary code, as a group of units in said error-detecting code which is the same in marking and spacing permutation as the group in said primary code and means for modifying a second group of units in each signal in said primary code and converting same into a group in said error-detecting code determined by the permutations of both groups of the respective signal in said primary code.

2,473,203
DIOLEFIN DISTILLATION
Ralph F. Howe, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 26, 1946, Serial No. 650,316
10 Claims. (Cl. 202—57)



1. In the distillation of a diolefin, the improvements which comprise introducing into distilled vapors of a diolefin as they are expelled from a still a relatively non-volatile polymerization inhibitor as a fine mist.

2,473,204
FREE PISTON ENGINE CONTROL
Robert Huber, Paris, France, assignor to Societe d'Etudes et de Participations, Eau, Gaz, Electricite Energie S. A., Geneva, Switzerland, a society of Switzerland
Application January 28, 1947, Serial No. 724,770
In France February 5, 1946
18 Claims. (Cl. 123—46)

2. In combination, two free piston engines each including at least one motor cylinder and one compressor cylinder interconnected together and at least one motor piston and one compressor piston interconnected together, said pistons being adapted to cooperate with said cylinders respectively so as to form several variable volume chambers, an oscillatable control member, means for subjecting said control member to the combined actions of the instantaneous pressures in two corresponding chambers of said engines, respectively, said means being adapted to cause said member to oscillate with amplitudes below a given value as long as said engines work in synchronism with each other with a 180° phase difference and to oscillate with amplitudes above said given value when said 180° phase difference is no longer maintained, and means operative by said control member oscillating with an amplitude above said given value for varying the frequency of operation of at least one of said engines to restore said 180° phase difference.

2,473,205
FIRE ESCAPE CONTROL MECHANISM
Joseph J. Jazwieck, Columbus, Nebr.
Application November 13, 1947, Serial No. 785,555
3 Claims. (Cl. 292—341.17)

1. In combination with a door vertically hinged in a wall and including a bolt at the free end thereof, a device of the kind described including an enclosure on the outer side of the wall adjoining the free end of the door, a vertically pivoted two-armed locking member in said en-

closure, a vertically pivoted tongue in said enclosure disposed normally at right angle to one arm of the member and being in abutment therewith, the other arm of the member forming a locking bar, the space between the tongue and the locking bar being adapted for reception of the bolt on the door, a case on the inner side of the wall, a hinged cover for said case, the cover framing a removable pane of glass therein, a two-armed lever fulcrumed within the case on a shaft disposed parallel to the rear wall thereof, one of said arms being in abutment with the pane of glass, the other arm bearing against a sliding pin disposed horizontally and extending outwardly of the case through the body of the wall into said enclosure against the tongue therein, a crank handle to operate the two-armed lever in the case, a swing of the lever serving to break the glass and to push the pin against the tongue to swing the same out of engagement with the two-armed locking member.

2,473,206

PROCESS OF SELECTIVELY POLYMERIZING DIOLEFINS IN AN UNSATURATED AND AROMATIC GASOLINE DISTILLATE

Minor C. K. Jones, Mountainside, and Richard C. Brandon, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application May 18, 1946, Serial No. 670,835
2 Claims. (Cl. 196—78)

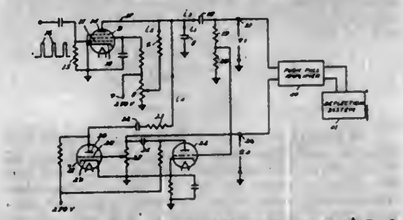
1. The process of selectively polymerizing diolefins in an unsaturated and aromatic gasoline distillate from a high-temperature cracking process, to obtain high diene number polymers and stabilized motor fuel, which comprises removing from the distillate an unsaturated hydrocarbon cut boiling below 140° F., passing the remainder of the distillate boiling above 140° F. into contact with catalytically active clay at an average temperature in the range of 250° F. to 350° F., said remainder of the distillate being in liquid phase and being contacted with the clay at a space velocity of 0.2 to 1 volume per volume of clay per hour, and recovering the thus clay-treated distillate freed of unstable diolefins and a polymer of high diene number.

2,473,207

SHOE TREE

Louis Kessler, Brooklyn, N. Y.

Application November 22, 1946, Serial No. 711,623
7 Claims. (Cl. 12—128.4)



1. A shoe tree comprising a hollow compressible shell serving as a toe piece, said shell being closed on top and front but open at the bottom and in the rear, a flexible longitudinal stem having one end thereof located at the toe end of said shell and curved to rise in the interior of the shell, said stem extending rearwardly of said shell to a position above the shank portion of a shoe when the tree is inserted into the shoe, and a flexible arched cross-spring secured at an intermediate point to the curved portion of said stem at a location within and near the rear of said shell, said shell having opposed inturned flanges, said flanges terminating adjacent said toe end with spaced points of inflection to provide increased compressibility of said shell, the ends of said cross-spring being fastened to the flanges of said shell.

2,473,208

APPARATUS FOR LINEARIZING SAW-TOOTH WAVES

Merwin J. Larsen, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York

Application November 14, 1944, Serial No. 563,388
2 Claims. (Cl. 250—36)

1. In a saw-tooth voltage wave generator, a capacitor, a load circuit coupled to said capacitor, means including a source of electrical energy for charging said capacitor, means including a periodically completed discharge path for discharging said capacitor, means for supplying a separate compensating charging current to said capacitor, a phase inverter unit responsive to a voltage developed in said load circuit, and a thermionic unit responsive to at least a portion of the output voltage of said inverter unit for controlling the supplying of said compensating current to said capacitor in such a manner that the sum of the charging currents is substantially constant.

2,473,209

BUCKLE

Cyrus Lombardi, Brooklyn, N. Y.

Application May 22, 1947, Serial No. 749,633
5 Claims. (Cl. 24—73)

1. A buckle construction for joining upper and lower straps and comprising a pair of side bars and a series of spaced tranverse bars, a transverse bar at at least one end being divided to provide a generally central slot which opens in a direction generally parallel with the side bars and which has a substantially permanent non-expansible width, and enclosure means extending outwardly from the portion of said last-mentioned bar at points spaced from said slot and spaced from said side bars and converging to provide an opening which spreads out laterally

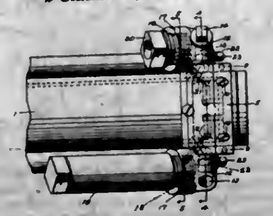
from said slot along the parts of said last-mentioned bar which lie at each side of said slot, said opening having a maximum extent of at least twice the width of said slot in a direction parallel to said width and not substantially more than two-thirds nor less than one-third the distance between the side bars at said slot in said direction and having a greater extent in said direction than in a direction perpendicular to said direction.

2,473,210

HARMONICA AND WIND CELL BLOCK THEREFOR

Finn H. Magnus, Essex Fells, N. J., assignor, by mesne assignments, to Magnus Harmonica Corporation, Newark, N. J., a corporation of New Jersey

Application April 30, 1947, Serial No. 745,063
7 Claims. (Cl. 84—377)



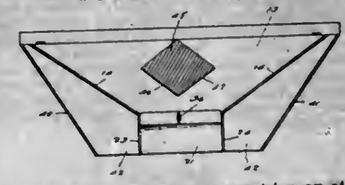
1. A harmonica including a wind cell block having a plurality of wind cells opening through one edge thereof to form a mouthpiece, there being a blow reed wind chamber and a draw reed wind chamber communicating with each wind cell and each opening through one of opposite sides of said wind cell block, a reed plate at each side of said block one having a blow reed for each blow reed wind chamber and the other having a draw reed for each draw reed wind chamber, the end portions of said blow reed wind chambers and said draw reed wind chambers remote from said mouthpiece being of greater and less capacity respectively than the other end portions of said chambers.

2,473,211

RECUPERATOR SYSTEM FOR AIRPLANE CANNONS

Harold N. Metzel, East Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application September 14, 1945, Serial No. 616,329
2 Claims. (Cl. 89—43)



1. In a cannon recuperator having a hydraulic cylinder the improvement comprising, a top and bottom yoke mounted on the forward end of the cylinder, said top yoke having a pair of angularly disposed boss-like members in a plane perpendicular to the axis of the cylinder, each of said bosses being provided with a threaded recess opening rearwardly and inclined upwardly and a passageway therefrom communicating with the interior of the hydraulic cylinder, vent means near the upper end of each of said bosses communicating with said recess, an expansion chamber adapted to be threaded into said recess of one of said bosses, said passageway permitting hydraulic fluid to enter said chamber, and a plug threaded into said recess of said other boss for sealing said passageway, said vent means being provided for bleeding said chamber whereby a limited amount of air may be trapped therein when the cylinder and part of said chamber are filled with hydraulic fluid.

2,473,212

AIRCRAFT SPRAYER

Sidney A. Monson, Bellegiade, Fla., assignor to Monson Manufacturing Co., Inc., Lakeland, Fla., a corporation of Florida

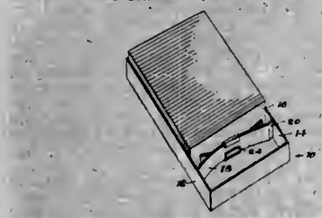
Application May 13, 1947, Serial No. 747,815
2 Claims. (Cl. 244—136)

1. A spraying apparatus, comprising an air inlet chamber, a mixing chamber arranged rearwardly of said air inlet chamber and in communication therewith, said mixing chamber comprising a forward portion, a relatively wide rearward portion, and an intermediate portion, a supply chamber containing insecticide material communicating with the forward portion of said mixing chamber, said inlet chamber having an upwardly extending throat and a downwardly extending baffle to form a venturi, whereby the material in said supply tank is sucked into said mixing chamber, means in the forward portion of said mixing chamber for controlling the turbulence of the air therein, means in said intermediate portion for evenly diverting the material discharging from said mixing chamber in a horizontal direction, means adjacent the rearward portion of said mixing chamber for controlling the discharge of said material in a vertical direction, and a pair of air jets disposed at opposite sides of said rearward portion for laterally impinging said material being discharged from said rearward portion into the atmosphere to effect an even distribution thereof.

2,473,213

KITE PLANE DEVICE

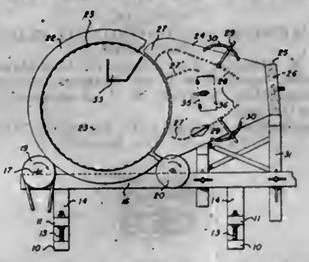
Martin E. Nissen, Hutchinson, Minn.



Application March 26, 1946, Serial No. 657,123
1 Claim. (Cl. 244—155)

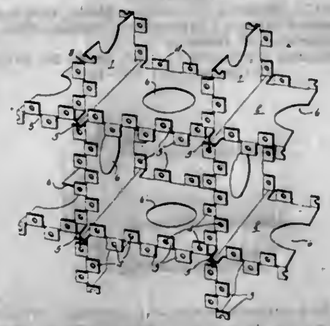
A kite cord carried toy airplane comprising a hollow, elongated fuselage through which said cord passes, grooved pulleys journaled in said fuselage near the opposite ends thereof supporting

said fuselage on said cord for minimum frictional resistance to movement of said fuselage along said cord, a shaft extending transversely of said fuselage, wing elements supported by said shaft one at each side of said fuselage for pivotal movement between a substantially vertical and a substantially horizontal position, spring means in said fuselage resiliently urging said wing elements to horizontal position, latch means in said fuselage releasably holding said wing elements in substantially vertical position, trigger means operatively connected with said latch means and operated by a stop on said cord to release said wing elements for movement to their substantially horizontal positions by said spring means, a U-shaped carrier pivotally connected at its closed end to the underside of said fuselage, and latch means pivotally mounted on said fuselage and engageable with said carrier to releasably hold said carrier in substantially horizontal position, said carrier latch means being positioned for operative engagement by one of said wing elements in moving from its substantially vertical to its substantially horizontal position to release said carrier for movement by gravity from its substantially horizontal to its substantially vertical position to discharge an object therefrom.



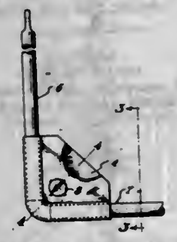
2,473,214
TYPE LOCK FOR MAILING GALLEYS
Ralph B. Orr, Logansport, Ind.
Application October 31, 1947, Serial No. 783,267
4 Claims. (Cl. 276—41)

1. A resilient end lock for supporting type matter within a mailing galley having substantially parallel side walls, comprising a stiff resilient strip of material shaped to provide a major portion of its length bowed in one direction longitudinally of the strip, a minor portion adjacent one end being reversely bowed for a short distance to provide galley-wall contacting end portions of said strip directed in opposite directions when the strip is wedged between side walls of a galley, and a rigid type-contacting member of less length than said strip affixed to the strip only adjacent approximately the center of the strip and lying on the convex side of said major portion, said strip being sufficiently stiff to maintain said lock abutted firmly against type matter in said galley, but sufficiently resilient in a direction lengthwise of said galley to enable a line of type matter to be removed and replaced without disturbing the locking engagement between said strip and said walls.



2,473,215
HOP AND LEAF SEPARATOR
Axel E. Oslund, Santa Rosa, Calif.
Application September 27, 1945, Serial No. 618,827
3 Claims. (Cl. 209—45)

1. In a hop cleaning machine, the combination which comprises a cylindrical wire mesh drum with open ends and having ring-like members on the ends, spaced rollers upon which the said ring-like members are positioned, shafts rotatably mounting the rollers whereby the drum being carried by the rollers is rotated upon rotation of the rollers, said rollers mounted to support the drum with the axis thereof inclined, a funnel-like housing having a large and a small end with the large end arcuate in section to receive the said cylindrical drum, an exhaust fan positioned in the outer small end of the housing for drawing

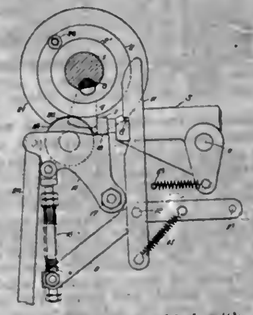


air from the interior of the drum through the wire mesh thereof whereby materials in the drum are held in suspension against the inner surface of the wire mesh thereof, stationary converging baffles positioned in the housing and in the path of the exhauster, adjustable baffles pivotally mounted in the housing and positioned to coact with the said converging baffles, means adjusting the positions of the said adjustable baffles, and converging means in the said wire mesh drum for receiving materials when released from the inner surface of the cylindrical drum.

2,473,216
BUILDING CONSTRUCTION
Alfred H. Parsons, Baldwin, N. Y.
Application November 14, 1945, Serial No. 628,471
6 Claims. (Cl. 189—34)

1. A building frame of the character described, comprising plates, criss-crossed and interlocked in the same plane, so as to constitute a unitary, continuous structure of uniform thickness, flexible flanges extending rectilinearly and outwardly in the form of a cross from opposite edges of the plates at their points of intersection and right angular fins carried by opposite edges of the plates, the said flanges and fins being adapted to support tile, glass or other material.

2,473,217
ROD CLAMP OR THE LIKE
Edward M. Peoples, Huntington, W. Va., assignor to The Peoples Company, Huntington, W. Va., a corporation of West Virginia
Application September 6, 1946, Serial No. 695,231
9 Claims. (Cl. 287—54)

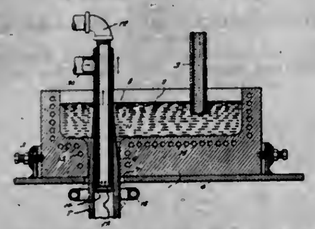


1. A rod clamp or the like comprising two substantially identical halves of sheet metal in the form of an isosceles triangle having its base corners clipped, and having rod receiving channels running along the legs of the triangle, a depressed portion forming a fulcrum adjacent the middle of the base and bolt receiving apertures between the depression and the apex.

2,473,218
TELESCOPING LAMP STANDARD
Howard F. Reichenbach, Waterbury, Conn., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application July 17, 1945, Serial No. 605,493
1 Claim. (Cl. 248—161)

A telescoping lamp-standard including: a lamp-base; a first tubular section connected to said lamp-base and having in the interior of its upper end, an interior downwardly-facing clamping-abutment, and having on its upper end-portion, an upwardly-facing clamping-abutment; a second tubular section telescopable in said first tubular section and having at the exterior of its lower end, an interior upwardly-facing clamping-abutment adapted to engage against said interior downwardly-facing clamping-abutment when said two tubular sections are in fully-extended relation; and a clamping-member rotatable in a general plane transverse of the axis of and relatively to and in camming relation with said second tubular member to force said clamping-member axially of said first tubular section and against said upwardly-facing clamping-abutment and thus force and lock the said two interior clamping-abutments against each other.

2,473,219
GUARD ARRANGEMENT FOR POWER PRESSES
Charles Joseph Rhodes, Wakefield, England
Application March 26, 1947, Serial No. 737,297
In Great Britain June 19, 1946
8 Claims. (Cl. 192—134)



6. In a power press provided with a clutch mechanism, a clutch lever spring-urged to move said mechanism into engagement, a trip member which is engageable with said clutch lever to prevent it from moving the clutch mechanism into engagement, a spring connected to said trip member and urging it, when loaded, to disengage the clutch lever, a control member which is engageable with said trip member to prevent the trip member from disengaging the clutch lever, and a press guard which is connected to said control member for movement therewith, said control member being movable out of engagement with the trip member when the guard is moved into closed position, said control member being connected to said spring to load the spring when it moves with the press guard out of engagement with the trip lever, whereby said trip lever is freed to move in response to the action of said loaded spring thereon, out of engagement with the clutch lever, to release said clutch lever for moving the clutch mechanism into engagement.

2,473,220
METHOD OF MANUFACTURING TARGET ELECTRODES
Albert Rose, East Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 16, 1941, Serial No. 407,131
11 Claims. (Cl. 49—81)

3. The method of manufacturing a target electrode for a television transmitting tube comprising heating a thin film of vitreous material in contact with a horizontal supporting member to cause said vitreous material to become attached to said member and continuing the heating until said film shrinks by surface tension to become taut over said member.

2,473,221
METHOD AND APPARATUS FOR THE CONTINUOUS CASTING OF METAL TUBES
Irving Rossi, West Orange, N. J.
Application March 6, 1947, Serial No. 732,734
6 Claims. (Cl. 22—57.2)

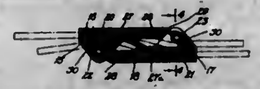
6. Apparatus for the continuous casting of metal tubes, comprising a mold block, said block having a cavity therein in which a pool of molten metal is maintained and having a mold passage extending through said block from said cavity to the outside, a water cooled mandrel projecting into said mold passage and having a water cooled surface extending from a point above said passage to a point below the point of final solidification, said surface forming the sole means for the withdrawal of heat to cause solidification of the molten metal, and means for maintaining said mold block at a temperature sufficient to prevent appreciable withdrawal of heat from the molten metal, whereby crystal growth proceeds entirely outwardly from said mandrel toward the wall of said mold passage.

2,473,222
CHORD INDICATOR
Louis Ruben and E. Jack Zeik, Bayonne, N. J., assignors to Leonard Greene, New York, N. Y.
Application May 18, 1948, Serial No. 27,753
7 Claims. (Cl. 84—471)

1. A musical chord indicator comprising an inclined front wall member, a substantially horizontal bottom member, the bottom member having spaced transverse slots therein extending inwardly from the outer edge thereof, the side edges of the slots continuing as slits into the inclined member, a first set of aligned longitudinally spaced folds at the joint between the bottom member and the inclined member, and an additional set of aligned longitudinally spaced folds alternating with and spaced inwardly from the folds of said first set.

2,473,223
COMBINED VALVE AND COUPLING
Albert T. Scheiwer, Erie, Pa.
Application March 29, 1947, Serial No. 738,043
6 Claims. (Cl. 284—18)

1. A coupling comprising a female member having a fixed and a movable flanged sleeve therein, check valves sealingly engaging said flanged sleeves in said female member, camming members engaging by said movable sleeve, locking means for said camming members, a male member for disposal in said female member adapted to move said movable sleeve longitudinally in said female member and having a groove for locking engagement by the camming members



of said female member, and a longitudinally movable manually operated valve in said male member adapted to move said check valves in said female member longitudinally progressively.

2,473,224
PROCESS OF MAKING ALCOHOL
Helmuth G. Schneider, Westfield, and Vincent F. Mistretta, Fanwood, N. J., assignors, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 31, 1945, Serial No. 636,590
10 Claims. (Cl. 260—639)

1. A process for removing saturated hydrocarbons from an acid extract which comprises contacting a hydrocarbon stream containing monoolefins and saturated hydrocarbons with a strong mineral acid absorbent at a temperature of 15° C. to 100° C. and at a pressure of 15 to 500 p. s. i. g. to form an acid extract, maintaining the acid extract at a pressure of 15 to 500 p. s. i. g. while diluting the acid extract with an aqueous diluent to an acid strength of 40 to 75 wt. % on a hydrocarbon free basis, cooling the extract to a temperature below 40° C., thereafter reducing the pressure on the cooled extract to atmospheric pressure to release saturated hydrocarbons therefrom and separating the released saturated hydrocarbons from the acid extract.

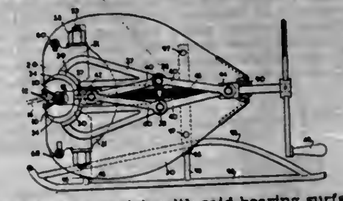
2,473,225
REVERSIBLE BUCKLE
Donald A. Seaver, West Cheshire, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application July 1, 1944, Serial No. 543,091
16 Claims. (Cl. 24—74)

1. A buckle comprising a frame, said frame having offset end plates formed by a central angular portion disposing said plates in different planes, said plates having oppositely directed side flanges forming pintle bearings, a clamp member arranged upon each of said plates and terminating at one end in a cylindrical rod, means at terminal

ends of the rod of each member for pivotally mounting said member in the bearings of an opposed plate, said means being arranged eccentrically to said rods to form of said rods clamping elements, and means on the plates adjacent the clamping elements of said members for securing the buckle to supports arranged between the clamping elements and said plates.

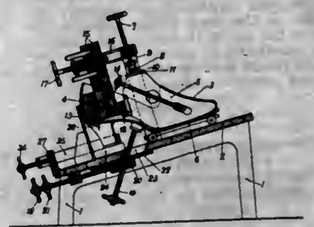
2,473,226
WRIST BAND
Lillian Sheldon, Chicago, Ill.
Application August 22, 1946, Serial No. 692,275
7 Claims. (Cl. 224—28)

1. A wrist band or bracelet of the split-ring type, the medial portion thereof being formed with a cuplike depressed portion integral therewith comprising a base and continuous side wall and providing a container section and inclined lateral flange portions integral with and extending downwardly from the upper edge of said cuplike portion to approximately the base thereof and integrally merging with the wrist embracing portions of said band.



2,473,227
HAIRDRESSING DEVICE
Nathan L. Solomon, Englewood, N. J.
Application April 10, 1947, Serial No. 740,509
6 Claims. (Cl. 132—85)

4. In devices of the class described, an elongated body portion, a handle member extending integrally from one end of the body portion, the body portion having two rows of brush elements arranged longitudinally of and projecting from one side of the brush body with one row of elements in diverging relationship to the other row of elements, a comb unit detachable with respect to said body and arranged intermediate said rows of brush elements, and a brush unit detachably mounted with said body in circumferentially spaced relationship to the coupling of the comb unit therewith.

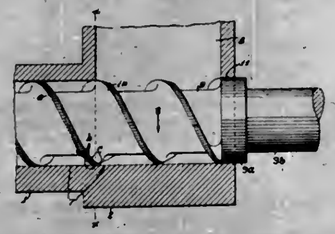


2,473,228
TOOL FOR INSERTING FASTENERS IN MACHINE BELTING
Bernard Tebb, Hull, England, assignor to Mastabar Belt Fastener Company Limited, Cleckheaton, England
Application January 21, 1947, Serial No. 723,386
In Great Britain September 13, 1938
Section 1, Public Law 690, August 8, 1946
Patent expires September 13, 1958
2 Claims. (Cl. 1—49.4)

1. A tool for inserting fasteners in machine belting comprising in combination segmental bearings, means to set said bearings at various predetermined distances apart relatively to one another, jaws mounted to rotate in said bearings, and overhanging shoulders on said jaws having inwardly facing arcuate surfaces cooperating with similarly curved outwardly facing arcuate surfaces on said segmental bearings, said sur-

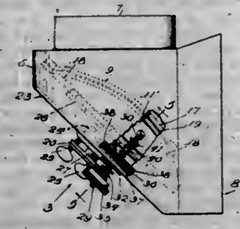
faces being concentric with said bearing surfaces and serving to maintain said jaws within said bearings whilst allowing their rotation in said bearings.

2,473,229
APPARATUS FOR STRETCHING AND STRAIGHTENING SHOES
Franciscus Fidelis van Beurden, Amsterdam, Netherlands
Application July 11, 1946, Serial No. 682,796
In Great Britain February 5, 1946
6 Claims. (Cl. 12—1)



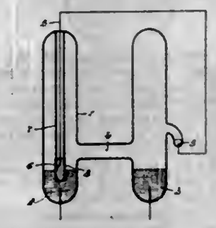
1. Apparatus for enlarging shoes, consisting of a stand with supporting surface for the shoe to be placed thereon in a longitudinal direction, and of an expander by which the loose heel and toe lasts in the shoe are forced apart, and of a bridge piece at right angles to this supporting surface, in which a screw spindle directed downwards is arranged, while a shank screw directed upwards passes through the said supporting surface, so that the downwards directed screw spindle, when the shoe is in position for stretching, presses on the upper side of the toe last fitted therein and the shank screw, passing in oblique direction through a slot in the supporting surface, passes through a small block slidable in a longitudinal direction along the under side of the said supporting surface, which block acts as a fixed nut for the shank screw, and a second screw spindle connected with said sliding block, and by which this block can be moved to and fro in guides

2,473,230
EXTRUSION APPARATUS
Jurian W. Van Riper, Fair Lawn, N. J., assignor to John Royle & Sons, Paterson, N. J., a corporation of New Jersey
Application October 8, 1945, Serial No. 621,088
5 Claims. (Cl. 18—12)



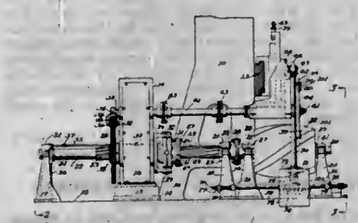
1. In an extrusion apparatus, the combination with fixed structure having a straight cylindrical extrusion bore, of a rotary screw in and coaxial

with the bore and having external helical threading closely fitting the bore throughout substantially the whole length thereof, such threading for a first part of its helical extent providing a cylindrically formed land facing and next adjoining the surface of the bore, and for a second part of its helical extent, which next adjoins said first part of the screw threading, providing a helical edge to and next adjoining said bore surface, the surfaces on the convolutions of the threading on



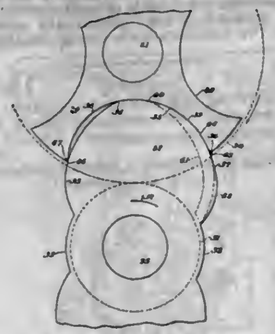
both sides of the helical edge in a direction axially of the screw being sharply relieved from the bore, said fixed structure having a feeding inlet extending to and thereby interrupting the circumferential continuity of substantially all that portion of the bore which contains the second part of the screw threading, and said bore having a substantially uninterrupted circumferential surface for all that portion thereof which contains the first part of the screw threading.

2,473,231
ADJUSTABLE MIRROR OBSERVATION UNIT FOR SMOKE INDICATORS
Robert Hudson Wager, Maplewood, N. J.
Application July 16, 1946, Serial No. 683,819
8 Claims. (Cl. 88—74)



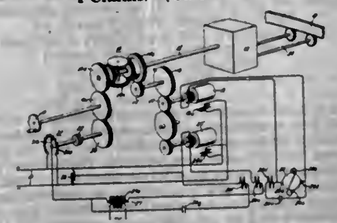
1. In a device of the character set forth, a casing, reflecting means in said casing including a main mirror section mounted for limited angular adjustment and a lateral mirror section hingedly connected directly to one edge of said main section for angular adjustment with respect thereto, an adjusting screw connected to said lateral mirror section, one wall of said casing being formed with an opening through which said screw extends, said opening being of much greater diameter than said screw, a hand wheel threaded on said screw and contacting with the inner side of said one wall of said casing, another wall of said casing having a slot through which a peripheral portion of said hand wheel projects accessibly, a washer on said screw and contacting with the outer side of said one casing wall, said washer having a boss loosely received in said opening, a compression spring on said screw and abutting the outer side of said washer, and a nut threaded adjustably on the outer end of said screw and abutting the outer end of said spring.

2,473,232
DISCHARGE TUBE HAVING A FLUID OR SOLID CATHODE AND A CAPACITATIVE IGNITER
Nicolaas Warmoltz, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application January 31, 1947, Serial No. 725,701
In the Netherlands February 28, 1946
3 Claims. (Cl. 250—27.5)



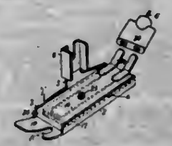
1. A discharge tube having a fluid cathode and a capacitative igniter, consisting of a tube of glass having a closed end and engaging the fluid cathode, the closed end of the tube containing a body of mercury, and the outer surface of the glass tube having secured thereto a thin layer of powdery quartz or hard glass applied thereto by sintering, the thickness of which is preferably from 0.1 to 0.2 mm.

2,473,233
ROTOR GENERATING
Joseph E. Whitfield, Hamilton, Ohio
Application January 12, 1943, Serial No. 472,132
6 Claims. (Cl. 90—8)



1. In a gear box for use with a machine for generating complementary rotors, the combination of a housing, parallel shafts journaled in the housing, one of said shafts being hollow and arranged to carry a splined nut, a splined shaft mounted in the nut and arranged to rotate a rotor blank, the other of said first mentioned shafts arranged to rotate a tool, means for rotating one of said shafts, and a pair of intermeshed timing gears connecting said shafts for maintaining them in correlated timed relation.

2,473,234
HELICAL ASYMMETRICAL THREAD FORMS FOR FLUID DEVICES
Joseph E. Whitfield, Hamilton, Ohio
Application October 6, 1943, Serial No. 505,135
28 Claims. (Cl. 103—128)

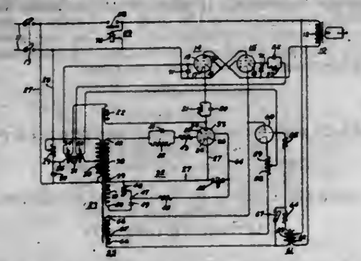


1. In a fluid device of the character described the combination of a housing having fluid inlet and outlet openings, a rotor member and a gate member rotatably disposed in parallelism in said housing and having mating substantially complementary intermeshing helical threads and troughs, the crests of the gate threads being cylindrical and bounded on each side by continuously extending helical edges, the crests of the rotor threads being arcuate and bounded on one side by a continuously extending helical edge, one flank of the rotor thread and the corresponding side of the gate thread being generated by the adjacent continuous crest edges of the gate and rotor respectively, the other flank of the rotor thread being generated from the root to part way up the flank by the adjacent continuous crest edge of the gate, the remainder of the gate thread trough and the connecting portion of the rotor thread flank between the generated surfaces being of different radii from each other and each being substantially circular in a plane normal to the axes of the members to form substantially complementary mating surfaces.

2,473,235
FOLLOW-UP CONTROL SYSTEM
Ernst F. W. Alexanderson, Schenectady, Martin A. Edwards, Scotia, and Gerald A. Hoyt, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application April 15, 1944, Serial No. 531,184
4 Claims. (Cl. 318—2)

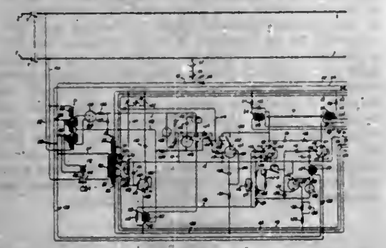
1. An aided tracking control system comprising in combination, an input control device, a driven member, an electric motor for driving said member, means responsive to a displacement of said control device from an initial position to a second position for effecting a corresponding displacement of said driven member and for controlling the supply of voltage to said motor to cause said motor to drive said member continuously at a speed having a predetermined relationship to said displacement while said control device remains in said second position, and means responsive to the rate of change of said displacement for temporarily varying the speed of said motor to effect a corresponding additional displacement of said driven member.

2,473,236
MEANS FOR HOT PRESSING MATERIALS ON SEWING MACHINES
Clifford Stanley Barlow, Sydney, New South Wales, Australia
Application March 19, 1946, Serial No. 655,465
In Australia May 5, 1945
2 Claims. (Cl. 219—19)



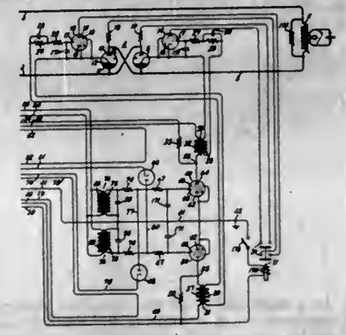
1. A device for the hot pressing of material on a sewing machine provided with a presser bar and sewing needle, said device comprising: a presser foot having a sole plate formed with longitudinal, oppositely-disposed, upturned side flanges, and with one of its ends curved upwardly to a slight extent, said upwardly curved end having a slot formed therein for the passage of said sewing needle therethrough; an extension formed on one of side flanges, said extension being formed, at its upper end, as a U-shaped lug provided with a slot formed therein, said U-shaped lug being adapted to be secured to said presser bar by a clamping screw which is adapted to pass through said slot in said U-shaped lug; an electric heating element disposed between said upturned side flanges of said sole plate of said presser foot, said electric heating element being adapted to heat said presser foot when electrical current is flowing therethrough; and a cover for said electric heating element, said cover being disposed above said electric heating element and between said upturned side flanges of said sole plate.

2,473,237
ELECTRIC TIMER
Maurice E. Bivens, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 7, 1948, Serial No. 6,910
6 Claims. (Cl. 315—246)



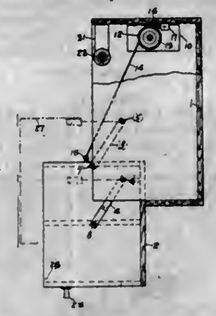
1. An electric timer comprising an alternating current supply circuit, an arc discharge device having a pair of principal electrodes and a pair of control electrodes, means connecting said principal electrodes of said arc discharge device for energization from said supply circuit, means for impressing on one of said control electrodes of said arc discharge device an alternating turn-on voltage, a capacitor connected to said one of said control electrodes of said arc discharge device and in series with said turn-on voltage and the rectifying circuit between said one of said control

electrodes and one of said principal electrodes of said arc discharge device for charging to a voltage equal to the maximum value of said turn-on voltage, a circuit connected across said capacitor and acting continuously to discharge said capacitor, and means for selecting the instantaneous value less than the maximum value of said turn-on voltage which is effective for overcoming the bias voltage of said capacitor and for rendering



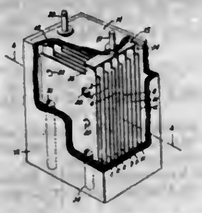
said arc discharge device conductive, said means including means for impressing on the other of said control electrodes of said arc discharge device an alternating voltage which lags the anode-cathode voltage of said arc discharge device by an amount greater than 90 electrical degrees which is sufficient to release said arc discharge device for conduction upon the attainment of said selected instantaneous value of turn-on voltage.

2,473,238
ELECTRIC VALVE CONTROL CIRCUITS
Maurice E. Bivens, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 19, 1947, Serial No. 742,754
20 Claims. (Cl. 315—246)



1. Apparatus comprising an alternating current supply circuit, two electric valves each of which has an anode, a cathode, and a control element, a direct connection between the cathodes of said electric valves, means for connecting the anode-cathode circuits of said electric valves for energization from said supply circuit with the anode voltage of one of said electric valves at a voltage of said supply circuit which is of one polarity when the anode voltage of the other of said electric valves is at a voltage of said supply circuit which is of the opposite polarity so that one of said electric valves may conduct during half cycles of voltage of one polarity and the other of said valves may conduct during half cycles of voltage of the opposite polarity, said means providing inductive circuits through the anode-cathode circuits of each of said electric valves, means for introducing into the control element circuit of one of said electric valves a voltage rendering said one of said electric valves conducting, and means for connecting each of said electric valves for operation in trailing response to the other of said electric valves, said means including for each of said electric valves control element circuits which are completed through the anode-cathode circuit of the other

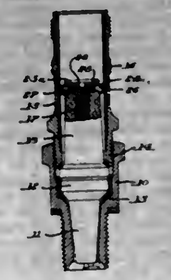
of said electric valves and which apply to the control element of each of said electric valves the trailing voltage drop across the anode and cathode of the other of said electric valves resulting from conduction through said other electric valve continuing over into its negative half cycle of anode voltage which corresponds to the positive half cycle of anode voltage of the electric valve next operating in trailing sequence.



2,473,239
WALL CABINET HAVING A VERTICALLY SWINGABLE SECTION
Cecil Perry Boyd, Gettysburg, Pa.
Application August 16, 1946, Serial No. 691,123
8 Claims. (Cl. 312—153)

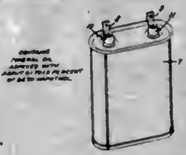
5. A kitchen cabinet unit including a fixed section and a movable section capable of being positioned wholly within the fixed section or withdrawn out of and downwardly from the fixed section while being anchored thereto; means for bringing about such positioning comprising, a pair of spaced arms located between the side walls of the two sections and pivoted at their corresponding opposite ends to the sections, a shaft rotatably mounted adjacent the rear top

part of the fixed section, a pulley fastened at each end of the shaft and each pulley having a strong flexible member connected between it and the top part of the movable section, a tension spring fastened between the shaft and the top part of the fixed section and means fastened to a part of the movable section for applying force thereto to bring about the positioning of the movable section.



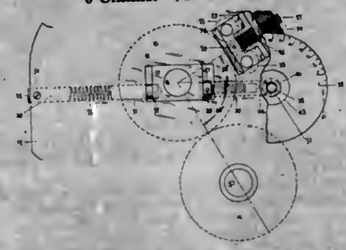
2,473,240
PARALLEL PLATE CAPACITOR
John F. Byrne, Columbus, Ohio, assignor to General Electric Company, a corporation of New York
Application October 1, 1946, Serial No. 700,534
1 Claim. (Cl. 175—41)

In an electric capacitor, a plurality of spaced and identical conducting plates, each of said plates containing a plurality of projections and an equal number of openings, each of said projections comprising a hollow protrusion extending beyond the surface of one face of a plate and defining a depression in the opposite face thereof, said protrusions on alternate plates of a given polarity extending through said openings in adjacent plates of opposite polarity and engaging said depressions in alternate plates, and means for maintaining said plates as an assembled unit comprising the two insulating side walls of a case, each of said side walls being parallel to and the inside surfaces thereof in slidable contact with the outside face of one of the end conducting plates of the assembly and containing grooves for slidably accommodating the protrusions extending through the openings in the adjacent end conducting plate.



2,473,241
SPARKING PLUG
Charles Molyneux Carington and George William Shoobert, London, England, assignors to K. L. G. Sparking Plugs Limited, London, England, a British company
Application November 29, 1944, Serial No. 565,585
In Great Britain August 17, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires August 17, 1963
5 Claims. (Cl. 123—169)

2. In a sparking-plug, the combination of a body formed with an internal shoulder, a ceramic insulator having an enlargement between its ends engaging said shoulder, a nut clamping said insulator against said shoulder, a screening tube rigidly secured on said nut surrounding but spaced radially from the end of said insulator, an electrode rigidly secured in said insulator, and projecting from the end thereof, a hollow barrel-shaped member engaging the inner surface of said screening tube, an inturned flange on said member, a washer threaded on the end of said electrode engaging the end of the insulator, a spring washer engaging said first-mentioned washer on one side and engaging said inturned



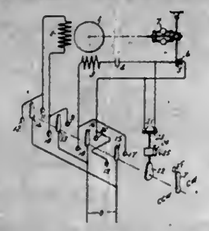
flange on the other side, and a third washer secured on said electrode pressing said inturned flange against said spring washer.

2,473,242
HEAT-RESISTING CAPACITOR
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application April 26, 1945, Serial No. 590,371
4 Claims. (Cl. 175—41)

2. An electric capacitor comprising the combination of an hermetically sealed container, and cooperating capacitor members therein including a dielectric composition consisting of mineral oil containing by weight about 0.5 per cent beta naphthol.

2,473,243
COATING MACHINE FOR FLEXIBLE SHEET MATERIALS
Joseph Ettl, Brooklyn, N. Y., assignor to Rogers Industries, Inc., New York, N. Y., a corporation
Application July 3, 1946, Serial No. 681,376
6 Claims. (Cl. 91—50)

1. In a gluing or coating machine, the combination with a receptacle for adhesive, a supply roller rotatably mounted in said receptacle with the supporting bearings thereof sealed while immersed



in said adhesive, a coating roller rotatably mounted in bearings above the level of adhesive in said receptacle, said coating roller being parallel to the axis of said supply roller, the lower face of said coating roller being above the upper surface of said adhesive, said coating roller being slidably mounted for movement to and from said supply roller while being out of contact with said adhesive, lockable dial adjustment means for movement of said coating roller, material feed rollers positioned above the horizontal center line of said coating roller and being movable relative to said coating roller, said feed rollers being in set position during operation of said machine, whereby a single adjustment of said coating roller causes movement of said coating roller to or from both said supply roller and said feed rollers simultaneously, the axes of said supply roller and said feeding rollers being positioned on the same side of a vertical plane passing through the axis of said coating roller.

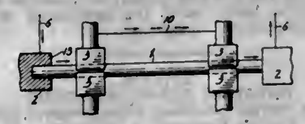
2,473,244

DYNAMOELECTRIC MACHINE

Roger A. Fuller, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application December 28, 1945, Serial No. 637,673
6 Claims. (Cl. 318—207)

1. An induction motor having a rotatable member with a rotor winding, a running field exciting winding and a starting field exciting winding, means including a circuit breaker responsive to the speed of said rotatable member for opening and closing the circuit of said starting field exciting winding dependent on the rotatable member speed, means for energizing said running field exciting winding, means for connecting said starting field exciting winding for energization in opposite directions, a mechanical time delay means mechanically connected to said last named means and operable thereby for rendering ineffective the effects of said speed responsive circuit breaker for a predetermined time on connection of said starting field exciting winding for energization in either direction whereby said rotatable member may be stopped and restarted in either direction.



2,473,245

FORGING OR UPSETTING OF METAL RODS OR BARS USING ELECTRIC RESISTANCE HEATING

Merrill Oliver Hanna, Darebin, Victoria, Australia

Application May 2, 1946, Serial No. 666,581
In Australia May 26, 1945
4 Claims. (Cl. 219—3)

1. A method of manufacturing spanners or double-ended articles or tools which consists in heating the opposite end portions of a metal rod or bar to forging temperature by passing a heavy current of low voltage through said end portions, applying endwise pressure to the metal rod or bar to cause the metal at such heated ends to flow or be upset to form substantially bulbous portions which subsequently form the enlarged ends of the spanner or tool, giving the central portion of the rod or bar a preliminary

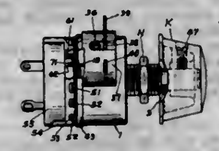
heating, not sufficient to bring it to a plastic state, during the time the end portions are being heated and upset by causing a portion of the current to leak or pass through said central portion, and finally passing current through the full length of the rod or bar to heat the whole of said rod or bar to forging temperature.

2,473,246

ADJUSTABLE RESISTOR OF THE TUBULAR TYPE

Donald F. Hastings, Fair Lawn, and Robert H. Winkler, Maplewood, N. J., assignors to Hardwick-Hindle, Inc., Newark, N. J.

Application November 7, 1945, Serial No. 627,138
8 Claims. (Cl. 201—56)



1. A resistor construction including, in combination with a tubular type resistor having a contact track along the length thereof, a band encircling the resistor with means for holding the band in an operative position on the resistor, said band having a pair of spaced outwardly extending lugs, the lugs having perforations therein and a roller mounted between the lugs by parts positioned in said perforations so the roller will engage and roll on said contact track.

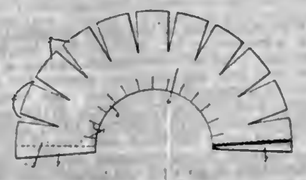
2,473,247

ELECTRICAL RHEOSTAT DEVICE

Donald Francis Hastings, Fair Lawn, N. J., assignor to Hardwick, Hindle, Inc., Newark, N. J.

Application February 23, 1946, Serial No. 649,589
9 Claims. (Cl. 201—48)

1. An electrical control structure including, a cup shaped casing with a section portion removed from the wall of the cup, a ring-shaped unit having a resistance winding fitting within the cup and having an insulating block carrying terminals fastened to the unit and connected to opposite ends of the winding and forming part thereof, the block spanning over opposite exterior edges of said sector portion, a cover for holding



said unit in the casing with means for holding the cover to the casing, a bearing carried by the cup, an operating shaft carried by the bearing, an electrical contact member insulatingly carried by the shaft and having parts co-operative with parts of the resistance unit including a contact track thereon for completing a circuit to said terminals, said resistance unit having an interiorly positioned band-type collector ring with an inwardly projecting flange forming an electrical contact track for parts on said contact member carried by the shaft, a strip of insulating material formed as a band has a resistance winding thereon with a band of insulating material preferably wider than the width of the winding and located between the winding and the collector ring.

2,473,248

COMMUTATOR CONE INSULATOR AND METHOD OF MAKING THE SAME

Emil M. Hausheer, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application December 1, 1944, Serial No. 566,135
6 Claims. (Cl. 171—321)

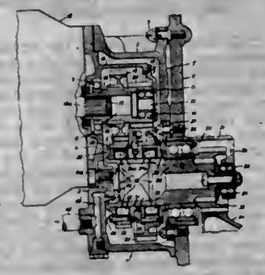
1. A commutator cone insulator formed of superposed layers of insulating material having an unslotted central frusto-conical portion, and a multi-slotted end flange portion on each end thereof extending generally in the opposite direction to the adjacent part of said central portion and at an angle thereto, said slotted end flange portions having the characteristics of flanges having been formed into continuous flanges of substantially uniform thickness.

2,473,249

ANTISKID CROSS STRIP

Bernard Hershman, Pittsburgh, Pa.

Application May 11, 1946, Serial No. 669,116
3 Claims. (Cl. 152—222)



1. A cross-strip for an anti-skid chain for a vehicle tire comprising a flexible metallic band having a plurality of internally threaded bushings extending therethrough and integrally formed with the band, a coating of flexible material on both surfaces of said band and having apertures registering with said bushings which apertures are counterbored adjacent the tire-bearing surface of said flexible material, a plurality of screw threaded studs screw threaded to said bushings and having head portions fitting into the counterbored portions and having end portions of progressively reduced cross-section compared to the shanks of the studs extending above the opposite surface of said flexible material.

2,473,250

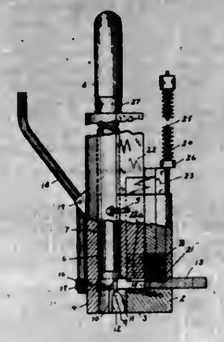
DUAL RATIO GEARING

Herbert N. Hoffman, Wakefield, Mass., assignor to General Electric Company, a corporation of New York

Application September 10, 1948, Serial No. 48,648
1 Claim. (Cl. 74—6)

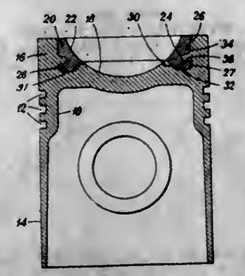
An automatic dual-ratio gearing comprising a first supporting wall having an opening therein, a gear casing having first and second end walls, said first end wall having an opening adapted to receive a first bearing housing, means securing the bearing housing to the casing, bearing means in the bearing housing, a shaft rotatably supported by the bearing means, first and second axially spaced gears having different pitch diameters secured to the shaft, walls defining a second bearing support housing disposed through the opening in the supporting wall and having a flanged portion secured to the wall, second bearing means in said housing, a second shaft rotatably supported by the second bearing means, third and fourth axially spaced gears having different pitch diameters concentric with said second shaft and in mesh with the first and second gears respectively, said second end wall having an opening therein of greater diameter than the larger of said third and fourth gears and concentric with the second shaft whereby the casing may be removed axially, first uni-directional clutch means arranged in cooperative relation between the third gear and the second shaft, second uni-directional clutch means arranged in cooperative relation between the fourth gear and the second shaft and adapted to transmit torque in a direction opposed to the direction of torque transmission of the first clutch means, each of said clutch means being adapted to permit free relative rotation of said shaft and the associated gear in the direction of rotation opposed to the direction of torque transmission of the clutch means, and means for supplying torque to either of said shafts, whereby upon application of torque in a given direction to the first shaft one of the clutch means transmits torque from its associated gear to the second shaft for the transmission of power at a certain speed ratio, whereas upon application of torque to the second shaft the other clutch means transmits torque between its associated gear and the first shaft for the transmission of power at a different speed ratio.

2,473,251
HIGH-FREQUENCY DIELECTRIC HEATING APPARATUS
Eugene T. Hsu, New York, N. Y., assignor to General Electric Company, a corporation of New York
Application May 29, 1945, Serial No. 596,575
2 Claims. (Cl. 219—47)



1. A high frequency heater for drying material impregnated with a vaporizable liquid, two elongated electrodes made of electrically conducting material, electric connections for supplying high frequency current to said electrodes, means for passing the material to be dried between said electrodes whereby said material is heated and the liquid driven off in the form of vapor, an outer tube of electrically insulating material surrounding each of said electrodes, and electrically insulating spacing means for securing each of said outer tubes in spaced relation with its said electrode thereby to protect said electrodes from the vapor driven off from the material and prevent corona discharge and arcing from said electrodes.

2,473,252
PUSH-BUTTON SWITCH
Philip Hutt, Milford, Conn., assignor to General Electric Company, a corporation of New York
Application May 9, 1947, Serial No. 746,911
3 Claims. (Cl. 200—168)



1. An electrical switch comprising a housing having a cylindrical recess in one end thereof and a plurality of substantially rectangular recesses disposed around the side wall of said cylindrical recess and communicating therewith by longitudinal slots, the walls of said housing forming longitudinal ridges between said cylindrical and said rectangular recesses, a plurality of stationary contacts positioned in said recesses, said contacts each having an arcuately shaped end concentrically disposed in said cylindrical recess, each of said contacts further having a portion shaped to fit into and being disposed within one of said rectangular recesses and around the corresponding ridges, whereby said contacts may be assembled on conductor wires and slid into position in said recesses, said rectangular recesses and said ridges forming a guide and support for the insertion and retention in proper position of said stationary contacts, said housing having in its other end an aperture merging with said cylindrical recess, a plunger having one end adapted to project through said aperture with its other end in said cylindrical recess, a frustoconical movable contact mounted on said other end of said plunger for engagement with the arcuate surfaces of said stationary contacts, a plate closing said recesses, and spring means within said housing for pressing said movable contact against said stationary contacts.

2,473,253
STAPLING APPARATUS
Desmond R. La Place, Pittsburgh, Pa., assignor to Bocji Corporation, a corporation of Delaware
Application September 3, 1942, Serial No. 457,165
6 Claims. (Cl. 1—49)

1. In an apparatus of the class described comprising a magazine for holding flat staples in face-to-face relation, the staples having a head portion and two leg portions, means for moving staples horizontally one at a time from the magazine, and means for deflecting the legs of the staple vertically by swinging them about an axis that traverses the head, and means for confining the head in a horizontal position during such operation of moving the staples and bending the legs.

2,473,254
PISTON WITH ANNULAR HEAT DAM IN THE HEAD
Alberto Jorge Morris, Dursley, England, assignor to R. A. Lister & Company Limited, Dursley, England, a British company
Application January 5, 1946, Serial No. 639,234
In Great Britain February 8, 1945
2 Claims. (Cl. 309—9)

1. A piston for an engine of the Diesel type comprising a cylindrical metal body, an imperforate head at one end of and in one piece with the body, said head having a central concavity in the shape of a spherical segment and an annular insert of a high heat conductivity material embedded in the head with its surface exposed so as to border the central concavity, the said insert having an outside diameter less than that of the body and having part of its exposed surface formed as a continuation of the spherical concavity, and said insert having a groove and a rib on its outer periphery interlocking with the material of the head.

2,473,255
PROCESS OF PREPARING MODIFIED PROTEIN
Ivan A. Parfentjev, Nanuet, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 15, 1946, Serial No. 641,403
3 Claims. (Cl. 195—29)

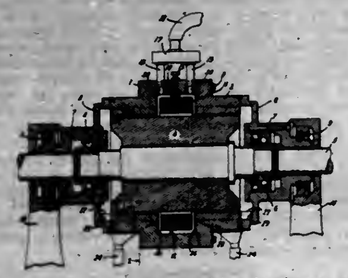
1. A process of preparing protein for alimentation which comprises digesting casein with pepsin at a pH within the range 2 to 8 until a substantial portion of the digested material is water-soluble at pH 4.6, adding ammonium sulfate to an aqueous solution of the water-soluble digested fraction until it contains about 25% to 35% by weight of ammonium sulfate, based on the weight of the digested casein solution, to precipitate a protein fraction, free of antigenicity and specificity separating the precipitated protein from its mother liquor, removing the ammonium sulfate from the precipitated protein by dialysis and redissolving the protein in water.

2,473,256
ELECTRIC CONTROLLER
Charles L. Perry, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 24, 1944, Serial No. 560,159
5 Claims. (Cl. 200—12)

1. In a direct current motor controller having a plurality of motor starting and accelerating contacts and an operating member movable from an off position through a plurality of starting positions to a running position sequentially to actuate said contacts, a circuit breaker for connecting said controller to a source of direct current supply including a movable switch member biased to its open circuit position and a pair of cooperating switch contacts, means actuated by said operating member for moving said switch member to its closed circuit position when said operating member is moved to said off position, magnetic means including a holding coil adapted to be connected across said supply source for holding said switch member in said closed circuit position when said operating member is moved away from said off position, and means responsive to flow of excessive current through said switch contacts for rendering said magnetic means ineffective to hold said switch member, thereby to release said switch member for movement to its open circuit position in accordance with its bias.

2,473,257
DYNAMOELECTRIC MACHINE CONSTRUCTION
Frederick M. Potter, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application August 27, 1946, Serial No. 693,220
3 Claims. (Cl. 171—228)

1. A dynamoelectric machine of the commutator type having a stationary member with a plurality of polar projections, a field exciting winding comprising sets of coils corresponding in number to a predetermined number of poles, each of said sets of coils being formed of a single electrical conductor with all coils of each set connected in series and arranged around certain of said polar projections for providing components of main series excitation by certain of said polar projections and commutating excitation by another of said polar projections, and one coil of each set arranged to excite part of said main series polar projections of the respective set of coils and part of the main series polar projections of an adjacent set of coils for providing a component of compensating excitation.

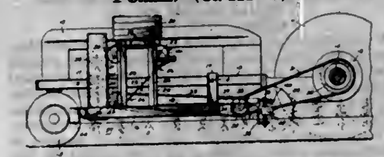


2,473,258
GAS-ARC TORCH
Everett F. Potter, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 20, 1946, Serial No. 717,539
9 Claims. (Cl. 219—15)

1. A gas-arc torch comprising a support, a nozzle body having one end mounted on and forming a gas-tight connection with said support and having therein a seating surface tapering toward its other end, a nozzle tip extending through and beyond said nozzle body and having a discharge opening in its projecting outer end and at its inner end a seating surface nesting within and tapered to form a gas-tight connection with the

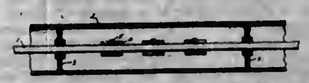
tapered seating surface of said nozzle body, means within said nozzle body and engaging said support and the inner end portion of said nozzle tip for holding said nozzle tip and said nozzle body in assembled relationship with said tapered seating surfaces nesting one within the other and said nozzle tip extending through and beyond said nozzle body, an electrode holder within said nozzle body and said nozzle tip and having jaw members which positions an electrode lengthwise of said nozzle tip with its arcing terminal extending through said discharge opening at its outer end, means for mounting said electrode holder on said support and for supplying electricity to said jaw members, and means for supplying gas to said nozzle body.

2,473,259
DYNAMOELECTRIC MACHINE
Phil S. Potts, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application January 9, 1946, Serial No. 639,987
11 Claims. (Cl. 188—104)



1. A dynamoelectric machine having a relatively stationary member with a core of magnetic material and a relatively rotatable member with a core of magnetic material arranged with an air gap between said cores, means including a field exciting winding for magnetically exciting said cores, longitudinally extending teeth with slots therebetween in the inner peripheral surface of the magnetic material of said stationary member core, means for supplying cooling fluid into said air gap onto said rotatable member for passage to the ends of the machine, means including an end shield on each end of said stationary member for substantially preventing passage of cooling fluid out of the ends of the machine, means including drain passages for draining cooling fluid from the lower part of said machine, and means including a fluid scoop member having curved sides wider at the top than at the base and arranged in spaces between each of said end shields and said stationary member core and substantially at the height of said teeth for guiding cooling fluid from said end shield into said drain passages.

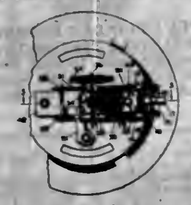
2,473,260
PREPARATION OF TETRAMETHYL SILICATE
Eugene G. Rochow, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application June 26, 1946, Serial No. 679,562
10 Claims. (Cl. 260—448.8)



1. The method of preparing tetramethyl silicate which comprises heating a mixture comprising silicon and methyl alcohol in the presence of a compound selected from the class consisting of copper, oxides of copper, hydroxides of copper, copper halides, copper salts of aliphatic acids, copper carbonates, copper hydroxide, copper cyanide, and mixtures thereof.

2,473,261
TRANSPLANTER
Guy P. Ruhl, Frostproof, Fla.
Application June 4, 1945, Serial No. 597,439
1 Claim. (Cl. 111—3)

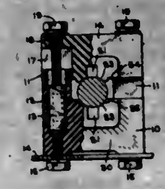
An automatic transplanter comprising a vehicle having ground engaging wheels, a frame secured to said vehicle and extending longitudinally thereof, a platform carried by said frame for supporting an operator, an endless conveyor having a substantially vertical portion disposed adjacent the forward end of said frame and a substantially horizontal longitudinally disposed portion located at a height convenient to an operator standing on said platform, a plurality of laterally disposed cleats secured to said conveyor and providing spaces therebetween for the reception of plants one in each space, a substantially vertical guide chute substantially enclosing said vertical portion in close proximity to said cleats, said chute terminating below said frame and in spaced relation to the ground whereby plants will be retained in said spaces during downward movement of said conveyor and uniformly disposed on the ground with the axis of said plants disposed laterally on the path of movement of said vehicle, a ground leveling and smoothing member secured to the forward end of said frame in advance of and a predetermined distance below said chute to facilitate the uniform deposition of plants on the ground, a relatively thin planting wheel yieldably secured to said frame adjacent the rear end thereof and having a smooth peripheral surface constructed and arranged to engage and press the stems of said plants a substantial distance into the ground thereby facilitating proper rooting thereof, and means to drive said conveyor.



2,473,262
WIDE BAND HIGH-FREQUENCY TRANSMISSION LINE
Marvel W. Scheldorf, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 1, 1945, Serial No. 626,137
4 Claims. (Cl. 178—44)

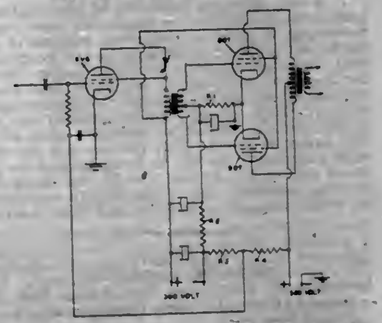
1. A coaxial transmission line adapted for operation over a wide band of high frequencies comprising a tubular outer conductor and an inner conductor, a plurality of insulators spaced at regulator intervals throughout said line, said insulators providing a plurality of reflection points each causing reflection of the same amount of

energy and also causing an undesired energy loss at said frequencies, the spacing between adjacent insulators being adequate for mechanical support of said inner conductor but substantially greater than that which provides sufficiently reflectionless transmission for operation over said wide band, and a plurality of discrete short sections of said line regularly interspersed with said insulators each providing substantially reduced spacing between said conductors, each of said sections being arranged to provide an additional reflection of the same amount of energy as each insulator but negligible energy loss, the distance between adjacent reflection points throughout said line being short enough to provide sufficiently reflectionless transmission for operation over said wide band.



2,473,263
ELECTRIC SWITCH
Robert E. Smith, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application November 12, 1947, Serial No. 785,234
2 Claims. (Cl. 200—6)

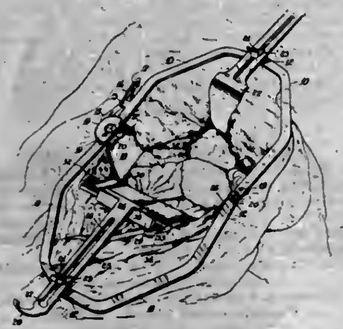
1. An electric switch comprising a pair of spaced parallel plates joined along one pair of edges by a bridging member thereby forming a U-shaped support, a first pair of aligned apertures in said plates adjacent said bridging member whereby said apertures form pivot points adjacent to the mounting surface of the switch and stop surfaces for a U-shaped actuating member, a second pair of aligned apertures in said plates near the opposite edges thereof forming two bearing surfaces, a U-shaped actuating member having one of its arms of the same width as said first apertures and extending through the same for pivotal motion therein adjacent to the mounting surface of the switch and with bearing surface on said bridging member and its other arm extending around one of said plates, a U-shaped actuated member positioned between said plates and having projections extending into said second apertures for pivotal motion therein, one of said projections having contact means secured thereto, and spring means connecting said actuating and actuated members.



2,473,264
SUPPORT FOR ELECTRIC CONDUCTORS
Arthur Harry Stevens and Geoffrey Arthur Stevens, Wednesbury, England, assignors to The Power Centre Company Limited, Wednesbury, England
Application May 15, 1946, Serial No. 669,760
In Great Britain May 20, 1945
1 Claim. (Cl. 174—157)

A support for electric conductors comprising a block and a cap forming conductor-gripping members, the block having end portions in each of which is a cavity, the cap having end portions of channel form the sides of the channels engaging the outer surfaces of the sides of the end portions of the block, a nut housed in each said cavity, screws extending through the end portions of said block and engaging one end of each nut, and further screws extending through the end portions of said cap and engaging the opposite end of each nut, said block and said cap having conductor engaging surfaces, the conductor engaging surface of said block being formed as a substantially rectangular slot the outer sides of which form two diverging surfaces whose outer

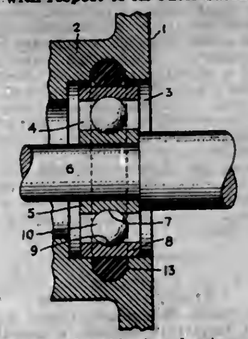
edges terminate in upwardly directed right-angle steps, the conductor-engaging surfaces of the cap being formed as a substantially rectangular slot the outer sides of which form two diverging surfaces whose outer edges terminate in right-angle shoulders adapted to fit within the aforementioned steps whereby conductors of different sizes and cross-section may be positively located between the cap and the block, and may be positively located during assembly of said support.



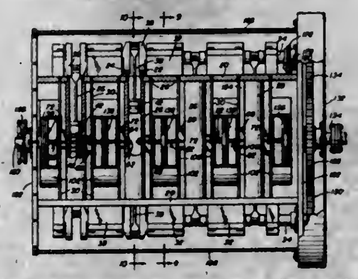
2,473,265
AUDIO-FREQUENCY AMPLIFIER
Eric Watkinson, Hinders Park, South Australia, Australia, Andre Willem Storm, Eindhoven, Netherlands, and Charles Gordon Smith, Sydney, New South Wales, Australia, assignors to Hartford National Bank & Trust Company, Hartford, Conn., as trustee
Application December 4, 1946, Serial No. 714,074
In Australia August 28, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires August 28, 1965
6 Claims. (Cl. 179—171)

1. An audio-frequency amplifier comprising a driver stage having a first electron discharge tube having an anode, a control grid and a cathode, an output stage coupled to said driver stage and having a second electron discharge tube having an anode, a control grid and a cathode, a first direct potential supply, a second direct potential supply, a resistance network connected across said second potential supply, means to apply the

output potential of said first potential supply across the grid and cathode of said first electron discharge tube in series with a portion of said resistance network, means to apply the output potential of said second potential supply across the anode and cathode of said second electron discharge tube, means to connect said resistance network to the grid of said first electron discharge tube, and means to connect said resistance network to the grid of said second electron discharge tube thereby to apply negative bias voltages to the grids of said first and said second electron discharge tubes at values and in series at which a change in the potential of either of said potential supplies will vary the bias voltage applied to the grid of said first electron discharge tube to vary the anode current thereof and vary the grid bias of said second electron discharge tube to maintain the power output of said amplifier substantially constant.



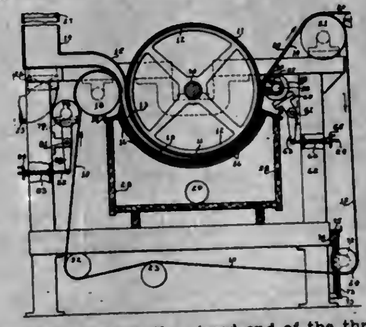
2,473,266
SELF-RETAINING ABDOMINAL RETRACTOR
David J. Wexler, Islip Terrace, N. Y.
Application June 12, 1946, Serial No. 676,143
8 Claims. (Cl. 128—20)



1. A self retaining retractor of the character described, comprising an adjustable open frame consisting of pivotally connected sections of flat stock and a clamp applicable to any portion of said sections to support interchangeable retractor blades at any position and angle, said clamp comprising an upright body portion having laterally projecting spaced lips to embrace top and bottom sides of the frame section, a lever pivotally mounted on said body portion and provided with a clamping portion to move against the exposed side of the section and fix the clamp and section together, and a universally adjustable retractor support carried by said body portion.

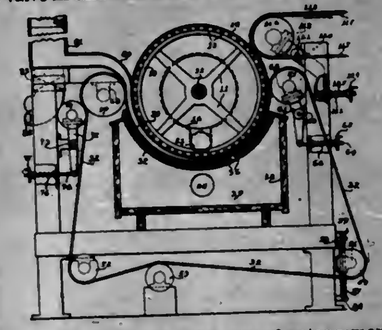
2,473,267
BEARING MOUNTING
Lawrance W. Wightman, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application August 21, 1946, Serial No. 45,453
5 Claims. (Cl. 308—236)

1. In combination, a bearing housing having a bearing-receiving recess formed therein and an annular groove formed in the circumferential wall of said recess, a bearing positioned in said recess, and an annular ring of resilient material seated in said groove and engaging the outer surface of said bearing for cushioning said bearing, said resilient ring having its inner surface eccentric with respect to its outer surface whereby the section of said ring having maximum thickness forces said bearing against said wall.



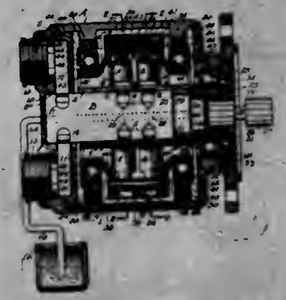
2,473,268
MULTIPLE CYLINDER ENGINE OF THE MULTIPLE PISTON TYPE
David Adams, Detroit, Mich.
Application January 16, 1948, Serial No. 2,687
8 Claims. (Cl. 123—51)

5. A multiple cylinder engine of the multiple piston type which includes a group of spaced parallel cylinders, a crank shaft adjacent each side of the group of cylinders, said crank shafts being rotatable about axes which lie in spaced parallel relation and intersect the longitudinal axes of the cylinders, aligned valves opening into adjacent cylinders and being movable along an axis which lies parallel to the axes about which the crank shafts rotate, a cam shaft rotatable intermediate the ends of the cylinders about an axis which lies parallel to the axes about which the crank shafts rotate, a disk mounted on the cam shaft between each pair of cylinders, said disks intersecting the axes along which the valves operate and a cam on each face of each disk for engaging an adjacent valve and moving it to open position.



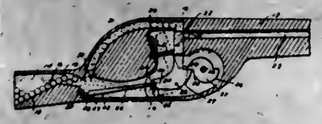
2,473,269
PAPERMAKING MACHINE
Charles S. Adams, Holden, Mass., assignor to Rice Barton Corporation, Worcester, Mass., a corporation of Massachusetts
Application September 2, 1944, Serial No. 552,508
6 Claims. (Cl. 92—43)

1. A paper making machine comprising a moving, endless, pervious, fine mesh screen wire arranged for the formation thereon of a paper web deposited from an aqueous suspension of paper pulp stock, a traveling wall located only above and opposed to the wire in a relatively fixed relationship which is impervious and non-receptive to the paper stock, means for movably supporting the wall, a fixed support which predetermines the configuration of the wire and provides for the passage of water therethrough, side walls adjacent to the edges of the wire, said wire and walls forming a gradually tapering throat of fixed and predetermined shape which converges from a wide stock entrance to a closed end where the paper web on the wire contacts with the traveling wall, controllable driving mechanism for moving both the wire and the traveling wall at the same rate towards the closed end of the throat without disturbing the throat shape, means for removing the water that has passed through the wire, and regulatable means including a conduit that makes a substantially water-tight connection with said entrance for maintaining the throat filled with an aqueous paper stock suspension under a controlled hydraulic head which determines the rates of water removal and paper formation, the throat providing for the progressive concentration of a suspension of pulp fibres and the formation of a paper web on the wire by the forced removal of the water during the period of travel of a portion of the wire and the associated pulp from the entrance to the closed end of the throat.



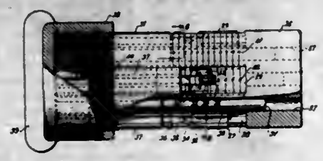
2,473,270
CYLINDER MOLD PAPERMAKING MACHINE
Charles S. Adams, Holden, Mass., assignor to Rice Barton Corporation, Worcester, Mass., a corporation of Massachusetts
Application September 2, 1944, Serial No. 552,509
2 Claims. (Cl. 92—43)

1. A cylinder mold paper making machine comprising a rotatable hollow cylinder mold having a pervious, fine mesh wire screen surface arranged for the formation thereon of a paper web deposited from an aqueous suspension of paper pulp stock, means for removing water from the mold interior, means including an endless, impervious, traveling wall beneath and spaced from the mold periphery which forms therewith an arcuate tapering throat of fixed configuration converging from a wide stock entrance to a closed end where the paper on the wire contacts with the wall, an adjustable support for said wall located beneath the mold which predetermines the shape of said wall and the size of the throat, controllable driving mechanism for moving the cylinder periphery and the wall towards the closed end of the throat at the same rate, regulatable means including a conduit having a substantially water-tight connection with the wide end of the throat for supplying an aqueous pulp suspension and maintaining the throat filled under a predetermined hydraulic pressure in the throat, means including a valve in said conduit for varying said hydraulic pressure and governing the rates of water removal and the formation of a paper web which causes the pulp suspension to move beneath the mold as a substantially quiescent body at about the same rate as that of the cylinder periphery while the water is removed upwardly through the cylinder mold wall, and means for removing the paper web from the mold outside of the throat.



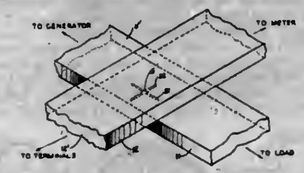
2,473,271
HYDRAULIC PUMP OR MOTOR
Elek K. Benedek, Chicago, Ill.
Application September 30, 1944, Serial No. 556,593
22 Claims. (Cl. 103—161)

1. In a rotary radial piston and cylinder pump or motor, a rotor; reactance means including a rotatable reactance ring and means mounting said reactance ring to rotate about an axis eccentric to the axis of rotation of said rotor; a set of radial cylinder members; a set of cooperating piston members, one of said sets being on and rotatable with said rotor and the other of said sets being operatively connected to said reactance ring for being reciprocated relatively to the respectively associated members of said other set during concurrent rotation of said ring and said rotor; and connections between the individual reciprocable members and said reactance ring comprising roller means for transmitting radial thrust between the reactance ring and the re-



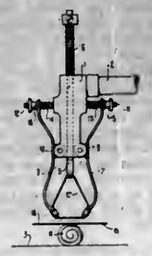
ciprocable member and a pin and slot connection for rotating said reactance ring in response to rotation of said rotor and said cylinder and piston members, the slot of said pin and slot connections having closed ends engageable by the pin of said pin and slot connection and extending arcuately and concentrically with respect to said reactance ring.

2,473,272
TOY MACHINE GUN
William O. Blake, Newport, Wash.
Application November 18, 1944, Serial No. 564,080
2 Claims. (Cl. 124—27)



1. In a toy gun, a projectile feeding and projecting assembly including a magazine, a spring biased pivoted lever having a hammer end, a projectile-receiving recess at the breech end of the bore of a gun barrel, a chute communicating with said magazine and proportioned to receive a single row of projectiles, a second lever actuated by said spring biased lever for singly transferring said projectiles from said magazine into one end of said chute, the other end of said chute communicating with said recess to singly deliver projectiles when said hammer end is retracted from said recess, and means for intermittently retracting said spring biased lever.

2,473,273
ADJUSTABLE KEY FOR USE WITH LOCKS IN WHICH THE TUMBLERS ARE MOVABLE PARALLEL TO THE AXIS OF THE PLUG
Carlos Jaramillo Borda, San Jose, Costa Rica
Application April 2, 1948, Serial No. 18,668
5 Claims. (Cl. 70—411)

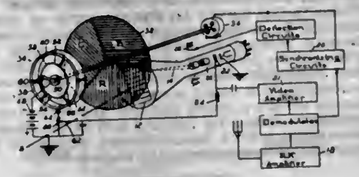


1. An adjustable key for use in locks of the type in which a plurality of tumblers extend parallel to the axis of the plug, said key comprising a body member defining a plurality of parallel passages extending inwardly from one end thereof, said passages being arranged for axial alignment with corresponding tumblers of the plug of the lock with which the key is to be used, channels in the side walls of said body member extending inwardly to said passages, blocks slidable in said channels and having pins which extend into said passages for engagement at their forward ends with tumblers of the lock, and laterally expandable clamps carried by said blocks for clamping engagement with the walls of said channels to prevent movement of said blocks and pins relative to said body member.

2,473,274
ULTRA HIGH FREQUENCY COUPLING
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 15, 1944, Serial No. 549,617
9 Claims. (Cl. 178—44)

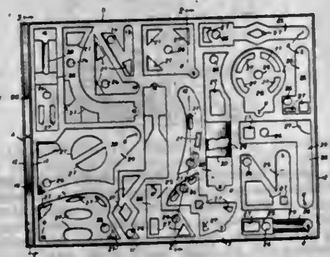
1. In an ultra high frequency system, a first wave guide, a second wave guide having its axis at right angles to said first wave guide, and a pair of coupling slots, perpendicular to and bisecting each other in each of said wave guides, the slots in one guide being juxtaposed on the slots of the other.

2,473,275
MACHINE FOR APPLYING BANDS TO CIGARS
Hubert Emile Brouns, Eindhoven, Netherlands, assignor to N. V. Vereenigde Tabaksindustrieen Mignot & De Block, Eindhoven, Netherlands, a company of the Netherlands
Application January 7, 1948, Serial No. 1,043
In the Netherlands January 31, 1947
2 Claims. (Cl. 216—39)



1. An apparatus for applying at least one band to a cigar and holding said band while, one end thereof is folded upon the other, characterized by a holder, three spring loaded stretcher members movably attached to said holder, and an endless flexible folding band passing round the free ends of said stretcher members, in such a manner, that said band is kept stretched in the form of a triangle, the base of which, during movement of the holder towards the cigar, can be tightly folded around said cigar.

2,473,276
COLOR TELEVISION SYSTEM
Thornton W. Chew, Washington, D. C.
Application May 23, 1946, Serial No. 671,689
7 Claims. (Cl. 178—5.4)

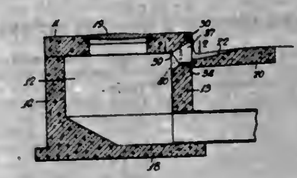


1. In a color television receiving system provided with a cathode ray tube having an image modulated electron beam, and an image screen, means cooperating with said screen for sequentially selecting partial images of different primary color components, and means for varying

the intensity of color of said partial images comprising a direct current potential source, means for deriving a potential from said source for each color component, and means controlled synchro-

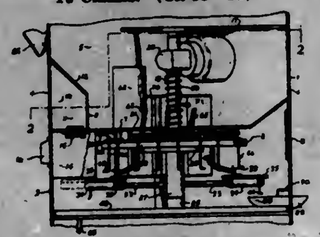
nously by said image selecting means for sequentially directly varying the average beam energy with said derived potentials to secure a variation in the intensity of color of said partial images.

2,473,277
MINIATURE-GOLF GAME BOARD
John Cipyak, Lansford, Pa., assignor of seventeen and one-half per cent to Margaret Cipyak, seventeen and one-half per cent to Tekla Cipyak, seventeen and one-half per cent to Francis E. Sterner, and seventeen and one-half per cent to Anna V. Sterner, all of Lansford, Pa.
Application January 10, 1947, Serial No. 721,247
3 Claims. (Cl. 273—116)



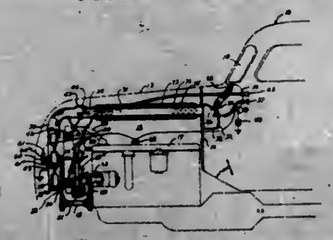
1. A miniature-golf game board comprising a rectangular tray, a plurality of only two spaced horizontal decks rigidly supported one above the other within said tray between the top and bottom of the latter, said decks extending the full width of the tray and from one end of the latter to a point adjacent but spaced from the other end thereof, a vertical wall dividing the spaces above and below said decks from the space at said other end of the tray, and strips dividing the latter space into two separate collection chambers for spherical game pieces, said vertical wall having superposed exit openings therein near one end for passage of game pieces from the spaces beneath the respective decks to the respective collection chambers, the upper deck having a plurality of depressed areas simulating the sections of a golf course and being provided with a cup simulating opening and a trap simulating opening in each depressed area, and means to conduct game pieces from certain of said openings through the lower deck.

2,473,278
HYGROSCOPIC DISK
Ben Cones, Indianapolis, Ind.
Original application February 2, 1944, Serial No. 520,611. Divided and this application June 15, 1945, Serial No. 599,595
1 Claim. (Cl. 297—1)



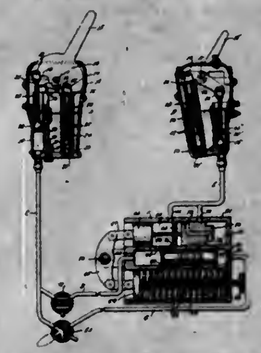
A structure of the character described comprising a ring substantially non-responsive to humidity and having an annular cut-away portion at one side to define a shoulder and provided at its opposite side with an annular lip having a beveled inner surface, a pair of concavo convex shaped expansion discs disposed within the ring and having their concaved sides opposed, a compression spring interposed between the central portions of the discs and impinging thereagainst, a second ring of less diameter than the first adapted to be set within the first ring and on said shoulder, said second ring having an inwardly disposed annular lip at its outer side formed with a beveled inner surface, said discs at their peripheral portions being adapted to abut said beveled faces of said lips by the force of the spring.

2,473,279
CURB INLET CASTING
De Witt Saxton Crocker, New York, N. Y.
Application June 14, 1945, Serial No. 599,415
4 Claims. (Cl. 182—6)



1. An inlet casting comprising, a base, end walls extending upwardly from the ends and transversely of the length of the base to form the end walls of the casting, the outer faces of said end walls forming the end faces of the casting, spaced apart partition walls extending upwardly from the base transversely of its length to define a plurality of passageways intermediate the end walls to drain water from the road gutter into a basin beneath the sidewalk, a flange extending upwardly from and connecting the upper ends of said partition walls and end walls, the height of the flange being substantially greater than the thickness of the base, the front faces of the partition and end walls and the base being in a common plane and defining the front face of the casting, vertical lugs extending laterally outwardly from the end faces of the casting, the lugs being located to the rear of and below said flange and above the base whereby the concrete can be poured for the basin and the sidewalk by first pouring the basin to a level which is intermediate the top and bottom of the lugs and thereafter pouring the sidewalk slabs to that level.

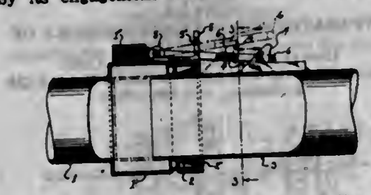
2,473,280
AUTOMATIC PHOTOGRAPHING AND DEVELOPING APPARATUS
Rodger William Dart, Essendale, British Columbia, and Sydney Jenkins, Vancouver, British Columbia, Canada, assignors to International Mutoscope Corporation, Long Island City, N. Y., a corporation
Application April 4, 1946, Serial No. 659,520
16 Claims. (Cl. 95—14)



1. In a photographic machine of the class described, a table with an arm adapted to be rotated about a vertical axis for the exposure and development of a sensitized photographic plate, a tray tiltably carried by said arm and adapted to receive a sensitized plate, a stationary disk in face-to-face engagement with the table, said disk having a plurality of liquid ports arranged concentrically of the rotary axis of said table, each port communicating with a source of liquid, said table having a conduit in liquid-delivery relation with the tray moving into registry with successive ports of the disk as the table rotates for the delivery of the respective liquids into said tray.

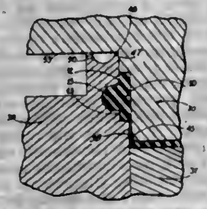
2,473,281
VENTILATING AND HEATING APPARATUS FOR VEHICLES
Howard J. Findley, Chardon, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application March 15, 1945, Serial No. 582,977
6 Claims. (Cl. 237—2)

1. In conditioning apparatus for a vehicle having a passenger compartment and a driving engine, the latter being provided with an auxiliary power take-off and a cooling radiator having numerous openings for a flow of air therethrough in heat-exchange relation thereto, a hollow structure connected with said radiator so as to define a passage for the air which passes through the radiator, said structure including a substantially segment-shaped housing portion in front of the radiator and an outlet housing portion at the rear of the radiator, a conduit extending from said structure to said compartment and opening into the latter, said conduit having cold and warm air inlet connections with said segment-shaped housing portion and said outlet housing portion respectively, air impelling means connected with said power take-off and operable to cause air to flow through said radiator and through said conduit, said impelling means including a fan having an annular series of blades adapted to sweep through said segment-shaped housing portion, an outlet for discharging air delivered by said impelling means in excess of that needed for said compartment, valve means controlling said outlet, a spring biasing said valve means toward a closed position, and temperature responsive means for opening said valve means in accordance with a predetermined change in the operating temperature of the engine.



2,473,282
LIQUID CONTROL GEAR
Carl G. Hebel, Weehawken, N. J., and Robert H. Wallace, Central Nyack, N. Y., assignors to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application March 7, 1944, Serial No. 525,344
9 Claims. (Cl. 60—54.5)

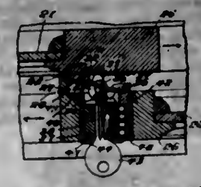
1. In a hydraulic remote control system, in combination, a transmitting station, a receiving station, a main force transferring connection between said stations, an auxiliary force transferring connection between said stations normally disconnected at both ends from said stations, means responsive to breaking of said main connection, and means actuated by said responsive means for connecting said auxiliary connection to said stations.



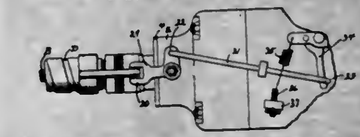
2,473,283
COUPLING PIPE
Harvey O. Guenthner, Antigo, Wis.
Application March 24, 1947, Serial No. 736,815
1 Claim. (Cl. 285—172)

A coupling comprising male and female pipe sections adapted to be in telescopic union, the female pipe section having an enlarged head provided with a down turned flange engaging the male pipe section, a link pivoted to the pipe head, the same terminating with a transversely disposed releasing cam web carried by the link rearwardly of its locking stretch and adjacent the pipe head flange, a tapered nose tooth carried by the male pipe section and projecting through the link between its cam web and locking stretch, when the pipe sections are coupled together, the pipe sections being uncoupled by a further inward movement of the male pipe section, whereby the inclined pipe face of the tooth engages the cam web to lift the link from its locking engagement with the tooth, the inner locking movement of said tooth being limited by its engagement with the head flange and

thereafter the coupling connection of the pipe sections is freed by a partial relevant rotation of one of said pipe sections, whereby the tooth nose rides transversely upon the link cam web to clear it from said link prior to withdrawing the pipe members from each other.



2,473,284
APPARATUS FOR MOLDING SEALING RINGS
Harold J. Knagge, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application July 24, 1945, Serial No. 607,221
1 Claim. (Cl. 18—42)



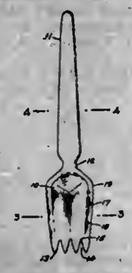
In apparatus of the class described, telescoping male and female die members, said die members having an annular region of very small clearance therebetween when telescoped together and another annular region of greater clearance axially spaced therefrom, an annular die cavity disposed between said clearance regions and formed partially in each of said die members to provide a mold for a ring-like sealing member with a sealing surface, that portion of said cavity that forms the boundary of the sealing surface comprising a groove lying entirely in one of said die members and having a smooth wall unbroken by joints in the die, a charge space in one of said die members to receive a charge of material to be formed in said cavity, said charge space being in communication with said die cavity via said annular region of greater clearance, said die members acting when telescoped to force the material into the die cavity through said region of greater clearance and simultaneously force gas out of said die cavity through said region of very small clearance.

2,473,285
SLIDING DOOR LOCK
William H. Keeser, Two Rivers, Wis.
Application May 27, 1947, Serial No. 750,767
3 Claims. (Cl. 70—96)

1. In a closure fastener for two overlapped sliding doors, the combination with a strike plate mounted on one door and provided with a socket and a resilient offset flange, of a lock housing mounted on the other door and having a partially rotatable bolt in said housing, means for operating the bolt, a hooked catch carried by said housing and a cam on a protruding end of the bolt engaging said catch to disengage said catch from said socket.

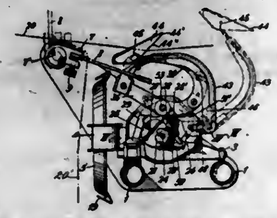
2,473,286
FLEXIBLE SHAFT MACHINE
Arthur W. Mall, Flossmoor, Ill., assignor to Mall Tool Company, Chicago, Ill., a corporation of Illinois
Application April 1, 1946, Serial No. 658,828
4 Claims. (Cl. 318—9)

1. A machine comprising a driving unit comprising a stationary housing portion and a rotatable shaft therein, a flexible shaft unit connected to the driving unit and comprising a flexible casing and a flexible shaft, the flexible shaft being operatively connected to the rotatable shaft of the driving unit, means connecting the flexible casing to the driving unit housing including means fixed with respect to the housing and means rotatable with respect to the housing, the last named means being connected to the flexible casing so that the casing has relative rotary movement with respect to the housing, means for regulating the operation of the driving unit, and means associated with the flexible casing for manipulating the regulating means in response to the movement of the casing.



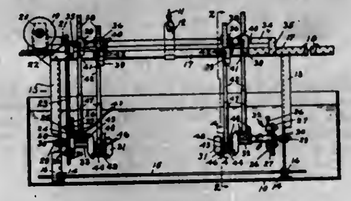
2,473,287
MULTIPLE SWITCH
Francis J. Maloney, Warren, Ohio
Application June 12, 1946, Serial No. 676,162
5 Claims. (Cl. 200—16)

5. In a controller for electric circuits, a shaft, a pair of discs secured to said shaft, an annular carrier journalled on said shaft intermediate said discs, a plurality of circumferentially spaced,



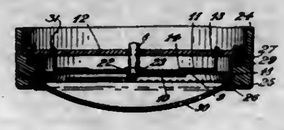
radial notches upon the periphery of said carrier, a plurality of cam inserts selectively engageable with said notches, said inserts defining cam surfaces of predetermined contour extending radially outward from the circumference of said carrier, a pair of rings journalled upon said discs, said rings being secured to opposite sides of said carrier, the radially protruding portions of said inserts defining operating cam surfaces and the periphery of said rings defining cam base circles, said rings being of electrically conductive material and said inserts being of electrically non-conductive material.

2,473,288
COMBINATION TABLE UTENSIL
Albert George McNeill, Philadelphia, Pa., assignor to Bachmann Bros., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application January 12, 1946, Serial No. 640,774
4 Claims. (Cl. 30—147)



1. A table utensil comprising a handle and a bowl, characterized in that the bowl is V shaped in cross section providing a flat spreading surface at one side.

2,473,289
PASSING OF WARP THREADS THROUGH REEDS
Heinrich Meier, Uster, Switzerland, assignor to Zellweger A. G., Apparate- und Maschinenfabriken Uster, Uster, Switzerland
Application April 13, 1945, Serial No. 588,152
In Switzerland April 21, 1944
5 Claims. (Cl. 28—45)

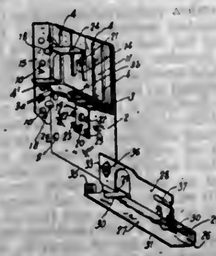


1. In a device for passing warp thread material through a reed having a gap therein, a lower movable reeding member and an upper reeding member, a hook on said lower reeding member for inserting therein the warp thread material to be passed through the gap in said reed by mutual cooperation of said reeding members, a feeler for releasing, by virtue of said operation of inserting said thread material in said hook, said pair of reeding members for passing the said material through said gap, and a prime mover for imparting driving movement to said pair of reeding members.

2,473,290
APPARATUS FOR PLATING JOURNALS OF CRANKSHAFTS
George E. Millard, Berkeley, Calif.
Application October 21, 1944, Serial No. 559,736
3 Claims. (Cl. 204—224)

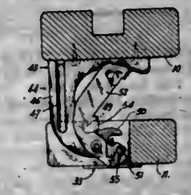
1. Apparatus or electro-plating the main and connecting rod bearing journals of a crankshaft which comprises a tank containing an electro-plating bath in which the crankshaft is submerged; means connecting the crankshaft with a cathode; means for rotating the crankshaft in the electro-plating bath; and an anode means slidingly mounted on and urged toward the journal surface of the crankshaft being plated, said anode means comprising an arcuate shaped anode, having its center portion in one circular path and its side portions bent radially inwardly therefrom at their ends, pivotally interconnected and angularly disposed link means connected at one end to a fixed support and at the other end to the anode and connecting the anode with a source of anode current, non-conductor means slidingly contacting and rubbing the journal surface being plated and supporting the anode in spaced relation thereon, and shielding means at the ends of the anode, extending inwardly toward the journal being plated, and limiting the path of current flow there past.

2,473,291
DIAL MOUNTING
Eric Beecroft Moss, London, England, assignor to S. Smith & Sons (England), Limited, London, England, a company of Great Britain
Application January 2, 1945, Serial No. 571,093
In Great Britain October 12, 1943
3 Claims. (Cl. 58—127)



1. A clock dial comprising a metal plate carrying the hour figures and having at least one tubular rearwardly directed upset portion formed integrally therewith, a resilient metal strip having a portion thereon arranged to contact with the metal dial plate and provided with an aperture for accommodating each tubular upset portion, which latter is turned over on the strip, and the other part of which strip is arranged to be spaced away from the metal dial plate and has its ends bent rearwardly for attachment to a part of the clock.

2,473,292
SPECTACLE CASE
Emanuel Nathan, Maplewood, N. J.
Application February 26, 1948, Serial No. 11,179
4 Claims. (Cl. 206—5)



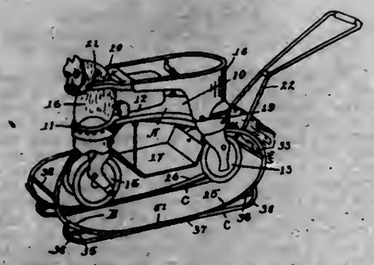
2. A spectacle case comprising a blank of flexible material cut to define front wall and rear wall portions secured together along one longitudinal edge to define a bottom portion, elongated tabs secured to the ends of the front wall portion and adapted to be folded with their ends in overlapping relation on the rear wall portion, to thereby close the ends of the ends of the front and rear wall portions, a spectacle positioning block medially disposed in said case between the front and rear wall portions, and means passing through the front wall, block, rear wall and ends of said tabs, to secure said parts together in assembled relation.

2,473,293
VENETIAN BLIND BRACKET
Harry Nelson, New York, N. Y., assignor to Lorentzen Hardware Mf'g. Corp., New York, N. Y., a corporation of New York
Application October 23, 1945, Serial No. 623,970
12 Claims. (Cl. 248—264)

2. A Venetian blind bracket having a body member formed of a single sheet metal plate having a portion provided with longitudinal stiffening ribs and a longitudinal slider opening, said portion being folded over upon the remainder of the plate and stressed at the bend so that the folded portion contacts the plate with resilient pressure, the terminal part of said folded portion extending away from the plate to form a stiffened horizontal supporting shelf at substantially a right angle to said plate, and a locking element between said folded portion and said plate slidable in said slider opening to lock a Venetian blind head-bar upon said shelf.

2,473,294
VENETIAN BLIND STRUCTURE
Harry Nelson, New York, N. Y., assignor to Lorentzen Hardware Mf'g. Corp., New York, N. Y., a corporation of New York
Application December 20, 1946, Serial No. 717,245
2 Claims. (Cl. 160—177)

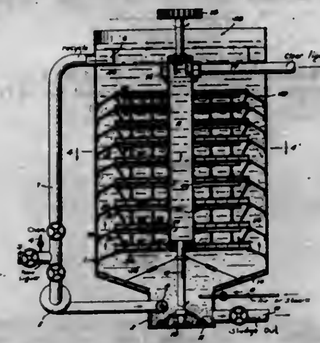
1. For a Venetian blind having a head bar and a tilt bar, a fitting for supporting the tilt bar between its ends, said fitting comprising: a plate to be secured against the undersurface of the head bar, a substantially flat arm rigid with the plate, the arm extending downwardly and forwardly in a vertical plane and terminating in a forwardly-opening bifurcated end spaced vertically from the plate a distance substantially equal to the spacing between the head bar and the axis of rotation of the tilt bar, said arm having an open transverse bearing in the bifurcation adapted to receive a pintle mounted on the axis of rotation of the tilt bar, and a locking lever pivotally mounted on a side of the arm for oscillation in a plane parallel thereto, said lever having a portion adapted to be moved into position projecting across the bifurcation in the end of the arm sufficiently to prevent movement of a pintle from the bearing, an operating portion extending on the opposite side of the pivot and shaped to conform in general outline with the arm, and a projection formed adjacent an edge thereof, overlying the edge of the arm, and adapted to engage the arm to limit the oscillatory movements of the lever.



2,473,295
MINIATURE ANIMAL TOY CAR
Jack N. O'Connor and Stella M. O'Connor, Los Angeles, Calif.
Application July 16, 1945, Serial No. 605,296
2 Claims. (Cl. 280—1.13)

2. A child's vehicle, comprising a platform having a broad rear seat portion, a forward horizontal bearing plate and a connecting neck between said seat and bearing plate, a carrier swiveled upon said bearing plate and having a steering head plate above said bearing plate, rear carrier wheels journaled below and supporting the seat rear portion of the platform, a rear leg pivotally supported below the seat rear portion of the platform outwardly beyond each of said rear wheels, a pin and slot connection be-

tween the inner face of the free end portion of each rear leg and its companion wheel by which reciprocable motion is imparted to the rear leg by the revolution of its connected wheel, and a shield depending from the outer edge of said platform in front of the pivot connections between said rear legs and platform.



2,473,296
MINIATURE ANIMAL TOY CAR
Jack N. O'Connor and Stella M. O'Connor, Los Angeles, Calif.
Application November 13, 1945, Serial No. 628,126
2 Claims. (Cl. 280—6)

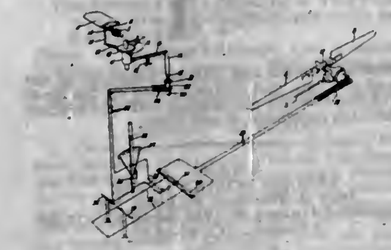
3. In a child's vehicle having a body, a self contained rocker element having a pair of unitary rocker treads, said treads being formed with upward reversely curved and transversely converging supporting loops at their opposite end portions, attaching means separably coupling the upper portions of said loops to the lower side of said body, stops on the lower side of the opposite ends of each tread for limiting rocking motion, and a sled runner detachably secured on the lower side of each of said treads, said runner having a tubular body formed with upward inturned end portions, said body portion being grooved longitudinally on its upper side and adapted to admit and laterally engage the lower body portion of a companion tread, and said inturned end portions having means for clasping said stops to assist in holding the runner longitudinally on the tread.

2,473,297
APPARATUS FOR CLARIFYING LIQUORS
Henry C. Parker, Washington, D. C.
Application April 3, 1945, Serial No. 586,356
14 Claims. (Cl. 210—55)

1. A clear liquor draw-off for clarifiers comprising a tank adapted to hold a liquor to be clarified and equipped with at least one substantially horizontal tray mounted in the body of the tank and partially defining a clarifying zone, with means for introducing a liquor to be clarified at a point outside the confines of said clarifying zone and with means for withdrawing sludge solids therefrom; said draw-off comprising at least one skimming pipe mounted directly beneath said tray and bearing against the underside of said tray, means for moving said pipe beneath said tray, means for holding said pipe against the underside of said tray during its movement, said pipe being provided with an upper longitudinal slot directly adjacent the underside of the tray and facing in the direction of the motion of said pipe so that it comes in contact with and tends to collect a thin quiescent film of clear liquor adjacent the underside of the tray as it is moved along thereunder, and means

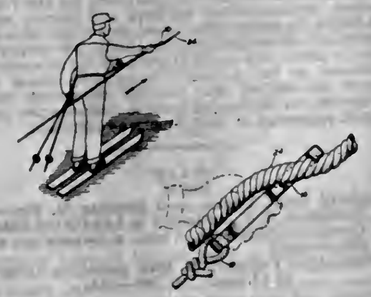
for discharging the so-collected liquor from said pipe.

2,473,298
WINDOW CONSTRUCTION
Edmund Perenal, Bayside, and Henry Weimann, Yonkers, N. Y., assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States
Application February 14, 1946, Serial No. 647,560
4 Claims. (Cl. 292—76)



4. In a window construction of the type having a frame member including vertical jambs having channels for receiving a slidable sash member, a sash member having horizontal upper and lower rails and vertical side rails which latter are slidably mounted in said channels; the improvement which includes a plate member mounted on the upper side of the upper horizontal rail, a screw attaching said plate member to said rail, an arm carried by said plate member and having slidable contact with a face of the adjacent jamb member, and an adjusting screw operatively associated with said plate for adjusting said arm toward and in contact with said face of said jamb, said screw including a tool-receiving head located outside of the adjacent channel in which said sash member is mounted so as to be freely accessible for engagement by a tool when said sash is mounted in said frame.

2,473,299
ROTATIVE WINGED AIRCRAFT CONTROL
Harold F. Pitcairn, Bryn Athyn, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 15, 1944, Serial No. 535,632
1 Claim. (Cl. 170—135.24)



A rotary wing aircraft comprising a sustaining rotor, an airscrew disposed for counteracting the rotor torque, a first mechanism for

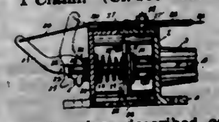
varying the pitch of said sustaining rotor, a second mechanism for varying the pitch of said airscrew, manual control means connected to both said mechanisms for concurrently varying the pitch of said rotor and airscrew, a pair of pilot-operated members, and means operatively connecting said members to said second mechanism and constraining said

members to move in opposite directions, said connecting means including means for independently transmitting control motions to said second mechanism from said manual operating means and said members, respectively, whereby the setting of said members may be maintained in fixed condition during operation of said manual control means.

2,473,300
SKI TOW DEVICE
Enzo Puricelli, Springfield, Mass.
Application October 17, 1946, Serial No. 703,854
3 Claims. (Cl. 104—202)

1. For use with a moving ski tow rope, a relatively thin hold-on device having opposite substantially flat faces which are substantially parallel throughout and having an open-sided parallel-ended notch extending between the said faces near the front for receiving the rope, the said device having means near the rear for the attachment of a tow cord and having a gripping portion at the rear of the notch with its center line in longitudinal alignment with the said notch which gripping portion is adapted to be positioned adjacent the rope when the rope extends through the notch so that when the said gripping portion and the said rope are gripped by one hand of the user the rope is flexed at the notch and is thus frictionally engaged with the device to effect towing.

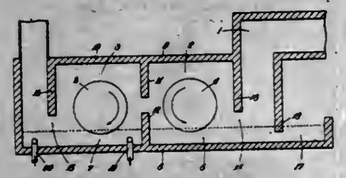
2,473,301
MOTION-PICTURE SCREEN
Anders W. Ramstad, Parkland, Wash.
Application September 5, 1944, Serial No. 553,969
2 Claims. (Cl. 88—28.90)



1. A picture projection screen structure comprising upper and lower horizontal frame members, upper and lower curved resilient strips extending horizontally, a flexible screen having upper and lower edges attached to said strips whereby said screen is curved from side to side thereof by said strips, and means for supporting said strips comprising a plurality of arms independently adjustable endwise on said frame members to apply pressure to said strips at different points along the same to variably curve said strips and said screen.

2,473,302
DYNAMOELECTRIC MACHINE HAVING LAMINATED ARMATURE WITH TEETH SLOTTED TO REDUCE EDDY CURRENTS
William L. Ringland, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application June 7, 1946, Serial No. 674,958
8 Claims. (Cl. 171—252)

3. A cylindrical armature core member for a dynamoelectric machine comprising a stack of magnetic laminae extending transversely to the axis of said member, said laminae being provided with a plurality of substantially radial narrow slots of substantially uniform width extending to the air gap surface of said laminae for reducing the eddy currents produced in said stack by fringing flux entering said stack through the end surfaces thereof while leaving substantially unaffected the reluctance of said stack for the flux entering the air gap surface of said stack, the depth of said slots decreasing from said end surfaces toward the central portion of said stack.



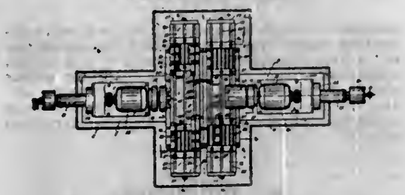
2,473,303
SWITCH
Roland S. Robbins and Carl T. Cochran, Lakewood, Ohio
Application August 24, 1945, Serial No. 612,432
1 Claim. (Cl. 200—16)

A device of the class described comprising a casing, a pair of battery circuit contacts insulated from the casing and mounted on opposite sides thereof, a movable contact adapted to bridge said first contacts, compression means normally urging said movable contact into engagement with said pair of contacts, a generator battery circuit con-

tact insulated from said casing and engageable by said movable contact when the latter is moved to its limit of motion in a direction to disengage said battery circuit contacts and against the urge of said compression means, a rod in said casing carrying said movable contact, and a cam lever having pivotal and sliding engagement with an end of said rod to move the rod in opposite directions, said cam lever having a slot therein, a pin carried by said rod end and operating in said slot, the cam portions of the lever having front and rear face portions embracing an intermediate heel or high point portion, said cam slot being so positioned relative to said high point that movement of the lever to its limit of movement in either direction will urge said pin to one respective end of said slot past a dead center position to thereby hold the movable contact in its respective limits of movement and in contact with one or the other of said battery or generator circuit contacts, and means for moving said cam lever.

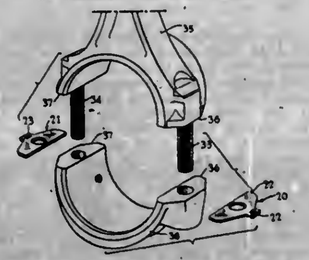
2,473,304
CONDENSATION OF ZINC FROM ITS VAPOR IN GASEOUS MIXTURES
Stanley Robson, Redland, Bristol, England, assignor to The National Smelting Company Limited, London, England, a British company
Application June 18, 1947, Serial No. 755,443
In Great Britain March 12, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires March 12, 1966
4 Claims. (Cl. 75—33)

1. A process for condensing zinc as liquid from a mixture of zinc vapour with permanent gases, comprising at least two stages of condensation in which the gas-zinc vapour mixture is fed with the minimum possible heat loss from the producing unit to a first condensing stage where the mixture is brought into intimate contact with a shower of molten zinc metal at a temperature high enough to permit tapping of molten zinc for casting into ingots, and the gas mixture is thence fed to a second condensing stage in which the mixture is brought into intimate contact with a shower of molten lead which may contain a residual amount of zinc in solution and whose temperature is below the minimum practical temperature for tapping molten zinc for casting into ingots.



2,473,305
WINDOW SHADE GUIDE
Emil A. Schmaus, Chicago, Ill.
Application September 19, 1945, Serial No. 617,345
2 Claims. (Cl. 160—268)

1. A shade guide including a bracket adapted to be positioned transversely of a side member of a window casing and formed with a vertical forwardly extending apertured flange forming the central portion of a hinge, a plate formed with an inwardly extending shade-engaging and guiding slot in its outer end and with vertically spaced apertured hinge portions adapted to be disposed at the opposite sides of said central hinged portion with the several apertures aligned, a pin

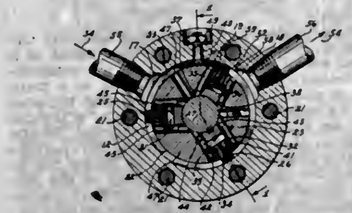


extending through said aligned apertures in the hinged portions, and means formed on the inner end of said plate for engagement with said bracket to limit the movement of said plate.

2,473,306
TANDEM SPINDLE LATHE
John H. Schreiber, St. Louis, Mo.
Application January 29, 1943, Serial No. 473,898
7 Claims. (Cl. 82—2.5)

1. In a tandem spindle lathe, two spindles supported in axially alined tandem relationship for respective or synchronous rotation and longitudinal axial movements, mechanisms for synchronously or respectively rotating and moving said spindles in longitudinal axial directions, chucks mounted on said respective spindles for cooperatively supporting pieces of work during processing thereof or for separately supporting pieces of work as desired, and laterally adjustable tool supports for supporting tools to operate upon the work supported by said chucks as aforesaid.

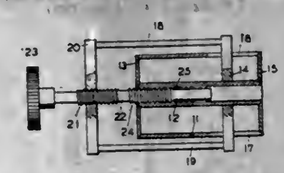
2,473,307
SHIM
Richard Seipt, Darien, and Douglas M. Steves, Tuckahoe, N. Y., assignors to Laminated Shim Company, Glenbrook, Conn., a corporation of Connecticut
Application February 21, 1948, Serial No. 10,085
10 Claims. (Cl. 308—244)



1. As an article of manufacture, a shim having a plurality of stacked body elements with tabs extending from said body elements, and rivet means joining said tabs together to hold said body elements in assembled relationship, said tabs being separable from said body elements to detach said body elements from each other.

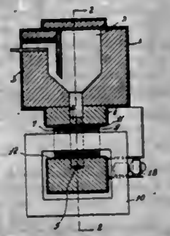
2,473,308
TREATMENT OF CELLULOSIC TEXTILES WITH STRONG HYDROXIDE AND ACRYLONITRILE
James W. Stallings, Atlanta, Ga., assignor to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 24, 1946, Serial No. 718,267
3 Claims. (Cl. 8—116.2)

1. The process of increasing abrasion resistance, stiffness, and tensile strength and decreasing moisture absorptivity of cellulosic yarns and fabrics which comprises impregnating said cellulosic material with a 10% to 30% aqueous solution of a strong hydroxide at 0° to 30° C., removing excess solution therefrom until the gain in weight is about equal to the dry weight of the dry cellulosic material, immersing the impregnated material in a 5% to 50% solution of acrylonitrile in an inert water-immiscible organic solvent at 0° to 35° C. for one to twenty-four hours, separating material and solution, and removing acrylonitrile and strong hydroxide remaining in the treated material.



2,473,309
ROTARY BALANCED VANE PUMP
William T. Stephens, Painesville, Ohio
Application November 2, 1945, Serial No. 626,213
7 Claims. (Cl. 103—136)

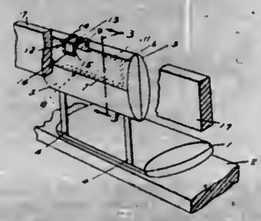
1. A sliding vane pump comprising in combination a housing having a right circular cylindrical bore with inlet and outlet openings and a sealing segment therebetween, a rotor having a shaft concentric with said bore, a plurality of radially movable hydraulically balanced vanes in said rotor and hydraulic means for pressing the vanes radially inward to avoid friction at the sealing segment between inlet and outlet openings of the housing.



2,473,310
TUNABLE ELECTRICAL CIRCUITS
Maximiliaan Julius Otto Strutt and Johannes Marinus van Hofweegen, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 14, 1943, Serial No. 483,004
In the Netherlands May 23, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 23, 1961
3 Claims. (Cl. 178—44)

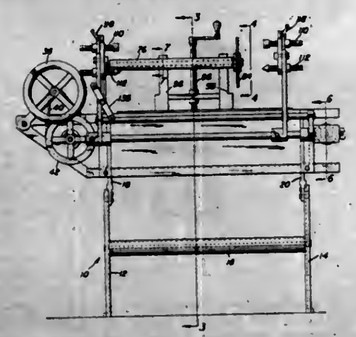
1. A tunable oscillatory circuit comprising an inner and an outer conductor fixedly connected together at one end by an end plate so as to constitute a concentric line resonator, a metallic bridge piece connecting the outer surface of the inner conductor with the inner surface of the outer conductor for tuning said oscillatory circuit, a shaft having two spaced screw threads of different pitches, said shaft entering the interior of said inner conductor, one of said screw threads

engaging said inner conductor for causing movement of said concentric line resonator as an integral unit, the other of said screw threads on said shaft being linked to said bridge piece, whereby rotation of said shaft causes both said resonator and said bridge piece to move simultaneously in the same direction but at different rates.



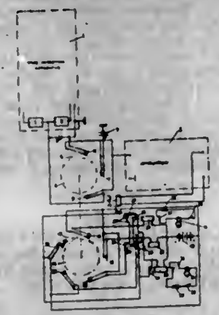
2,473,311
METHOD FOR PRODUCING METAL ALLOYS IN A SUBMERGED RESISTOR TYPE INDUCTION FURNACE
Manuel Tama and Mario Tama, Morrisville, Pa., and James Lloyd Hoff, Pennington, N. J., assignors to Ajax Engineering Corporation, Trenton, N. J.
Application July 3, 1945, Serial No. 603,626
4 Claims. (Cl. 13—34)

4. A method for producing metal alloys adapted to form low melting point segregations and particularly lead-rich copper alloys in a submerged resistor type induction furnace having in a refractory-lined casing an upper melting hearth, a refractory block underneath the hearth, a secondary melting loop opening into the hearth and inner cooling duct located in this block in concentric relationship with said loop, an inductor unit in said cooling duct, said loop and said cooling duct enclosing therebetween an annular refractory body having its outer face adjacent to said melting loop and its inner face adjacent to said cooling duct, said method comprising maintaining a relationship between the thickness of said annular refractory body of between four to six inches and the surface coefficient of heat



transmission at its cold face of between 39.0 to 18.0 B. t. u./°F./ft.²/ho. to create at said cold face a temperature of about 700 to 500° F.

2,473,212
BENCH CUSHION
Leonard J. Thompson, Wichita, Kans.
Application July 12, 1946, Serial No. 683,007
5 Claims. (Cl. 155—182)



1. In a device of the class described, a cushion, a pocket in the backside of said cushion, a centrally-located opening in the upper edge of said pocket, an elongated frame in said pocket, a centrally-located downwardly-opening hook secured to said frame and projecting through the opening in said pocket whereby to engage and secure the cushion to the upper edge of a backrest.

2,473,213
LAWN MOWER GRINDER
Albert C. Thompson, Fountain City, Tenn.
Application September 10, 1947, Serial No. 773,258
1 Claim. (Cl. 51—48)

A lawn mower sharpener comprising a base, a rail secured to said base and a carriage slidably disposed on said rail, a frame vertically movable on said carriage, and threaded means reacting on said carriage for retaining said frame in preselected vertical positions, a shaft mounted for rotation on said frame adapted to support an abrading means, a hand wheel mounted on said base, and means drivingly connecting said hand wheel and said carriage to slidably actuate said carriage, a motor, a table pivoted to said carriage supporting said motor, and means drivingly connecting said shaft and said motor, a pair of supports mounted on said base, links pivoted to said supports, upper screws mounted on said links adapted to engage the shaft of a lawn mower, and lower screws carried by said links to engage a lawn mower component, and means carried by said supports for adjusting the angle of inclination of said links.

2,473,214
SUPERVISORY SIGNALING DEVICE
Pierre Marie Gabriel Toulon, Neuilly sur Seine, France, assignor to Compagnie Francaise du Signum, Paris, France, a body corporate of France
Application March 9, 1946, Serial No. 653,240
In France March 8, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 8, 1965
5 Claims. (Cl. 177—311)

1. Security device for amplifiers ensuring the connection between a detecting instrument of a physical event and a signalling device, comprising a detecting apparatus giving rise to a main source of potential when detecting said physical event, an amplifier, an alarm device, a trouble device, an auxiliary source of potential, means creating at the output of said amplifier, periodically and successively, an impulse taking rise in the amplifier upon a faulty working of the latter, an impulse supplied by said auxiliary source of potential and an impulse supplied by said detecting apparatus when detecting a physical event, means actuating the trouble device by the impulse resulting from a faulty working of the amplifier, means controlled by the impulses supplied to the amplifier by said auxiliary source for completing the circuit of the alarm device and means controlled by the amplifier which is in turn controlled by the detecting apparatus for actuating the alarm device.

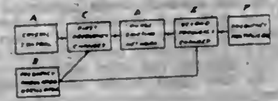
2,473,315
COTTON HARVESTER
Jeffrey John Wallace, Amite, La., assignor to Gullett Gin Company, a corporation of Louisiana
Application October 14, 1947, Serial No. 779,797
3 Claims. (Cl. 56—48)

1. Cotton harvester including a pair of driven picking cylinders rotatable toward one another, mounted on vertical axes and in lateral adjacency, adapted to compact the cotton plant between them as the harvester travels along a row of plants, said cylinders each having a flexible side wall and being inflatable to maintain said side wall under yielding pressure, whereby the side walls yield complementary to the shape of pro-

tuberant portions of the plant coming between said cylinders, permitting them to pass therebetween without being torn from the plant.

2,473,316
RAILWAY BRAKE BEAM
Samuel J. Walker, Lake Forest, and Irvin J. Spaeth, Chicago, Ill., assignors to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application January 4, 1947, Serial No. 720,178
8 Claims. (Cl. 188—223.1)

1. In a railway brake beam, a compression member, a tension member and a strut member, said members forming a truss and defining the general plane of the beam, the compression member being of angular cross section with web-like structure extending substantially throughout the length of the member in a plane inclined slightly to said general plane of the beam.

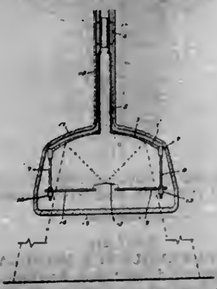


2,473,317
SPARK PLUG
Harry R. Webber, Norwood, Pa.
Application January 29, 1946, Serial No. 643,994
1 Claim. (Cl. 123—169)

In a spark plug, a shell having a differential bore with an annular internal portion at its forward end, a conical seat in rear of said annular portion and a rear, flat seat of greater diameter than said conical seat, an insulator in said shell having a cylindrical portion closing the front end of the shell, a conical seat in rear of said cylindrical portion, an enlarged rear shoulder to engage the rear seat, a portion of reduced diameter between said seats forming with the shell an annular chamber, and a lateral passage opening at its ends into said chamber, a nut encircling the insulator, in threaded engagement with the shell and bearing against said shoulder, said insulator having passages in its periphery extending from said lateral passage through its rear shoulder and beyond said nut, a ground electrode at the front end of the shell, and a sectional main electrode extending longitudinally through the shell with juxtaposed ends spaced at said lateral passage to

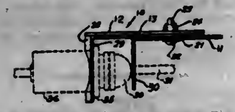
form a spark gap of substantially the same spacing as that of the main and ground electrodes.

2,473,318
PHASE OR FREQUENCY MODULATION
Donald Weighton, Cambridge, England, assignor to Pye Limited, Cambridge, England
Application August 7, 1947, Serial No. 767,117
In Great Britain December 22, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires December 22, 1959
10 Claims. (Cl. 332—22)



1. Method of wave modulation which comprises heterodyning master oscillations of substantially constant frequency with frequency modulated oscillations, heterodyning the resultant beat oscillations with the frequency modulated oscillations, applying a phase shift which is a linear function of frequency to the frequency modulated oscillations prior to the second-mentioned heterodyning, and selecting a desired product of said second heterodyning.

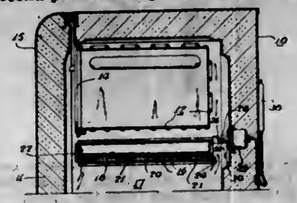
2,473,319
GASKET AND GASKET COMPOSITION
Herbert A. Winkelmann, Chicago, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application November 10, 1947, Serial No. 785,183
4 Claims. (Cl. 260—19)



1. A gasket composition comprising from 25% to 65% by weight of a butadiene-acrylonitrile copolymer synthetic rubber containing acrylonitrile in an amount not less than 20% by weight of the copolymer, a liquid petroleum oil at least 90% by weight having a boiling point of at least 150° C. and at least 75% consisting of aliphatic hydrocarbons, said petroleum oil being present in an amount from 25 to 60 parts by weight on 100 parts by weight of said copolymer, graphite in amount from 10 to 125 parts by weight on 100 parts by weight of said copolymer, a thermosetting phenol formaldehyde resin in amount from 10 to 35 parts by weight on 100 parts by weight of said copolymer, and sulfur from 1 to 5 parts by weight on 100 parts by weight of said copolymer.

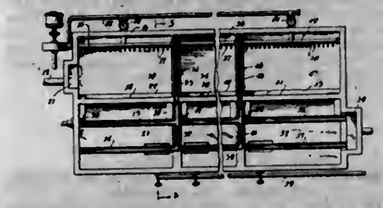
2,473,320
CATHODE-RAY TUBE
Arthur Henry Ashford Wynn and Ronald Alfred Hill, London, England, assignors to A. C. Cossor Limited, London, England, a British company
Application March 7, 1947, Serial No. 733,153
In Great Britain March 7, 1946
3 Claims. (Cl. 250—164)

1. A cathode ray tube having an electron beam projecting structure including a final anode and wherein is arranged an internal projection system comprising an object screen having a fluorescent surface thereon, said fluorescent surface facing the oncoming electron beam, and a mirror carried by the electron beam projecting structure of the tube and arranged to reflect light rays proceeding from said object screen upon excitation by the electron beam, through the end wall of the cathode ray tube, said mirror being carried by the final anode of the electrode structure.



2,473,321
PLUG-IN CLIP
Michael Yanko, Masury, Ohio
Application July 27, 1945, Serial No. 607,345
4 Claims. (Cl. 173—328)

1. A clamp for use in detachably interlocking an electrical socket and a cooperating plug having conducting lines comprising, a first section including a lateral bifurcated clamping arm, a second section extensibly connected thereto, including a pair of complementary members having coactive clamping arms, said arms being adjustable longitudinally relative to said arm and laterally adjustable relative to each other for selective engagement of the plug and the conducting lines, and means for securing said sections in selected positions.



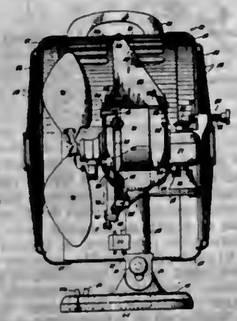
2,473,322
REFRIGERATOR HAVING MEANS FOR MINIMIZING CONDENSATION
Orland H. Yoxsimer, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 12, 1947, Serial No. 785,476
4 Claims. (Cl. 62—103)

1. A refrigerator comprising a food storage chamber having thermally insulated front, side, rear, top and bottom walls, said front wall including a door and being of lesser thermal insulating value than said side and rear walls, a cooling unit in the upper portion of said chamber, means for maintaining said cooling unit at a temperature below freezing, a partition in said chamber, said partition including a first plate located below said cooling unit, a second plate below said first plate and near but spaced therefrom to define a first air passage between said plates, said second plate comprising material which is transparent to radiant heat, said first and second plates having edges spaced from said

door when closed to define a second air passage adjacent said door, said first and second plates also having edges spaced from the rear wall of said food storage chamber to define a third air passage adjacent said rear wall, said first air passage communicating with said second and third air passages, the side edges of said first plate being sealed to the side walls of said chamber to prevent substantial passage of air therebetween, and a valve in said third air passage and adapted and arranged to substantially close the space between said first plate and the rear wall of said chamber.

2,473,323
METHOD AND APPARATUS FOR TREATING SEWAGE
Samuel I. Zack, Paxtang, Pa.
Application May 29, 1945, Serial No. 596,469
16 Claims. (Cl. 210—8)

1. In a sewage treatment apparatus, the combination with an aeration chamber to receive sewage and means for introducing sewage thereinto, of an adjacent settling chamber receiving sewage therefrom through a bottom opening between the chambers, a device adapted to be operated from the exterior of settling chamber for returning part of the settled sludge from the settling chamber to the aeration chamber through said bottom opening between the chambers, a separately settable device through which excess sludge is removed, an effluent connection from the settling chamber including troughs serving as weirs substantially throughout the length of the chamber and drawing liquid through the bottom opening, and an elongate aerating device in the aeration chamber adjacent

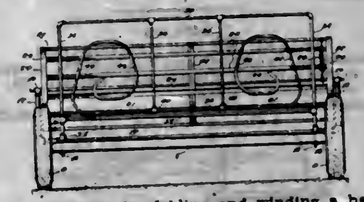


a bottom wall thereof adapted to maintain circulation of sewage in the aeration chamber by supplying air thereto.

2,473,324
FISHING LURE
Louis D. Adam and Nelta G. Poplin, Ponca City, Okla., assignors to Pachner & Koller, Inc., Chicago, Ill., a corporation of Illinois
Application June 28, 1946, Serial No. 680,258
6 Claims. (Cl. 43—42.47)

1. A fishing lure comprising an elongated body, a downwardly inclined substantially saucer-like shaped member secured to the forward end of said body and having a slot therein; and a brace having a line receiving eyelet in one end thereof, said brace being secured at one end to the forward end of said body, said eyelet adapted to partially extend through said slot and secured to said substantially saucer-like shaped member.

2,473,325
COMBINED ELECTRIC FAN AND AIR HEATING MEANS
John M. Auflero, Plandome, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a corporation of New York
Application September 19, 1946, Serial No. 697,857
5 Claims. (Cl. 219—39)

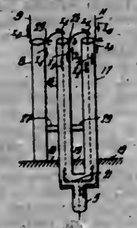


1. Air circulation means comprising a motor mounted upon a standard; a fan fixed to the shaft of said motor; a pair of frames fixed to the motor at opposite ends thereof; a plurality of substantially triangular brackets affixed at their bases to said frames and extending approximately radially outwardly from said motor, and a casing supported upon the apices of said triangular brackets and concentric with said motor, said casing completely encompassing said fan and said motor and having at its opposite ends closely spaced grille means to permit air flow while precluding the entry of any relatively large foreign objects.

2,473,326
COMPOSITION SUITABLE FOR THE CONSTRUCTION OF ROADS, PATHS, FLOORS, AIRDROME RUNWAYS, AND THE LIKE
John Frederick Thomas Blott, Worcester Park, England, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 3, 1944, Serial No. 543,420. In Great Britain June 18, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 18, 1963
8 Claims. (Cl. 260—38)

1. A method of producing a substantially water-repellent structural material possessing substantial rigidity, which comprises intimately mixing a major proportion of a natural soil containing clay and sand in combined major proportions therein with combined minor proportions of resorcinol, formaldehyde, water and hydrated lime, the resorcinol and the formaldehyde being used in proportions each less than 5% by weight of the resulting mixture, the hydrated lime being less than 2% by weight of the resulting mixture, and aging the resulting mixture to produce a water-repellent, substantially rigid, structural material.

2,473,327
IMPLEMENT FOR WINDING AND FOLDING HARVESTING SHEETS
Wade H. Born, McRae, Ga.
Application March 20, 1945, Serial No. 583,799
3 Claims. (Cl. 56—329)



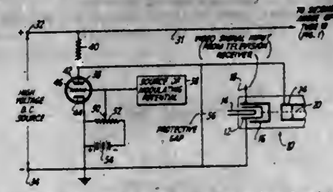
1. Apparatus for folding and winding a harvesting sheet comprising, a chassis frame, wheels supporting said chassis frame for rolling movement, a reel arranged transversely of the chassis frame, means supporting said reel for rotation on the chassis frame, means for securing the harvesting sheet to the periphery of said reel, a sheet folding guide member carried by said chassis frame including a horizontal portion and the vertical portion extending upwardly from the horizontal portion and merging with a downwardly extending portion which terminates in a tip portion, a second sheet folding guide member carried by the chassis frame including a horizontal portion and an upwardly extending portion merging with a downwardly extending portion which terminates in a tip portion, and said guide members being spaced forwardly of the reel for elevating and folding the lateral edges of the sheet to prevent escape of articles being harvested as the sheet is wound onto the reel.

2,473,328
LINE BALANCE CONVERTER
George H. Brown and Oakley M. Woodward, Jr., Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application December 19, 1944, Serial No. 568,844
11 Claims. (Cl. 178—44)

1. A line balance convertor including a substantially plane conductive body, a pair of coaxial transmission line sections extending through

said body at right angles to the surface thereof with their upper ends at points approximately one-quarter wavelength distant therefrom at the mean frequency of operation of the system, a cylindrical conductor substantially identical with the outer conductors of said line sections connected to said body and extending therefrom parallel to said line sections, a coaxial line connected to the lower ends of said line sections in

parallel, a balanced line including two conductors connected respectively to the upper end of said cylindrical conductor and to the upper end of the outer conductor of one of said coaxial line sections, means connecting the inner conductor of said one line section to the outer conductor of the other of said line sections, and means connecting the inner conductor of said other line section to the upper end of said cylindrical conductor.



2,473,329
TAIL ROTOR FOR HELICOPTERS
James Nall Candler, Grosse Pointe, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application December 15, 1944, Serial No. 568,293
4 Claims. (Cl. 230—114)

3. In combination with a hollow body having a walled passageway of annular cross section extending therethrough; means for creating and controlling a current of air through said annular passageway, said means comprising an impeller having an enlarged hub and an annular row of blades projecting radially therefrom across said passageway intermediate the ends thereof; an annular row of adjustable louvers arranged radially in said annular passageway between the walls thereof and in advance of said impeller; rotatable spindles extending across said passageway for supporting said louvers; rocker arms for rotating said spindles; a rotatable spider; and ball and socket assemblies operatively connecting said rocker arms and said spider, the balls of said assemblies being provided with means to slidably receive said rocker arms.

2,473,330
VOLTAGE CONTROL SYSTEM FOR CATHODE-RAY TUBES
Alfred W. Cousins, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application May 28, 1947, Serial No. 751,074
4 Claims. (Cl. 315—31)

1. In a system for supplying operating potentials to two electrodes of a cathode ray tube in order to effect focusing of the scanning beam in said tube, the combination of a source of high D.-C. voltage, a circuit for applying said voltage to one of said electrodes, a resistance, a grid-controlled electron discharge device, means connecting said resistance and said device in series across said source of high D.-C. voltage, an independent source of relatively low bias voltage, a circuit for

applying said bias voltage to the grid of said electron discharge device to limit the flow of current through said device and also through said series-connected resistance, a connection from another of said electrodes to a point on said resistance, a source of modulating potential, and means for applying said modulating potential to the grid of said electron discharge device to modify the action of said bias voltage.

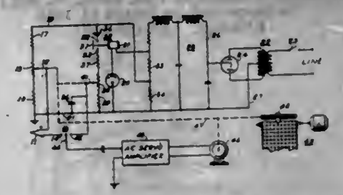
2,473,331
HELICOPTER POWER AND CONTROL MECHANISM
Carson O. Donley, Indianapolis, Ind., assignor to Vertiflite, Inc., Indianapolis, Ind., a corporation
Application October 20, 1944, Serial No. 559,009
6 Claims. (Cl. 170—135.26)

2. In a helicopter control system having a tiltable and rotatable control wheel means, foot operable means adjacent thereto and independent hand operable means adjacent both means, the combination of a pair of controls each including three reciprocable members, a hollow member connected to each reciprocable member and movable thereby, said hollow members of each said control being connected successively one to another and pivotally adjustable one upon another, a blade pitch control member directly connected to one of the hollow members and responsive to movement of any and all connected hollow members, and means connecting the six reciprocable members to said first three means for helicopter control.

2,473,332
INSULATION MEANS FOR ELECTRICAL APPARATUS
James M. England, Lebanon, Mo., assignor of one-third to David E. Owen, St. Louis, Mo.
Application May 26, 1944, Serial No. 537,511
7 Claims. (Cl. 174—33)

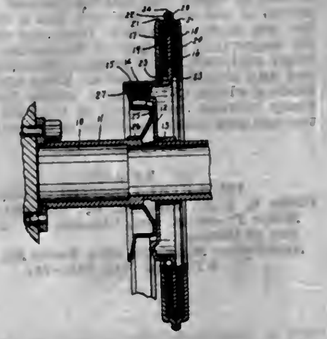
1. An insulation means for placing in electrical conductor receiving slots comprising a sheet of insulation material rectangular in shape, notched at one end to provide holding tabs on opposite sides of its longitudinal axis, and cross scored slightly inwardly from the inner end of the notch so that when the sheet is turned upon

itself about its longitudinal axis for reception in the slot the sheet can also be bent at the cross score to thus position the holding tabs in laterally outwardly extending direction and provide a turned over portion to overlie the end edge of the bottom of the slot.



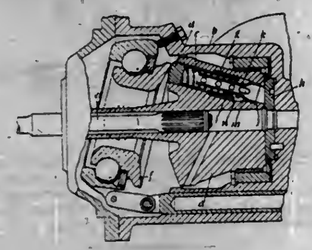
2,473,333
ARTICLE HOLDING ALBUM
Lester Gels, New York, and Robert E. Pope, Setauket, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application February 15, 1944, Serial No. 522,510
2 Claims. (Cl. 129—20)

1. An article-holding album comprising a pair of outer covers and including at least one envelope between said covers for holding said article, said envelope and said covers being secured together at one of their edges, said envelope being constituted of stiffened flexible material and being open along at least one other edge thereof and having a fold line extending from a point adjacent said open edge to a point adjacent a third edge of said envelope, whereby to provide a flap which automatically opens when said covers are swung apart.



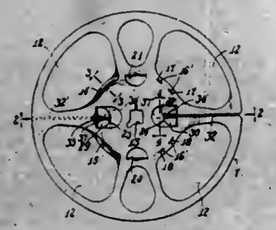
2,473,334
POTENTIOMETRIC CIRCUIT
Ivan A. Greenwood, Jr., Pleasantville, N. Y., assignor to General Precision Laboratory Incorporated, a corporation of New York
Application August 27, 1948, Serial No. 46,415
9 Claims. (Cl. 318—28)

1. A device of the class described comprising, means for producing a variable voltage, means for producing a voltage subject to departures from a standard, a first device for selecting a variable portion of said voltage subject to departure from standard, means for opposing said variable voltage and the selected portion of said voltage subject to departure from standard to produce a first difference voltage, a standard voltage source of constant potential, circuit means for continuously opposing said standard voltage to said voltage subject to departure from standard to obtain a second difference voltage function of said departure from standard, a second device for selecting a variable portion of said second difference voltage, means for producing an alternating-current signal whose amplitude is a function of the difference of the variably selected por-



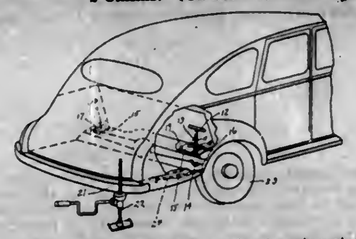
tions of said first and second difference voltages and motor means operative in accordance with the sense and amplitude of said alternating current signal for concomitantly and proportionally adjusting said first and second devices.

2,473,335
VIBRATION DAMPER
James A. Hardy, Indianapolis, Ind., assignor to Schwitzer-Cummins Company, Indianapolis, Ind., a corporation
Application June 19, 1946, Serial No. 677,888
2 Claims. (Cl. 74—574)



1. In a vibration damper for rotating shafts, the combination with a sleeve adapted to be secured to a shaft and having a hub portion, a radially extending supporting plate of stamped sheet metal having its inner portion flanged to provide a supporting collar adapted to be secured about said sleeve, a resilient rubber disk embracing the outer portion of said supporting plate in substantially spaced relation to said collar, a pair of opposed stamped sheet metal clamping plates co-extensive with and clamped about the outer faces of said rubber disk for providing an inertia element, the inner peripheral edges of each of said clamping plates being flanged inwardly toward said supporting plate at a substantial distance from the said collar thereof, and the outer peripheral portions of said clamping plates being flanged inwardly and radially outwardly to abut each other about the outer periphery of said rubber disk, and means for securing the abutting flanged portions of said clamping plates with said rubber disk compressed therebetween.

2,473,326
RECIPROCATORY PUMP AND THE LIKE
Richard Joseph Ifield, Birmingham, England, assignor to Joseph Lucas Limited, Birmingham, England
Application March 12, 1946, Serial No. 653,769
In Great Britain March 13, 1945
4 Claims. (Cl. 103—162)



1. In a reciprocatory pump or the like having inlet and outlet ports for fluid, the combination of at least one cylinder bore, a hollow plunger slidable in the bore, means for moving the plunger in one direction, a compression spring located within the plunger for moving it in the opposite direction, a perforated guide tube for the spring extending along the interior thereof and supported at one end in the bore, and a shoulder on the said guide tube spaced from said end thereof for supporting one end of the spring, the tube being perforated at a position between the said end and shoulder as well as along the part extending within the spring to enable fluid to flow freely between the interior of the said tube and the said bore under the action of the said plunger.

2,473,327
FILM REEL CONSTRUCTION
Philip L. Karr, Chicago, Ill., assignor to Excel Movie Products, Inc., Chicago, Ill., a corporation of Illinois
Application March 29, 1946, Serial No. 658,071
8 Claims. (Cl. 242—74)

1. A device of the character described comprising two flanges and a hub portion, means in said hub portion for receiving a film end therein and retaining the same, said means including a pair of juxtaposed lips in spaced relation, each of said lips having a slot for receiving a film end, the slots being so arranged that the film end when received therein is deformed substantially in an ogee configuration.

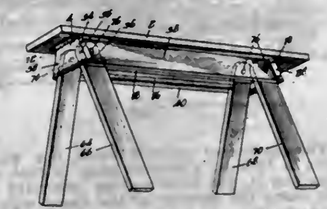
2,473,328
VEHICLE SPRING PRELOADING DEVICE
Clyde R. Kilmer, Elkhart, Ind.
Application December 26, 1947, Serial No. 793,994
2 Claims. (Cl. 267—2)

1. A device for pre-loading a load spring structure of a self-propelled vehicle, comprising in combination a slotted bearing plate operatively supported by the frame and a catch member having a shank including a handle at one end and a hook portion at the other end, the latter being adapted for axle or similar part engagement, and a plurality of longitudinally spaced locking lugs on said shank selectively associated with the said plate, the hook extending through the plate and the slot being of such length that it will pass the hook portion and any and all of the said lugs, the lugs being disposed transversely of the longitudinal direction of the slot and one of the lugs bearing on the plate when in operative position for spring preloading purposes.

2,473,329
STABLE, STERILE AQUEOUS SOLUTIONS OF STREPTOMYCIN AND PROCESS OF MAKING SAME
Frederick J. Kirchmeyer, Waukegan, and Ione Rita Card, North Chicago, Ill., assignors to Abbott Laboratories, a corporation of Illinois
No Drawing. Application June 13, 1946, Serial No. 676,572
10 Claims. (Cl. 21—2)

7. A stable liquid streptomycin preparation comprising, in combination: a sterile aqueous solvent; and a sterile salt of streptomycin dissolved in said solvent; said solvent also containing as a protective ingredient a salt stable in aqueous solution and having a mild reducing action; and sufficient acidic material to maintain the pH during storage in an inert atmosphere at about 4.85 and between about 3.0 and about 6.0.

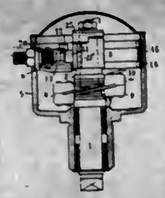
2,473,340
BOLSTER FOR FOUR-WHEEL COMMERCIAL AND FARM TRAILERS
Otto A. Klockau, Rock Island, Ill.
Application January 24, 1947, Serial No. 724,163
3 Claims. (Cl. 280—143)



1. In a device of the class described, the combination with a vehicle reach and axle attached thereto, and posts supported at the ends of said axle, of a two-part bolster mounted on said axle including a lower plate and upper plate having a vertically sliding connection with said posts, interposed springs, and a chain connection between said upper plate and said reach, permitting a limited rocking movement to said upper plate, independently of the posts.

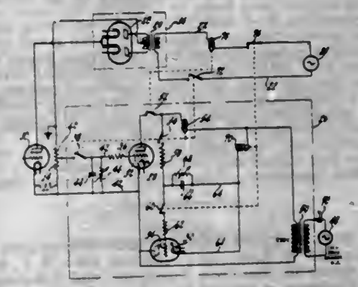
2,473,341
UNSATURATED HALOGEN-CONTAINING NITRO COMPOUNDS AND THEIR PRODUCTION
Eduard Cornelis Kooijman and Johan Overhoff, Amsterdam, Netherlands, assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 7, 1947, Serial No. 739,948. In the Netherlands July 5, 1946
14 Claims. (Cl. 260—644)

13. A mono-olefinic mononitrohalohydrocarbon having from 4 to 16 carbon atoms to the molecule and containing the structural grouping



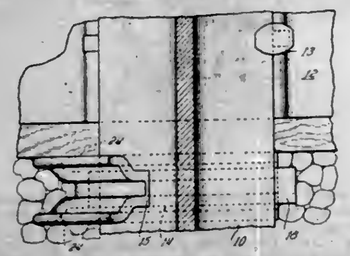
2,473,342
FOLDING SAWHORSE
Charles O. Larson, Sterling, Ill.
Application May 17, 1946, Serial No. 670,569
9 Claims. (Cl. 304—5)

4. A metallic bracket for a foldable saw horse comprising a sheet metal member having a plate-like portion formed in a single plane said plate having a relatively broad basal edge and a narrower upper opposed edge, said plate-like portion having normally extending flanges which extend in the same direction and which flanges converge from the broader basal edge to the shorter opposed edge, said flanges being suitably perforated to receive fastening means, the upper shorter edge of said plate-like portion having a third flange extending in a direction opposite to the first mentioned flanges and lying normally to the plane of said plate-like portion, said third flange having openings for the reception of securing means and having tongues formed in the metal substantially at the junction of said third flange and the upper edge of the plate-like portion, said tongues extending angularly with respect to the upper edge of the plate-like portion and lying normally to the planes of the first two mentioned flanges.



2,473,343
CENTRIFUGAL SWITCH DEVICE
Georges Levesque du Rostu, Paris, France, assignor to Societe Anonyme Andre Citroen, Paris, France
Application July 26, 1945, Serial No. 606,226
In France June 27, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 27, 1962
2 Claims. (Cl. 200—31)

1. An automatic spark advancing mechanism for internal combustion engines including at least one mass submitted to centrifugal force, formed by two superposed symmetrical members showing a groove in the cooperating surfaces thereof, a spring to which said mass is directly secured, a driving shaft, a cam shaft the angular shifting

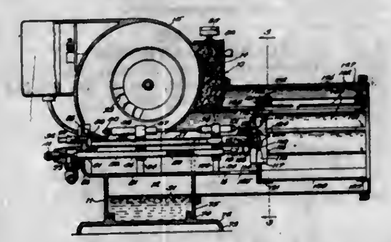


of which with reference to the driving shaft defines the variation in the lead and means for securing the ends of the spring respectively to said two shafts, the radius of curvature of the spring in the part to which the mass is secured matching the radius of curvature of the groove.

2,473,344
OVERLOAD PROTECTION SYSTEM
William E. McCown, Gloucester, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 26, 1945, Serial No. 574,696
3 Claims. (Cl. 175—363)

1. In an overload protection system, a controlling circuit including a gas discharge relay tube and a gas discharge lock-out tube, means for supplying alternating current to said relay tube, a controlled circuit including a direct current portion and an alternating current portion, said controlled circuit being energized only when said relay tube is energized, means responsive to the flow of space current in said relay tube for closing said alternating current portion and for normally preventing ignition of said lock-out tube, means responsive to an overload in said direct current portion for extinguishing said relay tube and for re-ignition thereof after a predetermined period, means responsive to an overload in said alternating current portion for extinguishing said relay tube and for thereupon re-igniting the same, means responsive to a predetermined rate of extinction and re-ignition of said relay tube for igniting said lock-out tube, and means responsive to the flow of space current in said lock-out tube for keeping said alternating current portion open.

2,473,345
RAIL ANCHOR
Frederick A. Preston, Lake Forest, Ill., assignor, by mesne assignments, to Poor & Company, Chicago, Ill., a corporation of Delaware
Application December 7, 1944, Serial No. 566,977
7 Claims. (Cl. 238—327)

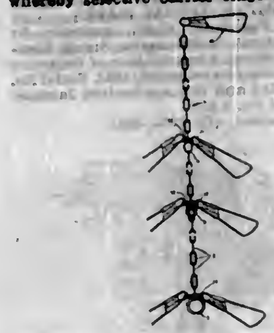


1. A rail anchor comprising a body portion provided at one end with a hook, which hook and said body portion cooperate to provide upper and lower jaws for gripping the top and bottom surfaces, respectively, of one base flange of a railroad rail; the said body portion including a horizontal web which bears against the bottom surface of the rail and extends around the inner face of the hook to provide the upper jaw with a horizontal portion for gripping the top surface of said base flange and a rigidifying flange extending around said hook to reinforce the hook and depending from said horizontal web of the body to provide abutting engagement with a rail supporting structure; the said rigidifying flange being bent laterally along its longitudinal center portion to offset the outer marginal portion of the flange relative to said horizontal web, whereby a reinforcing dished configuration is formed in said rigidifying flange at the hook end of the anchor and the engagement of the anchor with the rail supporting structure is confined to the offset marginal portion of said rigidifying flange.

2,473,346
TELETYPEWRITER EXCHANGE SYSTEM
Kenneth W. Richards, Packanack Lake, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application December 1, 1944, Serial No. 566,078
4 Claims. (Cl. 178—2)

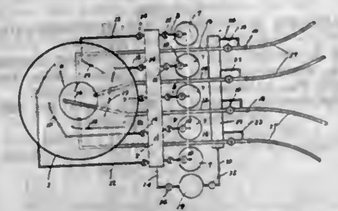
1. In a teletypewriter exchange system, the combination with a subscriber's loop having a teletypewriter transmitter connected therewith the said transmitter having a source of potential connected thereto adapted to transmit impulses of a certain value, of a cord circuit having sources of potential designed for operation with subscriber loops using a greater current value than is employed in the first mentioned loop, the said cord circuit including a repeater comprising a pair of polarized relays, and means to adjust the first mentioned loop for operation with the said cord circuit, the said adjusting means including a resistance a portion of which is connected across the said loop and the remainder in series with a source of voltage connected between the said loop and ground, the said resistance being so proportioned with respect to the resistance of the loop that the average current for marks and spaces passing through the line winding of the polar relay connected to the said loop shall equal the biasing current of that relay.

2,473,347
AIR DIRECTING MEANS IN GUN TYPE BURNERS
William L. Sanborn, Milwaukee, Wis., assignor, by mesne assignments, to Cleaver-Brooks Company, a corporation of Wisconsin
Original application April 3, 1943, Serial No. 482,247. Divided and this application December 24, 1947, Serial No. 793,739
6 Claims. (Cl. 158—1)



1. The process of burning liquid fuel which consists in forming a conical spray of fuel and air, igniting it, and then moving secondary air axially along the exterior of the flame with at least a portion of said secondary air being swirled around the flame in a diverging stream, and another portion of said secondary air being swirled around the flame in a cylindrical stream.

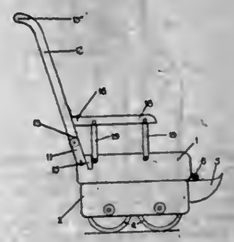
2. In a fuel burner of the class described, the combination of a means defining a passage for feeding a combustible mixture to a flame, said passage extending inwardly from the outer end of the burner, means for introducing a gaseous fluid into the passage centrally thereof, means at the inner end of the passage to introduce fuel in divided form into said fluid for dispersal therein and entrainment thereby, and means to introduce additional gaseous fluid peripherally into said passage along substantially the length of the passage with an axial component of motion to form an axially progressing rotating annular mass of fluid surrounding said fuel-laden stream and separating the fuel-laden stream from the passage wall.



2,473,348
FISH STRINGER
George J. Sharps, Chicago, Ill., assignor to Pachner & Koller, Inc., Chicago, Ill., a corporation of Illinois
Application February 27, 1947, Serial No. 731,333
4 Claims. (Cl. 224—7.1)

4. A fish stringer, a series of stop rings anchored in spaced relationship to each other along the length of said stringer, said stop rings being successively larger from the top end of said stringer to the lower end thereof, a series of fish-retainer devices each slidably mounted on said stringer by a carrier ring, the diameters of said carrier rings being gradiently larger in diameter whereby selective carrier rings respectively will

be engaged in their downward movement on said stringer by selective atop rings.



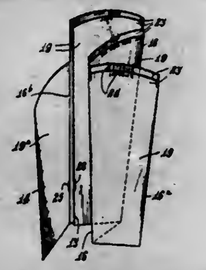
2,473,349
DRY CHEMICAL FIRE EXTINGUISHER
Ward E. Snowden, Modesto, Calif., assignor to Snowden Chemical Company, Modesto, Calif., a partnership
Application November 30, 1945, Serial No. 631,935
2 Claims. (Cl. 169—1)

2. A dry chemical fire extinguisher comprising a pressure tight reservoir for dry chemical, a plurality of high pressure gas supply cylinders, a manifold, separate valve controlled conduits leading from the cylinders to the manifold, other separate valve controlled conduits leading from the manifold to the reservoir, a plurality of outlet pipes leading from the reservoir, a hand valve in each of said outlet pipes, a fire hose coupled to each outlet pipe beyond the corresponding hand valve, another manifold, separate conduits leading from said other manifold to the outlet pipes between corresponding hand valves and fire hoses, a separate high pressure gas supply cylinder, a feed conduit leading from said separate cylinder to the first named manifold, and another feed conduit leading from said separate cylinder to said other manifold; there being a normally closed hand valve in each of the feed conduits.

2,473,350
FOLDING PUSH CHAIR
Bernard Clarence Walter Speckman, Auckland, Auckland, New Zealand
Application July 31, 1946, Serial No. 687,363
In New Zealand May 28, 1946
5 Claims. (Cl. 280—39)

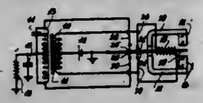
1. A folding push chair comprising a seat portion, side portions hinged thereto and capable of being swung inwardly only, front and rear wheels mounted on said side portions, a pivoted foot rest adapted to serve as a spreader between said hinged side portions when all of the wheels are disposed for use, supporting bars pivoted to the seat portion, arm rests pivotally mounted on said supporting bars and adapted with the bars to fold on the seat portion, a back consisting of hinged together portions pivoted to said seat portion, the back being foldable partly around the seat portion to retain the hinged side portions with the wheels thereon and the pivoted foot rest in folded positions to provide with the foot rest means for carrying the folded chair, spring catch means adapted to act between said arm rests and said back, and stops on said seat portion cooperating with said spring catch means to hold the back and the arm rests in position when the chair is set up for use.

2,473,351
LOCKING DEVICE FOR TELESCOPIC CONNECTIONS
Luke Thompson, Downsview, Ontario, and David T. Wilson, Toronto, Ontario, Canada
Application October 15, 1948, Serial No. 54,788
In Canada December 24, 1947
7 Claims. (Cl. 248—191)



1. In combination a telescopic connection comprising an inner member, an outer member providing a passage in which the inner member slides, and an eccentric journalled on said inner member by an eccentric axis for turning from a concentric position to an eccentric position by angular movement of said inner member relative to said outer member, whereby the eccentric is caused to bind against a side of said passage and the inner member is caused to bind against the opposite side thereof to produce a locking action.

2,473,352
FOLDER
Sol M. Zimmerman, Detroit, Mich., assignor to Plastikpli Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application November 24, 1944, Serial No. 564,998
2 Claims. (Cl. 282—36)

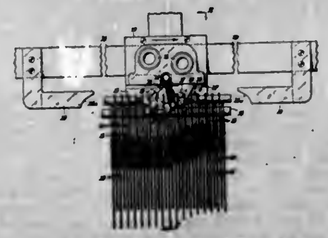


1. A folder comprising a sheet of material, a fold line inwardly of a side edge of said sheet de-

fining with said sheet a cover section, a second fold line in the remaining sheet portion substantially midway between the first named fold line and the other side edge of said portion along which said remaining portion of said sheet is adapted to be folded to provide a section of two thicknesses of material, a plurality of fold lines

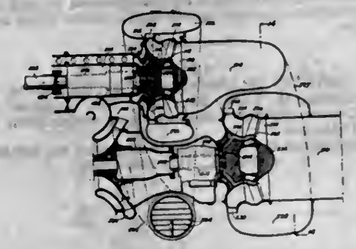
in both of said thicknesses of material dividing said material into pages each having a width substantially equal to the width of the cover section, said pages being adapted to underlie the cover section when the folder is closed, and each of said pages being of such length relative to the cover or page disposed thereover so as to have an end margin exposed.

2,473,353
HIGH-FREQUENCY VIBRATOR MECHANISM
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application July 3, 1944, Serial No. 543,255
7 Claims. (Cl. 171—97)



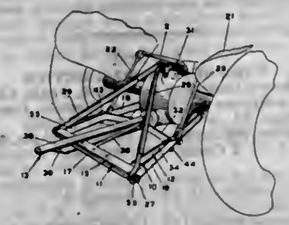
4. A vibratory interrupter comprising in combination a stack, a pair of frame plates clamped in said stack in parallel-spaced position, a pair of U-shaped permanent magnets mounted between said plates to have poles of opposite polarity facing each other defining a pair of magnetic gaps, a driver coil held between said magnets and having an axial opening therein aligned with said gaps, a ferromagnetic armature mounted for vibration in said stack and extending through said gaps and through the opening in said coil, a set of vibratory contacts on said armature, stationary interrupter and rectifier contacts cooperating with said vibratory contacts, one of said interrupter contacts being normally closed, stack-clamped springs for supporting said stationary contacts, connections between said coil, said interrupter contacts, a source of current and the primary winding of a transformer to alternately pass current of opposite direction through said coil and winding, and connections between the secondary winding of said transformer and the said rectifier contacts to rectify the alternating voltage induced in the said secondary winding.

2,473,354
DEVICE FOR TRANSMITTING AND RECEIVING COMPRESSIONAL WAVES
Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application November 20, 1942, Serial No. 466,535. Divided and this application January 10, 1948, Serial No. 1,851
6 Claims. (Cl. 177—386)



1. A device for transmitting and receiving compressional wave energy comprising a casing having a radiating member at one side thereof with the external surface in acoustic relationship with a sound-propagating medium and the interior surface shielded therefrom, said member having passive vibrating elements aligned at right angles to said member, and active resonant vibratory elements mounted at both ends of said passive vibrators.

2,473,355
SINKER ACTUATING MECHANISM FOR KNITTING MACHINES
Emil J. Berger and Howard K. West, Lansdale Pa., assignors to Dexdale Hosiery Mills, Lansdale, Pa., a corporation of Pennsylvania
Application January 3, 1948, Serial No. 406
3 Claims. (Cl. 66—110)

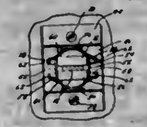


1. In sinker actuating mechanism for straight knitting machines, operating jacks individually associated with the sinkers; a reciprocating slur cock with receding cam surfaces complementally sloped relative to a center point for actuating the jacks to advance the sinkers; an element movably mounted on the slur cock and providing stop edges for respectively trailing the center point of the slur cock as the latter is traversed in opposite directions, to temporarily restrain one or more jacks in the wake of said center point and thereby prevent back slap of the corresponding sinkers, and fixed abutments respectively at opposite ends of the path of traverse of the slur cock adapted, by cooperation alternately with said element, to position it so that one of its stop surfaces trails the slur cock during traverse in one direction, and its other stop surface trails said cock during traverse in the other direction.

2,473,356
COMBUSTION GAS TURBINE ARRANGEMENT
Rudolph Birmann, Newtown, Pa., assignor, by mesne assignments, to Turbo Engineering Corporation, a corporation of Delaware
Application April 16, 1942, Serial No. 439,569
2 Claims. (Cl. 60—41)

1. In combination, a pair of turbines having independent shafts and rotating about parallel and closely adjacent axes, a compressor driven by, and coaxial with, one of said turbines, fuel burning means comprising a chamber in which products of combustion are formed and led to one of said turbines, means for leading gases discharged from one of said turbines to the other to drive the latter, and a passage for air from said compressor to said fuel burning means, said chamber being of scroll form and extending at least partially about both of said axes.

2,473,357
SWINGING DRAWBAR
Edward G. Blunier, Roanoke, Ill.
Application May 24, 1948, Serial No. 28,871
4 Claims. (Cl. 280—33.44)

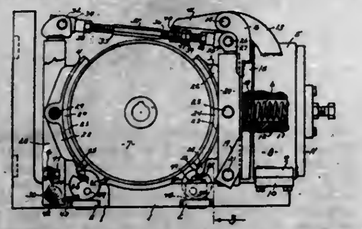


4. In an implement pulling adapter for removable support upon the hydraulic tool lift of a tractor, the combination comprising: a support bar; a U-shaped frame member having its free ends secured to opposite ends of said support bar; brace means between said support bar and said frame member; a swing bar pivotally supported at a point upon said frame member spaced forwardly from said support bar and substantially upon a perpendicular bisector of said support bar, said swing bar extending over and beyond said support bar; and means secured to said frame member slidably engaging said tool lift for preventing vertical movement with respect thereto.

2,473,358
CATHODE COATING FOR ELECTRON DISCHARGE DEVICES
Orlow S. Bright, Jr., Canton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application August 23, 1946, Serial No. 692,462
5 Claims. (Cl. 250—27.5)

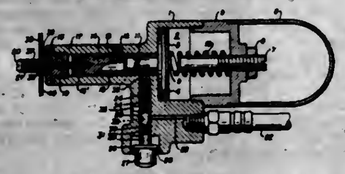
3. A gaseous-discharge device, comprising an envelope containing a low-pressure gaseous atmosphere, an ionically-heated cathode and one other electrode mounted in said envelope, said cathode having an emissive coating thereon which comprises a mixture of approximately equal percentages of barium and strontium oxides and a substantial quantity of thorium oxide.

2,473,359
DOOR CHECK DEVICE
Robert L. Brown, Ferndale, Mich.
Application September 30, 1947, Serial No. 776,988
5 Claims. (Cl. 16—85)



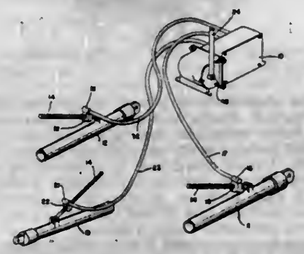
1. A striker plate for a door check, comprising a stamped sheet metal plate having an opening formed in the body portion thereon, a pair of oppositely disposed flanges bent from the body thereof adjacent the opening and extending at right angles to the plane of said body portion, a pair of oppositely disposed flanges in a plane at right angles to said first named flanges and at right angles to the plane of said body portion, notches in the end edges of said last named flanges, rollers journaled in the notches of said last named flanges, and compression spring means between each roller and the adjacent flange of said first named flanges.

2,473,360
BRAKE
Lynn S. Burgett, Bakersfield, Calif., assignor to The Clark Controller Company, Cleveland, Ohio, a corporation of Ohio
Application November 28, 1945, Serial No. 631,332
12 Claims. (Cl. 188—75)



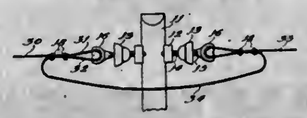
11. The combination with a brake drum of a brake shoe having an arcuate friction surface; a generally horizontal pivot support for the shoe; brake operating means to reciprocate the pivot support toward and from the drum to engage and disengage the friction surface with the drum; the pivot support being generally horizontal and behind the arcuate surface whereby the shoe tends to rock by gravity to engage an upper portion only of the arcuate surface with the drum when the shoe pivot is moved away from the drum; means to prevent said rocking of the shoe and to cause

all parts of the arcuate surface to move simultaneously toward and from the drum upon reciprocation of the shoe pivot, comprising: a device supported on a bearing having a bearing axis generally parallel to the shoe pivot axis and in radially spaced relation to the shoe pivot, and oscillatable to different positions on the bearing axis, and provided with friction means resisting oscillatory movements; the device provided with a guideway slot; a guide pin on the shoe and in the slot, the slot so formed and positioned that upon re-



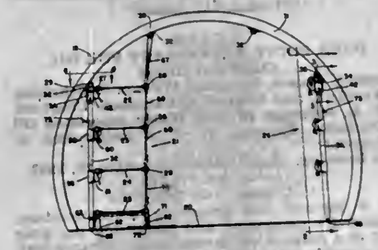
ciprocations of the shoe pivot toward and away from the drum, the pin engages one side of the slot and prevents said rocking of the shoe and concurrently slides along the said side of the slot; and upon reciprocation of the shoe pivot toward the drum to engage the arcuate surface with the drum, the pin may engage the other side of the slot and oscillate the device to a new position to reposition the slot in correspondence with wear on the arcuate surface and the corresponding change of position of the guide pin.

2,473,261
PNEUMATIC TOOL FOR UPSETTING HOLLOW RIVETS
Bert G. Carlson, Gates Mills, Ohio, assignor to The Bellows Company, Akron, Ohio, a corporation of Ohio
Application July 9, 1947, Serial No. 759,813
2 Claims. (Cl. 218—19)



1. In a riveting tool for flaring the barrel portion of a hollow rivet having a preformed flared head to rivet two pieces of material together and which tool includes a spindle for carrying a rivet, manually controllable fluid pressure operated means for drawing the forward end of said spindle toward said means to radially flare said rivet barrel underneath the second of said two pieces of material and means for returning said spindle to normal position upon release of said fluid pressure operated means, said pressure operated means comprising a casing, a piston slidably mounted in a cylinder in said casing and having a stem extending forwardly thereof, said stem having a reduced portion with clearance in said housing to form an annular passage in communication with said cylinder on one side only of said piston, an inlet from a source of fluid pressure and an intermediate passage between said inlet and annular passage, an exhaust outlet leading from said intermediate passage, a valve in said intermediate passage and means for normally maintaining said valve in position to open communication from said intermediate passage to said exhaust outlet and close communication to said intermediate passage from said inlet, said valve being manually operable to close communication from said intermediate passage to said exhaust outlet and open communication to said intermediate passage and to said cylinder from said inlet.

2,473,262
MOTION TRANSMISSION MECHANISM
Sherman H. Cook, Ferguson, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application December 23, 1944, Serial No. 569,601
4 Claims. (Cl. 244—102)

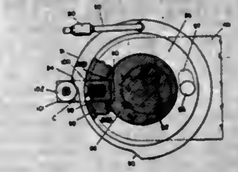


1. In an airplane, a landing gear actuating system which includes a mechanically operated jack for each of plural landing gears, a separate jack operating shaft for each landing gear, a rotatable drive element and a differential gearing connecting the drive element to each of said shafts, said differential gearing comprising at least one pair of gears coaxial with the drive element and each of which is operably connected to one of said shafts, and a gear meshed with said coaxial gears and mounted for free rotation on said drive element.

2,473,263
WIRE SUPPORTING DEVICE
John Brown Cook and Leonard L. Jugle, Chicago, Ill., assignors to Reliable Electric Company, Chicago, Ill., a corporation of Illinois
Application November 26, 1945, Serial No. 630,857
1 Claim. (Cl. 287—81)

A thimble for dead ending aluminum wire comprising two aluminum plates having contacting central portions, and offset marginal portions which cooperate with each other to form a curved groove, a series of rivets passing through said central portions and securing them to each other, said rivets being spaced adjacent the bottom of the groove formed by said marginal portions, and said plates being shaped so that each of said marginal portions is provided with an extension, said extensions being oppositely disposed and providing supporting arms for said thimble.

2,473,364
LITTER INSTALLATION FOR VEHICLES
Ernest G. Dickinson, Olcott, and John C. Parkin, Buffalo, N. Y., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application March 15, 1945, Serial No. 582,974
4 Claims. (Cl. 5—9)

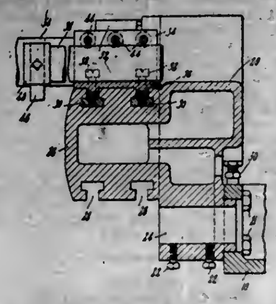


1. In a demountable litter installation for vehicles, a pair of support members attached to a wall of said vehicle, a connecting member pivotally attached to each said support member, a stanchion slidably connected to each said connecting member, said pivotal attachment of each said connecting member permitting swinging of its associated stanchion from a substantially vertical position to a substantially horizontal position adjacent to and substantially parallel to the other stanchion when the latter is correspondingly swung, a plurality of fittings adapted for supporting the ends of litter poles, said fittings being attached to said stanchions at spaced intervals, a first pair of sockets mounted on the floor of said vehicle, a second pair of sockets mounted one each on each said stanchion, a pair of socket engaging members on the lower ends of said stanchions adapted to engage said first pair of sockets in substantially vertical position and said second pair of sockets in substantially horizontal position of said stanchions, and means for selectively locking said stanchions against sliding movement with respect to said connecting members in either socket engaging position.

2,473,365
SEAT
Keith L. Emberson, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application August 6, 1946, Serial No. 688,639
9 Claims. (Cl. 155—179)

1. In a seat, a base member, an open centered substantially triangular bracket member secured to said base member, said bracket member being formed from an integral sheet the ends of which are bent to extend upwardly and outwardly beyond the apex of the bracket to form two superimposed positioning arms, a flat spring member secured to the lower of said positioning arms and extending therefrom outwardly and upwardly of said bracket member, and a lever arm having a plurality of reenforcing corrugations formed therein secured to the upper surface of said spring member and projecting therefrom immediately under and normally flush against the undersurface of said upper positioning arm, said lever arm extending upwardly and outwardly from said bracket member and being adapted to be connected to a load receiving member of the seat whereby said lever arm will be moved downwardly by load applied to the seat but will be retained against unlimited upward movement by the upper of said positioning arms.

2,473,366
DIE CASTING MACHINE
John Galliano, Oakland, Calif., assignor to Galliano Manufacturing Co., Oakland, Calif., a copartnership
Application April 9, 1945, Serial No. 587,285
5 Claims. (Cl. 22—92)

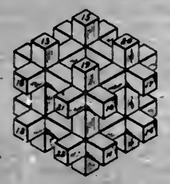


5. In a die casting machine, the combination comprising a stationary die block, a movable die block, means to support the movable die block for movement toward and away from the stationary die block, a drive shaft, a second shaft rigidly mounted on said drive shaft and arranged eccentrically to the axis of rotation of said drive shaft, an actuating member mounted on said second shaft, a clutch connecting the actuating member to one of said shafts during rotation of the drive shaft over one portion of its angular movement, said second shaft laterally moving the actuating member during rotation of the drive shaft over another portion of its angular movement, link means connecting the actuating member and the movable die block to move the movable die block during swinging movement of the actuating member, means effective to limit swinging movement of the actuating member, and a face on the actuating member contacting the movable die block to move the movable die block during lateral movement of the actuating member.

2,473,367
MULTIPLE TURNING HEAD
Leif Fersing, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application November 15, 1944, Serial No. 563,602
2 Claims. (Cl. 29—57)

1. A turning head adapted to be mounted on a lathe, said head having a non-rotatable drum,

means for securing said head to a lathe with the axis of said drum parallel to the spindle axis

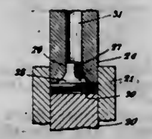


of the lathe, said drum having circumferential slots in its periphery to receive tool holder clamps.

2,473,368
SUPPOSITORY
Gerhard Flintermann, Philadelphia, Pa.
Application February 25, 1944, Serial No. 523,793
4 Claims. (Cl. 128—271)

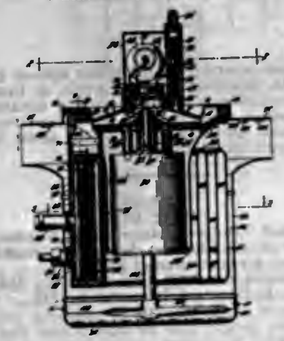
1. A composite suppository comprising an elongated solid portion of material that melts at body temperature having a cup shaped recess in at least one end thereof, and a dissolvable capsule adapted to be movably seated within said recess in close engagement with said solid portion, whereby said elongated portion acts both as an applicator for said capsule and as a functional meltable portion of the composite suppository which is isolated from the contents of the capsule prior to use.

2,473,369
THREE-DIMENSIONAL PUZZLE
Arthur Harris, Brooklyn, N. Y.
Application November 18, 1947, Serial No. 786,635
3 Claims. (Cl. 273—160)



1. A puzzle comprising four vertical members, four horizontal members, and four members transverse to the horizontal members interlocking to form a symmetrical, self-sustaining unit, each of said members having two recessed portions shaped to interlock with the recessed portions of two other members, two of said members having cylindrical elements in both recessed portions and four of said elements each having a cylindrical element in one of the two recessed portions to allow rotation of the six last-named members relative to members engaged therewith.

2,473,370
POUR POINT DEPRESSANT FOR OIL COMPOSITIONS
Russell J. Hawes, Cranford, William F. Behrman, Westfield, and Charles A. Campbell, Cranford, N. J., assignors to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
No Drawing. Application September 25, 1947, Serial No. 776,148
15 Claims. (Cl. 196—151)

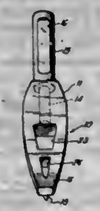


1. A method for preparing a composition, adapted for depressing and stabilizing the pour point of a mineral oil having an undesirably high and unstable pour point, from a solid subdivided adsorbent containing color-imparting carbonaceous bodies adsorbed from a fraction obtained by fractional distillation without substantial cracking, of a mineral oil, which comprises (*a*) extracting from said adsorbent color bodies adsorbed from said oil which are readily displaceable from said adsorbent by purging said adsorbent with steam but not substantially removable from said adsorbent by non-aromatic naphtha and (*b*) substantially cracking the extract thus obtained to obtain residuum effective as a pour point depressant and pour point stabilizer when incorporated in a minor proportional amount by weight in a mineral oil having an undesirably high and unstable pour point.

2,473,371
METHOD OF MAKING CONTACTS
Robert C. Heath, Willis R. Howe, and Walter E. King, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application December 29, 1945, Serial No. 637,996
8 Claims. (Cl. 29—155.55)

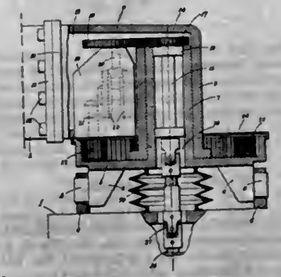
6. A method for making a contact having a precious metal face which comprises positioning the face of a bimetallic contact blank upon a die, applying a hollow bell-mouthed forming tool to the rear of said blank to extrude an embryo shank having an enlarged fillet-shaped base portion adjacent the rear face of the contact blank merging into a cylindrical end portion, the metal flowing from both the central and peripheral regions of blank into the interior of said forming tool whereby the metal adjacent said contact face flows away from the die, and pressing a second forming tool against the elongated embryo shank, the fillet-shaped portion, and the rear of the blank to cause the metal to flow toward the die and form a finished contact having a flat face formed of precious metal.

2,473,372
UNIT TYPE AIRPLANE HEATER
Frederic O. Hess, Philadelphia, Lawrence F. Miller, Hatboro, and Karl L. Dietrich, Jr., Philadelphia, Pa., assignors to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application June 20, 1944, Serial No. 541,258
7 Claims. (Cl. 126—110)



1. A heater comprising structure including a blower adapted to supply a combustible fuel mixture under pressure, said blower comprising a pair of removably secured opposing wall members providing an inner chamber having an inlet and an outer annular diffusing chamber immediately adjacent to and communicating with the inner chamber substantially about the entire periphery thereof, a rotatable impeller in the inner chamber, the outer annular chamber having an outlet for discharging combustible fuel mixture therefrom under pressure, a burner unit, means for removably securing said burner unit to one of said wall members to receive the combustible fuel mixture adapted to be discharged from the outlet of the outer annular chamber, a hollow heat dissipating element connected to receive heated gases from the burner unit and through which such gases are adapted to pass, means including a fan for circulating air to be heated in heat exchange relation with the hollow element, and means including a motor removably secured to said one of said wall members for driving the impeller and the fan.

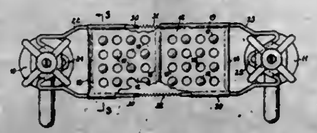
2,473,373
BOLT HEAD AND EXTRACTOR FOR FIREARMS
John D. Howell, Westport, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application January 30, 1946, Serial No. 644,207
7 Claims. (Cl. 42—25)



6. In a firearm for use with extractible rigidly cased cartridges, the combination of a breech bolt having a forwardly facing cartridge head engaging surface, cartridge extracting and ejecting means mounted in said breech bolt, and a continuous annular collar integral with said breech bolt and extending forwardly therefrom to form a continuous wall circumferentially surrounding said head engaging surface and said extracting and ejecting means.

2,473,374
PHONOGRAPH NEEDLE
William H. Hutter, Chicago, Ill.
Application April 26, 1945, Serial No. 590,329
1 Claim. (Cl. 274—38)

A phonograph needle formed from an organic plastic material having comparatively low stiffness and mass comprising a shank portion and a lower portion, said lower portion being curved forwardly, the width of said shank portion being greater than the thickness thereof in order to provide greater stiffness in a lateral direction than in a vertical direction, a stiffening member received in only the upper part of said shank portion to provide a localized stiffness, and a record engaging point mounted in the end of said curved lower portion, said curved lower portion being provided with an aperture passing through the needle in the direction of its thickness to offset the increase in generalized mass effected by the greater width of the needle, and by the stiffening member, the major part of that portion of the needle which is formed from organic plastic material being free from the stiffening effect provided by said stiffening member.



2,473,375
DOUBLE UNIVERSAL CONNECTION FOR VEHICLE COUPLING AND STEERING DEVICES
John H. Hyler, North Pekin, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Original application June 29, 1945, Serial No. 602,184. Divided and this application September 30, 1948, Serial No. 52,066
4 Claims. (Cl. 180—79.4)

1. A tractor-trailer draft coupling and power steering device comprising a pair of cooperating

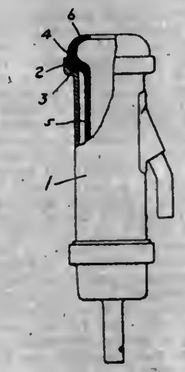
members secured together for relative rotation about an upstanding axis, means adapted to connect one member in fixed relation to the trailer, means adapted to connect the other member to the tractor for unitary lateral tilting of said members relative to said tractor about a longitudinally extending axis, and driving mechanism, including a universal connection, arranged to cause relative rotation between said unitary members regardless of the lateral tilt thereof relative to the tractor; the universal connection including vertically spaced universal joints disposed above and below, but in substantially the vertical plane of, the axis of tilting movement of said members, and means connecting said joints.

2,473,376
SOAP TRAY
Laurie B. King, Greensboro, N. C.
Application May 15, 1946, Serial No. 669,873
4 Claims. (Cl. 45—28)

1. A soap receptacle comprising a tray for supporting a cake of soap, said tray having tubular channels in each side thereof, a slidable U-shaped member for each end of the tray and having its legs mounted in the ends of the channels and each U-shaped member having a recess in its outer end adapted to fit against a spigot of a lavatory and the like, compression springs disposed at said channels between the proximate ends of the slidable members for urging the slidable members outwardly against the spigots to support the soap receptacle.

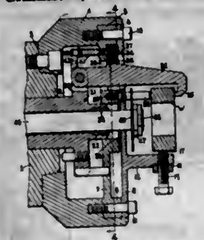
2,473,377
GROUND WIRE SYSTEM
Winfield R. Koch, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 2, 1946, Serial No. 700,696
10 Claims. (Cl. 250—33)

1. A ground wire system for a broadcast antenna array having antennas, including a plurality of conductors plowed into the ground and radiating from the base of each antenna of the array, said system of conductors following paths in which the current would tend to flow if the ground were perfectly conducting, said paths being non-intersecting except at the base of each antenna.



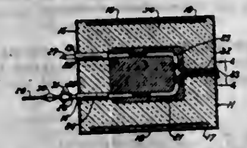
2,473,378
ELECTRIC CONVULSIVE THERAPY
Wladimir Theodore Liberson, Hartford, Conn.
Application March 16, 1946, Serial No. 654,882
4 Claims. (Cl. 128—421)

4. The method of electric convulsive shock therapy which consists in applying electrodes to the head of a patient, in transmitting through the electrodes and through the intact skull and the brain of the patient a series of electrical impulses having peak amperages within the range of 150 to 1000 milliamperes which said impulses have a frequency of 60 or more per second with



the impulses arranged in closely spaced groups and with relatively long intervals of time between successive groups, the mean duration of the impulses of each group being less than one millisecond, and in continuing the series of impulses until convulsion is elicited.

2,473,379
TEAT CUP
Hans Olof Lindgren, Appelviken, Sweden, assignor to Aktiebolaget Separator, Stockholm, Sweden, a corporation of Sweden
Application March 30, 1945, Serial No. 585,769
In Denmark December 9, 1943
1 Claim. (Cl. 21—85)

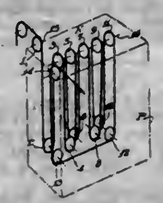


In a teat cup for milking machines, the combination, with a rigid shell having a cylindrical main portion and a larger cylindrical extension joined to the main portion by an annulus the upper face of which is of a width substantially greater than the thickness of the shell body and substantially greater than the thickness of the body of the below-specified liner, of a flexible liner having an approximately cylindrical body portion of a diameter substantially smaller than that of the main portion of the shell and a relatively thick annular portion the inner part of which is spaced from said annular portion of the shell and the outer part of which extends above the annulus of the shell inside the cylindrical extension and thence upward and inward substantially above the upper edge of said cylindrical extension to a diameter approaching that of the body portion, the relatively thick annular portion of the liner having along its bottom and along its outer wall a tight contacting fit with the annulus and larger cylindrical extension of the shell.

2,473,380
COMBINATION DIAPHRAGM AND CLAMP CHUCK
Thor H. Ljunggren and Glenn M. Green, Springfield, Vt., assignors to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont
Application April 10, 1947, Serial No. 740,642
7 Claims. (Cl. 279—46)

7. In combination, a hollow spindle having a nose, a chuck comprising a body for securement to said nose, a diaphragm carried by said body and having forwardly projecting work-engaging fingers arranged in circular series, stops carried by said chuck back of said fingers and against which a work piece positioned between and gripped by said fingers may engage, releasable means engageable with the forward end of said work piece and actuable to hold the work piece back against said stops, and a plug gage movable through said hollow spindle and having a gage part for entering a central hole in the work piece when said hole reaches a predetermined size.

2,473,381
HEAT-TREAT FURNACE
Clifford Mennica, Detroit, Mich.
Application May 8, 1946, Serial No. 668,242
3 Claims. (Cl. 263—42)



1. A radiant heated furnace comprising a hollow housing, a heat treatment receptacle mounted within said housing in spaced relation, there being a hollow continuous U-shaped combustion channel formed within the base portion of said receptacle, a combustible mixture intake pipe joined to one end of said channel, and an exhaust pipe joined to its other end, said pipes projecting through openings formed within one of the walls of said housing and a pilot tube extending from and joined centrally to said combustion channel through which an ignition source may be introduced.

2,473,382
APPARATUS FOR TREATING MOTION-PICTURE FILM
Emery Meschter, Towanda, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application December 24, 1947, Serial No. 793,615
2 Claims. (Cl. 271—2.3)

1. A unit film guiding mechanism for conducting continuous lengths of motion picture film through processing solutions comprising an idler film guiding spool and a film drive sprocket disposed on spaced parallel horisontal axes and having the median lines of their peripheral film guiding surfaces in alignment, an odd number N series of freely revolvable film guiding spools, laterally disposed on a common horisontal axis which is parallel to, between and below the axes of said sprocket and idler film guiding spool, a second series of freely revolving film guiding spools

$$\frac{(N+1)}{2}$$

in number, on individual axes parallel to each other and perpendicular to and on a level lower than said first N series and disposed with the median lines of their film guiding surfaces in a vertical plane passing between the idler film guiding spool and the nearest peripheral surfaces of the N series of spools, said individual horizontal axes being located in vertical planes passing between the idler film guiding spool and the first of the N spools and between the next even

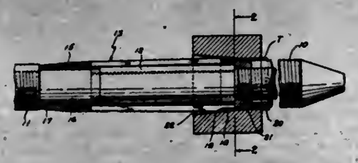
and odd numbered successive N spools respectively, and a third series of film guiding spools

$$\frac{(N+1)}{2}+1$$

in number all disposed in a vertical plane passing between the drive sprocket on the nearest peripheral faces of the N spools on the common axis, the first and last of the spools being disposed on horizontal axes which are extensions of those of the first and last of the above mentioned

$$\frac{(N+1)}{2}$$

spools and the remainder being disposed on horizontal axes parallel to those of the



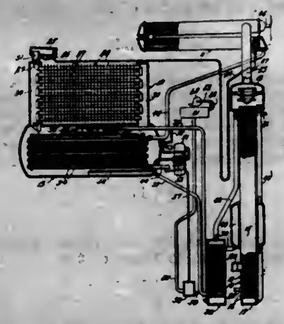
$$\frac{(N+1)}{2}$$

spools and on a higher level, said axes being located in vertical planes between the odd and even numbered successive N spools respectively, the second and third series of spools being mounted on a vertical movable frame.

2,473,383
TUBE SIZING MACHINE
Lester H. Messinger, Trumbull, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application September 16, 1946, Serial No. 697,747
1 Claim. (Cl. 82—83)

Apparatus for the sizing of tubes comprising a sizing die having a tapered throat; an arbor adapted to receive thereon a tube to be sized and

to be reciprocated to thrust a tube thereon through said die; a support for said arbor comprising an elongated member secured to one end of said arbor; and an abutment device for a tube impaled on said arbor comprising a sleeve member surrounding and secured to said elongated member, said sleeve member being slotted from one end to form a plurality of spring fingers



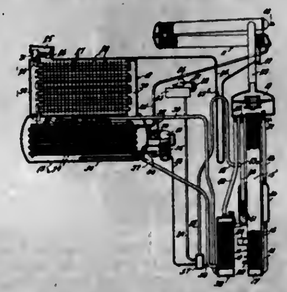
biased radially outwardly and adapted for endwise engagement with a tube on said arbor, said fingers being also adapted for radial inward displacement by direct engagement with the tapered throat of said die whereby the tube engaging ends of said fingers may be thrust through said die from the throat end thereof and retracted through said die to normal position.

2,473,384

APPARATUS FOR AND METHOD OF RETURNING PURGED INERT GAS TO AN ABSORPTION REFRIGERATING SYSTEM

Lowell McNeely, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware

Application January 13, 1948, Serial No. 2,039
8 Claims. (Cl. 62—119)



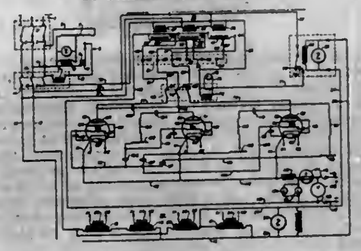
1. An absorption refrigerating system including a high and a low-pressure side, means for collecting non-condensable gas in the low-pressure side of the system, means for entraining at least a portion of the collected non-condensable gas into absorption solution in the low-pressure side of the system, means for withdrawing from the low-pressure side of the system any collected non-condensable gas beyond that entrained in the absorption solution, and a gas trap for storing the withdrawn non-condensable gas during on periods of operation of the system, said gas trap and said withdrawing means being so connected and arranged as to return the stored non-condensable gas to the low-pressure side of the system during off periods of operation.

2,473,385

ABSORPTION REFRIGERATION METHOD AND SYSTEM HAVING PROVISION FOR THE RETURN OF PURGED GAS

Eugene P. Whitlow, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware

Application January 13, 1948, Serial No. 2,095
17 Claims. (Cl. 62—119)



1. An absorption refrigerating system including a high and a low-pressure side, means for collecting non-condensable gas in the low-pressure side of the system, means for entraining at least a portion of the collected non-condensable gas into absorption solution in the low-pressure side of the system, means for withdrawing from the low-pressure side of the system any collected non-condensable gas beyond that entrained in the absorption solution, and a gas trap for storing the withdrawn non-condensable gas during on periods of operation of the system, said gas trap being provided with means forming a liquid seal for retaining the non-condensable gas therein during on periods of operation of the system, and means for draining said liquid seal during off periods of operation of the system.

2,473,386

GRID CONTROLLED POLYPHASE RECTIFIER

Felix A. Obley, Garfield Heights, Ohio

Application July 24, 1947, Serial No. 763,218
10 Claims. (Cl. 321—11)

1. A polyphase grid controlled rectifier for supplying a self regulated D. C. output voltage, comprising time delay means for controlling the flow of current through said rectifier, rectifying tubes each including a control grid for changing an A. C. input to a D. C. output, means associated with said time delay means to prevent current flow from the tubes until said tubes have been predeterminedly heated, and means for instantaneously varying the effective grid current

of ionization in each tube through its control grid in response to varying load conditions to obtain a D. C. output voltage at a preadjusted constant level.

2,473,387

ANTI-ICING MEANS FOR AIRCRAFT

Elwyn H. Peters, Lloyd F. Engelhardt, and James L. Brierton, Columbus, Ohio, assignors to Curtiss-Wright Corporation, a corporation of Delaware

Application May 28, 1947, Serial No. 750,968
8 Claims. (Cl. 244—134)

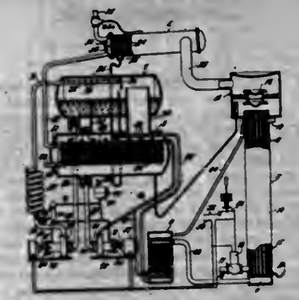
8. An airfoil having spaced inner and outer walls at the leading edge thereof, the inner wall having spaced inwardly directed flanges providing a slot communicating with the space between said walls, a duct having spaced inwardly directed flanges providing a slot extending longitudinally of the duct, the duct flanges and the inner wall flanges being provided with interlocking formations whereby the duct flanges nest in interlocking relation within the inner wall flanges, and means bridging said slot for holding said interlocking formations engaged, said bridging means providing spaced openings along the slot for passing fluid.

2,473,388

TUBING COUPLER

Ingar G. Rambo, Wauwatosa, Wis., assignor to Safway Steel Products Inc., Milwaukee, Wis., a corporation of Wisconsin

Application March 8, 1945, Serial No. 581,597
12 Claims. (Cl. 287—103)



9. The combination with cylindrical tubes fitting one within the other of coupling means releasable upon rotation of the tubes with respect to each other, said means comprising a latch pivotally carried by said one tube, said other tube having a slot, resilient means associated with the latch to project the latch into said slot, and inclined plane means acting between the slot and latch to move the latch inwardly out of the slot in response to rotation of one tube with respect to the other.

2,473,389

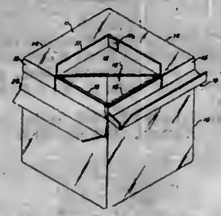
LOW-PRESSURE ABSORPTION REFRIGERATING SYSTEM

John G. Reid, Jr., Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware

Application January 2, 1947, Serial No. 719,871
6 Claims. (Cl. 62—119)

1. In a vacuum type refrigeration system having a plurality of interconnected elements to provide a circuit for refrigerant, a pump for circulating liquid in said system and so constructed and arranged as to deliver the liquid at a pressure greater than atmospheric pressure, said pump having a shaft extending out of said system and a housing surrounding the shaft, connecting means for supplying liquid delivered from said pump to said shaft housing, control mechanism for operating the pump periodically, and structure in said connecting means comprising a check valve for maintaining the liquid in said shaft housing at a pressure greater than the atmospheric pressure between periods of operation whereby to seal the shaft to prevent air from entering the system.

2,473,390



BUTADIENE EMULSION POLYMERIZATION PROCESS, INCLUDING MERCAPTAN AND CYANIDE MODIFIERS

Harold J. Rose and Marian Kabler Rowan, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 26, 1944, Serial No. 551,424
4 Claims. (Cl. 260—84.5)

4. The process of preparing rubber-like emulsion polymerizates which comprises emulsifying one part of a mixture of a major proportion of butadiene-1,3 and a minor proportion of acrylonitrile in 1½ to 2 parts of water in the presence of 0.5 to 5.0 weight percent based on the monomers of an alkali soap of a fatty acid, 0.05 to 0.6 weight percent based on the monomers of an oxygen-liberating polymerization catalyst and 0.2 to 1.0 weight percent based on the monomers of an aliphatic mercaptan polymerization modifier containing from 6 to 16 carbon atoms per molecule, and adding thereto 0.005 weight percent based on the monomers of cyanide ion in the form of potassium cyanide.

2,473,391
CONTAINER
Walter A. Roselle, New York, N. Y.
Application October 23, 1946, Serial No. 705,131
7 Claims. (Cl. 229—7)

1. A container formed of paper and comprising a body portion of angular cross-sectional shape and a top portion having flanges overlapping at least two adjacent side edges of the body, said top being scored across the corner intervening said side edges to form a closure and said flanges being interrupted at the ends of said scores to facilitate hinging of the corner of the top along the scored line, and sealing strips secured to the outer edges of the body portion along said adjacent side edges beneath said flanges and extending around the outside of said flanges and covering the interrupted portions of said flanges and extending over the outer edges of the corner of the top portion and sealing the outer edges of the flanges along said adjacent sides of the top portion, said extended portions of said strips being detachably sealed to the outer surfaces of the top portion.

2,473,392
DRILLING MUD CONTAINING GELATINIZED STARCH AND MONOETHANOL AMMONIUM 2-BENZOTHIAZYL SULFIDE
William F. Russell, Norwalk, Conn., assignor to R. T. Vanderbilt Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application April 11, 1947, Serial No. 740,976
4 Claims. (Cl. 252—8.5)

1. Gelatinized starch containing about 2%–4% by weight on the starch of monoethanol ammonium 2-benzothiazyl sulfide.

2,473,393
LADY'S SLIP
Emma H. Schwalbe, New York, N. Y.
Application March 12, 1947, Serial No. 734,629
1 Claim. (Cl. 2—73)

A form fitting slip comprising a skirt, a bust supporting panel, a bust encompassing panel and a back panel, said skirt being formed of a single piece of material and having a single vertically extending seam securing the side edges of said material together at the back of said skirt, said seam extending from the lower edge of said skirt to the upper edge thereof, said upper edge on each side of said vertical seam being curved sinuously upwardly and reaching its highest point on the front vertical center line of said skirt, said bust supporting panel extending from side to side of said slip across the front of said slip, said bust supporting panel having an inverted V-shaped configuration with its apex aligned with the highest point of said skirt and having parallel top and bottom edges, respectively, said bottom edge complementing the upper edge of said skirt at the front thereof, and means securing said bottom edge of said bust supporting panel to said upper edge of said skirt, said bust encompassing panel extending across the front of said slip from each side thereof, said bust encompassing panel having a curved lower edge of an inverted V-shape with the apex thereof disposed substantially on the vertical center line of said bust encompassing panel, said bust encompassing panel having a pair of oppositely disposed side edges diverging upwardly from said bottom edge and an upper edge converging upwardly and inwardly from each of said side edges and then downwardly, junctioning on said vertical center line, said lower edge of said bust encompassing panel complementing and being secured to the upper edge of said bust supporting panel, said back panel extending from side to side across the back of said slip and having its side edges secured to the side edges of said bust supporting and bust encompassing panels, said back panel having a substantially straight line upper edge, the lower edge thereof being substantially V-shaped, complementing the upper edge of said skirt at the back thereof and being secured thereto.

2,473,394
SAFETY HEADGEAR FOR PEDESTRIANS AND WORKMEN
Clarence W. Scott, Chicago, Ill.
Application March 6, 1948, Serial No. 13,446
5 Claims. (Cl. 177—329)

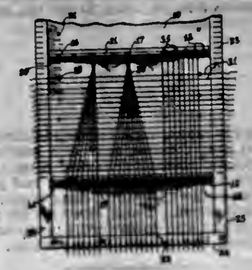
2. A safety hat for workers, pedestrians and the like comprising, a skull cap, a helmet pivotally secured to the said skull cap on its transverse axis, adjustable catch means retaining the said helmet in adjustable relationship to the said skull cap, light means secured to the said helmet at its interior central portion, battery means securable to a belt worn by a person, switch means, electrical connecting means interconnecting the said switch means to the said light means and the said battery means at an intermediate point, and varicolored visual signal means secured at front rear and sides of the said helmet diffusing rays of light, and reflector means interiorly of the said helmet and rearwardly of the said light means to concentrate and direct the rays of light toward the said visual signal means.

2,473,396
HOPS TREATMENT
George Segal, Great Neck, N. Y.
No Drawing. Application December 30, 1944, Serial No. 570,761
7 Claims. (Cl. 99—50.5)

1. The method of treating hops which consists of freezing the hops while they still retain substantially their fresh aroma, the temperature being depressed through the temperature of about 30° F. at a rate not substantially greater than about 1° F. per hour, then holding the hops in frozen state for a storage period, then thawing the hops, and thereafter drying the hops.

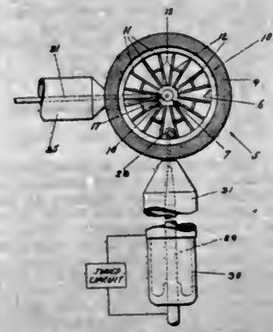
2,473,396
REINFORCED PLASTIC TOOTH
Sidney Slavin, Brooklyn, N. Y.
Application April 10, 1946, Serial No. 660,916
4 Claims. (Cl. 32—9)

1. A reinforced artificial tooth, comprising a plastic body having a recess for receiving the pin of a backing plate, a substantially hairpin-shaped, resilient reinforcement provided along the edges of the recess and about its closed end, said reinforcement being imbedded in and covered, substantially by the tooth material.



2,473,397
RETARDING MECHANISM
Harry Slavin, Detroit, Mich.
Application April 30, 1946, Serial No. 666,844
11 Claims. (Cl. 244—116)

1. In combination with a runway over which a vehicle is adapted to travel, a pair of posts each located on a side of the runway opposite to the other and mounted for bodily translational movement in upright position parallel to the runway, a barrier adapted to be supported by said pair of posts over the runway for engagement by a vehicle traveling therealong, and means for yieldingly resisting movement of the posts in one direction of their movement.

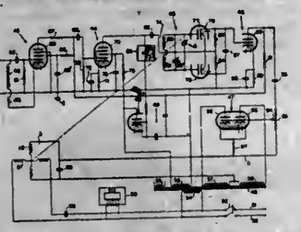


2,473,398
DEVICE ON WHICH TO FORM MINIATURE LADDERS, ETC.
Frank Spano, Union City, N. J.
Application March 28, 1946, Serial No. 657,776
9 Claims. (Cl. 28—16)

1. A form for the construction of miniature ladders consisting of a base having raised bridges for supporting substantially longitudinal threads, a slitted resilient abutment for frictionally anchoring the ends of threads supported

on said bridges and fixed slitted resilient side strips for anchoring the ends of cross threads supported on the substantially longitudinal threads.

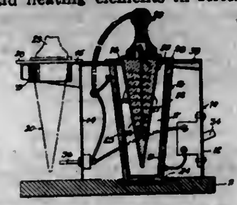
2,473,399
ELECTRON DISCHARGE DEVICE OF THE MAGNETRON TYPE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 27, 1945, Serial No. 585,025
12 Claims. (Cl. 315—40)



1. An electron-discharge device comprising: an anode structure provided with a plurality of anode members; at least one pair of said anode members, together with at least a portion of the anode structure lying therebetween, being electrically effective to constitute a first, shorted transmission line of predetermined dimensions adapted to resonate at a first, predetermined wave length; a low-impedance member connecting at least one pair of said anode members at points intermediate the length thereof; a portion of each of said connected anode members, together with said low-impedance member, being electrically effective to constitute a second, shorted transmission line of different dimensions than said first-named transmission line and adapted to resonate at a second, predetermined wave length; and an output circuit, tuned to the average of the resonant wave lengths of said first and second transmission lines, coupled to at least one of said transmission lines.

2,473,400
MOLDING CLIP
David H. Waara, Detroit, Mich., assignor to Robert L. Brown, Ferndale, Mich.
Application July 17, 1946, Serial No. 684,222
3 Claims. (Cl. 24—73)

1. A clip for mounting a hollow molding having spaced inturned flanges, said clip comprising a channel shaped stamping having a central base portion and downwardly projecting end portions, upwardly and outwardly projecting arms stamped from the bottom wall of said downwardly projecting end portions, and downwardly projecting arms stamped from the central base portion.



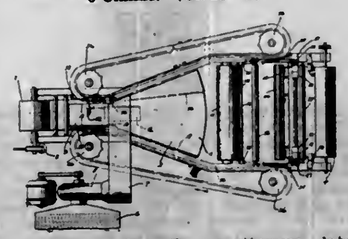
2,473,401
SENSITIVITY EQUALIZING CIRCUIT FOR CONTROL APPARATUS
Rudolf F. Wild, Philadelphia, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application October 6, 1945, Serial No. 620,831
14 Claims. (Cl. 318—28)

14. In a follow-up system, a variable frequency signal producing device which produces for the same adjustment different changes in the frequency of said signal over the range of adjustment, and a frequency responsive device responsive to the frequency of said signal, said frequency responsive device including electrical circuit means having a first portion tuned to a frequency outside of said range of adjustment and having a second portion coupled to said first portion and tunable over said range of adjustment to compensate for the difference in the frequency change of said signal over the range of adjustment of said signal producing device to maintain a substantially constant system sensitivity.

2,473,402
ELECTRIC BAKING MOLD
Milton E. Wood, Staten Island, N. Y.
Application June 8, 1948, Serial No. 31,656
1 Claim. (Cl. 219—19)

A baking mold including a plurality of cup shaped elements defining batter receiving cavities, a base on said mold, a heating element surrounding the outer wall of said cavities and supported by said base whereby by removing the base said heating element may be replaced, male elements adapted to be suspended in said cavities in spaced relation to the cavity walls, said male elements being conically shaped and having heating elements, means for locking said male elements in said cavities and electrical means connecting said heating elements in series relation

whereby when food batter is placed in said cavities an edible food cup will be formed.



2,473,403
HYDROPHILIC DYE INTERMEDIATES
David Willcox Woodward, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 8, 1945, Serial No. 576,906
7 Claims. (Cl. 260—87.3)

1. A color former consisting of a hydrophilic ether of a hydrolyzed aliphatic mono-olefin/vinyl ester interpolymer having a plurality of color former nuclei each nucleus being attached to the chain atoms of said interpolymer through a $-CH_2-O-$ linkage, said nuclei possessing a structure of the formula:

where X is a member of the group consisting of HO— and primary and secondary amino radicals and n is a number from the group consisting of 0 and 1, said olefin being an aliphatic terminally unsaturated mono-olefin of less than five carbon atoms.

2,473,404
APPARATUS FOR STRETCHING
Foster J. Young, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Original application July 25, 1940, Serial No. 347,465. Divided and this application August 17, 1946, Serial No. 691,371
6 Claims. (Cl. 18—1)

1. Apparatus for the continuous lateral stretching of film which comprises an oven for heating the film, the oven being in two parts which are separated from one another a sufficient distance for the film to pass between them, opposed openings in the respective parts adapted to act on the opposite sides of film located between the two parts, and on each side of the space between the two parts continuous gripping means for holding the film taut as it passes through the oven.

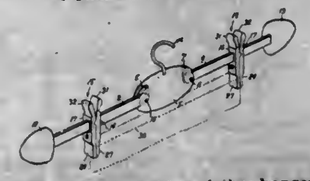
2,473,405
DELAY ELECTRIC INITIATOR
David T. Zebree, Kingston, N. Y., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application January 24, 1945, Serial No. 574,349
11 Claims. (Cl. 102—28)

9. A delay electric blasting initiator comprising a shell, a delay fuse element, a plug, lead wires inserted therethrough, the terminal ends of said lead wires projecting from the lower face of the plug, and a bridge wire affixed to the terminal ends of the lead wires and embedded in an ignition composition bead comprising, by weight, between about 18% and about 50% primary explosive, between about 16% and about 55% oxidizing material, between about 10% and about 64% flash-producing metal, and between about 2% and about 12% binding agent, said bead disposed less than about $\frac{1}{16}$ inch above the upper face of the fuse element, said initiator having a relatively small air space between the plug, and the bead being in close proximity to said plug and said delay fuse element.

2,473,406
DIOL COMPOUNDS AND ESTERS THEREOF
Carl N. Zellner, New Providence, and Herbert B. Granholm, Westfield, N. J., assignors to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
No Drawing. Application October 17, 1946, Serial No. 703,722
4 Claims. (Cl. 260—488)

1. A compound corresponding to the formula:

wherein R is the same radical in both instances and is a member selected from the group consisting of hydrogen and an acyl radical.



2,473,407
DISK SUPPORTING JIG WHILE TREATING THE EDGE OF THE DISK
Clifford E. Adams, Wakita, Okla.
Application May 2, 1947, Serial No. 745,669
1 Claim. (Cl. 91—60)

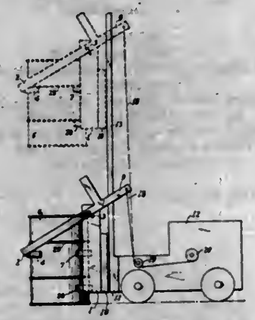
A jig of the class described, comprising a main hollow vertical post, including a telescoping section adjustably secured within the hollow post, a plate secured to the telescoping section at the upper end thereof, the side faces of the plate being parallel with the side of the telescoping section, a tubular bearing, a plate secured to the side of the tubular bearing and resting against the first-mentioned plate, a bolt extending through the plates adjustably securing the tubular bearing to the telescoping section of the main post, a shaft operating within the tubular bearing, a disc holder secured to one end of

the shaft to rotate therewith and on which a disc to be treated is held, a power shaft embodying telescoping sections, means for securing the telescoping sections of the shaft in their positions of adjustment with respect to each other, a universal connection between the power shaft and first mentioned shaft for rotating the first mentioned shaft, and reduction gearing for operating the shafts.

2,473,408
CLOTHES HANGER
Gerald Thompson Aikin, Kiama, New South Wales, Australia
Application March 22, 1947, Serial No. 736,541
In Australia March 13, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires March 13, 1966
3 Claims. (Cl. 223—96)

1. The combination with a clothes hanger provided with a pair of arms, of a pair of garment-supporting clips, one for each said arms, said clips being slidable on their respective arms and comprising each a pair of jaws arranged with the opening between the jaws transverse of their arms, one of the jaws of each clip being mounted on its respective arm to remain substantially at right angles thereto, and the other one of said jaws being pivotable on the first mentioned jaw, in a direction lengthwise of the arms, to open the jaws to receive a garment.

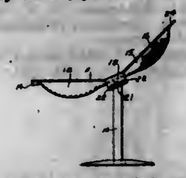
2,473,409
VARIABLE COMPOUND RESISTOR
John T. Beechlyn, Worcester, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application April 10, 1945, Serial No. 587,645
1 Claim. (Cl. 201—56)



A device of the type described comprising a plurality of resistance wires wound on independent cylindrical shells concentrically aligned with one another, an operating shaft adapted to be rotated

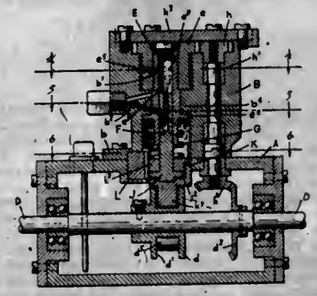
extending through one of the cylinders at the center, a contact arm for each of said resistance wires mounted to be rotated with said center as the turning point, means coupling one of said arms rigidly to said shaft for rotation thereof, means coupling the other of said arms to said

shaft, said coupling comprising a collar attached to said shaft having a projecting pin, said other arm being supported on said shaft by a ring having an arcuate slot therein engaging said projecting pin whereby said shaft may be turned a fraction of a revolution before said arm begins to rotate.



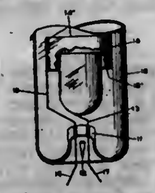
2,473,410
DEVICE FOR LIFTING AND TRANSPORTING OBJECTS
Angelo J. Bevevino, Petrolia, Pa., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware
Application August 9, 1947, Serial No. 767,718
8 Claims. (Cl. 214—66)

1. Improvement in device for lifting and transporting objects, which comprises first means for supporting one side portion of an object, second means for supporting at least one substantially opposing side portion of such object and secured freely pivotable relative said first means between an object-engaging and an object non-engaging position, third means carried by said first means for attachment to a lifting device, and means for pivoting said second means from one said position to the other said position.



2,473,411
EGG SEPARATOR STAND
Robert W. S. Boden, Pittsburgh, Pa.
Application March 12, 1947, Serial No. 734,133
1 Claim. (Cl. 146—2)

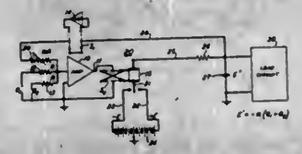
In an egg separating stand, the combination which comprises a pedestal having a stem and a base for holding the stem upright, a tray having a dished egg holding section in one end and a straining section in the other end with the straining section also dished and provided with openings and extended diagonally in relation to the said egg holding section, said tray having downwardly extending flanges at the sides overlapping the upper end of the pedestal for pivotally mounting the tray on the pedestal, and pins extended



through the flanges spaced from the shaft and positioned to engage the sides of the pedestal to limit tilting movement of the tray.

2,473,412
FUEL INJECTION PUMP
William Frederick Bryant, Chamblee, Ga.
Application May 11, 1945, Serial No. 593,368
5 Claims. (Cl. 103—2)

1. In a liquid fuel injector, the combination with a housing having an induction port and a series of eduction ports, of a tubular cylinder within the housing having an induction port registering with the induction port in the housing, and a plurality of eduction ports, a reciprocating piston in the cylinder opening and closing on its movement the induction port therein, a rotary member surrounding the head of the cylinder and having an eduction port, and means for reciprocating the piston and rotating the rotary member in synchronism with each other.

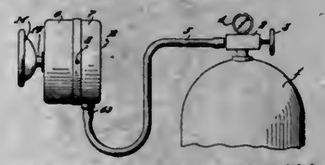


2,473,413
ELECTRODE
Ralph Cortese, Newark, N. J.
Original application May 17, 1945, Serial No. 594,226. Divided and this application August 5, 1947, Serial No. 766,145
3 Claims. (Cl. 176—124)

1. As a new article of manufacture, a space discharge tube, comprising, in combination, a

glass envelope, a shell electrode sealed therein in the form of a cylindrical cup with an open face and a closed bottom and having an electron-emitting oxide coating on the interior thereof, and a cooperating cylindrical ring anode also sealed therein and encircling said electrode in uniformly spaced relation thereto and extending therebeyond a slight distance.

2,473,414
VOLTAGE MULTIPLYING CIRCUIT
Sidney Darlington, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 7, 1947, Serial No. 784,745
6 Claims. (Cl. 320—1)



1. A system of apparatus for charging a condenser to a direct-current voltage numerically proportional in a desired ratio to a given direct-current voltage and of prescribed polarity relative thereto comprising a summing amplifier having an input and an output circuit, a first and a second resistance of arbitrarily fixed values, a third resistance proportional in the desired ratio to the first resistance, means for applying the given voltage to the input circuit through the first resistance, a pair of sources of direct-current voltage of opposite polarities, selection means for applying one or the other of the sources to charge the condenser through the second resistance, means included in the output circuit controlling the selection means to select that one of the sources of prescribed polarity relative to the given voltage and means for applying the voltage of the condenser through the third resistance to the input circuit in opposite polarity to the given voltage.

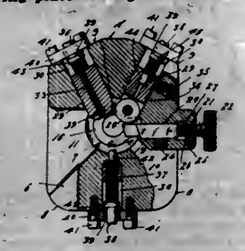
2,473,415
MIXING NOZZLE
Robert M. Doull, Westmount, Quebec, Canada
Application April 10, 1946, Serial No. 661,027
5 Claims. (Cl. 91—44)

1. A mixing nozzle of the kind described comprising two full length casing sections formed with straight longitudinal side edges butted together, each section comprising end portions of unequal length and an intermediate portion having a maximum depth greater than the maximum depth of the end portions, said sections being butted together with the shorter end portion of each section opposed to the longer end portion of the companion section and with the said intermediate portions of the sections staggered longitudinally of the nozzle.

2,473,416
RESUSCITATOR
John H. Emerson, Cambridge, and George J. Sinnett, Lexington, Mass.; said Sinnett assignor to said Emerson
Application April 13, 1946, Serial No. 661,937
8 Claims. (Cl. 128—29)

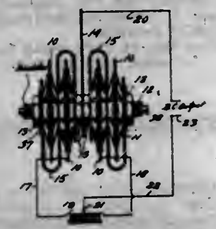
6. Breathing apparatus of the kind which inflates the patient's lung by the admission of gas at superatmospheric pressure and which allows the lung to deflate in response to chest contraction alone, said apparatus including a gas admission valve and a gas exhaust valve and means for automatically actuating said valves, cycle after cycle, including a spring tending normally to hold the inlet valve open and a pressure motor which is responsive to lung pressure, and snap-action mechanism actuated by the pressure motor and operative to close and to open the inlet and exhaust valves, said mechanism being so designed and arranged that when the inlet valve closes the exhaust valve simultaneously opens.

2,473,417
SECTIONAL SHAFT
Max Eesl, Swarthmore, Pa., assignor to William H. Harman Corporation, Wilmington, Del., a corporation of Delaware
Application May 24, 1944, Serial No. 537,156
7 Claims. (Cl. 74—568)



7. A sectional shaft comprising a plurality of hollow sections arranged in end to end relation, a plurality of serrations extending radially on the ends of each section and arranged to interfit with the serrations of an adjoining section to provide centering and aligning means and an adjustable driving connection between said sections, a thrust member on the outer end of each end section and having radial serrations thereon interfitting with the serrations on the end sections, a flexible tie member extending through said sections and said thrust members, and means on said tie member for applying pressure to said thrust members to clamp said sections rigidly together.

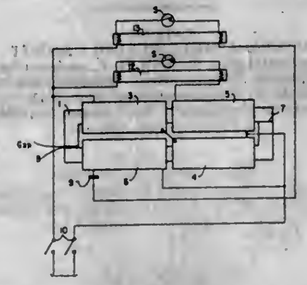
2,473,418
BOX TOOL
Karl Fellroth, Minneapolis, Minn.
Application July 20, 1945, Serial No. 607,832
1 Claim. (Cl. 82—35)



In a box tool, a head having in its face a work opening, three radially disposed channel guides in the face of the head and having open ends, two of the channel guides being in close proximity and the other channel guide being substantially diametrically opposite a medial point between said two channel guides, a carrier slidably mounted in each channel guide, three rollers

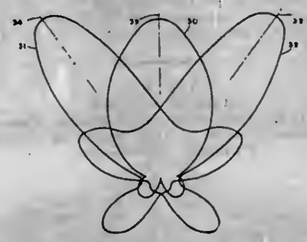
journaled, one on the inner end of each carrier for holding a piece of stock therebetween, at circumferentially spaced points, a nut-acting lug on each carrier, an adjusting screw having threaded engagement with said lug, a displaceable bearing plate closing the outer end of each

channel guide, an adjustable bushing in each bearing plate in which the adjusting screw is turnably mounted, said adjusting screws being held by the head and the bushings against endwise movement, means for locking the bushings in the bearing plates, and a tool bit mounted on the head for cutting the stock.



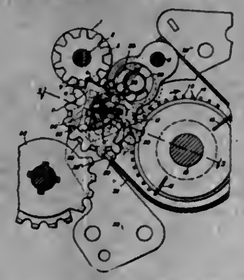
2,473,419
ALTERNATING CURRENT RECTIFIER
Albert C. Fletcher and Donald Lloyd, Oklahoma City, Okla.
Application January 14, 1946, Serial No. 641,044
14 Claims. (Cl. 175—366)

6. A rectifier for alternating currents including, a conducting plate having a surface coating thereon permitting the passage of electric current therethrough in one direction only, and a current collector comprising a cup shaped disk element with a plurality of legs of different lengths, each leg terminating with a contact for engaging the surface coating of the plate, whereby the current pick-up contacts are widely distributed over the surface area of the plate and afford large passageways for circulation of air between the plate and collector.



2,473,420
TRANSFORMER
Ernest H. Freeman, Wilmette, Ill., assignor, by mesne assignments, of one-half to Hirsch Epstein and one-half to Louis R. Duman, both of Chicago, Ill.
Application January 26, 1946, Serial No. 643,662
5 Claims. (Cl. 323—44)

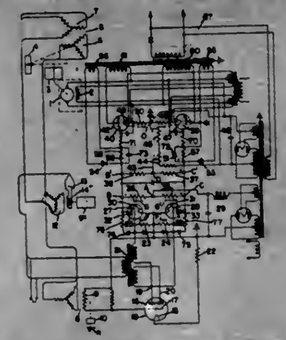
1. A transformer for providing leading and lagging currents respectively for operating a plurality of separately operable glow discharge tubes comprising a core having two opposite side legs connected in a magnetic circuit, primary coils one on each leg and connected together in series, a leading current secondary and a lagging current secondary one on each leg, the four coils being in quadrilateral formation with the two primaries at diagonally opposite ends of the quadrilateral and the two secondaries at the other diagonally opposite ends of the quadrilateral, each



of said secondaries being connected to the primary to form a step up auto transformer, the core having a gap in the magnetic flux path thereof which gap is included in the leakage flux path of one of the primary coils and included in the leakage flux path of the leading current secondary and excluded from the leakage flux path of the other secondary.

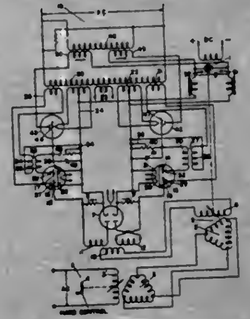
2,473,421
SEARCH ANTENNA ARRAY
Eugene Fubini, New York, N. Y., and Morton Hamermesh, Cambridge, Mass., assignors to the United States of America as represented by the Secretary of War
Application May 30, 1945, Serial No. 596,720
9 Claims. (Cl. 250—33.65)

1. An antenna array for radio signaling comprising a driven antenna arranged to travel along a substantially circular path in a horizontal plane, means for causing said travel, a pair of parasitic antennas fixedly mounted on the same horizontal plane and on a line representing an extended diameter of said circular path at points equidistant from the center of said circular path, and a third parasitic antenna fixedly mounted in the same horizontal plane at a point along an extended radius at right angles to the line on which said pair of parasitic antennas are mounted and at a distance from the center of said circular path substantially one-half the distance of each of the pair of parasitic antennas from said center.



2,473,422
TENS CARRY MECHANISM FOR CALCULATING MACHINES
Herman Gang, Livingston, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application November 27, 1946, Serial No. 712,557
1 Claim. (Cl. 235—133)

In tens carry mechanism for calculating machines having numeral wheels provided with gears, differential actuator gears, movement transmission gears between the differential acuator gears and the numeral wheel gears, a shaft therefor, rotary sleeves having pivotal dogs, pivoted settable members individually depressible to set position by a numeral wheel gear to rock the related dog into mesh with the transmission gear related to the next higher order numeral wheel to thereby during the rotation of the related sleeve transfer the carry to the next higher order numeral wheel, and means for restoring the settable member during further rotation of the related sleeve; means for yieldably maintaining the settable member in and assisting in its movement to set and to restore position, comprising a spring of hair pin form one end of which has pivotal connection with the settable member upon one side of said shaft, a lever fulcrumed intermediately of its length upon said shaft and one arm of which has pivotal connection with said settable member upon the other side of said shaft to rock said lever in opposite directions upon depression and restoration of said settable member and the other arm of which works between said connections and has pivotal connection with the other end of said spring to exert leverage upon and compress said spring and to rock said spring as an entirety in unison therewith until its connection therewith becomes aligned with said connections of said lever and said first named end of said spring with said settable member and to thereafter permit expansion of said spring, said settable member having an aperture through which said shaft passes and opposite edges of which contact said shaft to limit its movement in both directions, said lever and said spring being located and rocking in planes parallel to that of said settable member.



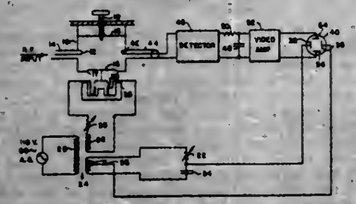
2,473,423
ANTIHUNT ELECTRICAL SERVO SYSTEM
William G. Gorton, Belmont, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application June 16, 1945, Serial No. 599,988
7 Claims. (Cl. 318—30)

1. In a positioning system having a load device driven by an electric motor and a command device for operatively controlling the motion of the load device, means producing a potential having a polarity and magnitude proportional respectively to the direction and magnitude of the displacement between said load and said command devices, a vacuum tube amplifying circuit with

anode, cathode and grid elements having a time lag circuit connected between anode and grid for limiting the abruptness of the rate of change of said potential and means responsive to said controlled potential for operating said motor.

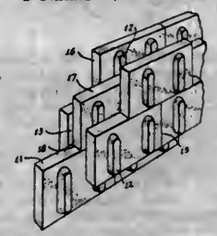
2,473,424
GAS TUBE CONTROLLED SERVO SYSTEM
William C. Grabau, Brighton, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application July 9, 1942, Serial No. 450,329. Divided and this application December 9, 1943, Serial No. 513,808
2 Claims. (Cl. 318—30)

1. A follow-up system for controlling linear motion of a tool to correspond with the contour of a template comprising a rotary transformer means having rotor and stator elements adapted to produce an electrical voltage corresponding in instantaneous polarity and magnitude to the direction and degree of angular displacement from a neutral position of one of said elements with respect to the other, the displacement of one of said elements being governed by the contour of said template and the displacement of the other by motion of said tool, a motor for moving said tool, gaseous conduction tube means for operating said motor in a forward or reverse direction, said conduction tube means including a pair of



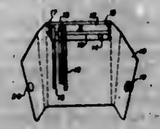
gaseous grid controlled rectifiers one for each direction of rotation of said motor and means for applying to the control grid of each rectifier periodic pulse potentials and a direct potential generated by the action of said rotary transformer and corresponding in polarity and magnitude to the direction and magnitude of said angular displacement.

2,473,425
SCREW CAP OPENER
William F. Grant, Miami, Fla.
Application February 9, 1946, Serial No. 646,669
1 Claim. (Cl. 81—3.43)



A screw cap opener comprising an elongated handle formed with an opening adjacent one end thereof, said opening including a relatively large portion and a relatively narrow portion extending laterally from one end of said large portion, a flexible cap encircling member, means securing one end of said member to said handle outwardly of said narrow portion and in longitudinal alignment with the latter, said flexible member being formed of spaced elements pivotally joined together by intermediate members, each of said elements having enlarged end portions and a narrow mid-portion, the width of the enlarged end portions being greater than the width of said narrow portion of the opening measured in the direction extending longitudinally of the flexible member and the width of said narrow mid-portions being less than said narrow portion of the opening measured in the same direction, whereby lateral shifting of the flexible member from said large portion of the opening will permit the narrow mid-portions of the elements to slide into said narrow portion of the opening with the said enlarged end portions disposed on opposite faces of said handle and said end portions will be held against passage through said narrow portion of the opening, thus locking the flexible member in its initially tightened condition about the cap.

2,473,426
ELECTRICAL APPARATUS
Julius Halpern, Brookline, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application September 6, 1945, Serial No. 614,727
3 Claims. (Cl. 175—183)



1. In combination, a resonant cavity, electromechanical means associated with said cavity for varying the resonant frequency of said cavity periodically at an audio rate, means for changing the maximum frequency deviation of said periodic variation, means for changing the mean frequency of said variation, means for coupling an electromagnetic oscillation into said cavity, detecting means coupled to the output from said cavity, amplifying means coupled to the output of said detecting means, and indicating means, including a cathode ray tube, means for vertically deflecting the beam of said tube in proportion to the instantaneous amplitude of the output from said amplifying means, and means for horizontally deflecting said beam in synchronism with the variation of the resonant frequency of said cavity.

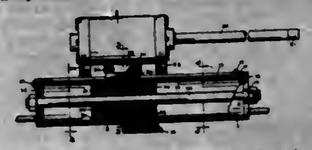
2,473,427
REGENERATIVE FURNACE CONSTRUCTION
Rudolph Leonard Hasche, Johnson City, Tenn., assignor to Tennessee Eastman Corporation, Kingsport, Tenn., a corporation of Virginia
Application May 5, 1945, Serial No. 592,102
3 Claims. (Cl. 263—51)

2. A regenerative mass for a regenerative furnace using bricks free from perforations and having plane surfaces with no projections therefrom except two projections on one side thereof, one of said projections being about one-quarter the length of the brick from one end of the brick, and the other projection being about one-quarter the length of the brick from the other end of the brick, said mass consisting of parallel walls each composed of said bricks laid one on top of the other in horizontal courses, these courses being staggered with relation to each other so that the projections near the right-hand end of the bricks in a specified course are in line with the projections near the left-hand end of the bricks in the courses above and below the specified course, thus providing free vertical channels between the projections, the bricks in adjacent walls being so staggered that the dividing line between courses in one wall is bridged by the projections on an adjacent wall.

2,473,428
KEY HOLDER
Irving Herriott, Chicago, Ill., assignor of one-half to David M. Davis, Oak Park, Ill.
Application June 20, 1945, Serial No. 600,432
1 Claim. (Cl. 150—40)

A key holder comprising: a key fastening device having a flat base portion, an upstanding

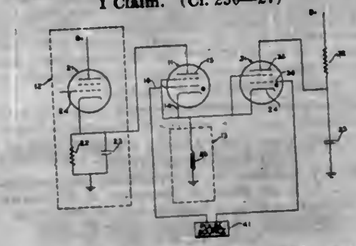
portion formed integrally with said base portion, a resilient tongue member formed integrally with said upstanding portion and extending substantially parallel to said base portion, and an upstanding latch portion formed integrally with said base portion at an end thereof opposite said first mentioned upstanding portion and constructed to engage the end of said tongue member remote from said first mentioned upstanding portion; a wedge-shaped covering member having a relatively large end and a relatively small end; a first side openable to admit access to keys carried by said device; and a second side including means for securing said base portion to said second side along a transverse axis of said second side adjacent said large end; said tongue member being spaced a predetermined distance from said base portion to permit the carrying of a plurality of keys slidably and rotatably on said tongue member; whereby, when stored, said keys lie with their handles at said large end and their narrow lock-engaging portions, extending towards said small end, and when selected for use said keys are rotatable to a position with their lock-engaging portions extending outside said cover at said large end.



2,473,429
BOTTLE CARRIER
Harry L. Hinman, Indianapolis, Ind.
Application June 20, 1945, Serial No. 600,442
4 Claims. (Cl. 224—45)

1. A bottle carrier comprising an elongated rectangular sheet of flexible material forming the outer sides and bottom of a carrier and a strip of similar material sewed to one face of the sheet by seams extending lengthwise of the side edges of the sheet and substantially parallel seams at intervals along said strip dividing same into individual pockets and transverse seams near the middle of the sheet for dividing each pocket into a pair of oppositely opening pockets with an intermediate second bottom therebetween, each pocket bottoming thereon, and a handle at each end of the sheet, the strip being of greater width than the width of the sheet for pleat fold pocket formation.

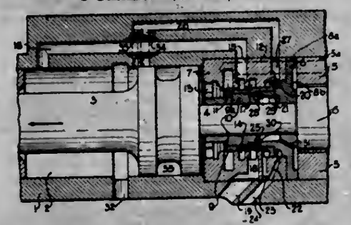
2,473,430
PISTON COUPLING MECHANISM
Henry S. Hoffar, near Sidney, British Columbia, Canada, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis., a corporation of Wisconsin
Application May 19, 1945, Serial No. 594,653
2 Claims. (Cl. 121—9)



1. A piston coupling mechanism comprising a cylinder having a slot through its wall extending lengthwise thereof, said slot throughout its depth and length being of uniform width, a piston head fitting within said cylinder for reciprocation lengthwise thereof, connecting means carried by said piston head and projecting outwardly therefrom through said cylinder wall slot, a bypass in one side of said piston head of substantially rectangular cross section and concaved lengthwise of the piston head, and a sealing strip within said cylinder having its ends affixed to the ends of said cylinder and located to cover said cylinder wall slot and extend through said bypass, said strip being normally of substantially rectangular cross section and capable of flexing transversely by virtue of the pressure of motive fluid within said cylinder to conform substantially to the curvature of the cylinder and engage the latter in fluid tight relation therewith.

2,473,431
TREATMENT OF CRUDE PETROLEUM OIL
Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application October 2, 1946, Serial No. 700,825
21 Claims. (Cl. 196—44)

20. In the distillation of naturally-occurring petroleum crude oil, the step of reducing the corrosiveness of the oil resulting from the presence of compounds naturally occurring therein which are unstable at the distillation temperatures, by intimately admixing with the oil, prior to the distillation thereof, an alkali-metal soap of a water-insoluble organic acid.



2,473,432
ELECTRONIC SQUARE WAVE SIGNAL GENERATOR
Lawrence H. Johnston, Rural, N. Mex., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,313
1 Claim. (Cl. 250—27)

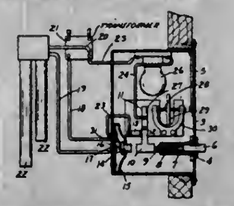
An electronic square wave signal generator comprising first and second gas tubes, each having at least an anode, a control grid and a cathode, a source of variable unidirectional voltage having its positive terminal connected to the anode of said first tube, loading means connected between the negative terminal of said source and the cathodes of both tubes, the anode of the second tube being connected to the positive terminal of a second source of voltage through a resistor, and to the negative terminal of said second source through a capacitor, a source of

periodic pairs of pulses, means for supplying the first pulse of each of said pairs to the control grid of the first tube and the second pulse of each of said pairs to the control grid of the second tube, said first pulse rendering the first tube conductive, said second pulse rendering the second tube conductive, whereby said first tube is cut off, the duration of the application of the unidirectional voltage to the loading means being fixed by the interval between the pulses of each pair, and the periodicity of the application of the unidirectional voltage to the loading means being fixed by the frequency of said source, the amplitude of the square wave output developed across the loading means being variable in successive output pulses in response to variation in said unidirectional voltage.

2,473,433
PNEUMATIC DRILLING TOOL
August H. Katterjohn, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a corporation of Texas
Application November 19, 1945, Serial No. 629,403
3 Claims. (Cl. 121—20)

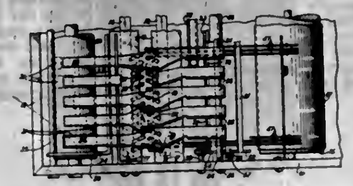
3. In a reciprocable piston type fluid actuated hammer tool having a live fluid chamber, live fluid conveying passages leading from said chamber to the opposite sides of said piston, a fluid actuated sleeve valve for controlling application of live fluid from said passages alternatively to the opposite sides of said piston to advance and retract it, said valve having a holding shoulder formed thereon adapted to receive live fluid to urge the valve at all times toward piston retracting position, and means for connecting said live fluid chamber to said shoulder at all times, said means having a small passage leading from said chamber to an auxiliary live fluid reservoir and another passage leading from said reservoir to said holding shoulder.

2,473,434
METHOD FOR PREPARING HYDROCARBOMETALLIC HALIDES
Richard V. Lindsey, Jr., Marshallton, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 27, 1946, Serial No. 679,855
9 Claims. (Cl. 260—431)



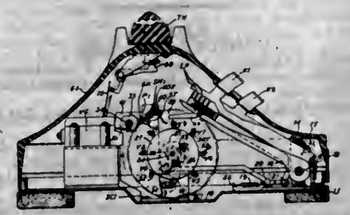
1. A method for preparing hydrocarbometallic halides which comprises reacting at a temperature below the decomposition temperature of the reactants under an atmosphere free from oxygen and moisture a bihalide of a metal of group II—B in the long periods of the periodic table with an organoaluminum compound in an anhydrous inert organic liquid solvent therefor, said organoaluminum compound containing at least one monovalent hydrocarbon radical free from nonbenzenoid unsaturation and wherein the valences of aluminum are satisfied solely by members selected from the class consisting of halogen atoms and hydrocarbon radicals as aforesaid, the halogens in both of said reactants having an atomic number between 16 and 54, and isolating the resulting hydrocarbometallic halide.

2,473,435
BLOWPIPE FOR HEATING TOOLS
Bert C. Lusader, Sr., Jonesboro, La.
Application September 21, 1946, Serial No. 698,555
2 Claims. (Cl. 126—229)



1. A blow pipe comprising two longitudinally aligned sections separably connected together and constituting a tubular body, a perforated baffle plate interposed between the adjacent ends of said sections, one of said sections being closed at the free end thereof and forming an air chamber, the remaining section being open and forming a combustion chamber, an air supply tube communicating with said air chamber, a tube having a venturi positioned axially in said body and extending through said plate into said combustion chamber, said Venturi tube adapted to be connected to a source of gas, a control valve provided on each of said tubes, the lateral wall of said combustion chamber being formed with a plurality of openings, brackets for supporting said body, and a further bracket attached to said baffle plate and adapted to support a soldering iron at the mouth of said combustion chamber.

2,473,436
ALARM, LIGHT, AND SAFETY SIGNALING DEVICE
Elmer F. Lynd, Cleveland, Ohio
Application November 13, 1946, Serial No. 709,464
9 Claims. (Cl. 177—339)

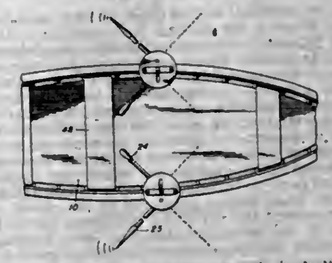


1. In a signaling device, in combination, an entrance to a dwelling, apartment, or the like, comprising a door frame, a door therein, a light arranged to exteriorly illuminate the entrance, an audible signal interiorly of the entrance, and means to simultaneously operate the light and audible signal, including a control device, means for actuating said first means, said control device comprising means for maintaining the audible signal in operation and the light on after actuation of said actuating means is discontinued, and means to automatically discontinue operation of said audible signal and shut off the light after a predetermined time subsequent to operation of said operating means.

2,473,437
MECHANICAL PERFORATOR
Rudolph F. Mallina, Hastings on Hudson, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 20, 1947, Serial No. 722,977
11 Claims. (Cl. 164—115)

1. In a tape perforator, tape perforator means, means for enabling the perforator to perform a perforating operation, a group of code levers each having an integrally formed code pin, a select lever having code holes corresponding in number to the number of code levers and normally positioned relative to said code levers so that less than the whole of the code pins thereof are in individual vertical alignment with corresponding code holes of said select lever, means for selectively operating said code levers to variably position the code pins thereof relative to corresponding code holes of said select lever, and means, including said select lever, responsive to the selective operation of said code levers in a manner to effect the individual vertical alignment of the code pins of all thereof with corresponding select lever code holes for operating said perforator enabling means.

2,473,438
CALL TRANSMITTER
Rudolph F. Mallina, Hastings on Hudson, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 17, 1947, Serial No. 761,563
7 Claims. (Cl. 177—380)



1. In a telephone call transmitter, a set of key members, a set of pivoted bars actuated in pairs by the movement of each of said key members, a set of vibrating reeds, a rotatable support, a row of segment-shaped members mounted for pivotal movement on said support from normal to engageable relation with said reeds, means carried by each of said bars for setting a number of said segment-shaped members relative to said reeds in position representing the digit of the operated key member and motor means for rotating said support for transmitting the call.

2,473,439
MOTOR FUEL
Herbert Lightfoot Maxfield, Banstead, England, assignor to The Distillers Company Limited, Edinburgh, Scotland, a British company
No Drawing. Application December 22, 1947, Serial No. 793,324. In Great Britain January 11, 1947
6 Claims. (Cl. 44—53)

1. A fuel for internal combustion engines composed of 60 parts of a mixture consisting of 26 to 36 parts by volume of ethanol, remainder secondary butanol, from 5 to 10 parts of hydrocarbons selected from the group of paraffins and olefines with 3 to 5 carbon atoms in the molecule, the latter having not more than one double linkage in the molecule, and from 10 to 30 parts of water, the proportions being chosen within said limits so that at atmospheric temperatures at which the fuel is used the mixture is homogeneous.

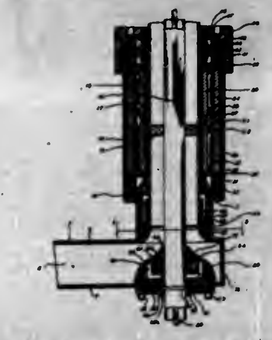
2,473,440
REVERSIBLE OAR
Robert C. Moeller, North Tonawanda, N. Y.
Application February 24, 1948, Serial No. 10,539
4 Claims. (Cl. 9—25)

1. An oar comprising an oarlock including a stationary base plate, a table rotatably mounted on the base plate, handle and blade oar portions pivotally connected to each other and individually pivoted to the table for opposite swinging movement of said portions, and means locking the table to the base plate and also locking the portions of the oar to each other and arranged for opposite locking and unlocking movement.

2,473,441
HOSE COUPLING
John A. Muller, Princeton, N. J., assignor to Thermoid Company, Trenton, N. J., a corporation of Delaware
Application February 4, 1946, Serial No. 645,275
8 Claims. (Cl. 285—72)

1. In a hose structure, a connector sleeve having an annular end face and a plurality of axially extending radial openings in the external surface of the sleeve at equally spaced intervals circumferentially thereof, a hose including inner and outer plies connected at one end to said connector sleeve with the inner ply of said hose extending through the sleeve and having an annular end flange portion overlying the annular end face of

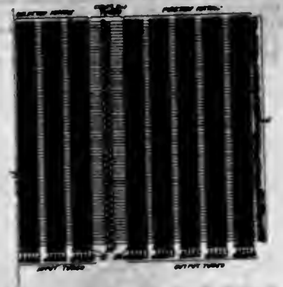
said sleeve and the outer ply of said hose overlying the exterior of said sleeve, inner and outer spirally wound layers of wires embedded in said outer ply of the hose and extending from end to end thereof with the end portions of a corresponding wire of each layer disposed in each of said axially extending openings on the connector sleeve, means to anchor said end portions of the wires in said openings, a coupling member receiving said sleeve and having an angularly disposed surface engaging interiorly of the hose end flange to force the same outwardly against the surrounding coupling member and provide a fluid-tight seal.



2,473,442
MUSICAL INSTRUMENT OF THE STRING TYPE
Clyde B. Page, Baton Rouge, La.
Application April 11, 1946, Serial No. 661,270
7 Claims. (Cl. 84—285)

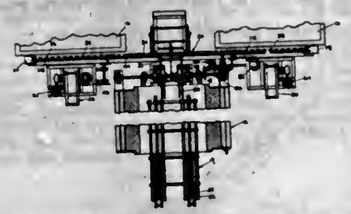
1. In musical instruments of the auto-harp type, wherein the playing face includes a string zone formed of a succession of strings individually tuned to predetermined tonal values together with a bar zone containing a plurality of normally inactive individual damping bars individually arranged for muting predetermined strings of the string zone, and wherein the chord effects when rendering a musical selection are produced by the movement of a pick across the string zone with an individual damping bar depressed from its normal position to render it active to damp strings having tonal values undesired in the chord, the improvement therein which comprises having the ends of its individual damping bars yieldingly supported within permanent housings carried by the playing face at opposite sides of the string zone, each housing having a predetermined number of division spaces each adapted to receive an end of a damping bar to thereby permit the presence of bars equal in number to those of the division spaces of a housing, the top zone of each housing including a slidable removable cover element overlying an end of all of the positioned bars of the bar zone for normally retaining the bars therein, removal of said cover elements permitting substitution of damping bars having other string muting combinations without increase in the number of bars positioned in the bar zone, each housing presenting an open zone above the division space zone with each of the walls of such open zone including a groove formation open to the zone with the groove formation forming receiving portions for margins of the cover to thereby rigidly anchor the cover, the dimensions of the open zone being such as to permit of the free passage of damper bar ends therethrough.

2,473,443
ULTRA HIGH FREQUENCY ROTATABLE JOINT
George L. Ragan, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application April 18, 1944, Serial No. 531,607
8 Claims. (Cl. 178—44)



8. In a high frequency transmission system, a rotatable joint construction, comprising a wave guide, said wave guide having an aperture in one side, a tubular conductor supported at said aperture and extending substantially at right angles to said wave guide and forming one section of outer tubular conductor for a coaxial line, a second section of tubular conductor aligned with said first section, means for rotatably supporting said second section with respect to said first section, a central conductor for said coaxial line, said central conductor having one end extending through said wave guide aperture and toward the opposite side of said wave guide, means for rotatably supporting said central conductor, and a fitting carried by said opposite side of said wave guide for providing a transition structure between said opposite side of said wave guide and said central conductor, said fitting comprising a

stationary annular structure surrounding said central conductor and spaced therefrom, said fitting extending from said opposite side of the wave guide to a termination near the aperture in said first side of said wave guide and tapering to a smaller diameter as said aperture is approached, said fitting having an internal annular channel communicating with the free space between said fitting and said central conductor, said annular channel and said free space together having an effective length of substantially a half wave length whereby a good low impedance path is provided for high frequency energy between said stationary fitting and said central rotatable conductor.



2,473,444
COMPUTING SYSTEM
Jan A. Rajchman, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 29, 1944, Serial No. 524,475
2 Claims. (Cl. 235—61)

1. The combination of a first set of conductors arranged in groups each including a number of conductors dependent on the number of digits in a predetermined numerical system, means for establishing on selected conductors of said groups potentials representative of the successive digits of a variable expressed in said numerical system, a second set of conductors, means connected between the conductors of said sets for applying a predetermined potential to a different one of the conductors of said second set in response to potentials representative of each different value of said variable, third and fourth sets of conductors, means interconnecting the conductors of said third and fourth sets in accordance with a predetermined function of said variable, means coupling the conductors of said second set to those of said third set, and means connected to the terminals of said fourth set of conductors for deriving potentials representative of different

values of a function of said variable in response to shifting of said predetermined potential from one to another of said second set conductors.

2,473,445
SPRING CAMBERING MACHINE
George R. Reed, Grosse Pointe Park, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application April 11, 1947, Serial No. 740,945
8 Claims. (Cl. 266—4)

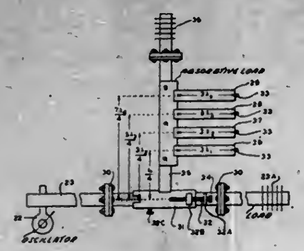
1. Combination mechanism for the automatic handling of leaf spring plates in the heating, cambering, and quenching thereof comprising a heating furnace, walking beam mechanism for transporting springs through the furnace in orderly and parallel array, articulating arm mechanism for retrieving the plates from the furnace and for delivery to a point removed from the furnace, a pair of spaced cambering dies arranged forwardly from the exit of the furnace, a pair of quenching tanks, one associated with each die into which the respective cambered plates are moved after a cambering operation, roller mechanism for delivering the retrieved plates alternately in opposite horizontal directions to positions adjacent to the dies, and lifter and conveying mechanism associated with each die for transferring the plates from positions adjacent the die to the die, said mechanisms and dies all being power driven in coordinated timed relation to one another.

2,473,446
ANTENNA
Henry J. Riblet, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application November 6, 1945, Serial No. 627,041
5 Claims. (Cl. 250—33.63)

1. An antenna for communication systems comprising a dielectric solid of revolution substantially in the shape of an elongated cone having a cylindrical base portion, exciting means coupled to said base portion to cause said dielectric solid to radiate energy, said energy forming a pattern which normally has its axis of directivity substantially coinciding with the axis of said solid of revolution, a metallic sheet member mounted on said dielectric member and curved to conform to the shape of said dielectric member, said sheet

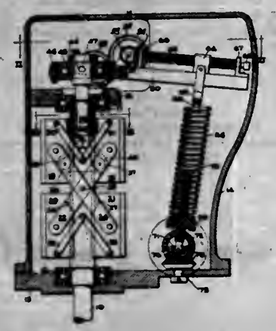
member being so shaped as to be included between two angularly displaced planes which intersect along the axis of revolution of said dielectric member, said sheet member covering substantially all of the surface of said dielectric member within one of the angles of intersection of said two planes, said sheet member being effective to angularly displace the axis of directivity of said radiation pattern in a direction away from said sheet member.

2,473,447
WHIFFLE TREE
Joseph Rickard, Hancock, N. Y.
Application April 21, 1947, Serial No. 742,763
1 Claim. (Cl. 278—102)



A whiffle tree including an elongated member, a reinforcing plate at the rear edge at each end of the member and extending horizontally around the end of the member and inwardly at the front edge thereof, a snap hook secured to the plate adjacent its inner end for attaching a trace thereto, and guide rings for the trace carried by the plate to hold the trace in position along the rear edge of the member and at the end thereof.

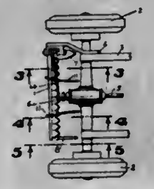
2,473,448
OSCILLATOR
Foster F. Ricke, Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application April 18, 1945, Serial No. 588,988
5 Claims. (Cl. 250—36)



1. In combination with a magnetron oscillator and an associated output wave guide therefor, a frequency stabilizer unit comprising a main wave guide adapted for insertion in said output wave guide, a stub wave guide branching from said

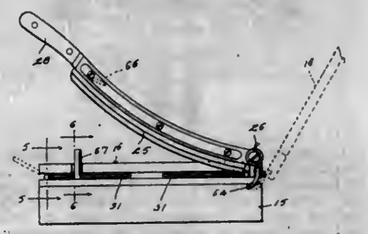
main guide, and means affording a plurality of rectangular wave guide cavities respectively communicating with said stub guide through suitable irises therein, each of said cavities being an in-

tegral number of wavelengths long and being disposed an odd number of quarter wavelengths from the junction of said stub guide with said main guide.



2,473,449
CENTRIFUGAL GOVERNOR
Armin H. Rodeck and Albert G. Massey, Watertown, N. Y., assignors to Massey Machine Company, Watertown, N. Y.
Application September 28, 1944, Serial No. 556,144
10 Claims. (Cl. 264—20)

2. Centrifugal governor mechanism comprising a rotatable drive shaft, a pair of centrally pivoted crossed levers having their central pivot carried by said shaft, a fly-weight pivotally supported at each outer end of each of the crossed levers, means normally urging said fly-weights toward said shaft, and a link spaced from said levers connecting pivotally between each fly-weight and the drive shaft for maintaining the fly-weights in a constant attitude during movements of the fly-weights toward and away from the drive shaft.



2,473,450
VINE CUTTER
Louis Rogers and Clarence A. Rogers, Ripon, Calif.
Application July 31, 1944, Serial No. 547,388
2 Claims. (Cl. 55—107)

1. A ground-trailing vine cutting device of the character described for attachment to a tractor, having in combination a mower unit provided with a reciprocative cutter blade, ground shoes secured to said unit at opposite ends thereof, so as to maintain said unit in a horizontal position, said shoes being so positioned as to engage and press downwardly upon such portions of trailing vines as may extend laterally into the paths of

travel of said shoes, vine lifters secured to said mower unit beneath the blade thereof and having portions projecting in advance of the unit and between said ground shoes, said vine-lifters having ground-penetrating portions and means for lifting trailing vines into the cutting plane of the mower unit, and means for reciprocating said cutter blade.

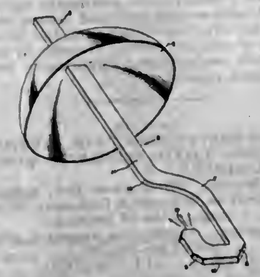
2,473,451
CLOTH MARKING AND CUTTING MACHINE
Vito Sciancalepore, White Plains, N. Y., assignor of one-half to Charles Greene, White Plains, N. Y.
Application January 22, 1947, Serial No. 723,623
8 Claims. (Cl. 91—14)

1. In combination a cutter comprising a stationary blade and a movable blade, means clamping a pair of trousers legs in a position for cutting by said cutter, and means actuated by movement of said movable blade to cutting position for marking the trousers legs in a series of parallel lines to define the cuff width and leg length.

2,473,452
FORCE CUP FOR CLEANING DRAINPIPES AND THE LIKE
Eben L. Scott, Mission, Kans.
Application May 2, 1945, Serial No. 591,455
5 Claims. (Cl. 15—104.30)

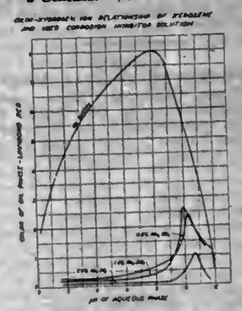
3. A device of the character described including, a resilient pressure and suction cup having a socket portion projecting coaxially thereof and having an opening therethrough into the cup, a handle member having one end engaged in the socket portion and having a longitudinal channel registering with said opening at one end and having the other end opening through a side of the handle member, a reel, means for mounting the

reel on the handle member adjacent said opening of the channel, and a flexible cleanout mem-



ber wound on the reel and projectable through the channel and opening of the cup.

2,473,453
METHOD OF EXTRACTING OILS FROM FISH MATERIAL
Ralph F. Shropshire, Cambridge, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application October 4, 1946, Serial No. 701,067
7 Claims. (Cl. 260—412.1)

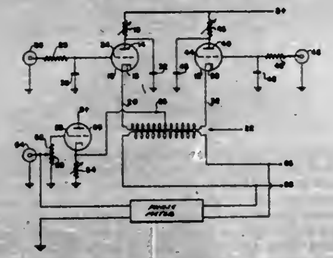


1. The method of extracting oils from fish fragments which comprises reducing oil-bearing fish fragments to a pulpy mass, subjecting said mass to compressional wave energy at a power level which produces cavitation within said mass whereby the cell structure of the fish tissues is disrupted, thereafter separating the desired oil from the treated material.

2,473,454
ANTENNA
William Sichak, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application July 9, 1945, Serial No. 604,026
4 Claims. (Cl. 250—33.65)

2. An antenna comprising a paraboloid reflector and a device for illuminating said reflector, said device comprising a hook shaped waveguide terminating in an aperture, said waveguide extending through the vertex of said paraboloid and being so disposed that its aperture terminates substantially at the focal point of said paraboloid and is directed toward the vertex of said reflector.

2,473,455
TRANSPORTING PETROLEUM DISTILLATES
Leonard V. Sorg, Kansas City, Mo., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application March 5, 1946, Serial No. 652,173.
2 Claims. (Cl. 44—72)

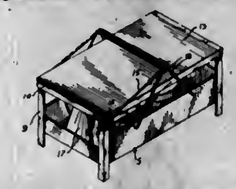


1. The method of preventing discoloration of a refined petroleum distillate during geographical transportation thru a ferrous metal pipe line in the presence of a small amount of an aqueous corrosion inhibitor comprised of sodium hydroxide and ammonia in substantially the proportions resulting from the hydrolysis of sodamide having a hydrogen ion concentration corresponding to a pH between 8 and 11, said method comprising introducing into said pipe line simultaneously with said distillate a small amount, not more than 5 per cent based on the weight of the corrosion inhibitor, of a sulfite selected from the class consisting of the sulfites of the alkali metals and ammonium.

2,473,456
PASSIVATION OF FERROUS METALS
Elmer A. Thurber, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application December 23, 1943, Serial No. 515,427
10 Claims. (Cl. 148—6.14)

2. The method of improving the rust resistance of a surface of a ferrous metal object which has a tendency to rust comprising subjecting said object to a preliminary treatment comprising at least two of the operations of heating said object in the presence of oxygen until an oxide coating is formed on the surface, heating said object in an atmosphere of hydrogen at a temperature sufficient to cause occlusion of hydrogen at the surface of said object and to reduce any oxide coating present on the surface, and contacting said object with an aqueous solution of a non-oxidizing acid of sufficient strength and for a sufficient time to roughen the surface of said object by etching and to remove any oxide coating which may be present, said operation of heating in the presence of oxygen being followed by one of the other of said operations, at least one of said heating operations being carried out at a recrystallizing temperature for said metal until recrystallization of the metal at the surface of said object occurs, the surface after said preliminary

treatment being free from deep scars, cracks, pits or segregated impurities, and subsequent to said preliminary treatment immersing said object with agitation, in an aqueous solution of hydrogen peroxide at a temperature in the vicinity of room temperature, said solution of hydrogen peroxide containing at least 5 per cent by weight of hydrogen peroxide, raising the temperature of the hydrogen peroxide solution having said object immersed therein to a temperature in the vicinity of its boiling point, maintaining the solution at that temperature for at least about 5 minutes and allowing said object to cool while in contact with said solution.



2,473,457
POTENTIAL COMPARATOR
Owen A. Tyson, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,314
1 Claim. (Cl. 250—27)

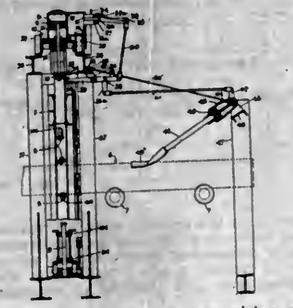
A circuit for comparing the amplitudes of two direct-current potentials comprising a first, a second and a third vacuum tube, each having at least a cathode, an anode and a control grid, means for connecting said first vacuum tube as a cathode follower, first and second variable resistors for connecting said anodes of said second and third vacuum tubes to a suitable source of plate potential, said first and second variable resistors providing means for balancing said circuit, first and second capacitor means for maintaining said anodes of said second and third vacuum tubes at a substantially constant potential for alternating voltage signals, a transformer having a first, a second and a third primary terminal and a first and a second secondary terminal, said two secondary terminals serving as the output terminals for said comparator circuit, means for connecting said cathodes of said first, second and third vacuum tubes to said first, second and third primary terminals of said transformer, means for introducing a first and second direct-current potential, low-pass filter means for applying said first and second direct-current potentials to the control grids of said second and third vacuum tubes respectively, and means for applying a sine wave signal to the control grid of said first vacuum tube.

2,473,458
PORTABLE OUTDOOR COOKING STOVE
Allen Vinson Walker, Nashville, Tenn.
Application January 5, 1946, Serial No. 639,325
1 Claim. (Cl. 126—25)

An outdoor cooking stove comprising an open fire pot, having corner legs for supporting the same on the ground in elevated position, said legs extending above said pot, a grill unit supported on top of the legs above the fire pot and including an open grill member, a combined folding plate grill and table pivoted at one end on the open grill member for swinging into and out of folded position and resting in the folded position on top of said grill member, a pair of U-shaped handles pivoted at ends thereof to opposite sides of the fire pot upon opposite sides of the transverse center thereof for swinging into upwardly converging relation to straddle said pot, grill unit

and said folding plate and grill in the folded position thereof to provide for grasping of said handles by one hand to carry the stove, and a U-shaped leg structure on the other end of said folding plate grill and table pivoted thereon for swinging upwardly thereover in the folded position thereof to converge toward said pair of handles for grasping therewith to hold said folding plate grill and table in folded position while the stove is being carried.

2,473,459
QUICK DETACHABLE COUPLING
Carl A. Weise, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application February 6, 1946, Serial No. 645,721
9 Claims. (Cl. 285—129)



1. A jointure, comprising: a plurality of couplable members; a plurality of arcuate members surrounding the members to be coupled, each arcuate member having a transversely-extending resiliency adapted to embrace the members to be coupled; means surrounding said arcuate members laterally of said resiliency and adapted to be diametrally constricted; and means operatively interposed between the last-said means and said resiliency for effecting reduction in the transverse dimension of said resiliency, whereby to longitudinally apply immobilizing compressive forces to said couplable members.

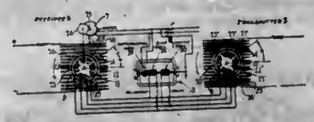
2,473,460
CONDENSATION PRODUCTS OF CITRIC ACID WITH LONG CHAIN ALIPHATIC MONOHYDRIC ALCOHOLS
James H. Wernts, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 6, 1946, Serial No. 688,687
12 Claims. (Cl. 260—78.3)

1. A method of preparing a surface-tension modifying agent which comprises condensing at a temperature of 150° to 225° C. from three to thirty molar equivalents of citric acid solely with one molar equivalent of an open-chain aliphatic monohydric alcohol containing from eight to thirty carbon atoms.

2,473,461
HYDRAULIC BARKING MACHINE
Frank O. White, Edmundston, New Brunswick, Canada
Application May 19, 1945, Serial No. 594,752
9 Claims. (Cl. 144—208)

1. A log debarking machine comprising, a support, a nozzle carrier provided with a central opening through which a log to be debarked is passed lengthwise, a plurality of nozzles movably mounted on said carrier and normally converging toward the center of said carrier opening, said carrier being mounted on said support for selective vertical and transverse movements in its own plane and with respect to the longitudinal axis of said log, independent means for imparting said vertical and transverse movements to said carrier, means responsive to the vertical movement of said carrier for moving said nozzles toward and away from the center of said carrier opening, and means responsive to the shape of the log to selectively actuate said carrier movement imparting means.

2,473,462
METERING MEANS FOR A BOTTLE HAVING A LOCK TO ENSURE THE TIPPING OF THE BOTTLE TO DISPENSE
Robert Wortman, Detroit, Mich., assignor to J. E. Berger Corporation, Detroit, Mich.
Application October 8, 1948, Serial No. 53,535
10 Claims. (Cl. 222—38)



1. A device for dispensing liquids from bottles comprising means providing a casing applicable to the neck of a bottle having an inlet leading from the interior of the bottle and an outlet leading from the casing, a rotary valve within the casing having openings in its wall adapted to be brought into registration with the inlet and outlet respectively, a slot in the casing, an operating handle secured to the rotary valve and extending through said slot in the casing for rotating the valve from closed to pouring position, spring means connected to the casing and the valve for normally urging the valve into a position wherein the outlet is closed, a transparent crystal forming a part of the casing wall, and an index wheel positioned between the crystal and the rotary valve for registering the amount of liquid dispensed.

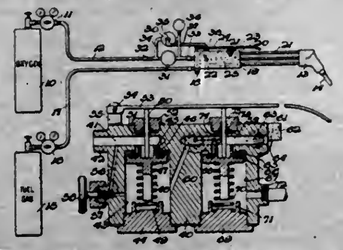
2,473,463
ALKYLATED MELAMINE-FORMALDEHYDE LIQUID COMPOSITIONS
Pierrepont Adams, Glenbrook, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 22, 1947, Serial No. 749,885
12 Claims. (Cl. 260—67.6)

8. The method of preparing an alkylated melamine-formaldehyde liquid composition which comprises effecting reaction under heat and at a temperature up to and including the boiling temperature of the reaction mass between ingredients comprising (1) methanol, (2) melamine and (3) an aqueous solution of formaldehyde, the melamine and formaldehyde being employed in the ratio of from about 2 to not more than 3½ moles of formaldehyde per mole of melamine, at least part of the reaction between the aforesaid ingredients being effected while distilling alcohols from the reaction mass containing the same and in the presence of (4) an alcohol of the group consisting of propanols and primary and secondary butanols, whereby the alcohol of (4) is caused to react with the melamine-formaldehyde reaction product and an ungelled liquid composition comprising an alkylated melamine-formaldehyde resin having a low ratio of formaldehyde to melamine is obtained, the amount of methanol of (1) employed being at least sufficient for substantial methylation of the melamine-formaldehyde reaction product and the amount of the alcohol of (4) employed being in excess of the theoretical amount required for substantially complete replacement of the methyl groups of the methylated melamine-formaldehyde reaction product with alkyl groups corresponding to the alcohol of (4) employed.

2,473,464
REMOTE CONTROL
Robert Alkan, Locust Valley, N. Y., assignor to Specialties, Inc.
Application May 26, 1945, Serial No. 595,924
5 Claims. (Cl. 318—31)

1. A direct current remote control comprising similar resistances at transmitter and receiver stations respectively, each resistance being formed to provide a circular contact path and adapted to be connected to positive and negative current sources at opposite sides of the circular contact path, at each station a pair of angularly related, rotatably mounted contact arms insulated from each other engaging said resistances, a polarized relay having three coils, an electric motor controlled by the polarized relay connected to drive he pair of arms at the receiver station, an electric circuit connecting the first coil

to similar arms of both pairs, a second electric circuit connecting a second coil to the other similar arms, and a third electric circuit connecting the third coil to receive current proportional to, and of the sign of, the voltage across the motor terminals, said first and second coils cooperating as actuating coils to insure actuation of the polarized relay in accordance with the relative positions of the rotatable contact arms at the transmitter and receiver stations and said third coil acting in opposition to the actuating coils to inhibit overrunning of the motor.



2,473,465

APPARATUS FOR IMPROVING THE OPERATION OF OXYGEN CUTTING TORCHES

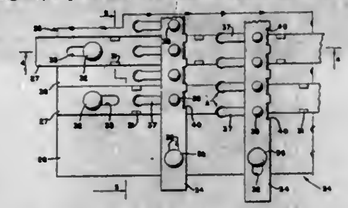
Paul L. Betz, Baltimore, Md., assignor to Consolidated Gas Electric Light and Power Company of Baltimore, Baltimore, Md., a corporation of Maryland

Original application June 5, 1942, Serial No. 445,951, now Patent No. 2,399,979, dated May 7, 1946. Divided and this application December 3, 1945, Serial No. 632,576

15 Claims. (Cl. 158—27.4)

1. In a device for controlling the flow of oxygen to an oxygen cutting torch having separate passages for flow of preheat oxygen and cutting oxygen and a fuel passage and a valve at the torch for controlling flow of cutting oxygen, the combination of means providing two oxygen passages in parallel having outlets in communication with said first named oxygen passages, one of said passages including a non-throttling valve for opening and closing said passage and the other of said passages including a throttling valve disposed in said passage on its upstream side from its outlet, and means for operating said non-throttling valve simultaneously with the operation of said valve on the torch for controlling the flow of cutting oxygen.

2,473,466



PARTIAL PRODUCTS MECHANISM

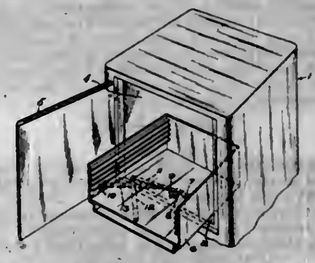
Ralph E. Bitner, Roslyn, N. Y.

Application November 13, 1945, Serial No. 628,038

7 Claims. (Cl. 235—61)

1. A partial products mechanism for producing the product of two digits comprising, a plurality of multiplier rods movably mounted in parallel relationship, each of said rods corresponding to a digit, a plurality of multiplicand rods movably mounted in parallel relationship, each of said rods corresponding to a digit, mechanical limit means for restricting the rod motion to an actuated or an unactuated position, a plurality of contact fingers secured to each of said multiplier rods in spaced relation thereon, each finger representing a product digit, a plurality of contact lugs secured to each of said multiplicand rods in spaced relation thereon, a base structure for slidably holding said multiplicand rods which comprises channels for the rods and intermediate rod-like strips for sliding engagement by the multiplier fingers, a plurality of electromagnetic coils, each

corresponding to a product digit, for transmitting product values to an integrating mechanism, and electrical connecting means joining all contact fingers of similar product-digit value with the electromagnetic coil having a corresponding value.



2,473,467

ATTACHMENT FOR DRAWERS IN OVENS OF STOVES OR RANGES

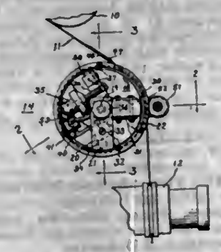
James P. Burt, Taunton, Mass., assignor to Glenwood Range Company, Taunton, Mass., a corporation of Massachusetts

Application April 29, 1948, Serial No. 665,745

3 Claims. (Cl. 126—340)

1. In a range having an oven, a drawer in the oven, and an oven door hingedly supported and closing the doorway to the oven, a linkage for withdrawing the drawer from the oven as the door is opened and returning it into the oven as the door is closed, said linkage comprising a lever pivotally mounted upon the bottom of the oven at about the center of its fore end portion beneath the drawer and turnable transversely to and fro from an inwardly turned position corresponding relatively with the closed position of the oven door to an outwardly turned position corresponding relatively with the open position of the oven door and when occupying its said inwardly turned position extending in a direction substantially parallel with a vertical plane passing through the longitudinal center of the oven bottom and when occupying its said outwardly turned position extending in a direction substantially normal to said plane, a lever between the free end of said first named lever and the fore end portion of the drawer and pivoted, respectively, thereto, and a lever pivotally connected to the oven door and pivotally connecting with said first named lever between its free end and the point of its pivotal

connection, whereby upon the opening and closing of the door said first named lever will be turned from its said inwardly turned position to its said outwardly turned position and return and when approaching or leaving its said inwardly turned position its free end will move in a direction substantially normal to said plane.



2,473,468

MAGNETIC SWITCH APPARATUS

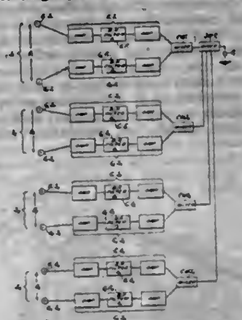
Hal Cooley, Portland, Oreg.

Application August 6, 1946, Serial No. 688,747

1 Claim. (Cl. 200—52)

A magnetic switch device for motion picture projection apparatus, the combination comprising a strip of film, a relatively small, thin, magnetic element, means attaching said element onto said film, said element and said attaching means being flexible and sufficiently thin so as not to interfere with the normal feeding of the film through the projection apparatus, a cylindrical housing, means for training said film over said housing in firm engagement with the cylindrical wall thereof, means for supporting said housing for free rotation about its longitudinal axis, at least the cylindrical wall of said housing being of nonmagnetic material, a magnetized unit, means mounting said magnetized unit within said housing for movement toward and away from the cylindrical wall thereof, said magnetized unit being adapted to be actuated in response to movement of said magnetic element attached to said film therepast on the exterior of said housing, and switch means mounted within said housing and operatively connected to said magnetized unit for actuation thereby.

2,473,469



METHOD AND APPARATUS FOR MINIMIZING THE HORIZONTALLY-TRAVELING COMPONENTS OF SEISMIC WAVES

Cornelius G. Dahm, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application April 10, 1948, Serial No. 20,233

4 Claims. (Cl. 177—352)

3. In seismic prospecting, the method of minimizing confusion of the record of reflected seismic waves by co-existent horizontally traveling waves which comprises arranging geophone spreads with the horizontal spacing between the geophones of each spread corresponding with an odd number of half-wavelengths at a predetermined seismic frequency different for the different spreads, combining in phase the reflected wave outputs of each pair of geophones of each spread having the frequency corresponding with their spacing, and combining the joint output of each pair of geophones of one spread with the

joint output of a pair of geophones of each of the other spreads.

2,473,470

ALIGHTING GEAR

Albert P. Fall, Toledo, Ohio

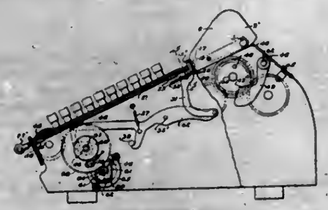
Application June 12, 1944, Serial No. 539,970

2 Claims. (Cl. 308—4)

1. In a packing gland for disposition at the junction between the telescoping members of an alighting gear or the like in which a piston rod reciprocates with respect to a cylinder and in which a bearing member is disposed in the cylinder about the piston adjacent said junction with the bearing formed with an annular groove, that improvement which comprises a one-piece split metal wiping or scraping ring disposed in said bearing groove, said ring having at the radially inner part thereof a cutting edge against the piston surface and having in its convex peripheral portion a compressor groove, and a compressor in said compressor groove between it and the said bearing groove acting with squeeze grip action about the ring tending to compress the ring and reduce the diameter of its cutting edge and thus increase the contact of the cutting edge against the piston.

2,473,471

CARRIAGE CUSHIONING MEANS FOR CALCULATING MACHINES



Herman Gang, Livingston, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware

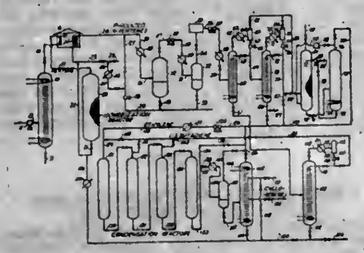
Application September 17, 1948, Serial No. 49,792

3 Claims. (Cl. 235—63)

1. In a calculating machine, a denominationally shiftable carriage having register gears, said carriage being pivoted in rear upon the fixed frame of the machine, said fixed frame having transmission gears, means for differentially actuating said register gears through the medium of said transmission gears, means for denominationally shifting said carriage comprising means for raising the carriage pivotally to clear the register gears from the transmission gears and for

causing the carriage to fall by gravity to reengage said gears, power driven means to effect repeated alternate operation of said differential actuating means and said carriage shift means comprising a clutch, and means comprising a manipulable key to close the clutch and initiate operation of the machine, said power driven means also comprising means to open the clutch upon the conclusion of a calculation of a plural order program in any one ordinal position of the carriage and means to thereafter reclose the

clutch to start the calculation in the new ordinal position of the carriage; in combination with means for cushioning the fall of the carriage comprising a brake governor and follower means having connection with the carriage and means of connection with said governor to cause the governor to idle during the rise of the carriage and to drive the governor during the fall of the carriage, and means having connection with said follower means for synchronizing the operation of said means for cushioning the fall of the carriage with the operation of the means for reclosing the clutch.



2,473,472

MANUFACTURE OF CYCLOHEXENE

Everett Gorin and Alex G. Oblad, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of Texas

Application April 15, 1946, Serial No. 662,154

2 Claims. (Cl. 260—666)

1. The process for the manufacture of cyclohexene which comprises pyrolyzing a mixture consisting substantially of 2-pentene and from 25 to 50 mol percent of 1-pentene in the presence of from about 3 to about 15 volumes of steam diluent per volume of pentenes at a temperature within the range of from 725° C. to 850° C. for a contact time of from about 0.05 to 0.5 second to decompose from 40 to 90 mol percent of said pentenes and to produce substantially equal molar quantities of ethylene and 1,3-butadiene, separating and recovering the ethylene and 1,3-butadiene from the pyrolyzed mixture, and condensing the 1,3-butadiene and ethylene to produce cyclohexene.

2,473,473

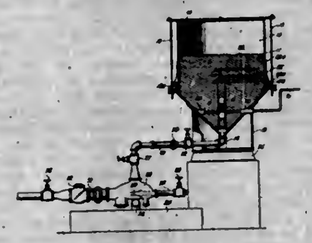
METHOD OF PREPARING REGENERATED CELLULOSE

Gordon D. Hiatt and Carlton L. Crane, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application February 5, 1945, Serial No. 576,364

5 Claims. (Cl. 106—168)

1. A method of preparing regenerated cellulose which comprises mixing together at a temperature not to exceed 37° F. cellulose having a viscosity not to exceed 200 centipoises, N_2O_4, an inert solvent compatible with N_2O_4 containing between 0.5 and 20% of water, and 0.5–20% of water, based on the weight of the N_2O_4, until solution of the cellulose occurs, followed by imparting a physical form to the solution and setting the so-formed solution.



2,473,474

APPARATUS FOR ADDING POWDERED DYE TO LIQUIDS

Charles C. Keane, Kansas City, Mo., assignor to Great Lakes Pipe Line Company, Kansas City, Mo., a corporation of Delaware

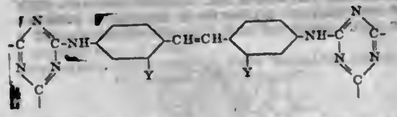
Application October 29, 1945, Serial No. 625,235

3 Claims. (Cl. 259—4)

1. Apparatus for emptying a rigid container open at the top, comprising a funnel adapted to be inverted over the open top of the container, means for securing the funnel to the container when thus positioned, a support adapted thereafter to hold said container and funnel with the open end of the container down and the funnel therebelow, said support comprising a standard rigidly affixed to the funnel, and a horizontal platform upon which said standard is adapted to rest when the container is inverted with a funnel secured thereto.

2,473,475

WATER-SOLUBLE TRIAZINE CONDENSATION PRODUCTS AND A PROCESS OF MAKING SAME



Ernst Keller and Reinhard Zweidler, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm

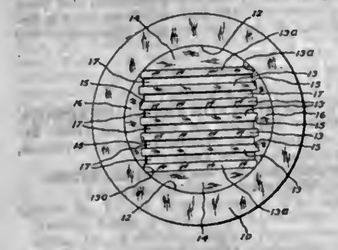
No Drawing. Application May 22, 1944, Serial No. 536,820. In Switzerland June 26, 1943

12 Claims. (Cl. 260—249.5)

1. A process for the manufacture of a water-soluble condensation product, which comprises heating in alkaline solution for a period of one

to several hours a stilbene-triazine compound of the formula

wherein the Y's represent identical members selected from the class consisting of the sulfonic acid group and the carboxylic acid group, and wherein at least one of the free valencies is taken up by an amino group, the remaining free valencies being taken up by a member selected from the group consisting of amino, phenylamino, sulfophenylamino and carboxyphenylamino, with an excess of formaldehyde.



2,473,476

METHOD AND MOLD FOR MAKING BORON CARBIDE ARTICLES

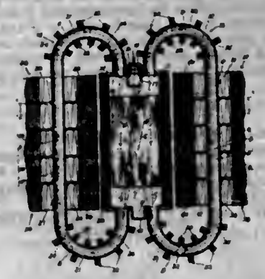
James W. Knowlton, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application April 3, 1946, Serial No. 659,407

2 Claims. (Cl. 25—118)

1. A graphite mold assembly comprising a cylindrical outer mold body having a coaxial cylindrical bore therethrough, four cylindrical segments fitting in said bore to define a rectangular hole, there being a set of grooves in the otherwise flat surfaces of two of said segments which are placed opposite each other, the grooves in one segment being of the same size and spacing as those of the other segment, flat separator plates fitting in said grooves and extending across the rectangular hole to divide it into a number of cavities, and a set of flat plunger plates in each end of said cavities whereby the cavities may be filled with material to be pressed and sintered and then, after the cavities are closed by the plungers, the material may be molded by pressing the plungers and heating the entire mold, the ratio of the thickness of the separator plates to the plunger plates being between 1½ to 1 and ¾ to 1.

2,473,477



MAGNETIC INDUCTION DEVICE

Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application July 24, 1946, Serial No. 685,939

8 Claims. (Cl. 250—27.5)

1. A magnetic-induction device comprising: an evacuated envelope; a source of electrons, disposed in said envelope, for introducing electrons therein; a first magnetic structure, mounted adjacent said envelope, for establishing a first magnetic field transversely therethrough; said first magnetic field coacting with said electrons to subject them to a first force, causing the same to move in a first closed path; a second magnetic structure, linking said envelope, for inducing along said first closed path a first, time-varying electromotive force; said first, time-varying electromotive force coacting with the electrons moving in said first closed path to subject them to a second force, causing the same to become accelerated; means, mounted adjacent said first closed path, for establishing a third, force-producing field therethrough; said third, force-producing

field coacting with said accelerated electrons to displace the same from said first closed path; a third magnetic structure, mounted adjacent said envelope, for establishing a second magnetic field transversely therethrough; said second magnetic field coacting with said displaced electrons to subject them to a fourth force, causing the same to move in a second closed path; and a fourth magnetic structure, linking said envelope, for inducing along said second closed path a second, time-varying electromotive force; said second, time-varying electromotive force coacting with the electrons moving in said second closed path to subject them to a fifth force, causing the same to become additionally accelerated.

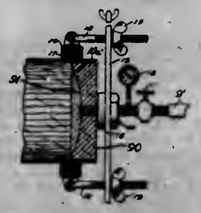
2,473,478

UTENSIL SUPPORT FOR GAS RANGES

Earle A. Stevens, Taunton, Mass., assignor to Glenwood Range Company, Taunton, Mass., a corporation of Massachusetts

Application October 25, 1945, Serial No. 624,492

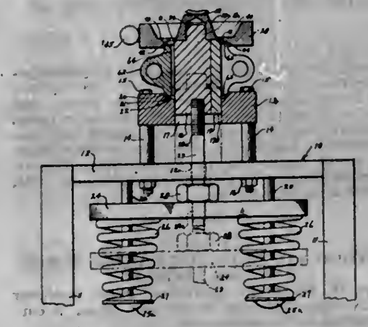
2 Claims. (Cl. 126—214).



1. In a cooking range having a top with an opening in it, a support having a top edge and spaced butts rising above said edge, means for fixedly securing said support within said opening, fingers borne by said butts extending over the adjacent surface of said top, a ring resting upon and overlaying said top edge of the support, said ring being provided with cutout openings in it by which the ring may embrace said butts, and inwardly projecting fingers borne by said ring in end abutting relation to said butts and aligned with the fingers borne by said butts.

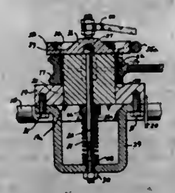
2,473,479
LAMP FOR ENDOSCOPIC INSTRUMENTS
Ignaz Suwa, Jackson Heights, N. Y., assignor to National Electric Instrument Co., Inc., Elmhurst, L. I., N. Y., a corporation of New York
Application September 20, 1948, Serial No. 50,229
3 Claims. (Cl. 176—16)

1. A cartridge type lamp for an endoscopic instrument, comprising an incandescent filament, a glass envelope, and a base having a plurality of flanges in spaced relation to each other, at least one of said flanges being adapted for grasping to remove the lamp from said endoscopic instrument.



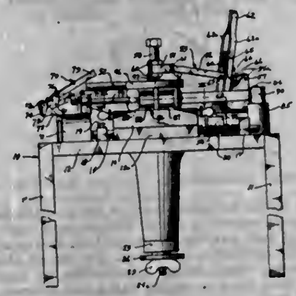
2,473,480
LOG IMPREGNATING DEVICE
Henry Svensson, New York, N. Y.; Agnes B. Svensson, administratrix of said Henry Svensson, deceased, assignor by mesne assignments, to Agnes B. Svensson, New York, N. Y.
Application March 9, 1943, Serial No. 478,529
1 Claim. (Cl. 21—63)

In an impregnating system for trees, logs and the like, in combination, a cap head comprising a length sawed off from the end of the tree to be impregnated and provided with a curved chamber extending into said length from the sawed end and with a through passage into said chamber, a valve controlled conduit connected to said passage and to sources of fluid media under pressure for admission of said media to said chamber, and clamping means for securing said length in fluid tight relation to the end of said tree in substantially its original positional relationship and for supporting said valve controlled conduit in its connected relation to said passage.



2,473,481
CASTING MACHINE FOR LINING BEARINGS
William Henry Tobener, Jr., Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 12, 1946, Serial No. 640,916
8 Claims. (Cl. 22—123)

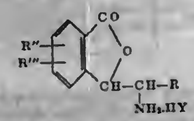
4. A casting machine for lining bearings or the like which comprises a table, a work-supporting die detachably fixed in stationary relation to the top of the table in spaced relation above said top, said die having an aperture therethrough, a mandrel slidably mounted in said aperture, spring-pressed means acting on said mandrel and supported by said table for urging the mandrel upwardly through the work support, means acting in opposition to the thrust of said spring pressed means for retracting the mandrel through work on said support, a pour plate detachably seatable on and supported only by said mandrel, and a



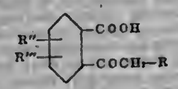
clamping device on said table for acting on said pour plate to clamp the work between the pour plate and work support and to adjust said mandrel downwardly to accommodate the size of the work.

2,473,482
CASTING MACHINE FOR LINING BEARINGS
William Henry Tobener, Jr., Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application May 4, 1946, Serial No. 667,414
10 Claims. (Cl. 22—123)

8. A casting machine adapted for lining bearings or the like which comprises a table having an aperture therein, guide rods slidably mounted on said table and spring-pressed toward an unlocked position, a die secured to said slidable rods having an aperture therein, a resiliently mounted mandrel slidable in the aperture of said die, a ring on said die for centering the segments of the bearing to be lined around the mandrel, a stop-pin mounted on said table, clamping means on said table for urging said bearings, said mandrel and said die laterally as a unit to clamp said bearing segments against said stop-pin, a pour plate mounted on said mandrel having ports communicating with the interior of the bearing segments around the mandrel, and a clamp movable against said pour plate for clamping said bearing segments between the pour plate and the die and for adjusting the length of the bearing forming surface of the mandrel to the length of the face of the bearing segments.

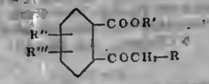


2,473,483
MOLD FOR LINING BEARINGS
William Henry Tobener, Jr., Cleveland, Ohio, and Carl V. Anderson, Portland, Oreg., assignors to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 12, 1946, Serial No. 696,474
14 Claims. (Cl. 22—123)

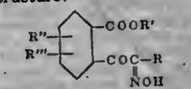


2. In a casting machine, a support, a member pivoted on said support for tilting movement relative to the support, ball bearings seated on said member, support plates pivoted on said ball bearings, die plates slidably positioned on said support plates, a mandrel mounted for slidable movement between said die plates, a pour plate removably positioned on said mandrel, and means for holding work pieces in position around said mandrel.

2,473,484
METHOD FOR THE PREPARATION OF AMINOPHTHALIDYLALKANES
Glenn E. Ullyot, Philadelphia, Pa., assignor to Smith, Kline & French Laboratories, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 12, 1946, Serial No. 696,619
2 Claims. (Cl. 260—344.6)



1. The method for preparing compounds as exemplified by the structure



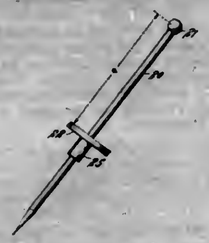
wherein R is a member of the group consisting of H, alkyl not in excess of 10 carbon atoms, aryl and aralkyl the alkyl portion of which has less than 6 carbon atoms; R'' and R''' are members of the group consisting of H, alkoxyl the alkyl portion of which has less than 6 carbon atoms, aralkyl the alkyl portion of which has less than 6 carbon atoms, alkyl of less than 6 carbon atoms; and Y is a strong mineral acid radical, which comprises esterifying a compound having the structure:

where R, R'' and R''' are as specified above, to produce a compound having the following structure:

where R, R'' and R''' are as specified above and R' is a member of the group consisting of alkyl, aryl and aralkyl groups; treating the last mentioned compound with a reagent from the group consisting of an alkyl nitrite-hydrogen chloride and nitrosyl chloride to produce a compound having the structure:

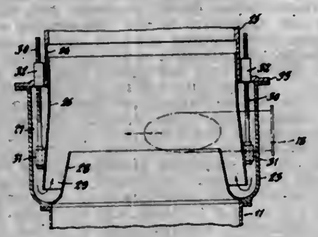
in which R, R', R'' and R''' are as specified above and reducing the last mentioned compound with hydrogen under pressure in the presence of a catalyst.

2,473,485
THERMAL OVERLOAD DEVICE
Samuel Ernest Vickers, Bloomington, Ill., assignor to Eureka Williams Corporation, Bloomington, Ill., a corporation of Michigan
Application January 6, 1948, Serial No. 733
4 Claims. (Cl. 171—252)



1. An electrical device comprising a casing having electrically energized means therein, a thermal overload device associated with said casing and responsive to the temperature of said means, said thermal overload device having a temperature responsive switch for opening a circuit through said electrically energized means above a predetermined safe operating temperature for said electrically energized means, a reset member projecting through an opening in said casing for movement inwardly of said casing for closing and resetting said switch, said overload device comprising resilient means for opposing said inward movement and for holding said reset member normally in an extended position within said opening, and actuating means for said reset member, said actuating means comprising a body covering the end of said reset member and disposed within said opening and closing said opening against access to said reset member from externally of said casing.

2,473,486
PREPARATION OF 1-CYANO-1,3-BUTADIENE
Paul H. Wise, Rocky River, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application June 17, 1947, Serial No. 755,233
4 Claims. (Cl. 260—465.9)

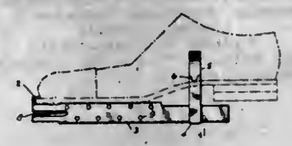


1. The method of producing 1-cyanobutadiene-1,3 which comprises acylating a difficultly separable mixture comprising essentially 1-cyanobutadiene-1,3 and 1-cyano-3-butene-2-ol and pyrolyzing the acylated mixture.

2,473,487
TIME-INTERVAL INDICATOR
Robert W. Byerly, New York, N. Y.
Application May 19, 1945, Serial No. 594,622
6 Claims. (Cl. 33—62)

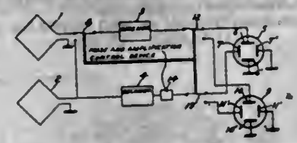
3. A time-interval indicator, comprising a circular shadow-casting element, a dial in fixed relation to said element having a circle indicating the position of the shadow when the dial is in a plane perpendicular to the sun's rays and time graduations consisting of circles concentric with said circle and each radially distant therefrom by a distance intermediate between the distance which the shadow moves at the equinoxes in the time-interval represented by that circle and the distance which it moves at the solstices and the interval, and means under the dial for supporting it in a plane inclined to the horizontal.

2,473,488
VORTICAL CURRENT SEPARATOR
Burton S. Hughes, Buffalo, N. Y., assignor to Zaremba Company, Buffalo, N. Y., a corporation of Maine
Application June 16, 1945, Serial No. 599,924
4 Claims. (Cl. 209—211)



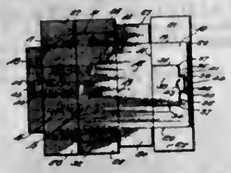
1. A classifier of the character described, comprising a vessel including a cylindrical section interposed therein and composed of inner and outer sleeve-like members disposed axially of the vessel and in spaced concentric relation to each other, the outer member being secured at its upper and lower ends to the opposing ends of the vessel and terminating at its lower end in an inwardly and upwardly directed annular flange spaced about the lower portion of the companion inner member to jointly provide therewith and with said outer section member an annular chamber substantially U-shaped in cross section, the outer portion of such chamber being closed at its top and having an intake for delivering the solution thereto in a tangential direction and the inner portion thereof opening upwardly into the vessel.

2,473,489
FLEXIBLE BAG WITH METAL GUSSET
Max Kaplan, New York, N. Y.
Application January 6, 1948, Serial No. 69,457
4 Claims. (Cl. 150—39)



1. A lady's handbag having metal ends permanently connected by front, bottom and back walls made of soft flexible, non-metallic material, and a flexible openable closure at the top of the bag, said metal ends being expansible to facilitate access thru the top of the bag when opened, each of said ends consisting of two overlapping metal plates pivoted at a point near the bottom wall, one of said plates having a channel along its front edge which receives and is clamped about an edge of the flexible front wall, the other of said plates having a channel along its rear edge which receives and is clamped about an edge of the flexible rear wall, and motion limiting means to limit the pivotal relative movement of the plates.

2,473,490
MEANS TO STRAIGHTEN SHOE SOLES
Harald E. Lonngren, New York, N. Y.
Application September 21, 1948, Serial No. 50,280
1 Claim. (Cl. 12—129.1)

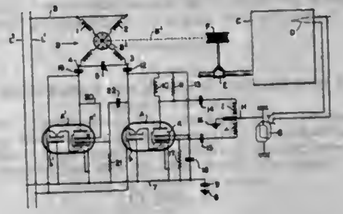


In a shoe sole straightening device of the externally attachable type, a substantially U-shaped straightening frame or bar having a spring action in its bent portion in the plane thereof, a lip formed integrally on the said bar at the bent portion thereof adapted to serve as a fixed anchorage for the tip of the shoe sole, a multiplicity of holes in the web portion of the U-branches through which ventilating and drying air passes so as to strike the underside of the shoe sole, a rectangular sleevelike locking member slidably mounted on the U-branches of the straightening bar and held in a desired position by virtue of the spring action in the bent portion of said bar, flexible shackles fastened in a substantially vertical position to the sides of said locking member, said shackles being provided with hooks and outwardly diverging portions adapted to spread apart when the shoe is inserted between them and automatically spring back and firmly grab hold of the shoe sole edge when this edge has passed over the hooks in said shackles.

2,473,491
DIRECTION FINDING DEVICE
Klaas Posthumus, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 8, 1947, Serial No. 727,403
In the Netherlands February 26, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 26, 1964
4 Claims. (Cl. 343—120)

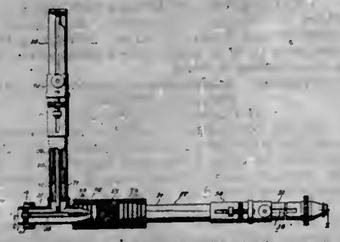
1. A direction finding arrangement comprising first and second antenna having crossed directive patterns, first and second radio receivers, means to switch at a predetermined rate the first receiver input to the first antenna and in parallel with the input of the said second receiver selectively, means to couple the second receiver to the second antenna, means to vary the signal amplitude and signal phase response of one of said receivers, a cathode ray indicator having noncoplanar deflecting electrodes, an auxiliary voltage indicating means, and means to switch at the said predetermined rate the output of said receivers to the respective noncoplanar deflecting electrodes of said cathode ray indicator and to the auxiliary indicating means selectively.

2,473,492
RECLOSABLE CARTON
Frank C. Shina, Thomson, N. Y., assignor to United Board & Carton Corporation, a corporation of New Jersey
Application August 1, 1945, Serial No. 608,168
2 Claims. (Cl. 229—17)



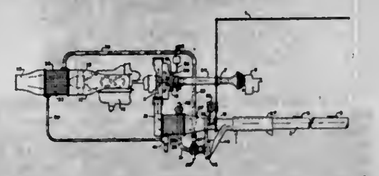
1. A blank for reclosable cartons comprising a rectangular bottom panel having sides and ends, front and rear side panels extending from the sides of the bottom panel and divided therefrom by fold lines, and panels extending from the ends of the bottom panel and divided therefrom by fold lines, a sealing strip extending from the free edge of the front side panel and divided therefrom by a fold line, a top panel extending from the free edge of the rear side panel and divided therefrom by a fold line, and flaps extending from the ends of the front and rear side panels and divided therefrom by fold lines, said top panel having window portion extending from the fold line between the top panel and the rear side panel, said window portion being partially severed toward the free edge of the top panel and being divided along weakened lines running from the partially severed part back to the fold line between the top panel and rear side panel, said window portion having a partially severed tab adjacent the free edge of the top panel, said sealing strip having a locking tab adjacent its free edge and divided by a severed substantially U-shaped line, and end flaps extending from the ends of the top panel and divided therefrom by fold lines.

2,473,493
STABILIZING EVAPORATED MILK
Herbert E. Otting, Westerville, and Lewis H. Chrysler and Emory F. Almy, Columbus, Ohio, assignors to M & R Dietetic Laboratories, Inc., a corporation of Ohio
No Drawing. Application September 11, 1946, Serial No. 696,360
11 Claims. (Cl. 99—55)



1. In the processing of fluid milk products to secure non-solid products containing an increased proportion of milk solids and wherein the fluid milk product under treatment is subjected to temperatures exceeding about 150° F., the method of controlling and stabilizing the viscosity and curd forming effects of the high temperature treatment which comprises incorporating therein a minor proportion of mineral modified milk solids having a calcium to phosphorus ratio in the range from about 0.15 to about 0.75.

2,473,494
ELECTRIC MOTOR CONTROL APPARATUS
William H. Wannamaker, Jr., Flourtown, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 12, 1945, Serial No. 634,558
9 Claims. (Cl. 318—207)

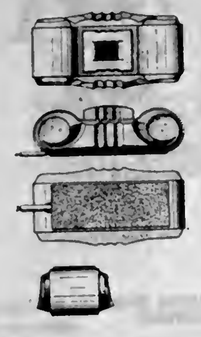


1. A control system comprising in combination a regulating mechanism including two windings and adapted to produce different effects accordingly as one or another of said windings is operatively energized, energizing means separately associated with each of said windings and comprising a condenser, an electronic valve unit and connecting means for connecting the winding and its associated condenser and valve unit in series to a source of alternating current, each of said valve units comprising a diode valve and a valve having a control grid and comprising an input circuit including the control grid and cathode of the control grid valve, and an output circuit including the anodes and cathodes of both valves of the unit, the two valves of each unit being inversely connected to pass current in opposite directions through the associated winding and condenser during successive half cycles of alternating current supplied by said source, and means actuated by a change in a control quantity for impressing a control signal on the input circuit of one or the other of said control grid valves accordingly as said change is in one direction or in the opposite direction.

2,473,495
MICROWAVE WATTMETER
Hugh E. Webber, Williston Park, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application December 8, 1943, Serial No. 513,164
13 Claims. (Cl. 171—95)

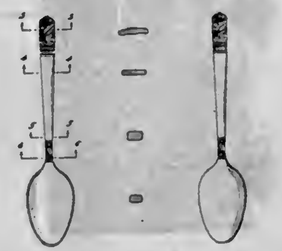
13. In a microwave measuring instrument, the combination of a section of coaxial transmission line short-circuited at one end for high frequency waves, said line comprising an inner conductor and a tubular outer conductor, a resistance element connected in series with said inner conductor adjacent to said end, adjustable susceptance means connected across said line at the end of said resistance element remote from said one end, said line having a fixed length adjacent said element, said susceptance means cooperating with said fixed length to match the conductance of said element with the characteristic conductance of said line at the end of said fixed length remote from said element, fixed susceptance means on said inner conductor at said last end.

2,473,496
AIR CONDITIONING SYSTEM
Waldemar F. Mayer, Los Angeles, Calif., assignor to The Garrett Corporation, Los Angeles, Calif., a corporation of California
Application October 11, 1944, Serial No. 558,148
17 Claims. (Cl. 257—3)



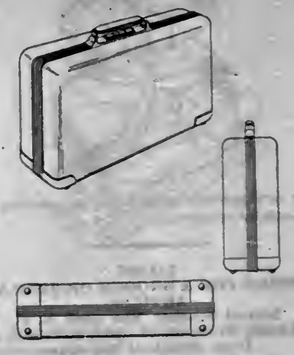
1. In an air conditioning system, air pumping means, a duct for conveying air under pressure from said pumping means to an enclosure to be conditioned, power operated means for conditioning the air flowing in said duct, an air motor for driving said last means, and means including a temperature controlled valve mechanism for bypassing air from said duct through said air motor and back to said duct.

DESIGNS



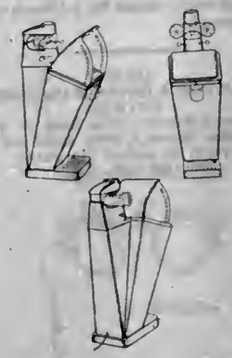
JUNE 14, 1949

154,090
DESIGN FOR A CIGARETTE LIGHTER
John T. Adams, Roslyn, N. Y.
Application August 23, 1948, Serial No. 148,248
Term of patent 3½ years
(Cl. D48—27)



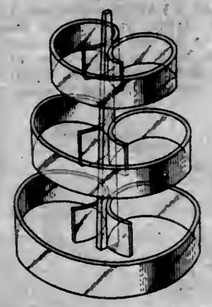
The ornamental design for a cigarette lighter, as shown.

154,091
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Grosvenor N. Allen and William H. Gerth, Oneida, N. Y., assignors to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application June 23, 1948, Serial No. 147,136
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or similar article, substantially as shown and described.

154,092
DESIGN FOR A VALISE OR SIMILAR ARTICLE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,060
Term of patent 14 years
(Cl. D87—5)



The ornamental design for a valise or similar article, substantially as shown and described.

154,093
DESIGN FOR A MICROFILM PROJECTOR OR SIMILAR ARTICLE
John T. Armbruster, Niagara Falls, N. Y., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application May 22, 1948, Serial No. 146,531
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a microfilm projector or similar article, substantially as shown and described.

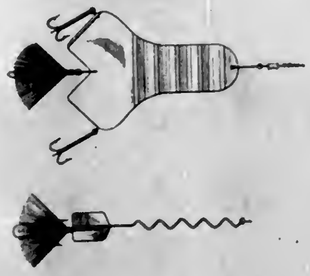
154,094
DESIGN FOR AN EARRING RACK
Kenneth R. Armstrong, Battle Creek, Mich., assignor by decree of court to Catherine C. Armstrong
Application February 17, 1948, Serial No. 144,548
Term of patent 14 years
(Cl. D80—9)

The ornamental design for an earring rack, substantially as shown.

154,095
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 23, 1949, Serial No. 1,005
Term of patent 3½ years
(Cl. D45—19)

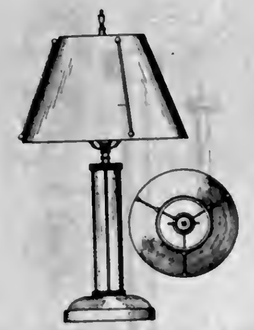
The ornamental design for a brooch or similar article, as shown.

154,096
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application March 3, 1949, Serial No. 1,187
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, as shown.

154,097
DESIGN FOR A NURSERY LAMP
Edward Brenner, Hollywood, Calif.
Application June 11, 1947, Serial No. 139,582
Term of patent 7 years
(Cl. D48—20)

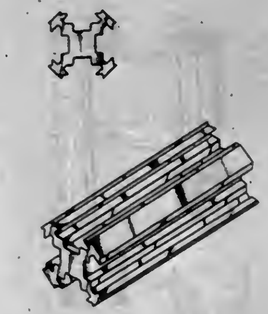


The ornamental design for a nursery lamp, as shown and described.

154,098
DESIGN FOR A FISH LURE
Wayne H. Carr, Kalamazoo, Mich.
Application May 7, 1947, Serial No. 138,866
Term of patent 3½ years
(Cl. D31—4)

The ornamental design for a fish lure, as shown.

154,099
DESIGN FOR A TABLE LAMP
Vincent Casmara, New York, N. Y.
Application January 17, 1947, Serial No. 136,209
Term of patent 3½ years
(Cl. D48—20)

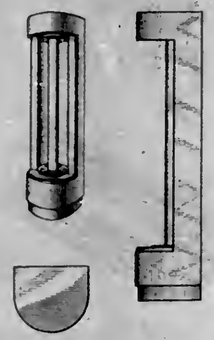


The ornamental design for a table lamp, substantially as shown.

154,100
DESIGN FOR A LACE TABLECLOTH
Francesco Paolo Castorani, Philadelphia, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application April 22, 1948, Serial No. 145,912
Term of patent 7 years
(Cl. D92—26)

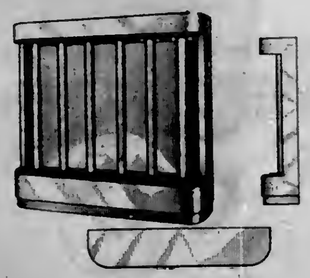
The ornamental design for a lace tablecloth, substantially as shown and described.

154,101
DESIGN FOR AN EXTRUDED METAL SHOWCASE FITTING
Thorp Clive Cowdroy, Balgowlah, near Sydney, New South Wales, Australia
Application February 5, 1948, Serial No. 144,314
Term of patent 7 years
(Cl. D54—2)



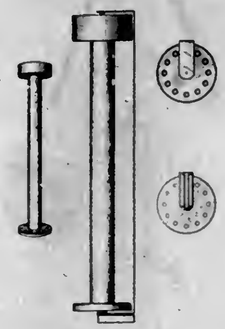
1. The ornamental design for an extruded metal showcase fitting, as shown.

154,102
DESIGN FOR A SPECTACLE FRAME
Mafalda Davis, New York, N. Y.
Application July 25, 1947, Serial No. 140,501
Term of patent 7 years
(Cl. D57—1)



The ornamental design for a spectacle frame, as shown.

154,103
DESIGN FOR A RACK OR THE LIKE FOR BILLIARD CUES
Donald Deskey, New York, N. Y., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application September 20, 1947, Serial No. 141,507
Term of patent 14 years
(Cl. D34—3)

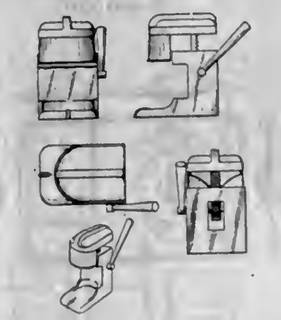


The ornamental design for a rack or the like for billiard cues, as shown.

154,104
DESIGN FOR A RACK OR THE LIKE FOR BILLIARD CUES
Donald Deskey, New York, N. Y., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application September 20, 1947, Serial No. 141,508
Term of patent 14 years
(Cl. D34—3)

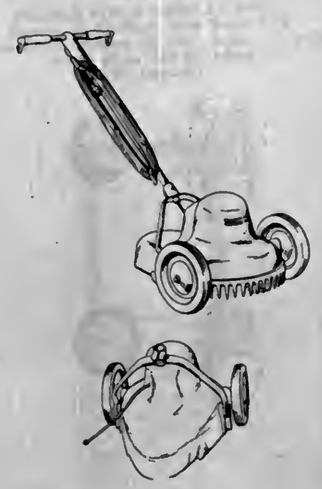
The ornamental design for a rack or the like for billiard cues, as shown.

154,105
DESIGN FOR A RACK OR THE LIKE FOR BILLIARD CUES
Donald Deskey, New York, N. Y., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application September 20, 1947, Serial No. 141,509
Term of patent 14 years
(Cl. D34—3)



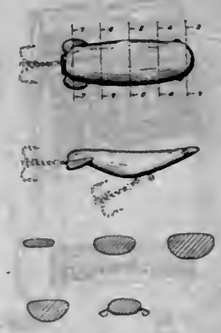
The ornamental design for a rack or the like for billiard cues, as shown.

154,106
DESIGN FOR A LIPSTICK CONTAINER
Enrico Donati, New York, N. Y., assignor to Lady Esther, Ltd., Chicago, Ill., a corporation of Illinois
Application May 6, 1947, Serial No. 138,844
Term of patent 14 years
(Cl. D86—10)



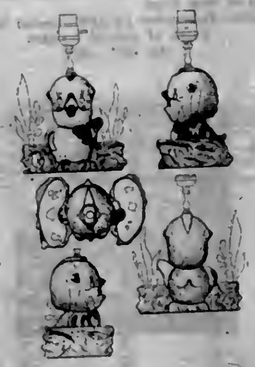
The ornamental design for a lipstick container, as shown.

154,107
DESIGN FOR A CAN OPENER
Joseph B. Donnelly, Burlingame, Calif., assignor to Schenley Distillers Corporation, New York, N. Y., a corporation of Delaware
Application December 17, 1947, Serial No. 143,176
Term of patent 14 years
(Cl. D22—2)



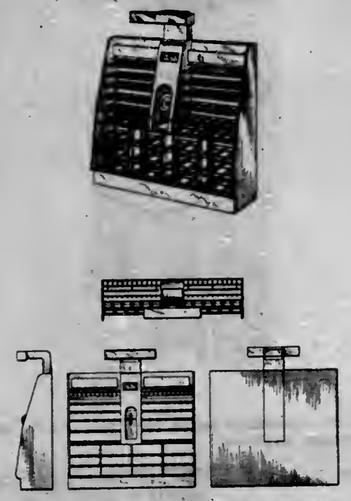
The ornamental design for a can opener, as shown.

154,108
DESIGN FOR AN ELECTRIC DRIVEN LAWN MOWER
Albert Edwin Emmons, Lockport, N. Y., assignor to Rumsey Products, Inc., Seneca Falls, N. Y., a corporation of New York
Application December 18, 1946, Serial No. 135,590
Term of patent 14 years
(Cl. D40—1)



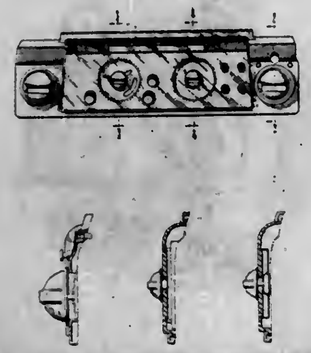
The ornamental design for an electric driven lawnmower, substantially as shown.

154,109
DESIGN FOR A FISHING LURE
George B. Espey and Gilbert D. Waite, Cleveland, Ohio
Application June 2, 1947, Serial No. 139,408
Term of patent 14 years
(Cl. D31—4)



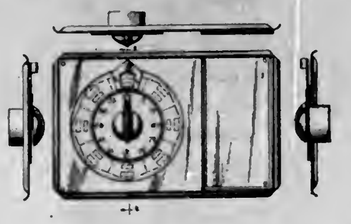
The ornamental design for a fishing lure, substantially as shown.

154,110
DESIGN FOR A PLANTER LAMP
John E. Everett, Evanston, Ill., assignor to Herman Kravitz, Chicago, Ill.
Application June 3, 1948, Serial No. 146,736
Term of patent 3½ years
(Cl. D48—20)



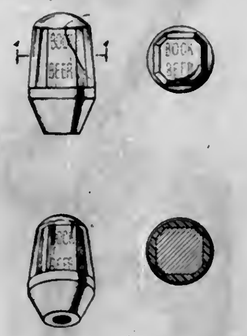
The ornamental design for a planter lamp, as shown and described.

154,111
DESIGN FOR A COMBINED DISPLAY RACK AND COLOR SELECTOR
Robert L. Falkenberg, Mission, Kans.
Application April 26, 1948, Serial No. 145,971
Term of patent 7 years
(Cl. D86—9)



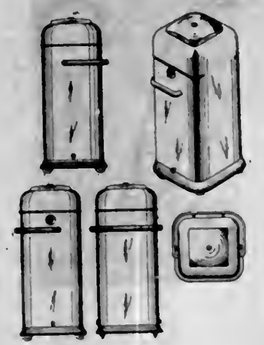
The ornamental design for a combined display rack and color selector, as shown.

154,112
DESIGN FOR A COOKING RANGE CONTROL PANEL UNIT
Montgomery Ferar, Detroit, Mich., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application December 10, 1947, Serial No. 143,092
Term of patent 7 years
(Cl. D81—25)



The ornamental design for a cooking range control panel unit, substantially as shown.

154,113
DESIGN FOR AN INDICATOR CONTROL PANEL UNIT FOR STOVES
Edward A. Fink, Chicago, Ill.
Application December 29, 1947, Serial No. 143,427
Term of patent 14 years
(Cl. D61—25)

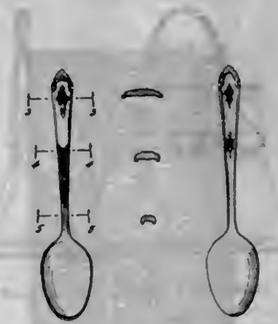


The ornamental design for an indicator control panel unit for stoves, as shown and described.

154,114
DESIGN FOR A TAP HANDLE
Francis C. Fisher, Syracuse, N. Y.
Application August 19, 1948, Serial No. 148,188
Term of patent 14 years
(Cl. D2—3)

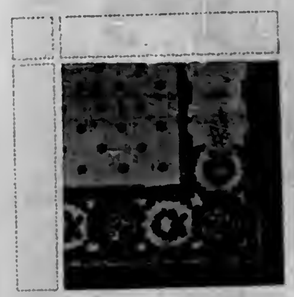
The ornamental design for a tap handle, as shown.

154,115
DESIGN FOR A CABINET FOR AUTOMOTIVE LUBRICATION EQUIPMENT
Alexander P. Fox, University City, and August D. Reisert, St. Louis, Mo., assignors to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application March 15, 1947, Serial No. 137,625
Term of patent 7 years
(Cl. D52—2)



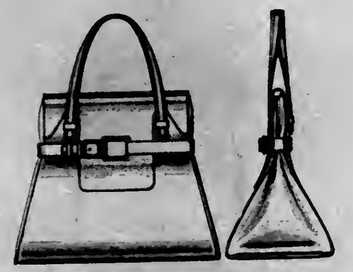
The ornamental design for a cabinet for automotive lubrication equipment, substantially as shown.

154,116
DESIGN FOR A DISPLAY BOX
Samuel H. Geffner, New York, N. Y.
Application November 28, 1947, Serial No. 142,839
Term of patent 3½ years
(Cl. D80—5)



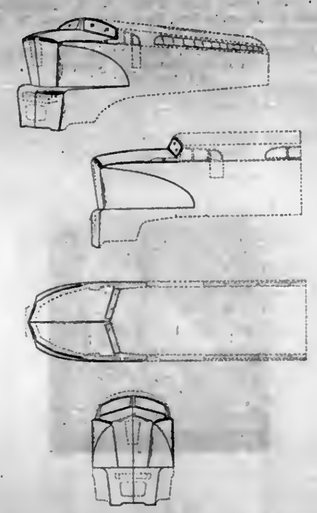
The ornamental design for a display box, substantially as shown and described.

154,117
DESIGN FOR A SPOON OR SIMILAR ARTICLE
William H. Gerth, Oneida, N. Y., assignor to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application September 23, 1948, Serial No. 148,720
Term of patent 14 years
(Cl. D54—12)



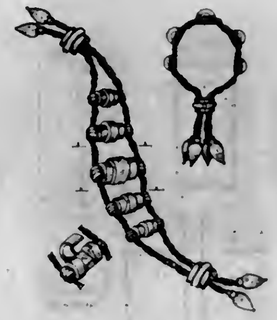
The ornamental design for a spoon or similar article, substantially as shown and described.

154,118
DESIGN FOR A SCARF
Rose Gottschalk, New York, N. Y., assignor to Edgar C. Hyman Co., Inc., New York, N. Y., a corporation of New York
Application May 25, 1948, Serial No. 146,592
Term of patent 3½ years
(Cl. D3—12)



The ornamental design for a scarf, substantially as shown and described.

154,119
DESIGN FOR A HANDBAG
Edgar F. Gumbrill, Walsall, England, assignor to Greatrex Ltd., New York, N. Y., a corporation of New York
Application May 29, 1948, Serial No. 146,693
Term of patent 14 years
(Cl. D87—3)



The ornamental design for a handbag, as shown.

154,120
DESIGN FOR A LOCOMOTIVE BODY
Donald L. Hadley, Meriden, Carleton B. Ryder, Huntington, and Nicholas F. Pedersen, New Hartford, Conn., assignors to The Baldwin Locomotive Works, Eddystone, Pa., a corporation of Pennsylvania
Application September 3, 1947, Serial No. 141,188
Term of patent 3½ years
(Cl. D66—1)

The ornamental design for a locomotive body, substantially as shown and described.

154,121
DESIGN FOR A COMBINED WATCH AND BRACELET
Abbot A. Harman, New York, N. Y.
Application January 11, 1949, Serial No. 169
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a combined watch and bracelet, as shown.

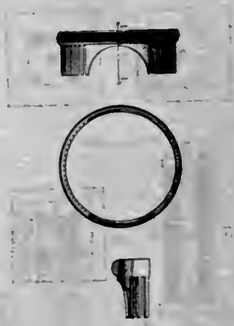
154,122
DESIGN FOR A LACE TABLECLOTH
Howard Hooven, Doylestown, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application April 22, 1948, Serial No. 145,913
Term of patent 14 years
(Cl. D92—26)

The ornamental design for a lace tablecloth, substantially as shown and described.

154,123
DESIGN FOR A LACE TABLECLOTH
Howard Hooven, Doylestown, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application February 4, 1949, Serial No. 690
Term of patent 7 years
(Cl. D92—26)

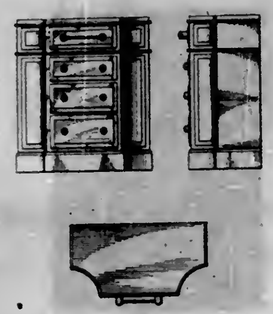
The ornamental design for a lace tablecloth, substantially as shown and described.

154,124
DESIGN FOR A LACE TABLECLOTH
Howard Hooven, Doylestown, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application April 30, 1949, Serial No. 2,367
Term of patent 7 years
(Cl. D92—26)



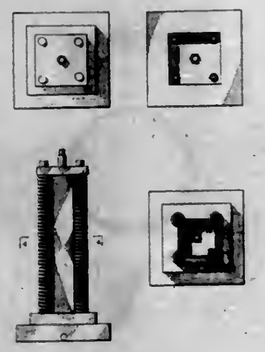
The ornamental design for a lace tablecloth, substantially as shown and described.

154,125
DESIGN FOR A LACE TABLECLOTH
Howard Hooven, Doylestown, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application April 30, 1949, Serial No. 2,369
Term of patent 14 years
(Cl. D92—26)



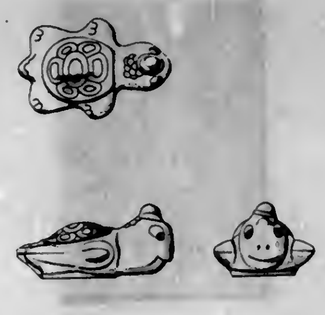
The ornamental design for a lace tablecloth, substantially as shown and described.

154,126
DESIGN FOR A ROUND COMB
Robert Humphreys, Menlo Park, Calif.
Application January 20, 1948, Serial No. 143,892
Term of patent 14 years
(Cl. D86—8)



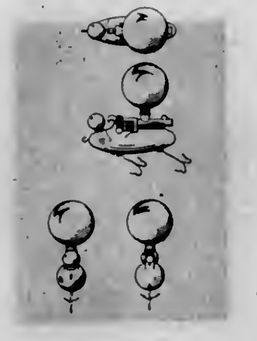
The ornamental design for a round comb, as shown.

154,127
DESIGN FOR A COIN BANK
Arthur Frank Klingberg, Chicago, Ill., assignor to Park Sherman Co., Springfield, Ill., a corporation of Illinois
Application September 8, 1947, Serial No. 141,243
Term of patent 7 years
(Cl. D34—11)



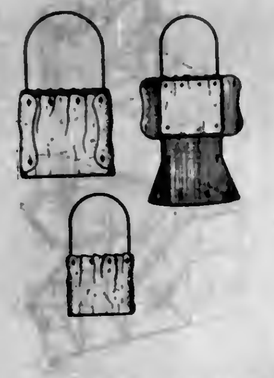
The ornamental design for a coin bank, substantially as shown.

154,128
DESIGN FOR A LAMP STANDARD OR SIMILAR ARTICLE
Frank Lascow, New York, N. Y.
Application September 24, 1948, Serial No. 148,755
Term of patent 7 years
(Cl. D48—20)



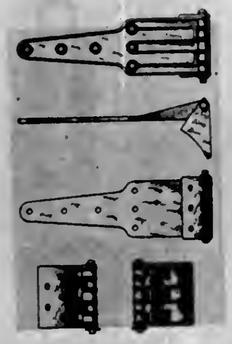
The ornamental design for a lamp standard or similar article, as shown.

154,129
DESIGN FOR A TOY TURTLE OR SIMILAR ARTICLE
Ludwig Leaf, Forest Hills, N. Y., assignor to Empire Plastic Corporation, New York, N. Y.
Application April 17, 1948, Serial No. 145,791
Term of patent 3½ years
(Cl. D34—2)



The ornamental design for a toy turtle or similar article, substantially as shown.

154,130
DESIGN FOR A NOVELTY FISH LURE
Desire O. Le Moine, Akron, Ohio
Application November 20, 1947, Serial No. 142,683
Term of patent 14 years
(Cl. D31—4)

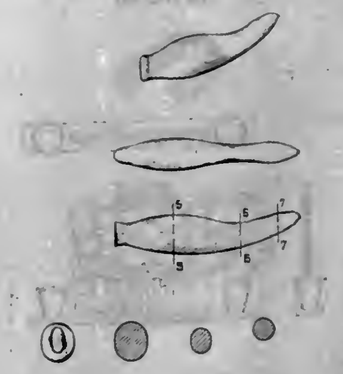


The ornamental design for a novelty fish lure, as shown.

154,131
DESIGN FOR A HANDBAG
Rudolph Lebel, New York, N. Y., assignor to Friedman-Lebel, Inc., New York, N. Y., a corporation of New York
Application May 27, 1948, Serial No. 146,635
Term of patent 3½ years
(Cl. D87—3)

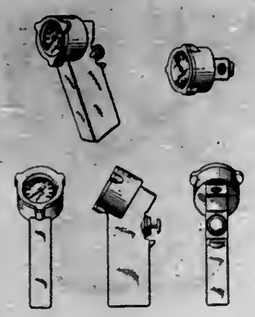
The ornamental design for a handbag, substantially as shown.

154,132
DESIGN FOR A HINGE
Harvey J. Lounsbury, Glen Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 20, 1946, Serial No. 131,785
Term of patent 14 years
(Cl. D10—9)



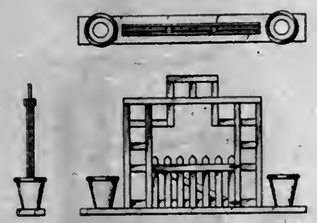
The ornamental design for a hinge, as shown.

154,133
DESIGN FOR A SPECTACLE FRAME
Aurel E. Maagold, New York, N. Y.
Application July 3, 1946, Serial No. 131,378
Term of patent 3½ years
(Cl. D57—1)



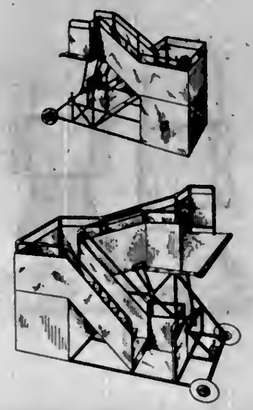
The ornamental design for a spectacle frame, as shown and described.

154,134
DESIGN FOR A KNIFE HANDLE
Ward McMillen, Toledo, Ohio
Application October 30, 1947, Serial No. 142,223
Term of patent 14 years
(Cl. D44—29)



The ornamental design for a knife handle, substantially as shown.

154,135
DESIGN FOR A TIRE INFLATOR
Archibald R. Moffett, Orinda, Calif.
Application April 19, 1948, Serial No. 145,805
Term of patent 14 years
(Cl. D62—1)

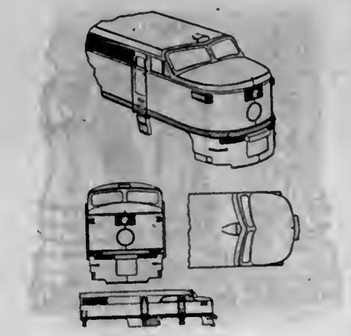


The ornamental design for a tire inflator, substantially as shown.

154,136
DESIGN FOR A COMBINED FLOWER STAND AND TRELLIS
Thomas S. Morris, Birmingham, Ala.
Application March 3, 1947, Serial No. 137,291
Term of patent 3½ years
(Cl. D35—3)

The ornamental design for a combined flower stand and trellis, substantially as shown.

154,137
DESIGN FOR A PASSENGER LOADING RAMP
Procter W. Nichols, Colorado Springs, Colo.
Application December 19, 1947, Serial No. 142,239
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a passenger loading ramp, as shown.

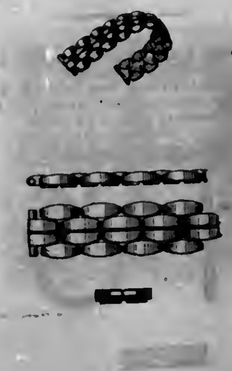
154,138
DESIGN FOR A LACE TABLECLOTH
Ferdinand P. Otto, Philadelphia, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application March 11, 1949, Serial No. 1,367
Term of patent 7 years
(Cl. D92—26)

The ornamental design for a lace tablecloth, substantially as shown and described.

154,139
DESIGN FOR A LOCOMOTIVE BODY OR THE LIKE
Ray Patten, Norwalk, Conn., assignor to General Electric Company, a corporation of New York
Application October 12, 1946, Serial No. 133,898
Term of patent 3½ years
(Cl. D46—1)

The ornamental design for a locomotive body or the like, substantially as shown and described.

154,140
DESIGN FOR A KNITTING BAG OR SIMILAR ARTICLE
Paul R. Peak, Jr., Hamden, Conn.
Application February 12, 1947, Serial No. 136,866
Term of patent 3½ years
(Cl. D3—19)



The ornamental design for a knitting bag or similar article, substantially as shown.

154,141
DESIGN FOR A FISHING SPINNER OR SIMILAR ARTICLE
Sven A. Pilblad, Boston, Mass.
Application March 6, 1947, Serial No. 137,369
Term of patent 7 years
(Cl. D31—4)

The ornamental design for a fishing spinner or similar article, substantially as shown.

154,142
DESIGN FOR A WRIST BAND
Alfred Pinson, Stamford, Conn., assignor to Apex Accessories Co., Inc., New York, N. Y.
Application March 16, 1949, Serial No. 1,426
Term of patent 14 years
(Cl. D45—4)

The ornamental design for a wrist band, as shown.

154,143
DESIGN FOR A COMBINATION COCKTAIL TABLE, RADIO AND PHONOGRAPH CABINET
Thomas C. Reed, Washington, D. C.
Application September 10, 1947, Serial No. 141,497
Term of patent 7 years
(Cl. D58—4)

The ornamental design of a combination cocktail table, radio and phonograph cabinet, as shown.

154,144
DESIGN FOR A FINGER PULL FOR ZIPPERS AND THE LIKE
Daniel I. Reiter, New York, N. Y.
Application June 16, 1947, Serial No. 139,709
Term of patent 14 years
(Cl. D17—8)

The ornamental design for a finger pull for zippers and the like, substantially as shown.

154,145
DESIGN FOR A LAMP BASE
Joseph Roemer, Kirkwood, Mo., assignor to Pidgeon Vitrified China Company, Barnhart, Mo., a corporation of Missouri
Application August 6, 1948, Serial No. 147,976
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a lamp base, substantially as shown.

154,146
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,811
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,147
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,812
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,148
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,813
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,149
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,816
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,150
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,817
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,151
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,816
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,152
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,820
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,153
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,823
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,154
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,824
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,155
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,825
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,156
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,826
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,157
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,827
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,158
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,828
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,159
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,829
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,160
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,830
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,161
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,831
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,162
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,832
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

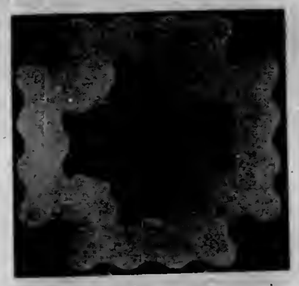
154,163
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,834
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,164
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,835
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,165
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,836
Term of patent 14 years
(Cl. D18—2)

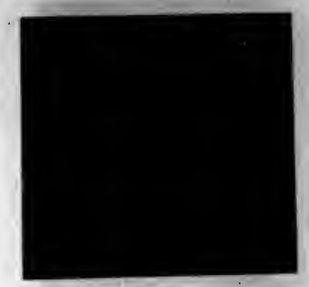


The ornamental design for a tile floor and wall covering, as shown and described.

154,166
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,837
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,167
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,838
Term of patent 14 years
(Cl. D18—2)



The ornamental design for a tile floor and wall covering, as shown and described.

154,168
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,839
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,169
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,840
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,170
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,841
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,171
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,842
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,172
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,843
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor, and wall covering, as shown and described.

154,173
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,844
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor, and wall covering, as shown and described.

154,174
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,847
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,175
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,848
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,176
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,849
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,177
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,850
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,178
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,853
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,179
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,856
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,180
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,857
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,181
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,859
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

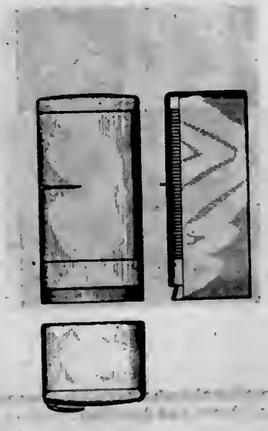
154,182
DESIGN FOR A FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,860
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,183
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,861
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,184
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1946, Serial No. 148,862
Term of patent 14 years
(Cl. D18—2)



The ornamental design for a tile floor and wall covering, as shown and described.

154,185
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,863
Term of patent 14 years
(Cl. D18—2)

The ornamental design for a tile floor and wall covering, as shown and described.

154,186
DESIGN FOR A REFRIGERATOR
Ray C. Sandin, Oak Park, Ill., assignor to Hotpoint Inc., a corporation of New York
Application February 25, 1948, Serial No. 144,732
Term of patent 14 years
(Cl. D67—3)

The ornamental design for a refrigerator, as shown and described.

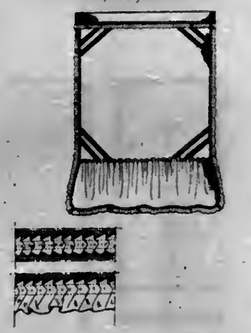
154,186—Continued

The ornamental design for a refrigerator, as shown and described.

154,187
DESIGN FOR A REFRIGERATOR
Ray C. Sandin, Oak Park, Ill., assignor to Hotpoint Inc., a corporation of New York
Application February 25, 1948, Serial No. 144,733
Term of patent 14 years
(Cl. D67—3)

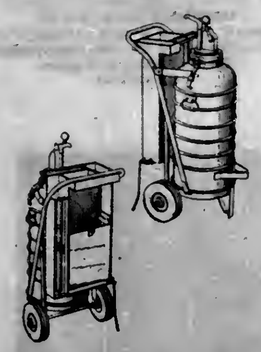
The ornamental design for a refrigerator, as shown and described.

154,188
DESIGN FOR A REFRIGERATOR
Ray C. Sandin, Oak Park, Ill., assignor to Hotpoint Inc., a corporation of New York
Application March 3, 1948, Serial No. 144,892
Term of patent 14 years
(Cl. D67—3)



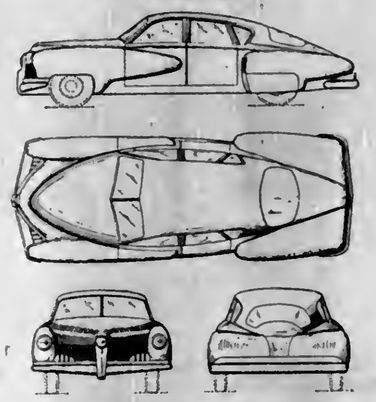
The ornamental design for a refrigerator, as shown and described.

154,189
DESIGN FOR A PLANE
Edwin G. Simon, San Francisco, Calif.
Application November 10, 1948, Serial No. 149,550
Term of patent 14 years
(Cl. D93—4)



The ornamental design for a plane, substantially as shown.

154,190
DESIGN FOR A CURTAIN
Leonard Singer, New York, N. Y.
Application February 3, 1948, Serial No. 144,227
Term of patent 14 years
(Cl. D47—6)



The ornamental design for a curtain, substantially as shown.

154,191
DESIGN FOR A PORTABLE BEVERAGE DISPENSER
Burton O. Smith, Chicago, Ill., assignor to Vacuum Can Company, Chicago, Ill., a corporation of Illinois
Application June 8, 1948, Serial No. 146,831
Term of patent 14 years
(Cl. D2—3)

The ornamental design for a portable beverage dispenser, substantially as shown.

154,192
DESIGN FOR AN AUTOMOBILE
Preston T. Tucker, Ypsilanti, Mich., assignor to Tucker Corporation, Chicago, Ill., a corporation of Delaware
Application March 15, 1947, Serial No. 137,626
Term of patent 3½ years
(Cl. D14—3)

The ornamental design for an automobile, substantially as shown and described.

154,193
DESIGN FOR A LACE TABLECLOTH
William Wolf, Philadelphia, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application April 21, 1948, Serial No. 145,889
Term of patent 14 years
(Cl. D92—26)

The ornamental design for a lace tablecloth, substantially as shown and described.

Donati, Enrico, New York, N. Y., assignor to Lady Ester, Ltd., Chicago, Ill. Lipstick container. 154,106, June 14.

Donnelley, Joseph B., Burlingame, Calif., assignor to Schenley Distillers Corporation, New York, N. Y. Can opener. 154,107, June 14.

Emmons, Albert E., Lockport, assignor to Rumsey Products, Inc., Seneca Falls, N. Y. Electric driven lawn mower. 154,108, June 14.

Empire Plastic Corporation, assignee: *See*—
Leaf, Ludwik.

Espey, George B., and G. D. Waite, Cleveland, Ohio. Fishing lure. 154,109, June 14.

Everett, John E., Evanston, assignor to H. Kravitz, Chicago, Ill. Planter lamp. 154,110, June 14.

Falkenberg, Robert L., Mission, Kans. Combined display rack and color selector. 154,111, June 14.

Ferar, Montgomery, Detroit, Mich., assignor to Sears, Roebuck and Co., Chicago, Ill. Cooking range control panel unit. 154,112, June 14.

Fink, Edward A., Chicago, Ill. Indicator control panel unit for stoves. 154,113, June 14.

Fisher, Francis C., Syracuse, N. Y. Tap handle. 154,114, June 14.

Fox, Alexander P., University City, and A. D. Reisert, assignors to Lincoln Engineering Company, St. Louis, Mo. Cabinet for automotive lubrication equipment. 154,115, June 14.

Friedman-Lobel, Inc., assignee: *See*—
Lobel, Rudolph.

Gellner, Samuel H., New York, N. Y. Display box. 154,116, June 14.

General Electric Company, assignee: *See*—
Patten, Ray.

Gerth, William H.: *See*—
Allen, Grosvenor N., and Gerth.

Gerth, William H., assignor to Oneida Ltd., Oneida, N. Y. Spoon or similar article. 154,117, June 14.

Gottschalk, Rose, assignor to Edgar C. Hyman Co., Inc., New York, N. Y. Scarf. 154,118, June 14.

Grestrex Ltd., assignee: *See*—
Gumbrill, Edgar F.

Gumbrill, Edgar F., Walsall, England, assignor to Grestrex Ltd., New York, N. Y. Handbag. 154,119, June 14.

Hadley, Donald L., Meriden, C. B. Ryder, Huntington, and N. F. Pedersen, New Hartford, Conn., assignors to The Baldwin Locomotive Works, Eddystone, Pa. Locomotive body. 154,120, June 14.

Harman, Abbot A., New York, N. Y. Combined watch and bracelet. 154,121, June 14.

Hooven, Howard, Doylestown, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,122, June 14.

Hooven, Howard, Doylestown, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,123, June 14.

Hooven, Howard, Doylestown, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,124, June 14.

Hooven, Howard, Doylestown, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,125, June 14.

Hotpoint Inc., assignee: *See*—
Sandin, Ray C.

Humphreys, Robert, Menlo Park, Calif. Round comb. 154,126, June 14.

Hyman, Edgar C., Co., Inc., assignee: *See*—
Gottschalk, Rose.

Klingberg, Arthur F., Chicago, assignor to Park Sherman Co., Springfield, Ill. Coin bank. 154,127, June 14.
Kravitz, Herman, assignee: *See*—
Everett, John E.
Lady Esther, Ltd., assignee: *See*—
Donati, Enrico.
Lascow, Frank, New York, N. Y. Lamp standard or similar article. 154,128, June 14.
Leaf, Ludwig, Forest Hills, assignor to Empire Plastic Corporation, New York, N. Y. Toy turtle or similar article. 154,129, June 14.
Le Moine, Desire O., Akron, Ohio. Novelty fish lure. 154,130, June 14.
Lincoln Engineering Company, assignee: *See*—
Fox, Alexander P., and Reisert.
Lobel, Rudolph, assignor to Friedman-Lobel, Inc., New York, N. Y. Handbag. 154,131, June 14.
Lounsbury, Harvey J., Glen Ellyn, assignor to W. H. Miner, Inc., Chicago, Ill. Hinge. 154,132, June 14.
Mangold, Aurel E., New York, N. Y. Spectacle frame. 154,133, June 14.
McMillen, Ward, Toledo, Ohio. Knife handle. 154,134, June 14.
Miner, W. H., Inc., assignee: *See*—
Lounsbury, Harvey J.
Moffett, Archibald R., Orinda, Calif. Tire inflator. 154,135, June 14.
Morris, Thomas S., Birmingham, Ala. Combined flower stand and trellis. 154,136, June 14.
Nichols, Proctor W., Colorado Springs, Colo. Passenger loading ramp. 154,137, June 14.
Oneida Ltd., assignee: *See*—
Allen, Grosvenor N., and Gerth.
Gerth, William H.
Otto, Ferdinand P., assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,138, June 14.
Park Sherman Co., assignee: *See*—
Klingberg, Arthur F.
Patten, Ray, Norwalk, Conn., assignor to General Electric Company. Locomotive body or the like. 154,139, June 14.
Peak, Paul R., Jr., Hamden, Conn. Knitting bag or similar article. 154,140, June 14.
Pedersen, Nicholas F.: *See*—
Hadley, Donald L., Ryder, and Pedersen.
Pidgeon Vitrified China Company, assignee: *See*—
Rosner, Joseph.
Pilblad, Sven A., Boston, Mass. Fishing spinner or similar article. 154,141, June 14.
Pinson, Alfred, Stamford, Conn., assignor to Apex Accessories Co., Inc., New York, N. Y. Wrist band. 154,142, June 14.
Quaker Lace Company, assignee: *See*—
Castoral, Francesco P.
Hooven, Howard.
Otto, Ferdinand P.
Wolf, William.
Reed, Thomas C., Washington, D. C. Combination cocktail table, radio and phonograph cabinet. 154,143, June 14.
Reisert, August D.: *See*—
Fox, Alexander P., and Reisert.
Reiter, Daniel L., New York, N. Y. Finger pull for slippers and the like. 154,144, June 14.
Rosner, Joseph, Kirkwood, assignor to Pidgeon Vitrified China Company, Barnhart, Mo. Lamp base. 154,145, June 14.
Rumsey Products, Inc., assignee: *See*—
Emmons, Albert E.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,146, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,147, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,148, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,149, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,150, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,151, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,152, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,153, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,154, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,155, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,156, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,157, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,158, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,159, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,160, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,161, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,162, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,163, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,164, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,165, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,166, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,167, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,168, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,169, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,170, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,171, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,172, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,173, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,174, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,175, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,176, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,177, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,178, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 159,179, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,180, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,181, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,182, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,183, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,184, June 14.
Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,185, June 14.
Ryder, Carleton B.: *See*—
Hadley, Donald L., Ryder, and Pedersen.
Sandin, Ray C., Oak Park, Ill., assignor to Hotpoint Inc. Refrigerator. 154,186, June 14.
Sandin, Ray C., Oak Park, Ill., assignor to Hotpoint Inc. Refrigerator. 154,187, June 14.
Sandin, Ray C., Oak Park, Ill., assignor to Hotpoint Inc. Refrigerator. 154,188, June 14.
Schenley Distillers Corporation, assignee: *See*—
Donnelly, Joseph B.
Sears, Roebuck and Co., assignee: *See*—
Ferar, Montgomery.
Simon, Edwin G., San Francisco, Calif. Plane. 154,189, June 14.
Singer, Leonard, New York, N. Y. Curtain. 154,190, June 14.
Smith, Burton O., assignor to Vacuum Can Company, Chicago, Ill. Portable beverage dispenser. 154,191, June 14.
Tucker Corporation, assignee: *See*—
Tucker, Preston T.
Tucker, Preston T., Ypsilanti, Mich., assignor to Tucker Corporation, Chicago, Ill. Automobile. 154,192, June 14.
United States Rubber Company, assignee: *See*—
Arbib, Richard H.
Vacuum Can Company, assignee: *See*—
Smith, Burton O.
Waite, Gilbert D.: *See*—
Espey, George B., and Waite.
Wolf, William, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 154,193, June 14.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 14TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Kirchmeyer, Frederick J., and Card.
Ache, Nicholas, Detroit, Mich. Open-top refrigerated display case. 2,473,122, June 14.
Adam, Louis D., and N. G. Poplin, Ponca City, Okla., assignors to Pachner & Koller, Inc., Chicago, Ill. Fishing lure. 2,473,324, June 14.
Adams, Arthur A., Brookline, assignor to R. G. Morse, Marblehead, Mass. Micrometer caliper. 2,472,875, June 14.
Adams, Charles, Jr., Croton on Hudson, N. Y. Pipe fitting. 2,473,045, June 14.
Adams, Charles, Jr., Croton on Hudson, N. Y. Pipe clamp. 2,473,046, June 14.
Adams, Charles S., Holden, assignor to Rice Barton Corporation, Worcester, Mass. Papermaking machine. 2,473,269, June 14.
Adams, Charles S., Holden, assignor to Rice Barton Corporation, Worcester, Mass. Cylinder mold papermaking machine. 2,473,270, June 14.
Adams, Clifford E., Wakita, Okla. Disk supporting jig while treating the edge of the disk. 2,473,407, June 14.
Adams, David, Detroit, Mich. Multiple cylinder engine of the multiple piston type. 2,473,268, June 14.
Adams, Gail D., Jr., Champaign, assignor to The Board of Trustees of the University of Illinois, Urbana, Ill. Electronic induction accelerator apparatus and method. 2,473,123, June 14.
Adams, Pierrepont, Glenbrook, Conn., assignor to American Cyanamid Company, New York, N. Y. Alkylated melamine-formaldehyde liquid compositions. 2,473,463, June 14.
Adelson, David E., Berkeley, and T. W. Evans, Oakland, assignors to Shell Development Company, San Francisco, Calif. Polyallyl type alcohols and production thereof. 2,473,124, June 14.
Adkins, Bruce, Pharr, Tex. House moving apparatus. 2,472,932, June 14.
Aerotec Corporation, The, assignee: *See*—
Watson, John E., and McBride.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Connolly, Claire A.
Ahrndt, Arthur H., assignor to U. S. Slicing Machine Company, La Porte, Ind. Knife assembly and stripper for meat tendering machines. 2,472,800, June 14.
Ahrndt, Arthur H., and P. H. Meyer, assignors to U. S. Slicing Machine Company, La Porte, Ind. Rotary disk knife. 2,472,876, June 14.
Air Reduction Company, Incorporated, assignee: *See*—
Hoover, Charles O.
Huff, Harry A., Jr.
Klinke, Henry O.
Ajax Engineering Corporation, assignee: *See*—
Tama, Manuel, and Tams and Hoff.
Aktiebolaget Separator, assignee: *See*—
Lindgren, Hans O.
Albersheim, Walter J., Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave modifying reflector. 2,472,762, June 14.
Albin, Frederick G., Los Angeles, Calif., assignor to Radio Corporation of America. Radio-frequency dielectric heater with constant heating rate control. 2,473,188, June 14.
Aldon Products Company, assignee: *See*—
Vara, Ethan W.
Alexander, Elisha E., Chicago, Ill. Elevator door and bridge. 2,473,125, June 14.
Alexander, Elisha E., Chicago, Ill. Freight platform bridge. 2,473,126, June 14.
Alexander, Elisha E., Chicago, Ill. Elevator bridge. 2,473,127, June 14.
Alexander, Elisha E., Chicago, Ill. Elevator door bridge. 2,473,128, June 14.
Alexander, Emmett L., and A. W. Braithwaite, assignors to The George E. Failing Supply Company, Enid, Okla. Portable drilling rig. 2,472,999, June 14.
Alexanderson, Ernst F. W., Schenectady, M. A. Edwards, Scotia, and O. A. Hoyt, Schenectady, N. Y., assignors to General Electric Company. Follow-up control system. 2,473,235, June 14.
Alkan, Robert, Locust Valley, N. Y., assignor to Specialties, Inc. Remote control. 2,473,464, June 14.
Alkin, Gerald T., Kiama, New South Wales, Australia. Clothes hanger. 2,473,408, June 14.
Allday, Henry, & Son (1922) Limited, assignee: *See*—
Bain, Robert.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Ringland, William L.
Allmänna Svenska Elektriska Aktiebolaget, assignee: *See*—
Gynt, Sven.
Aliquist, John W., Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America. Washing cellulose. 2,472,877, June 14.
Almasi, Ludwig, New York, N. Y. Bowling game ball projector. 2,473,087, June 14.
Almy, Emory F.: *See*—
Otting, Herbert E., Chrysler, and Almy.
Aluminum Company of America, assignee: *See*—
Hunsicker, Harold Y., and Kempf.
American Can Company, assignee: *See*—
Paynter, Horace J.
Socke, John E.
American Chemical Paint Company, assignee: *See*—
Sprnance, Frank P., Jr., and Thirsk.
American Cyanamid Company, assignee: *See*—
Adams, Pierrepont.
Cullinan, John F., and Lytle.
Davis, Arnold R.
Partentjev, Ivan A.
American Lead Pencil Company, assignee: *See*—
Juelss, David.
American Seating Company, assignee: *See*—
Morgan, Erving B., and Clay.
American Steel Foundries, assignee: *See*—
Baselt, Walter H.
Clasen, Clans J. W.
Cottrell, Robert B.
Keysor, Harold C.
Schlegel, Walter L., Jr.
American Telephone and Telegraph Company, assignee: *See*—
Richards, Kenneth W.
Anderson, Carl V.: *See*—
Tobener, William H., Jr., and Anderson.
Anderson, Dwight M., South Euclid, Ohio. Vacuum breaking and dump valve. 2,472,933, June 14.
Andrews, Eleanor U., assignee: *See*—
Lorenz, John.
Armco Steel Corporation, assignee: *See*—
Littmann, Martin F.
Armington, Raymond Q.: *See*—
Double, Walter F., Armington, and Armington, R. Q.
Armington, Stewart F.: *See*—
Double, Walter F., Armington, and Armington, R. Q.
Artisan Shoe Company, assignee: *See*—
Risso, Joseph D.
Attapulgus Clay Company, assignee: *See*—
McCarter, William S. W.
Atwell, Harold V., Beacon, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Carrying out exothermic reactions. 2,473,129, June 14.
Auñero, John M., Plandome, assignor to E. A. Laboratories, Inc., Brooklyn, N. Y. Combined electric fan and air heating means. 2,473,325, June 14.
Aust, Robert J., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. High-frequency vibrator mechanism. 2,473,353, June 14.
Autogiro Company of America, assignee: *See*—
Pitcairn, Harold F.
Automatic Telephone & Electric Company Limited, assignee: *See*—
Gillings, Charles, and Cowley.
Autophon Aktiengesellschaft, the firm, assignee: *See*—
Kappeler, Hans.
Bachmann Bros., Inc., assignee: *See*—
McNeill, Albert G.
Bader, Paul W., Chicago, and F. E. Oakhill, Wilmette, assignors to O-Cedar Corp'n, Chicago, Ill. Handle and socket structure. 2,473,000, June 14.
Badger Carton Co., assignee: *See*—
Bledsoe, William E., Jr.
Bain, Robert, Handsworth, Birmingham, assignor to Henry Allday & Son (1922) Limited, Birmingham, England. Electric switch. 2,473,088, June 14.
Baker, William M., Clyde, N. Y. Glass cutter. 2,473,189, June 14.
Barber-Colman Company, assignee: *See*—
Colman, Howard D.
Barfield, Morris L., Washington, D. C., and J. J. Gurtowski, Wallington, N. J., assignors to the United States of America as represented by the Secretary of War. Temperature-stable molded resistor. 2,472,801, June 14.
Barlow, Clifford S., Sydney, New South Wales, Australia. Hot pressing materials on sewing machines. 2,473,236, June 14.

Barnes, Walter C., Lake Bluff, and H. W. Keevil, Evanston, Ill. Method and apparatus for detecting flaws. 2,472,784, June 14.

Barone, James, Alamosa, Colo. Anchor leader. 2,473,080, June 14.

Barrere, Gerald N., Cincinnati, Ohio. Handle control mechanism. 2,472,763, June 14.

Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Trussed brake beam. 2,473,001, June 14.

Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Brake beam. 2,473,002, June 14.

Baskin, Charles M., Toronto, Ontario, and N. W. McLeod, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company. Producing fibrous building compositions. 2,473,190, June 14.

Bastian Brothers Company, assignee: *See*—
Wegman, Julee G.

Bates Manufacturing Company, assignee: *See*—
Watson, William.

Baumann, Karl, Mere, Knutsford, assignor to Metropolitan-Vickers Electrical Company Limited, London, England. Fluid turbine power plant with speed reduction transmission gearing. 2,472,878, June 14.

Banroth, Walter J., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Electric traction motor. 2,473,130, June 14.

Bayle, André A. C., Boulogne-sur-Seine, France. Protective device for thermal receivers. 2,472,879, June 14.

Beachell, Harold C., Lakewood, and M. Syeda, Cleveland, Ohio, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Purification of chloral containing under-chlorinated constituents. 2,473,003, June 14.

Beale, Evelyn S. L., Staines, assignor to Alan Munts & Company Limited, Hounslow, England. Control means for internal-combustion-operated free-piston machines. 2,472,934, June 14.

Bechler, André, Berne, Switzerland. Transmission gear for machine tools. 2,472,880, June 14.

Becker, Frank, Arlington, Va. Telescoping collapsible chair. 2,473,060, June 14.

Beckman, Arnold O., Altadena, assignor to National Technical Laboratories, South Pasadena, Calif. Variable resistance unit. 2,473,048, June 14.

Beechlyn, John T., Worcester, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Variable compound resistor. 2,473,409, June 14.

Behrman, William F.: *See*—
Hawes, Russell J., Behrman, and Campbell.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Albersheim, Walter J.
Darlington, Sidney.
Mallina, Rudolph F.
Thurber, Elmer A.

Bellows Company, The, assignee: *See*—
Carlson, Bert G.

Beloit Iron Works, assignee: *See*—
Hornbostel, Lloyd.

Bender, Charles E., Teaneck, N. J., assignor to General Foods Corporation, New York, N. Y. Recovering caffein. 2,472,881, June 14.

Benedek, Elek K., Chicago, Ill. Hydraulic pump or motor. 2,473,271, June 14.

Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Device for transmitting and receiving compressional waves. 2,473,364, June 14.

Bensley, Robert D., Chicago, Ill. Color photography. 2,473,131, June 14.

Bentley, Oliver D. H., Dover, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lubrication system. 2,472,902, June 14.

Berger, Emil J., and H. K. West, assignors to Dexdale Hosiery Mills, Lansdale, Pa. Sinker actuating mechanism for knitting machines. 2,473,355, June 14.

Berger, J. E., Corporation, assignee: *See*—
Wortman, Robert.

Berger, Paul, assignor, by mesne assignments, of one-half to H. Epstein and one-half to L. R. Dumen, Chicago, Ill. Transformer. 2,472,882, June 14.

Bergstein, Frank D., assignee, trustee: *See*—
Bergstein, Samuel.

Bergstein, Robert M., assignee, trustee: *See*—
Bergstein, Samuel.

Bergstein, Samuel, Cincinnati, Ohio, assignor to R. M. Bergstein and F. D. Bergstein, trustees. Method and apparatus for producing cartons. 2,472,883, June 14.

Bershad, Israel, Brooklyn, N. Y. Portable clothes drier. 2,473,047, June 14.

Berube, Frank, Brockton, Mass. Snap fastener attachment for button sewing machines. 2,473,132, June 14.

Bettencourt, Alfred S., East Orange, N. J. Larding and seasoning needle. 2,473,191, June 14.

Bets, Paul L., assignor to Consolidated Gas Electric Light and Power Company of Baltimore, Baltimore, Md. Apparatus for improving the operation of oxygen cutting torches. 2,473,465, June 14.

Beveviso, Angelo J., Petrolia, Pa., assignor to L. Sonneborn Sons, Inc. Device for lifting and transporting objects. 2,473,410, June 14.

Beyer, Frederick C., Washington, D. C., and C. E. Jackson, Niagara Falls, N. Y. Welding apparatus. 2,472,803, June 14.

Bied, John R., Framingham, Mass. Combination mount and shoulder rest. 2,472,804, June 14.

Birmann, Rudolph, Newtown, Pa., assignor, by mesne assignments, to Turbo Engineering Corporation. Combustion gas turbine arrangement. 2,473,356, June 14.

Bitner, Ralph E., Roslyn, N. Y. Partial products mechanism. 2,473,466, June 14.

Bivens, Maurice E., Schenectady, N. Y., assignor to General Electric Company. Electric timer. 2,473,237, June 14.

Bivens, Maurice E., Schenectady, N. Y., assignor to General Electric Company. Electric valve control circuits. 2,473,238, June 14.

Blackwell, John B., San Antonio, Tex. Coil for weed burners and pear burners. 2,473,192, June 14.

Blake, William O., Newport, Wash. Toy machine gun. 2,473,272, June 14.

Bledsoe, William E., Jr., assignor to Badger Carton Co., Milwaukee, Wis. Electric motor. 2,473,049, June 14.

Blits, Daniel Newtonville, Mass., assignor to Radio Corporation of America. Standing wave detector and indicator system. 2,472,785, June 14.

Blott, John F. T., Worcester Park, England, assignor to Shell Development Company, San Francisco, Calif. Composition suitable for the construction of roads, paths, floors, aerodrome runways, and the like. 2,473,326, June 14.

Blume, Frank J., Chicago, Ill. Multiple belt conveyer system. 2,472,805, June 14.

Blunier, Edward G., Roanoke, Ill. Swinging drawbar. 2,473,357, June 14.

Bocji Corporation, assignee: *See*—
La Place, Descond R.

Boden, Robert S., Pittsburgh, Pa. Egg separator stand. 2,473,411, June 14.

Bogart, Fred H., South Euclid, assignor to The Warner & Swasey Company, Cleveland, Ohio. Machine tool. 2,473,133, June 14.

Bolvin, Odilon J., Gorham, N. H. Wallpaper pasting and cutting device. 2,472,935, June 14.

Bollier, Ernest R., Marion, Ind., L. D. Eubank, Cleveland, Ohio, and R. J. Kepfer, La Grange, Ill., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Galvanising flux. 2,473,004, June 14.

Bonnett, Horace W., Fairfield, assignor to United Aircraft Corporation, East Hartford, Conn. Adjustable rotor blade. 2,473,134, June 14.

Boots Pure Drug Company Limited, assignee: *See*—
Short, Wallace F., Hobday, and Oxley.
Short, Wallace F., and Oxley.

Borda, Carlos J., San Jose, Costa Rica. Adjustable key for use with locks in which the tumblers are movable parallel to the axis of the plug. 2,473,273, June 14.

Borg-Warner Corporation, assignee: *See*—
Candler, James N.
Rockwell, Edward A.

Born, Wade H., McRae, Ga. Implement for winding and folding harvesting sheets. 2,473,327, June 14.

Bowerman, Edwin R., Jr., assignor to Sylvania Electric Products Inc., Emporium, Pa. Pickling metal contact surfaces. 2,472,786, June 14.

Boyd, Cecil P., Gettysburg, Pa. Wall cabinet having a vertically swingable section. 2,473,239, June 14.

Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Brace for doors and the like. 2,472,936, June 14.

Boye, James H., Manufacturing Company, assignee: *See*—
Boye, James H.

Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Ultra high frequency coupling. 2,473,274, June 14.

Braithwaite, Albert W.: *See*—
Alexander, Emmett L., and Braithwaite.

Brandon, Richard C.: *See*—
Jones, Minor C. K., and Brandon.

Brierton, James L.: *See*—
Peters, Elwyn H., Engelhardt, and Brierton.

Bright, Orlow S., Jr., Canton, assignor to Raytheon Manufacturing Company, Newton, Mass. Cathode coating for electron discharge devices. 2,473,358, June 14.

Brinkoeter, Paul H., assignor to Ed Friedrich, Inc., San Antonio, Tex. Cooling plate. 2,472,937, June 14.

Brittain, Francis H., Pinner, and C. E. Ransley, Sudbury, assignors to The General Electric Company Limited, London, England. Point-contact rectifier. 2,472,938, June 14.

Britton, Joseph W., and R. C. Dosser, assignors to The Dow Chemical Company, Midland, Mich. Method and catalysts for polymerizing vinyl and vinylidene compounds. 2,473,005, June 14.

Bronson, Adelbert E., Shaker Heights, and L. S. Speth, Cleveland, Ohio, assignors to A. E. Bronson, Jr. Method of and apparatus for waving hair. 2,473,135, June 14.

Bronson, Adelbert E., Jr., assignee: *See*—
Bronson, Adelbert E., and Speth.

Brooks, Desmond B., and C. J. Van Boven, Haxtun, Colo. Marble projector. 2,473,091, June 14.

Brose, Horace B.: *See*—
Brose, Lasetta D., and H. B.

Brose, Lasetta D., and H. B., Chicago, Ill. Abdominal pillow. 2,473,136, June 14.

Brouns, Hubert E., assignor to N. V. Vereenigde Tabaksindustrieen Mignot & De Block, Eindhoven, Netherlands. Machine for applying bands to cigars. 2,473,276, June 14.

Brown, Frank L., Park Ridge, and H. S. Steen, Chicago, Ill., assignors to Chicago Faucet Company. Flow regulator. 2,472,747, June 14.

Brown, George H., and O. M. Woodward, Jr., Princeton, N. J., assignors to Radio Corporation of America. Line balance converter. 2,473,328, June 14.

Brown, Robert L., assignee: *See*—
Waara, David H.

Brown, Robert L., Ferndale, Mich. Door check device. 2,473,359, June 14.

Bryant Chucking Grinder Company, assignee: *See*—
Ljunggren, Tore H., and Green.

Bryant, William F., Chamblee, Ga. Fuel injection pump. 2,473,412, June 14.

Buffington, Don M., Grand Falls, Tex. Hose clamp. 2,473,092, June 14.

Burgett, Lynn S., Bakersfield, Calif., assignor to The Clark Controller Company, Cleveland, Ohio. Brake. 2,473,360, June 14.

Burns, Alfred G., Farmland, Ind. Automatic electric animal trap. 2,472,806, June 14.

Burrus, Robert E., assignor to Clark Equipment Company, Buchanan, Mich. Step-up gearing. 2,472,788, June 14.

Burrus, Robert E., assignor to Clark Equipment Company, Buchanan, Mich. Vehicle clutch control mechanism. 2,472,789, June 14.

Burt, James F., assignor to Glenwood Range Company, Taunton, Mass. Attachment for drawers in ovens of stoves or ranges. 2,473,467, June 14.

Byerly, Robert W., New York, N. Y. Time-interval indicator. 2,473,487, June 14.

Byrne, John F., Columbus, Ohio, assignor to General Electric Company. Parallel plate capacitor. 2,473,240, June 14.

Cable & Wireless Limited, assignee: *See*—
Higgitt, Harry V.

California Machinery and Supply Company, Ltd., assignee: *See*—
Ostling, William.

Camp, Charles J., Palo Alto, Calif. Emergency radio signal for airplanes. 2,473,050, June 14.

Campbell, Charles A.: *See*—
Hawes, Russell J., Behrman, and Campbell.

Campbell, Shirley P., and R. Grubb, assignors to The Coleman Company, Inc., Wichita, Kans. Furnace. 2,473,006, June 14.

Campion, Donald C., Detroit, Mich., assignor to Loftus Engineering Corporation, Pittsburgh, Pa. Reciprocating conveyer. 2,473,193, June 14.

Candler, James N., Grosse Pointe, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Tail rotor for helicopters. 2,473,329, June 14.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Johnston, Franklin, and Hensley.

Card, Ione R.: *See*—
Kirchmeyer, Frederick J., and Card.

Carlington, Charles M., and G. W. Shoobert, assignors to K. L. G. Sparking Plugs Limited, London, England. Sparking plug. 2,473,231, June 14.

Carlson, Bert G., Gates Mills, assignor to The Bellows Company, Akron, Ohio. Pneumatic tool for upsetting hollow rivets. 2,473,361, June 14.

Carlson, Louis C., South Ozone Park, N. Y. Adapter. 2,473,051, June 14.

Carson, Russell M., Red Oak, Iowa, assignor of fifty per cent to G. C. Hohl, Kansas City, Mo. Dish cleaning and garbage collecting machine. 2,473,007, June 14.

Carter, Dora E., assignee: *See*—
Donaldson, Jefferson R., and Hulse.

Casey, James P., assignor to A. E. Staley Manufacturing Company, Decatur, Ill. Preparing starch paste. 2,472,790, June 14.

Celanese Corporation of America, assignee: *See*—
Allquiet, John W.
Taylor, David, and Ward.

Chadsey Corporation, assignee: *See*—
Chadsey, George E.

Chadsey, George E., East Hampton, Conn.: I. M. Davis, and I. D. Dickerson, Middletown, executrices of said G. R. Chadsey, deceased, assignor to Chadsey Corporation, Hartford, Conn. Bulb manipulating device. 2,473,008, June 14.

Chadsey, George R., East Hampton, Conn.: I. M. Davis, and I. D. Dickerson, Middletown, executrices of said G. R. Chadsey, deceased, assignor to Chadsey Corporation, Hartford, Conn. Bulb socket manipulator. 2,473,009, June 14.

Chamberlin, Richard: *See*—
Driesebman, Donald, and Chamberlin.

Chase Brass & Copper Co., Incorporated, assignee: *See*—
Reichenbach, Howard F.

Chew, Thornton W., Washington, D. C. Color television system. 2,473,276, June 14.

Chicago Faucet Company, assignee: *See*—
Brown, Frank L., and Steen.

Chicago Railway Equipment Company, assignee: *See*—
Walker, Samuel J., and Spaeth.

Chou, Ching-Ih, West Webster, N. Y., assignor to Stromberg-Carlson Company. Power supply switching system. 2,473,194, June 14.

Chrysler Corporation, assignee: *See*—
Lawton, Boen.
Ochs, Sidney A.

Chrysler, Lewis H.: *See*—
Otting, Herbert E., Chrysler, and Almy.

Church, William K.: *See*—
Graham, Joseph P., and Church.

Cipyak, John, assignor of seventeen and one-half per cent to T. Cipyak, seventeen and one-half per cent to F. E. Sterner, seventeen and one-half per cent to A. V. Sterner, and seventeen and one-half per cent to A. V. Sterner, Lansford, Pa. Miniature golf game board. 2,473,277, June 14.

Cipyak, Margaret, assignee: *See*—
Cipyak, John.

Cipyak, Tekla, assignee: *See*—
Cipyak, John.

Clark Controller Company, The, assignee: *See*—
Burgett, Lynn S.

Clark Equipment Company, assignee: *See*—
Burrus, Robert E.

Clark, Ethel H., assignee: *See*—
Clark, John W.

Clark, Frank M., Pittsfield, Mass., assignor to General Electric Company. Heat-resisting capacitor. 2,473,242, June 14.

Clark, Henry B., Elisabeth, N. J. Overhead door lock. 2,472,791, June 14.

Clark, John W., assignor of one-third to E. H. Clark, Washington, D. C. Safety razor. 2,472,807, June 14.

Clasen, Claus J. W., assignor to American Steel Foundries, Chicago, Ill. Quick wheel change railway car truck. 2,473,010, June 14.

Clay, Royce W.: *See*—
Morgan, Erving B., and Clay.

Cleaver-Brooks Company, assignee: *See*—
Sanborn, William L.

Clifton, Robert P., Dearborn, assignor to Packard Motor Car Company, Detroit, Mich. Shroud for multiple runner fluid couplings. 2,473,137, June 14.

Cochran, Carl T.: *See*—
Robbins, Roland S., and Cochran.

Cohen, Charles A., Roselle Park, N. J., assignor to Standard Oil Development Company. Treatment of oils corrosive to copper. 2,473,195, June 14.

Cohler, Irving H., Chicago, Ill., assignor, by mesne assignments, to Mitchell Manufacturing Company. Air conditioning unit for mounting in windows. 2,472,702, June 14.

Colaiuca, Leonardo, Somerville, N. J. Cushioning attachment for game tables. 2,472,884, June 14.

Coleman Company, Inc., The, assignee: *See*—
Campbell, Shirley P., and Grubb.

Collins Radio Company, assignee: *See*—
May, Richard W.

Colman, Howard D., assignor to Barber-Colman Company, Rockford, Ill. Automatic multiple stage telegraph system. 2,472,885, June 14.

Colonial Radio Corporation, assignee: *See*—
Nicholson, Madison G., Jr.

Columbia Steel Company, assignee: *See*—
Jones, Walter J.

Comins, Alfred W., Lancaster, Pa., assignor to Radio Corporation of America. Voltage control system for cathode-ray tubes. 2,473,330, June 14.

Compagnie Francaise du Signum, assignee: *See*—
Toulon, Pierre M. G.

Conea, Ben, Indianapolis, Ind. Hygroscopic disk. 2,473,278, June 14.

Conn, Alfred J., Oak Park, and R. B. Stanley, Maywood, assignors to La Salle Designing Company, Chicago, Ill. Machine tool. 2,473,093, June 14.

Connolly, Claire A., Detroit, Mich., assignor to the United States of America as represented by the Secretary of Agriculture. Crate having lifting means. 2,472,930, June 14.

Conrad, Joseph D., Springfield, and W. H. Lloyd, Philadelphia, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Turbine blade lashing. 2,472,886, June 14.

Consolidated Engineering Corporation, assignee: *See*—
McClure, Dorr W. G.
Washburn, Harold W.

Consolidated Gas Electric Light and Power Company of Baltimore, assignee: *See*—
Bets, Paul L.

Conterno, Charles, Brooklyn, N. Y. Gas stove valve operator guard. 2,472,793, June 14.

Continental Pharmacal Company, The, assignee: *See*—
Lager, Roger K.

Cook, John B., and L. L. Jugle, assignors to Reliable Electric Company, Chicago, Ill. Wire supporting device. 2,473,363, June 14.

Cook, Sherman H., Ferguson, Mo., assignor to Curtiss-Wright Corporation. Motion transmission mechanism. 2,473,362, June 14.

Cooley, Hal, Portland, Oreg. Magnetic switch apparatus. 2,473,465, June 14.

Cordrey, Hancil, and W. J. Duvall, Chula Vista, Calif. Keyless lock. 2,473,052, June 14.

Core, Aaron F., Sacramento, Calif. Plasterboard hoist. 2,472,827, June 14.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Cortese, Ralph, Newark, N. J. Electrode. 2,473,413, June 14.

Cosser, A. C., Limited, assignee: *See*—
Wynn, Arthur H. A., and Hill.

Cothran, Charles D., assignor, by mesne assignments, to M. W. Engleman, trustee, Los Angeles, Calif. Removal of surface moisture from wet articles. 2,472,794, June 14.

Cottrell, Robert B., assignor to American Steel Foundries, Chicago, Ill. Spring group. 2,473,011, June 14.

Cottrell, Robert B., assignor to American Steel Foundries, Chicago, Ill. Truck bolster interlocking device. 2,473,012, June 14.

Cowley, Percy E. A.: *See*—
Gillings, Charles, and Cowley.

Crane, Carlton L.: *See*—
Hiatt, Gordon D., and Crane.

Crane, Charles R., II, Chicago, and A. Mueller, Berwyn, assignors to Crane Co., Chicago, Ill. Valve actuating mechanism. 2,473,013, June 14.

Crane Co., assignee: *See*—
Crane, Charles R., II, and Mueller.

Crews, John F.: *See*—
Meade, Reginald E., Taylor, and Crews.

Critchfield, Burke H., assignee: *See*—
Edwards, Thomas J.

Crocker, De Witt B., New York, N. Y. Curb inlet casting. 2,472,279, June 14.

Crompton & Knowles Loom Works, assignee: *See*—
Lindquist, Frank D.

Crozall, Willard J., Bryn Athyn, and H. T. Neher, Bristol, assignors to Rohm & Haas Company, Philadelphia, Pa. Preparation of halo-substituted acetals. 2,473,014, June 14.

Crump, Robert E.: *See*—
Hamwill, William W., and Crump.

Cullinan, John F., and L. D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Acid treatment of heterocyclic imide and imidasole vat dyestuffs. 2,473,015, June 14.

Cummings, Arthur H., Ventura, Calif. Brassière. 2,472,940, June 14.

Cunningham, James M., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Apparatus for training pilots and other aircraft personnel. 2,472,888, June 14.

Curtis, Helene, Industries, Inc., assignee: *See*—
Nemeth, Otto R.

Curtiss-Wright Corporation, assignee: *See*—
Cook, Sherman H.
Dickinson, Ernest G., and Parkin.
Peters, Elwyn H., Engelhardt, and Brierton.

Dahl, Andrew I., Arlington, Va. Thermocouple junction with radiation shield. 2,472,808, June 14.

Dahm, Cornelius G., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Method and apparatus for minimising the horizontally-traveling components of seismic waves. 2,473,469, June 14.

Dannenberg, Kurt, Stoke-on-Trent, England. Combined thermal-magnetic circuit breaker. 2,473,196, June 14.

Darash, Nicholas P., assignor to The Warner & Swasey Company, Cleveland, Ohio. Machine tool. 2,473,138, June 14.

Darlington, Sidney, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Voltage multiplying circuit. 2,473,414, June 14.

Dart, Rodger W., Essondale, British Columbia, and S. Jenkins, Vancouver, British Columbia, Canada, assignors to International Mutoscope Corporation, Long Island City, N. Y. Automatic photographing and developing apparatus. 2,473,280, June 14.

Davis, Arnold R., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Reducing cut-growth rate of rubberlike butadiene-styrene copolymer. 2,473,016, June 14.

Davis, David M., assignee: *See*—
Herriott, Irving.

Davis, Inez M., executrix: *See*—
Chadsey, George E.

Decker, John R., Amherst, Mass. Illuminated reticle attachment for telescopes. 2,472,809, June 14.

Delaware Engineering Corporation, assignee: *See*—
Moore, William E.

Denig, Fred, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc. Recovery of light oil from absorbent. 2,472,810, June 14.

Denison Engineering Company, The, assignee: *See*—
Mills, Howard.

De Roo, William C., assignor to Hart & Cooley Manufacturing Company, Holland, Mich. Register construction. 2,473,053, June 14.

Devaney, Lawrence W.: *See*—
McBee, Earl T., and Devaney.

Dexdale Hosiery Mills, assignee: *See*—
Berger, Emil J., and West.

Dieherman, Fred N., Nichols, assignor to United Aircraft Corporation, East Hartford, Conn. Piston rod packing lubricator. 2,473,139, June 14.

Dieherson, Ida D., executrix: *See*—
Chadsey, George E.

Dickey, Joseph B., assignor to Eastman Kodak Company, Rochester, N. Y. Polymers of alpha-fluoromethyl acrylic acid esters. 2,472,811, June 14.

Dickey, Joseph B., assignor to Eastman Kodak Company, Rochester, N. Y. Esters of alpha-fluoromethyl acrylic acids. 2,472,812, June 14.

Dickinson, Ernest G., Olcott, and J. C. Parkin, Buffalo, N. Y., assignors to Curtiss-Wright Corporation. Latter installation for vehicles. 2,473,364, June 14.

Diebold, Incorporated, assignee: *See*—
Miller, Karl H.

Dietrich, Karl L., Jr.: *See*—
Hess, Frederic O., Miller, and Dietrich, Jr.

Distillers Company Limited, The, assignee: *See*—
Maxfield, Herbert I.

Doeg, Ralph W., Highland Park, Mich. Weeder. 2,472,941, June 14.

Donaldson, Jefferson E., and N. M. Huiss, assignors of thirty-three and one-third per cent to D. E. Carter, Dallas, Tex. Bottle vending machine. 2,473,064, June 14.

Donley, Carson O., assignor to Vertifilte, Inc., Indianapolis, Ind. Helicopter power and control mechanism. 2,473,331, June 14.

Dosser, Robert C.: *See*—
Britton, Joseph W., and Dosser.

Double, Walter F., Wickliffe, S. F. Armington, Willoughby, and R. Q. Armington, Shaker Heights, assignors to The Euclid Road Machinery Co., Cleveland, Ohio. Tandem axle construction. 2,472,813, June 14.

Douglas Aircraft Company, Inc., assignee: *See*—
Weise, Carl A.

Doull, Robert M., Westmount, Quebec, Canada. Mixing nozzle. 2,473,415, June 14.

Dow Chemical Company, The, assignee: *See*—
Britton, Joseph W., and Dosser.

Dowl Products, Inc., assignee: *See*—
Hutchinson, Alton E., and Thomas.

Drieschman, Donald, Los Altos, and R. Chamberlin, assignors to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube. 2,472,942, June 14.

Dryden Rubber Company, assignee: *See*—
Winkelmann, Herbert A.

Duman, Louis R., assignee: *See*—
Berger, Paul.
Freeman, Ernest H.

Du Mont, Allen B., Upper Montclair, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Photovision. 2,472,889, June 14.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Du Mont, Allen B.

Dunn, Joseph F., New York, N. Y. Control for ranges. 2,472,795, June 14.

Du Pont, E. I. de Nemours & Company, assignee: *See*—
Beachell, Harold C., and Sveda.
Boller, Ernest R., Eubank, and Kepfer.
Hallowell, Alban T.
Lindsey, Richard V., Jr.
Martin, Elmore L.
McQueen, David M.
Maechter, Emery.
Wernits, James H.
Woodward, David W.

Duriron Company, Inc., The, assignee: *See*—
Jacobsen, Oystein.

Duvall, Walter J.: *See*—
Cordrey, Hanell, and Duvall.

E. A. Laboratories, Inc., assignee: *See*—
Auñero, John M.

Eastman Kodak Company, assignee: *See*—
Dickey, Joseph B.
Hiatt, Gordon D., and Crane.

Eaton Manufacturing Company, assignee: *See*—
Findley, Howard J.
Reed, George R.

Edwards, Martin A.: *See*—
Alexanderson, Ernst F. W., Edwards, and Hoyt.

Edwards, Thomas J., Klamath Falls, Oreg., assignor, by mesne assignments, to B. H. Critchfield, Berkeley, Calif. Building structure. 2,473,017, June 14.

Edwards, Thomas J., Klamath Falls, Oreg., assignor to B. H. Critchfield. Building structure. 2,473,018, June 14.

Eitel-McCullough, Inc., assignee: *See*—
Drieschman, Donald, and Chamberlin.

Electric Service Manufacturing Company, assignee: *See*—
Magooch, Harry Y., and Shaback.

Electric Storage Battery Company, The, assignee: *See*—
Lighton, Lester E.

Elliott, Myron A., Washington, D. C. Testing dielectric materials. 2,472,814, June 14.

Emberson, Keith L., assignor to Wingfoot Corporation, Akron, Ohio. Seat. 2,473,365, June 14.

Emerson, John H., Cambridge, and G. J. Sinnett, Lexington, Mass., said Sinnett assignor to said Emerson. Resuscitator. 2,473,416, June 14.

Engelhardt, Lloyd F.: *See*—
Peters, Elwyn H., Engelhardt, and Brierton.

England, James M., Lebanon, assignor of one-third to D. E. Owen, St. Louis, Mo. Insulation means for electrical apparatus. 2,473,332, June 14.

Engleman, M. W., assignee, trustee: *See*—
Cothran, Charles D.

Eppler, Eugene: *See*—
Winslow, Albert E., and Eppler.

Epstein, Hirsch, assignee: *See*—
Berger, Paul.
Freeman, Ernest H.

Erasmus, Hendrik D.: *See*—
Spendelow, Howard R., Jr., and Erasmus.

Erasmus, Hendrik D., Lewiston, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Production of ferrochromium. 2,473,019, June 14.

Erasmus, Hendrik de W., Lewiston, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Ferrochromium. 2,473,020, June 14.

Erlbacher, Robert W., Cape Girardeau, Mo. Self-adjusting slip box. 2,473,140, June 14.

Essl, Max, Swarthmore, Pa., assignor to William H. Harman Corporation, Wilmington, Del. Sectional shaft. 2,473,417, June 14.

Ettl, Joseph, Brooklyn, assignor to Rogers Industries, Inc., New York, N. Y. Coating machine for flexible sheet materials. 2,473,243, June 14.

Eubank, Lowell D.: *See*—
Boller, Ernest R., Eubank, and Kepfer.

Euclid Road Machinery Co., The, assignee: *See*—
Double, Walter F., Armington, and Armington, R. Q.

Eureka Williams Corporation, assignee: *See*—
Vickers, Samuel E.

Evans, John, Hightstown, N. J., assignor to Radio Corporation of America. Heat detecting system. 2,473,197, June 14.

Evans, Theodora W.: *See*—
Adelson, David E., and Evans.

Evans, William O., Baltimore, and W. C. Schaefer, Parkville, assignors to The Glenn L. Martin Company, Middle River, Md. Anode rod for plating tanks. 2,472,796, June 14.

Excel Movie Products, Inc., assignee: *See*—
Karr, Philip L.

Fader, William L.: *See*—
Pettengill, George D., Jarvis, and Fader.

Failing, George E., Supply Company, The, assignee: *See*—
Alexander, Emmett L., and Braithwaite.

Fall, Albert P., Toledo, Ohio. Alighting gear. 2,473,470, June 14.

Farnsworth Research Corporation, assignee: *See*—
Larson, Christian C.

Federal Cartridge Corporation, assignee: *See*—
Hoffman, Harry W., and Helmer.

Feilroth, Karl, Minneapolis, Minn. Box tool. 2,473,418, June 14.

Fenske, Otto E., Jr., Spokis, Ill. Combined carrying case and table. 2,473,022, June 14.

Fersing, Leif, assignor to Jones & Lamson Machine Company, Springfield, Vt. Multiple turning head. 2,473,367, June 14.

Findley, Howard J., Chardon, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Ventilating and heating apparatus for vehicles. 2,473,281, June 14.

Fink, Lucynda L., Liscomb, Iowa. Hair waver. 2,473,198, June 14.

Firestone, Howard E., Salem, Ohio. Stair elevator. 2,472,943, June 14.

Fitzpatrick, Earl A., assignee: *See*—
Griffin, Linnie.

Fleming, William D., Denver, Colo. Automatic light control. 2,472,815, June 14.

Fletcher, Albert C., and D. Lloyd, Oklahoma City, Okla. Alternating current rectifier. 2,473,419, June 14.

Flintermann, Gerhard, Philadelphia, Pa. Suppository. 2,473,368, June 14.

Folzenlogen, Robert G.: *See*—
Lange, Willy, and Folzenlogen.

Food Machinery and Chemical Corporation, assignee: *See*—
Kerr, Charles E.

Ford, Eugene A., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Machine for sorting record cards. 2,472,890, June 14.

Foss, Joseph, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gripper mechanism. 2,472,816, June 14.

Foulke, Louise M. J., Brooklyn, N. Y. Toy horse. 2,472,797, June 14.

Fredendall, Gordon L., Feasterville, Pa., assignor to Radio Corporation of America. Low-pass filter system. 2,472,798, June 14.

Freeman, Ernest H., Wilmette, assignor, by mesne assignments, of one-half to H. Epstein and one-half to L. R. Duman, Chicago, Ill. Transformer. 2,473,420, June 14.

Friedberg, Milton R., Cleveland Heights, assignor to The Gabriel Company, Cleveland, Ohio. Outside mounted automobile antenna. 2,473,141, June 14.

Friedrich, Ed., Inc., assignee: *See*—
Brinkoeter, Paul H.

Frisell, Ernest: *See*—
Skipper, James, Marble, and Frisell.

Fubini, Eugene, New York, N. Y., and M. Hamermesh, Cambridge, Mass., assignors to the United States of America as represented by the Secretary of War. Search antenna array. 2,473,421, June 14.

Fuge, Fred T., Fostoria, Ohio. Electric ironing machine. 2,472,891, June 14.

Fuller, Roger A., Fort Wayne, Ind., assignor to General Electric Company. Dynamoelectric machine. 2,473,246, June 14.

Furer, Edward, and C. B. Lonea, Burbank, Calif.; said Lonea assignor to said Furer. Gyroscopically stabilised camera boom. 2,472,944, June 14.

Gabriel Company, The, assignee: *See*—
Friedberg, Milton R.

Galdes, Alonso F., Redwood City, Calif., assignor to the United States of America as represented by the Secretary of War. Cartridge belt link. 2,472,817, June 14.

Galliano, John, assignor to Galliano Manufacturing Co., Oakland, Calif. Die casting machine. 2,473,366, June 14.

Galliano Manufacturing Co., assignee: *See*—
Galliano, John.

Gang, Herman, Livingston, assignor to Monroe Calculating Machine Company, Orange, N. J. Tens carry mechanism for calculating machines. 2,473,422, June 14.

Gang, Herman, Livingston, assignor to Monroe Calculating Machine Company, Orange, N. J. Carriage cushioning means for calculating machines. 2,473,471, June 14.

Garcia, Max M., Los Angeles, Calif. Music stand. 2,473,199, June 14.

Gardes, Alfred W., Detroit, Mich. Timing and control device. 2,472,818, June 14.

Garrett Corporation, The, assignee: *See*—
Mayer, Waldemar F.

Gaylord, Asa K., Portland, Oreg. Control mechanism. 2,473,004, June 14.

Gear Grinding Machine Company, The, assignee: *See*—
Miller, Fred F., Jr.

Geigy, J. R., A. G., assignee: *See*—
Keller, Ernst, and Zweidler.

Geis, Lester, New York, and R. E. Pope, Setauket, N. Y., assignors to Radio Corporation of America. Article holding album. 2,473,333, June 14.

Gelb, Herbert, assignor to J. Gelb, doing business as Joseph Gelb Company, New York, N. Y. Halftone screen holder. 2,473,023, June 14.

Gelb, Joseph, Company: *See*—
Gelb, Herbert.

General Electric Company, assignee: *See*—
Alexanderson, Ernst F. W., Edwards, and Hoyt.
Rivera, Maurice E.
Brittain, Francis H., and Ransley.
Byrne, John F.
Clark, Frank M.
Fuller, Roger A.
Hausheer, Emil M.
Hoffman, Herbert N.
Man, Eugene T.
Hutt, Philip.
Perry, Charles L.
Potter, Frederick M.
Potts, Phil S.
Rochow, Eugene G.
Scheidorf, Marvel W.
Smith, Robert E.
Wightman, Lawrence W.

General Foods Corporation, assignee: *See*—
Bender, Charles R.

General Motors Corporation, assignee: *See*—
Metzel, Harold N.

General Precision Laboratory Incorporated, assignee: *See*—
Greenwood, Ivan A., Jr.

George, Robert E., Columbus, Ohio. Digging tooth for excavating buckets. 2,472,892, June 14.

Gerson, Jules, New York, N. Y. Twin finger rings. 2,472,893, June 14.

Gevaert Photo-Producten N. V., assignee: *See*—
Merckx, Philibert R.

Giesen, Josef H., U. S. Navy. Mechanical skeleton. 2,472,819, June 14.

Gillings, Charles, Liverpool, and P. E. A. Cowley, Coventry, assignors to Automatic Telephone & Electric Company, Limited, Liverpool, England. Echo suppressor. 2,472,894, June 14.

Gilmore, Basil E., Windsor, Mo. Artificial fish lure. 2,473,142, June 14.

Gingrich, Clair C., Kewanee, Ill. Apparatus for detecting uncapped bottles. 2,472,945, June 14.

Glenwood Range Company, assignee: *See*—
Hurt, James P.
Stevens, Earle A.

Goldberg, Herman, Chicago, Ill. Drilling machine. 2,472,967, June 14.

Goldberg, Herman, Chicago, Ill. Drilling machine. 2,472,968, June 14.

Gordon, James, Chicago, Ill. Floor waxing and polishing device. 2,472,895, June 14.

Gorin, Everett, and A. G. Oblad, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Manufacture of cyclohexene. 2,473,472, June 14.

Gorton, William G., Belmont, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Antihunt electrical servo system. 2,473,428, June 14.

Gottlieb, Maurice, Philadelphia, and F. A. Meyer, Sharon Hill, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control apparatus. 2,472,896, June 14.

Graham, William C., Brighton, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Gas tube controlled servo system. 2,473,424, June 14.

Graham, Joseph P., and W. E. Church, Midland, Mich., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Bonding machine. 2,472,820, June 14.

Graham, Joseph P., and E. D. Lowry, Midland, Mich., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Electrostatic bonding machine. 2,473,143, June 14.

Granholm, Herbert B.: *See*—
Eelner, Carl N., and Granholm.

Grant, William F., Miami, Fla. Screw cap opener. 2,473,425, June 14.

Graumann, Raymond L., Alexandria, Va. Sensitive fuse. 2,472,821, June 14.

Great Lakes Pipe Line Company, assignee: *See*—
Keane, Charles C.

Green, Glenn M.: *See*—
Ljungren, Thor H., and Green.

Greene, Charles, assignee: *See*—
Sciancalepore, Vito.

Greene, Howard B., Cheshire, Conn. Lighter. 2,472,822, June 14.

Greene, Leonard, assignee: *See*—
Ruben, Louis, and Zeik.

Greenwood, Ivan A., Jr., Pleasantville, N. Y., assignor to General Precision Laboratory Incorporated. Potentiometric circuit. 2,473,334, June 14.

Gregg, Jon, New Hope, Pa. Making fabricated articles. 2,473,024, June 14.

Gregg, Jon., New Hope, Pa. Baseball glove. 2,473,025, June 14.

Grene, George H. S., Watford, assignor of one-half to Wild-Barfield Electric Furnaces, Limited, Watford, Hertfordshire, England. Tilting salt bath furnace. 2,473,095, June 14.

Griffin, Lianie, assignor of one-half to Earl A. Fitzpatrick, Roanoke, Va. Shaft-pulling tool. 2,473,200, June 14.

Grubb, Roderic: *See*—
Campbell, Shirley P., and Grubb.

Guenthner, Harvey O., Antigo, Wis. Coupling pipe. 2,473,283, June 14.

Guinane, James P., Westport, Conn. Loose-leaf binder. 2,472,909, June 14.

Gullett Gin Company, assignee: *See*—
Wallace, Jeffrey J.

Gurtowski, John J.: *See*—
Barfield, Morris L., and Gurtowski.

Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Reclosing carton. 2,473,035, June 14.

Gynt, Sven, assignor to Allmauna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Winding arrangement in alternating current machines. 2,473,144, June 14.

Hallowell, Alban T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Xylyl trichlorothiolacetate. 2,472,897. June 14.

Halpern, Julius, Brookline, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electrical apparatus. 2,473,426, June 14.

Hamermesh, Morton: *See*—
Fubini, Eugene, and Hamermesh.

Hamill, William W., Little Aston, England. Thermostatically-operated regulating of controlling apparatus. 2,473,097, June 14.

Hamill, William W., Little Aston, and R. S. Crump, Birmingham, England. Connecting rod. 2,473,096, June 14.

Hamilton, Clarence R., Roseville, Calif. Hatch cover operating device. 2,473,093, June 14.

Hanna, Edward J., assignor to Taylor Instrument Companies, Rochester, N. Y. Apparatus for the heat processing of canned products. 2,472,970, June 14.

Hanau, Merrill O., Dunedin, Victoria, Australia. Forging or upsetting of metal rods or bars using electric resistance heating. 2,473,245, June 14.

Hansen, Donald W., assignor to A. E. Staley Manufacturing Co., Decatur, Ill. Manufacture of corn products. 2,472,971, June 14.

Hardwick, Hindle, Inc., assignee: *See*—
Hastings, Donald F.

Hardwick-Hindle, Inc., assignee: *See*—
Hastings, Donald F., and Winkler.

Hardy, James A., assignor to Schwitzer-Cumming Company, Indianapolis, Ind. Vibration damper. 2,473,335, June 14.

Harlow, William R., U. S. Navy. Combat camera having handgrip operating means. 2,472,828, June 14.

Hasman, William H., Corporation, assignee: *See*—
Bud, Max.

Harris, Arthur, Brooklyn, N. Y. Three-dimensional puzzle. 2,473,800, June 14.

Hart & Cooley Manufacturing Company, assignee: *See*—
De Reo, William C.

Hart, Edwin J., Cedar Grove, and Max S. Matheson, Clifton, N. J., assignors to United States Rubber Company, New York, N. Y. Production of trichloroacetyl chloride. 2,472,946, June 14.

Hartford National Bank and Trust Company, assignee: *See*—
Posthumus, Klaas.
Strutt, Maximilliaan J. O., and van Hofwegen.
Warmolts, Nicolaas.
Watkinson, Eric, Strom, and Smith.

Hasche, Rodolph L., Johnson City, assignor to Tennessee Eastman Corporation, Kingsport, Tenn. Regenerative furnace construction. 2,473,427, June 14.

Hastings, Donald F., Fair Lawn, assignor to Hardwick, Hindle, Inc., Newark, N. J. Electrical rheostat device. 2,473,247, June 14.

Hastings, Donald F., Fair Lawn, and R. H. Winkler, Maplewood, assignors to Hardwick-Hindle, Inc., Newark, N. J. Adjustable resistor of the tubular type. 2,473,246, June 14.

Hatch, James M., Castine, Maine. Trapper's hip-length boot. 2,473,099, June 14.

Hausheer, Emil M., Schenectady, N. Y., assignor to General Electric Company. Commutator cone insulator and making the same. 2,473,248, June 14.

Hawes, Russell J., Cranford, W. F. Behrman, Westfield, and C. A. Campbell, Cranford, assignors to Tide Water Associated Oil Company, Bayone, N. J. Pour point depressant for oil compositions. 2,473,370, June 14.

Haya, Robert F., Jr., Syosset, N. Y., assignor to The Sperry Corporation. Radio scanning apparatus. 2,472,824, June 14.

Hasel, Ernest, Jr., St. Louis, Mo. Loose-leaf binder. 2,472,898, June 14.

Head, James F., Washington, D. C. Pipe lighter. 2,472,825, June 14.

Hearn, Hilton W., Houston, Tex. Lawn edger. 2,472,972, June 14.

Heath, Charles W., near Seattle, Wash. Nut dish. 2,473,026, June 14.

Heath, Robert C., W. R. Howe, and W. E. King, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Making contacts. 2,473,371, June 14.

Hebel, Carl G., Weehawken, N. J., and R. H. Wallace, Central Nyack, N. Y., assignors to Sperry Products, Inc., Hoboken, N. J. Liquid control gear. 2,473,282, June 14.

Heffernan, Robert C., Great Neck, N. Y. Garment hanger. 2,473,201, June 14.

Heln, Clarence A., Denver, Colo. Sanding and finishing tool. 2,472,899, June 14.

Helmer, Grover H.: *See*—
Hoffman, Harry W., and Helmer.

Henderson, Roe P., assignor to The Springfield Leather Products Co., Springfield, Ohio. Billfold with gusset pocket. 2,473,056, June 14.

Hensley, William H.: *See*—
Johnston, Franklin, and Hensley.

Herber, Leonard, Minneapolis, Minn. Butter dispensing machine. 2,473,057, June 14.

Herbrick, Milton B., Sterling, Colo. Tire chain release device. 2,472,826, June 14.

Herbrick, Milton B., Sterling, Colo. Tire chain release device. 2,472,827, June 14.

Herbrick, Milton B., Sterling, Colo. Tire chain release device. 2,472,828, June 14.

Hercules Powder Company, assignee: *See*—
Zebree, David T.

Herriott, Irving, Chicago, assignor of one-half to D. M. Davis, Oak Park, Ill. Keyholder. 2,473,428, June 14.

Hershman, Bernard, Pittsburgh, Pa. Antiskid cross strip. 2,473,249, June 14.

Hess, Frederick O., Philadelphia, L. F. Miller, Hatboro, and K. L. Dietrich, Jr., assignors to Seiss Corporation of America, Philadelphia, Pa. Unit type airplane heater. 2,473,372, June 14.

Hesselbart, Robert C., Toledo, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company. Preparation of water-soluble thermosetting resins. 2,473,145, June 14.

Hiatt, Gordon D., and C. L. Crane, assignors to Eastman Kodak Company, Rochester, N. Y. Preparing regenerated cellulose. 2,473,478, June 14.

Higgitt, Harry V., assignor to Cable & Wireless Limited, London, England. Telegraph system with code conversion and error detection. 2,473,202, June 14.

Hill, Ronald A.: *See*—
Wynn, Arthur A., and Hill.

Hinman, Harry L., Indianapolis, Ind. Bottle carrier. 2,473,429, June 14.

Hlobil, Josef S. J., Portland, Oreg. Universal cargo aircraft. 2,472,947, June 14.

Hobday, Gordon I.: *See*—
Short, Wallace F., Hobday, and Oxley.

Hoeldtke, Martin, St. Petersburg, Fla. Awning bracket. 2,473,058, June 14.

Hoenie, Norman J.: *See*—
Landis, George G., and Hoenie.

Hoff, James L.: *See*—
Tama, Manuel and M., and Hoff.

Hoffar, Henry S., near Sidney, British Columbia, Canada, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis. Piston coupling mechanism. 2,473,430, June 14.

Hoffman, Harry W., Oneka, and G. H. Helmer, assignors to Federal Cartridge Corporation, Minneapolis, Minn. Pressure testing apparatus and control circuits therefor. 2,472,972, June 14.

Hoffman, Herbert N., Wakefield, Mass., assignor to General Electric Company. Dual ratio gearing. 2,473,250, June 14.

Hohl, George C., assignee: *See*—
Carson, Russell M.

Holt, Josephine L., Oakland, Calif. Corset attachment. 2,472,974, June 14.

Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Separating solids from liquid suspensions. 2,472,976, June 14.

Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Treatment of crude petroleum oil. 2,473,431, June 14.

Hoppmann, William H., Valley Stream, N. Y. Peak accelerometer. 2,472,829, June 14.

Hornbostel, Lloyd, assignor to Beloit Iron Works, Beloit, Wis. Paper machine wire stringing device. 2,473,100, June 14.

Houghtaling, Guy R., Rochester, N. Y. Machine for making circular form tools. 2,472,975, June 14.

Howe, Ralph F., Baton Rouge, La., assignor to Standard Oil Development Company. Dioleñn distillation. 2,473,203, June 14.

Howe, Willis R.: *See*—
Heath, Robert C., Howe, and King.

Howell, John D., Westport, assignor to Remington Arms Company, Inc., Bridgeport, Conn. Bolt head and extractor for firearms. 2,473,373, June 14.

Hoyt, Gerald A.: *See*—
Alexanderson, Ernst F. W., Edwards, and Hoyt.

Hsu, Eugene T., New York, N. Y., assignor to General Electric Company. High-frequency dielectric heating apparatus. 2,473,251, June 14.

Huber, Robert, Paris, assignor to Societe d'Etudes et de Participations, Eau, Gaz, Electricite Energie S. A., Geneva, Switzerland. Free piston engine control. 2,473,204, June 14.

Huff, Harry A., Jr., Jersey City, N. J., assignor to Air Reduction Company, Incorporated. Cutting and welding machine. 2,472,948, June 14.

Hughes, Burton S., assignor to Zaremba Company, Buffalo, N. Y. Vortical current separator. 2,473,488, June 14.

Hulse, Newton M.: *See*—
Donaldson, Jefferson R., and Hulse.

Hunsicker, Harold Y., Cleveland, and L. W. Kempf, Shaker Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Bearing alloy. 2,473,059, June 14.

Hunsicker, Harold Y., Cleveland, and L. W. Kempf, Shaker Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Bearing alloy. 2,473,060, June 14.

Hunt, Nelson V., Colorado Springs, Colo. Paper and trash pickup tongs. 2,473,146, June 14.

Hunter, Edward A.: *See*—
Schexnailder, Robert E., Jr., and Hunter.

Hunter, Edward A., Baton Rouge, La., assignor to Standard Oil Development Company. Preparation of silica containing catalysts. 2,472,830, June 14.

Hunter, Edward A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Preparation of a silica-metal oxide hydrogel catalyst. 2,472,831, June 14.

Hunter, Edward A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Preparation of a silica-group IV metal oxide catalyst. 2,472,832, June 14.

Hunter, Edward A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Preparation of a silica-group VIII metal oxide catalyst. 2,472,833, June 14.

Hutchinson, Alton E., Milwaukee, Wis., and G. G. Thomas, Detroit, Mich., assignors, by mesne assignments, to Dowl Products, Inc., Milwaukee, Wis. Dispensing cigarette lighter. 2,472,835, June 14.

Hutt, Philip, Milford, Conn., assignor to General Electric Company. Push-button switch. 2,473,252, June 14.

Hutter, William H., Chicago, Ill. Phonograph needle. 2,473,374, June 14.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Production of alkali-metal salts of triorganosilanols. 2,472,799, June 14.

Hyler, John H., North Peklin, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Double universal connection for vehicle coupling and steering devices. 2,473,375, June 14.

I. T. E. Circuit Breaker Company, assignee: *See*—
Scott, William M., Jr.

Ifield, Richard J., assignor to Joseph Lucas, Limited, Birmingham, England. Reciprocatory pump and the like. 2,473,336, June 14.

International Business Machines Corporation, assignee: *See*—
Cunningham, James M.
Ford, Eugene A.
Paris, Robert E.

International Mutoscope Corporation, assignee: *See*—
Dart, Rodger W., and Jenkins.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Nyman, Carl G.

Jackson, Clarence E.: *See*—
Beyer, Frederick C., and Jackson.

Jackson, James O., Crafton, Pa., assignor to Pittsburgh-Des Moines Company. Flexible nozzle for supersonic wind tunnels. 2,472,949, June 14.

Jacobsen, Oyetein, Montgomery County, assignor to The Dartron Company, Inc., Dayton, Ohio. Shaft seal. 2,473,061, June 14.

Jarvis, Thomas F.: *See*—
Pettengill, George D. Jarvis, and Fader.

Jaswieck, Joseph J., Columbus, Nebr. Fire escape control mechanism. 2,473,205, June 14.

Jeffrey Manufacturing Company, The, assignee: *See*—
Banroth, Walter J.
Marcier, Stanley M.

Jenkins, Paul W.: *See*—
Singleton, Fred O., and Jenkins.

Jenkins, Sydney: *See*—
Dart, Rodger W., and Jenkins.

Jensen, Harry T., Milford, assignor to United Aircraft Corporation, East Hartford, Conn. Slip-ring structure. 2,473,147, June 14.

Johnston, Franklin, and W. H. Hensley, St. Albans, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Vinyl chloride resins plasticised with diester-amides. 2,472,900, June 14.

Johnston, Franklin, and W. H. Hensley, St. Albans, W. Va., assignors to Carbide and Carbon Chemicals Corporation. 2,2'(2-ethylhexanamido)diethyl di(2-ethylhexanoate). 2,472,901, June 14.

Johnston, George X., St. Clair, Mich. Cam making machine. 2,472,902, June 14.

Johnston, Lawrence H., Rural, N. Mex., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electronic squara wave signal generator. 2,473,432, June 14.

Jones & Lamson Machine Company, assignee: *See*—
Fersing, Leif.

Jones, Minor C. K., Mountainside, and R. C. Brandon, Elizabeth, N. J., assignors to Standard Oil Development Company. Selectively polymerizing dioleñns in an unsaturated and aromatic gasoline distillate. 2,473,206, June 14.

Jones, Walter J., Lomita, Calif., assignor to Columbia Steel Company. Molder's flask. 2,473,101, June 14.

Joos, August G., Velda Village, assignor to Wagner Electric Corporation, St. Louis, Mo. Radiator valve assembly. 2,473,148, June 14.

Joy Manufacturing Company, assignee: *See*—
Russell, John D.

Joelss, David, Brooklyn, N. Y., assignor to American Lead Pencil Company, Hoboken, N. J. Mechanical pencil with step-by-step lead feeding means. 2,473,149, June 14.

Jugle, Leonard L.: *See*—
Cook, John B., and Jugle.

K. L. G. Sparking Plugs Limited, assignee: *See*—
Carington, Charles M., and Shoobert.

Kamholtz, Richard, New York, N. Y. Extension table construction. 2,472,903, June 14.

Kaplan, Max, New York, N. Y. Flexible bag with metal gusset. 2,473,489, June 14.

Kappeler, Hans, assignor to the firm Autophon Aktiengesellschaft, Soleure, Switzerland. Transmitting antenna with automatic tuning, particularly for aircraft wireless. 2,472,904, June 14.

Karr, Philip L., assignor to Excel Movie Products, Inc., Chicago, Ill. Film reel construction. 2,472,337, June 14.

Kass, John C., Ravenna, Mich. Tractor hitch. 2,472,905, June 14.

Katterjohn, August H., assignor to Reed Roller Bit Company, Houston, Tex. Pneumatic drilling tool. 2,473,433, June 14.

Keane, Charles C., assignor to Great Lakes Pipe Line Company, Kansas City, Mo. Apparatus for adding powdered dye to liquids. 2,473,474, June 14.

Keenan, Walter, Little Falls, N. J. Nonrefillable bottle. 2,472,950, June 14.

Keevil, Henry W.: *See*—
Barnes, Walter C., and Keevil.

Keller, Ernst, and R. Zweidler, assignors to J. R. Geigy A. G., Basel, Switzerland. Water soluble triazine condensation products and making same. 2,473,475, June 14.

Kellogg, M. W., Company, The, assignee: *See*—
King, Charles C.

Kemp, Charles B., assignee: *See*—
Biebigteroth, Maximilian.

Kempf, Louis W.: *See*—
Hunsicker, Harold Y., and Kempf.

Kennedy, Carlton L., South Braintree, and K. W. Macdonald, Watertown, Mass., assignors to The Seamless Rubber Company, New Haven, Conn. Surgical bandage. 2,473,062, June 14.

Kennedy, Earnest R., and L. E. Kennedy, Defiance County, Ohio. Reversible propeller. 2,472,836, June 14.

Kennedy, Lowell E.: *See*—
Kennedy, Earnest R. and L. E.

Kepfer, Raymond J.: *See*—
Boller, Ernest R., Eubank, and Kepfer.

Kerr, Charles E., Hoopeston, Ill., assignor to Food Machinery and Chemical Corporation. Shear tenderness tester. 2,473,063, June 14.

Koepler, Louis, Brooklyn, N. Y. Shoe tree. 2,473,207, June 14.

Keyser, Harold C., assignor to American Steel Foundries, Chicago, Ill. Spring product and forming same. 2,473,237, June 14.

Kilbarger, Clyde R., Elkhart, Ind. Vehicle spring preloading device. 2,473,336, June 14.

Kimberlin, Charles N., Jr.: *See*—
Hunter, Edward A., and Kimberlin, Jr.

Kimbrough, Warren C., Portland, Oreg. Gas trap. 2,473,150, June 14.

King, Charles C., Roselle, assignor to The M. W. Kellogg Company, Jersey City, N. J. Separation of organic compounds. 2,473,837, June 14.

King, Laurie B., Greensboro, N. C. Soap tray. 2,473,376, June 14.

King, Stanley G., London, England, assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Mercury vapor rectifying apparatus. 2,473,151, June 14.

King, Walter E.: *See*—
Heath, Robert C., Howe, and King.

Kirchmeyer, Frederick J., Waukegan, and I. E. Card, North Chicago, Ill., assignors to Abbott Laboratories. Stable, sterile aqueous solutions of streptomycin and making same. 2,473,339, June 14.

Kjellström, Alvar E. P., Stockholm, Sweden. Stretching device for the heel wire of ski ties. 2,472,906, June 14.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. System for charging and discharging energy storage devices. 2,472,838, June 14.

Klinke, Henry O., Forest Hills, N. Y., assignor to Air Reduction Company, Incorporated. Method and apparatus for controlling torch spacing. 2,472,951, June 14.

Kleckas, Otto A., Rock Island, Ill. Bolster for four-wheel commercial and farm trailers. 2,473,240, June 14.

Klumb, Harvey A.: *See*—
Wilder, Cecil L., and Klumb.

Knaggs, Harold J., assignor to The Weatherhead Company, Cleveland, Ohio. Apparatus for molding sealing rings. 2,473,284, June 14.

Knowlton, James W., assignor to Norton Company, Worcester, Mass. Method and mold for making boron carbide articles. 2,473,476, June 14.

Koch, Winfield E., Haddonfield, N. J., assignor to Radio Corporation of America. Ground wire system. 2,473,377, June 14.

Koerer, William H., Two Rivers, Wis. Sliding door lock. 2,473,285, June 14.

Kolesnikoff, Mark T., Los Angeles, Calif. Focus and magnification indicator for photographic enlargers. 2,472,907, June 14.

Koolman, Eduard C., and J. Overhoff, Amsterdam, Netherlands, assignors to Shell Development Company, San Francisco, Calif. Unsaturated halogen-containing nitro compounds and their production. 2,473,341, June 14.

Koopman, Kenneth H., Kenmore, N. Y., assignor to Union Carbide and Carbon Corporation. Copper base alloy. 2,473,038, June 14.

Koppers Company, Inc., assignee: *See*—
Dean, Fred.

Kovan, Louis, Astoria, N. Y. Necktie rack. 2,473,029, June 14.

Kramer, Fred S., Prospect Park, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Steering nozzle for jet-propelled aircraft. 2,472,839, June 14.

Kreitner, John: *See*—
Nettel, Frederick, and Kreitner.

Kreutzer, Casper, Milltown, N. J. Tool for reaping asparagus and the like. 2,473,152, June 14.

Krouse, John H., assignor to Victaulic Company of America, New York, N. Y. Coupling for brittle pipes. 2,473,102, June 14.

Kulastic Company, Inc., assignee: *See*—
Kulman, Herman M.

Kulman, Herman M., assignor to Kulastic Company, Inc., Atlanta, Ga. Composition comprising a copolymer of vinyl chloride-vinyl acetate and ground peanut hulls and making same. 2,473,030, June 14.

Lager, Roger K., Lakewood, assignor to The Continental Pharmacal Company, Cleveland, Ohio. Blood filter. 2,473,153, June 14.

Laminated Shim Company, assignee: *See*—
Seipt, Richard, and Steves

Landis, George G., South Euclid, and N. J. Hoenle, Cleveland Heights, assignors to The Lincoln Electric Company, Cleveland, Ohio. Apparatus for electromagnetically controlling welding arcs. 2,472,851, June 14.

Lange, Willy, and R. G. Felsenleiger, Cincinnati, assignors to The Procter & Gamble Company, Ivorydale, Ohio. Production of soap from hydrogenated vegetable oils. 2,473,154, June 14.

La Place, Desmond R., Pittsburgh, Pa., assignor to Bocji Corporation. Stapling apparatus. 2,473,253, June 14.

Larsen, Merwin J., assignor to Stromberg-Carlson Company, Rochester, N. Y. Apparatus for linearising sawtooth waves. 2,473,208, June 14.

Larson, Charles O., Sterling, Ill. Folding sawhorse. 2,473,342, June 14.

Larson, Christian C., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Electron multiplier for ultra high frequencies. 2,472,031, June 14.

La Salle Designing Company, assignee: *See*—
Conn, Alfred J., and Stanley.

La Soudure Electrique Autogene, Societe Anonyme, assignee: *See*—
Schmerber, Raoul J.

Lathers, Matthew F., Saint Augustine, Fla. Baffle type muffler. 2,473,103, June 14.

La Blond, E. K., Machine Tool Co., The, assignee: *See*—
Meyer, Walter R., and Siekmann.

Le Clair, Camille C. S., Acton, London, assignor to Tecalemit Limited, Brentford, England. Multifilter assembly for filtering oil or liquids. 2,473,032, June 14.

Lefevre, Martial A., Crepy-en-Valois, France. Arrangement for sawing stones. 2,473,104, June 14.

Leman, Arthur L., Houston, Tex. Reciprocating pump piston and assembly. 2,473,064, June 14.

Leonard, Thomas E., Portland, Oreg. Truck dolly. 2,472,952, June 14.

Le Roi Company, assignee: *See*—
Hoffar, Henry S.

Letac, Roger, Marseille, France. Sterilized and air-conditioned chamber for surgical uses. 2,473,033, June 14.

La Tourneau, R. G., Inc., assignee: *See*—
Hyler, John H.

Levesque du Rostu, Georges, assignor to Societe Anonyme Andre Citroen, Paris, France. Centrifugal switch device. 2,473,343, June 14.

Lewton, Ross, assignor to Chrysler Corporation, Highland Park, Mich. Valve construction. 2,472,840, June 14.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Hesselbart, Robert C.

Liberson, Wladimir T., Hartford, Conn. Electric convulsive therapy. 2,473,378, June 14.

Lighton, Lester E., Glenside, Pa., assignor to The Electric Storage Battery Company. Filling and venting structure for storage batteries. 2,472,852, June 14.

Lincoln Electric Company, The, assignee: *See*—
Landis, George G., and Hoenle.

Lindgren, Hans O., Appelviken, assignor to Aktiebolaget Separator, Stockholm, Sweden. Teat cup. 2,473,379, June 14.

Lindquist, Frank D., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Warp beam for looms. 2,473,155, June 14.

Lindsey, Richard V., Jr., Marshallton, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing hydrocarbometallic halides. 2,473,484, June 14.

Linn, Carl B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Treating a hydrocarbon mixture which is contaminated by small amounts of organic fluorine compounds. 2,472,908, June 14.

Lipe-Rollway Corporation, assignee: *See*—
Spase, Charles B.

Lister, B. A., & Company Limited, assignee: *See*—
Morris, Alberto Y.

Littmann, Martin F., Middletown, Ohio, assignor to Armco Steel Corporation. Developing high magnetic permeability and low core loss in very thin silicon steel. 2,473,156, June 14.

Ljunggren, Thor H., and G. M. Green, assignors to Bryant Chucking Grinder Company, Springfield, Vt. Combination diaphragm and clamp chuck. 2,473,380, June 14.

Lloyd, Donald: *See*—
Fletcher, Albert C., and Lloyd.

Lloyd, William H. : *See*—
Conrad, Joseph D., and Lloyd.

Loftus Engineering Corporation, assignee: *See*—
Campion, Donald C.

Lombardi, Cyrus, Brooklyn, N. Y. Buckle. 2,473,209, June 14.

Lonngren, Harald E., New York, N. Y. Straighten shoe soles. 2,473,490, June 14.

Lonon, Charles B.: *See*—
Purse, Edward, and Lonon.

Loreatsen Hardware Mfg. Corp., assignee: *See*—
Nelson, Harry.

Lorens, Anton, Buffalo, N. Y. Reclining article of furniture. 2,472,854, June 14.

Lorens, Anton, Buffalo, N. Y. Reclining article of furniture. 2,472,855, June 14.

Lorens, John, Forest Hills, N. Y., assignor, by mesne assignments, to E. U. Andrews, Greenwich, Conn. Shaving appaartus. 2,472,853, June 14.

Lowry, Robert D.: *See*—
Graham, Joseph P., and Lowry.

Lucas, Joseph, Limited, assignee: *See*—
Ifield, Richard J.

Lucia, Carroll J., Toledo, Ohio, and F. R. McFarland, Huntington Woods, assignors Packard Motor Car Company, Detroit, Mich. Transmission mechanism. 2,473,157, June 14.

Luckens, Claude A., Jr., Steamboat Springs, Colo. Ski pole. 2,473,158, June 14.

Luenberger, Frederick O., assignor to U. S. Electrical Motors, Inc., Los Angeles, Calif. Electric motor mounting. 2,473,105, June 14.

Lundstrom, Nels, Altmont, N. Dak. Fireless brooder. 2,472,909, June 14.

Lusader, Bert C., Sr., Jonesboro, La. Blowpipe for heating tools. 2,473,435, June 14.

Lyman, Harold T., Jr., Glen Arm, Md., assignor to Remington Rand Inc., New York, N. Y. Counting tube transfer circuit. 2,473,159, June 14.

Lynd, Elmer F., Cleveland, Ohio. Alarm, light, and safety signaling device. 2,473,436, June 14.

Lytle, Lawrence D.: *See*—
Cullinan, John F., and Lytle.

M. & R. Dietetic Laboratories, Inc., assignee: *See*—
Orthe, Herbert E., Chrysler, and Almy.

Macdonald, Kenneth W.: *See*—
Kennedy, Carlton L., and Macdonald.

Madrigal, Frank L., Tulsa, Okla. Mold jacket. 2,473,160, June 14.

Mageoch, Harry Y., Havertown, and A. J. Shaback, assignors to Electric Service Manufactoring Company, Philadelphia, Pa. Fluorescent lamp socket. 2,472,977, June 14.

Magnus, Finn H., Essex Fells, assignor, by mesne assignments, to Magnus Harmonica Corporation, Newark, N. J. Harmonica and wind cell block therefor. 2,473,210, June 14.

Magnus Harmonica Corporation, assignee: *See*—
Magnus, Finn H.

Mahon, Frank, Chicago, Ill. Universal golf club head. 2,472,978, June 14.

Mall, Arthur W., Flossmoor, assignor to Mall Tool Company, Chicago, Ill. Flexible shaft machine. 2,473,286, June 14.

Mall Tool Company, assignee: *See*—
Mall, Arthur W.

Mallina, Rudolph F., Hastings on Hudson, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Mechanical perforator. 2,473,437, June 14.

Mallina, Rudolph F., Hastings on Hudson, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Call transmitter. 2,473,438, June 14.

Mallory, P. R., & Co., Inc., assignee: *See*—
Aust, Robert J.
Heath, Robert C., Howe, and King.

Maloney, Francis J., Warren, Ohio. Multiple switch. 2,473,287, June 14.

Manookian, Harry A., Chicago, Ill. Airplane. 2,472,656, June 14.

Man-Sew Corporation, assignee: *See*—
Sigoda, Victor J.

Marble, Howard: *See*—
Skipper, James, Marble, and Frisell.

Marlowe, Donald E.: *See*—
Thompson, John L., and Marlowe.

Martin, Elmore L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Tetrahydro-1-hydroxy-2 and -3- naphthamidobenzaldehydes and their acetals with lower alkanols and 1,2-and 1,3-alkanediols. 2,472,910, June 14.

Martin, Elmore L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Quinoneimine dyes from hydroxy-benzamidobenzaldehyde and hydroxybenzsulfamido benzaldehyde acetals of lower alkanols and 1, 2- and 1,3-alkanediols. 2,472,911, June 14.

Martin, Glenn L., Company, The, assignee: *See*—
Evans, William G., and Schaefer.

Massey, Albert G.: *See*—
Rodeck, Armin H., and Massey.

Massey Machine Company, assignee: *See*—
Rodeck, Armin H., and Massey.

Mastabar Belt Fastener Company Limited, assignee: *See*—
Tebb, Bernard.

Matheson, Max S.: *See*—
Hart, Edwin J., and Matheson.

Mathieson, Roderick R., Grosse Pointe Park, Mich. Telephone handset supporting fixture. 2,473,106, June 14.

Maxfield, Herbert L., Banstead, England, assignor to The Distillers Company Limited, Edinburgh, Scotland. Motor fuel. 2,473,439, June 14.

May, Richard W., assignor to Collins Radio Company, Cedar Rapids, Iowa. Semiautomatic tuner device for radio apparatus and the like. 2,472,979, June 14.

Mayer, Waldemar F., assignor to The Garrett Corporation, Los Angeles, Calif. Air conditioning system. 2,473,496, June 14.

McBee, Earl T., La Fayette, Ind., and L. W. Devaney, Fishkill, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind. Propane chlorination. 2,473,161, June 14.

McBee, Earl T., West Lafayette, Ind., and L. W. Devaney, Fishkill, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind. Liquid phase chlorination. 2,473,162, June 14.

McBride, Charles B.: *See*—
Watson, John E., and McBride.

McCarter, William S. W., Bala-Cynwyd, assignor to Attapulgus Clay Company, Philadelphia, Pa. Drying alcohols. 2,472,912, June 14.

McClere, Doit W. G., assignor to Consolidated Engineering Corporation, Pasadena, Calif. Pneumatic dispatch signaling system. 2,472,857, June 14.

McCown, William E., Gloucester, N. J., assignor to Radio Corporation of America. Overload protection system. 2,473,344, June 14.

McCoy, Ewald H., Chicago, Ill. Plating nickel on aluminum. 2,473,163, June 14.

McCoy, John J., Los Angeles, Calif. Two-cycle engine. 2,473,164, June 14.

McFarland, Forest R.: *See*—
Lucia, Carroll J., and McFarland.

McKinney, Horace C., assignor of one-half to Evelyn R. Minter, Rocksprings, Tex. Three-way vegetable slicer. 2,473,165, June 14.

McLeod, Norman W.: *See*—
Baskin, Charles M., and McLeod.

McNeely, Lowell, Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Apparatus for and method of returning purged inert gas to an absorption refrigerating system. 2,473,384, June 14.

McNeill, Albert G., assignor to Bachmaan Bros., Inc., Philadelphia, Pa. Combination table utensil. 2,473,268, June 14.

McQueen, David M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Azomethine dyes from acylactamidobensaldehyde acetals. 2,472,913, June 14.

Meade, Reginald E., N. E. Taylor, and J. F. Crews, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Spray device. 2,473,035, June 14.

Meier, Heinrich, assignor to Zellweger A. G., Apparate-und Maschinenfabriken Uster, Uster, Switzerland. Passing of warp threads through reeds. 2,473,286, June 14.

Mendelsohn, Irving, Brooklyn, N. Y. Dual reel wire connector for ironing boards. 2,473,107, June 14.

Menzies, Clifford, Detroit, Mich. Heat-treat furnace. 2,473,381, June 14.

Mercier, Stanley M., Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Safety apparatus. 2,472,914, June 14.

Mercky, Philibert R., assignor to Gevaert Photo-Producten N. V. Mortsel-Antwerp, Belgium. Production of photographic images by color development. 2,473,166, June 14.

Meschter, Emery, Towanda, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Apparatus for treating motion-picture film. 2,473,382, June 14.

Messinger, Lester H., Trumbull, assignor to Remington Arms Company, Inc., Bridgeport, Conn. Tube sizing machine. 2,473,383, June 14.

Metals & Controls Corporation, assignee: *See*—
Vaughan, Victor G.

Metropolitan-Vickers Electrical Company Limited, assignee: *See*—
Baumann, Karl.

Metzel, Herold N., East Lansing, assignor to General Motors Corporation, Detroit, Mich. Recuperator system for airplane cannons. 2,473,211, June 14.

Meyer, Chester J., Speed, Kans. Tractor drawn hay rake. 2,472,953, June 14.

Meyer, Frank A.: *See*—
Gottlieb, Manioue, and Meyer.

Meyer, Paul H.: *See*—
Ahrndt, Arthur H., and Meyer.

Meyer, Walter R., and H. J. Siekmann, assignors to The R. K. Le Blond Machine Tool Co., Cincinnati, Ohio. Center drive lathe power chucking mechanism. 2,473,108, June 14.

Microstat Corporation, assignee: *See*—
Yohn, Fred C.

Millard, George E., Berkeley, Calif. Apparatus for plating journals of crankshafts. 2,473,290, June 14.

Miller, Camillo, Hamilton, Ontario, Canada. Vacuum cleaner. 2,473,066, June 14.

Miller, Carlton W., and N. B. Nichols, assignors to Taylor Instrument Companies, Rochester, N. Y. Measuring system and saturable reactor for use therein. 2,472,980, June 14.

Miller, Charles L., Altoona, Pa. Hand brake lever controlled door locking device. 2,472,916, June 14.

Miller, Edwin, Jeanette, Pa. Machine for applying rubber tire treads to carcasses. 2,473,067, June 14.

Miller, Fred F., Jr., Berkley, assignor to The Gear Grinding Machine Company, Hamtramck, Mich. Constant velocity universal joint. 2,473,036, June 14.

Miller, Karl, Detroit, Mich. Lock for closures. 2,473,065, June 14.

Miller, Karl H., North Canton, assignor to Diebold, Incorporated, Canton, Ohio. Wall panel joint construction. 2,472,981, June 14.

Miller, Lawrence F.: *See*—
Hess, Frederic O., Miller, and Dietrich, Jr.

Mills, Howard, assignor to The Denison Engineering Company, Columbus, Ohio. Two-hand control. 2,473,167, June 14.

Milster, Arthur N., St. Louis, Mo., assignor to Wagner Electric Corporation. Selective operation of systems by a unit cylinder. 2,473,168, June 14.

Mine Safety Appliances Company, assignee: *See*—
Strange, John P., and Yant.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Roeche, John O.
Wannamaker, William H., Jr.
Wild, Rudolf F.

Minier, Evelyn R., assignee: *See*—
McKinney, Horace C.

Mistretta, Vincent F.: *See*—
Schneider, Helmuth G., and Mistretta.

Mitchell Manufacturing Company, assignee: *See*—
Cohler, Irving H.

Moeller, Robert C., North Tonawanda, N. Y. Reversible car. 2,472,440, June 14.

Molat, Joseph H.: *See*—
Elker, Robert T., and Molat.

Monroe Auto Equipment Company, assignee: *See*—
Whisler, Ralph H., Jr.

Monroe Calculating Machine Company, assignee: *See*—
Gang, Herman.

Monsanto Chemical Company, assignee: *See*—
Walter, Henry A.

Monson Manufacturing Co., Inc., assignee: *See*—
Monson, Sidney A.

Monson, Sidney A., Belleglade, assignor to Monson Manufacturing Co., Inc., Lakeland, Fla. Aircraft sprayer. 2,473,212, June 14.

Montero, Ricardo G., New York, N. Y. Holder. 2,473,086, June 14.

Moon, James M., Graham, N. C. Electromagnetic checkerboard. 2,472,916, June 14.

Moore, William E., Pittsburgh, Pa., assignor to Delaware Engineering Corporation. Adjustable roof mounting means for top charged electric furnaces. 2,472,954, June 14.

Moorman, Charles L., Millington, Ill., assignor to Union Asbestos & Rubber Company. Refrigerator car with a movable bulkhead. 2,473,109, June 14.

Morgan, Erving B., and R. W. Clay, assignors to American Seating Company, Grand Rapids, Mich. Chair with folding table leaf. 2,473,037, June 14.

Morris, Alberto J., assignor to R. A. Lister & Company Limited, Dursley, England. Piston with annular heat dam in the head. 2,473,254, June 14.

Morse, Robert O., assignee: *See*—
Adams, Arthur A.

Moss, Eric B., assignor to S. Smith & Sons (England), Limited, London, England. Dial mounting. 2,473,291, June 14.

Mouchiroud, Antoine F. G., and J. A. Trillat, Lyon, assignors to Societe "Rhodiaceta," Paris, France. Apparatus and method of dry spinning vinyl compounds. 2,472,842, June 14.

Mueller, Alfred: *See*—
Crane, Charles R., II, and Mueller.

Muiee, Robert K., Congers, N. Y. Material handling device. 2,472,843, June 14.

Muller, John A., Princeton, assignor to Thermoid Company, Trenton, N. J. Hose coupling. 2,473,441, June 14.

Munday, John C., Cranford, N. J., and E. W. S. Nicholson, Baton Rouge, La., assignors to Standard Oil Development Company. Maintenance of catalyst activity in hydrocarbon conversion processes. 2,472,844, June 14.

Munts, Alan, & Company Limited, assignee: *See*—
Beale, Evelyn S. L.

Myers, Joseph W., assignor, by mesne assignments, to Proctor Electric Company, Philadelphia, Pa. Coffee filter. 2,472,955, June 14.

N. V. Verenigde Tabakeindustrieen Mignot & De Block, assignee: *See*—
Brouns, Hubert E.

Nalpantian, Rebecca, San Francisco, Calif. Syringe. 2,473,068, June 14.

Nameyah, Wilfred, assignor to William Pretty & Sons (1930) Limited, Ipswich, England. Form of corset. 2,472,982, June 14.

Nathan, Emanuel, Maplewood, N. J. Spectacle case. 2,473,292, June 14.

National Brass Company, assignee: *See*—
Vander Henst, Abraham.

National Electric Instrument Co., Inc., assignee: *See*—
Sawa, Ignas.

National Lock Company, assignee: *See*—
Stone, Roy A.

National Smelting Company Limited, The, assignee: *See*—
Robson, Stanley.

National Technical Laboratories, assignee: *See*—
Beckman, Arnold O.

Navy, United States of America, as represented by the Secretary of, assignee: *See*—
Ridenour, Louis N.

Neher, Harry T.: *See*—
Croxall, Willard J., and Neher.

Neiswander, Robert S., U. S. Navy. Tensiometer. 2,472,845, June 14.

Nelson, Harry, assignor to Lorentzen Hardware Mfg. Corp., New York, N. Y. Venetian blind bracket. 2,473,293, June 14.

Nelson, Harry, assignor to Lorentzen Hardware Mfg. Corp., New York, N. Y. Venetian blind structure. 2,473,294, June 14.

Nemeth, Otto R., Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc. Motion-picture projector. 2,472,983, June 14.

Nettel, Frederick, Manhasset, and J. Kreitner, New York, N. Y. Heat power plant. 2,472,846, June 14.

Nichols, Frederick S., Melrose, Mass. Ruffle curtain. 2,472,956, June 14.

Nichols, Nathaniel B.: *See*—
Miller, Carlton W., and Nichols.

Nicholson, Edward W. S.: *See*—
Munday, John C., and Nicholson.

Nicholson, Madison G., Jr., Snyder, assignor to Colonial Radio Corporation, Buffalo, N. Y. Tuning contral system for signal seeking receivers. 2,472,957, June 14.

Nicolaeff, Boris A., Montreal, Quebec, Canada. Rotary aircraft athodyd motor. 2,472,917, June 14.

Nika, Nicholas J., Munising, Mich. Apparatus for manufacture of paper. 2,473,069, June 14.

Nissen, Martin E., Hutchinson, Minn. Kite plane device. 2,473,213, June 14.

Norton Company, assignee: *See*—
Knowlton, James W.

Nyman, Carl G., Shaker Heights, assignor, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio. Aircraft bank and turn control system. 2,472,918, June 14.

Oakhill, Frederic E.: *See*—
Bader, Paul W., and Oakhill.

Oblad, Alex G.: *See*—
Gorin, Everett, and Oblad.

Oblon, Felix A., Garfield Heights, Ohio. Grid controlled polyphase rectifier. 2,473,386, June 14.

O-Cedar Corp'n, assignee: *See*—
Bader, Paul W., and Oakhill.

Ochs, Sidney A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Valve construction. 2,472,841, June 14.

O'Connor, Jack N., and S. M., Los Angeles, Calif. Miniature animal toy car. 2,473,295, June 14.

O'Connor, Jack N., and S. M., Los Angeles, Calif. Miniature animal toy car. 2,473,296, June 14.

O'Connor, Stella M.: *See*—
O'Connor, Jack N., and S. M.

Ohio Crankshaft Company, The, assignee: *See*—
King, Stanley G.

Oldak, Jacob M., Brooklyn, N. Y. Cuff link construction. 2,472,958, June 14.

Oleon, Raymond E., Pittsford, assignor to Taylor Instrument Companies, Rochester, N. Y. Heat exchange system. 2,472,984, June 14.

Orr, Ralph B., Logansport, Ind. Type lock for mailing gallevs. 2,473,214, June 14.

Osborne, Walter S., Sumter, S. C. Fungicidal lacquer. 2,472,847, June 14.

Oslund, Axel E., Santa Rosa, Calif. Hop and leaf separator. 2,473,215, June 14.

Ostling, William, assignor to California Machinery and Supply Company, Ltd., Los Angeles, Calif. Automatic spark advance mechanism. 2,473,170, June 14.

Ostling, William, assignor to California Machinery and Supply Company, Ltd., Los Angeles, Calif. Automatic spark advance mechanism. 2,473,171, June 14.

Ottling, Herbert E., Westerville, and L. H. Chrysler, and E. F. Almy, Columbus, Ohio, assignors to M & H Dietetic Laboratories, Inc. Stabilizing evaporated milk. 2,473,493, June 14.

Overhoff, Johan: *See*—
Koolman, Edward C., and Overhoff.

Owen, David R., assignee: *See*—
England, James M.

Oxley, Peter: *See*—
Short, Wallace F., Hobday, and Oxley.
Short, Wallace F., and Oxley.

Pachner & Koller, Inc., assignee: *See*—
Adam, Louis D., and Poplin.
Sharps, George J.

Pacific Manufacturing & Engineering Corp., assignee: *See*—
Plouff, Clifford E.

Packard Motor Car Company, assignee: *See*—
Clifton, Robert P.
Lucia, Carroll J., and McFarland.
Weiss, Erwin A.

Page, Clyde B., Baton Rouge, La. Musical instrument of the string type. 2,473,442, June 14.

Pardee, Edward A., Mount Vernon, Ohio, assignor to Shellmar Products Corporation, Chicago, Ill. Container. 2,472,985, June 14.

Parfentjev, Ivan A., Manuet, assignor to American Cyanamid Company, New York, N. Y. Preparing modified protein. 2,473,255, June 14.

Paris, Robert E., Teaneck, N. J., assignor to International Business Machines Corporation, New York, N. Y. Mechanical movement. 2,472,910, June 14.

Park, Davis & Company, assignee: *See*—
Tillitson, Edward W.

Parker Appliance Company, The, assignee: *See*—
Wolfram, John N.

Parker, Henry C., Washington, D. C. Apparatus for clarifying liquors. 2,473,297, June 14.

Parkin, John C.: *See*—
Dickinson, Ernest G., and Parkin.

Parsons, Alfred H., Baldwin, N. Y. Building construction. 2,473,216, June 14.

Paynter, Horace J., Union, N. J., assignor to American Can Company, New York, N. Y. Electric butt-welding metallic container seams. 2,472,848, June 14.

Paynter, Horace J., Union, N. J., assignor to American Can Company, New York, N. Y. Apparatus for electrically welding container seams. 2,472,849, June 14.

Peenstra, Richard G., Utica, N. Y. Folding sled. 2,472,920, June 14.

Pelce, Henri, assignor to Societe dite: Saint Freres (Societe Anonyme), Paris, France. Shuttle-guiding device in circular looms. 2,473,172, June 14.

Peoples Company, The, assignee: *See*—
Peoples, Edward M.

Peoples, Edward M., assignor to The Peoples Company, Huntington, W. Va. Rod clamp or the like. 2,473,217, June 14.

Peremi, Edmund, Bayside, and H. Weimann, Yonkers, assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Window construction. 2,473,295, June 14.

Perry, Charles L., Schenectady, N. Y., assignor to General Electric Company. Electric controller. 2,473,256, June 14.

Peters, Elwyn H., L. F. Engelhardt, and J. L. Brierton, Columbus, Ohio, assignors to Curtiss-Wright Corporation. Anti-icing means for aircraft. 2,473,387, June 14.

Petersen, George M., Cleveland, Ohio. Outdoor theatre loudspeaker support post. 2,473,173, June 14.

Peterson, Eric W., Spring Lake, Mich. Line printer device for duplicating machines. 2,473,070, June 14.

Pettengill, George D., T. F. Jarvis, and W. L. Fader, assignors to Warsaw Elevator Co., Warsaw, N. Y. Elevator control mechanism. 2,472,959, June 14.

Philco Corporation, assignee: *See*—
Bradley, William E.
Rudolph, William E.
Walker, Harold.

Pleper, Chester R., Warrenton, Mo. Cable clamping device. 2,473,071, June 14.

Pifer, George N., Cleveland Heights, assignor to Speedtype, Inc., Cleveland, Ohio. Double exposure photographing and developing apparatus. 2,473,174, June 14.

Pitcairn, Harold F., Bryn Athyn, assignor to Autogiro Company of America, Philadelphia, Pa. Rotative winged aircraft control. 2,473,299, June 14.

Pittsburgh-Des Moines Company, assignee: *See*—
Jackson, James O.

Plant, John H., Aurora, Ill. Antiglare lens structure for headlights and the like. 2,472,860, June 14.

Plastikpil Laboratories, Inc., assignee: *See*—
Zimmerman, Sol M.

Plouff, Clifford E., Seahurst, assignor, by mesne assignments, to Pacific Manufacturing & Engineering Corp., Seattle, Wash. Line dispensing container. 2,473,072, June 14.

Poor & Company, assignee: *See*—
Preston, Frederick A.

Pope, Robert E.: *See*—
Geis, Lester, and Pope.

Poplin, Nelia G.: *See*—
Adam, Louis D., and Poplin.

Posthumus, Klaas, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Direction finding device. 2,473,491, June 14.

Potter, Everett F., Schenectady, N. Y., assignor to General Electric Company. Gas-arc torch. 2,473,258, June 14.

Potter, Frederick M., Marblehead, Mass., assignor to General Electric Company. Dynamoelectric machine construction. 2,473,257, June 14.

Potts, Phil S., Fort Wayne, Ind., assignor to General Electric Company. Dynamoelectric machine. 2,473,259, June 14.

Powdermaster Products Inc., assignee: *See*—
Wolfers, Philip.

Power Centre Company Limited, The, assignee: *See*—
Stevens, Arthur H., and Stevens.

Preston, Frederick A., Lake Forest, assignor, by mesne assignments, to Poor & Company, Chicago, Ill. Rail anchor. 2,473,345, June 14.

Pretty, William & Sons (1930) Limited, assignee: *See*—
Namegah, Wilfred.

Procter & Gamble Company, The, assignee: *See*—
Lange, Willy, and Polzenlogen.

Proctor Electric Company, assignee: *See*—
Myers, Joseph W.

Purdue Research Foundation, assignee: *See*—
McBee, Earl T., and Devaney.

Puricelli, Enzo, Springfield, Mass. Ski tow device. 2,473,300, June 14.

Pye Limited, assignee: *See*—
Weightton, Donald.

Quality Bakers of America Cooperative, Inc., assignee: *See*—
Thomas, Robert W.

Quimper, Anthony A., Westfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Cup positioning apparatus. 2,472,921, June 14.

Radio Corporation of America, assignee: *See*—
Albin, Frederick G.
Bilts, Daniel.
Brown, George H., and O. M. Woodward, Jr.
Comins, Alfred W.
Evans, John.
Fredendall, Gordon L.
Geis, Lester, and Pope.
Koch, Winfield R.
McCown, William E.
Rajchman, Jan A.
Rose, Albert.

Ragan, George L., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Ultra high frequency rotatable joint. 2,473,443, June 14.

Rajchman, Jan A., Princeton, N. J., assignor to Radio Corporation of America. Computing system. 2,473,444, June 14.

Rambo, Ingar G., Wauwatosa, assignor to Safway Steel Products Inc., Milwaukee, Wis. Tubing coupler. 2,473,388, June 14.

Ramstad, Anders W., Parkland, Wash. Motion-picture screen. 2,473,601, June 14.

Ransley, Charles E.: *See*—
Brittain, Francis H., and Ransley.

Raytheon Manufacturing Company, assignee: *See*—
Bright, Orlow S., Jr.
Klemperer, Hans.
Smith, Charles G.
Spencer, Percy L.
Stuitsman, Paul W.

Reconstruction Finance Corporation, assignee: *See*—
Peremi, Edmund, and Weimann.

Reder, Emil E., Jr., Chicago, Ill. Cord protector and strain reliever for use with electrical connectors. 2,472,986, June 14.

Reed, George R., Grosse Pointe Park, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio. Spring cambering machine. 2,473,445, June 14.

Reed Roller Bit Company, assignee: *See*—
Katterjohn, August H.

Reichenbach, Howard F., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Telescoping lamp standard. 2,473,218, June 14.

Reid, John G., Jr., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Low-pressure absorption refrigerating system. 2,473,389, June 14.

Reliable Electric Company, assignee: *See*—
Cook, John B., and Jugle.

Remboid, Albert A., San Francisco, Calif. Punch. 2,473,073, June 14.

Remington Arms Company, Inc., assignee: *See*—
Howell, John D.
Messinger, Lester H.

Remington Rand Inc., assignee: *See*—
Lyman, Harold T., Jr.

Reynolds, Robert J., Trotwood, Ohio. Reel for motion-picture films. 2,473,074, June 14.

Rhodes, Charles J., Wakefield, England. Guard arrangement for power presses. 2,473,219, June 14.

Riblet, Henry J., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Antenna. 2,473,446, June 14.

Rice Barton Corporation, assignee: *See*—
Adams, Charles S.

Richards, Kenneth W., Packanack Lake, N. J., assignor to American Telephone and Telegraph Company. Teletypewriter exchange system. 2,473,346, June 14.

Richfield Oil Corporation, assignee: *See*—
Travers, William J., Jr.

Rickard, Joseph, Hancock, N. Y. Whiffle tree. 2,473,447, June 14.

Ridenour, Louis N., Philadelphia, Pa., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Radio direction-finding system. 2,473,475, June 14.

Rieke, Foster F., Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Oscillator. 2,473,448, June 14.

Riker, Robert T., and J. H. Moist, New York, N. Y. Lamp-rotating clamp for attachment to tubular lamps. 2,472,858, June 14.

Ringland, William L., West Allis, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Dynamoelectric machine having laminated armature with teeth slotted to reduce eddy currents. 2,473,502, June 14.

Rizzo, Joseph D., assignor to Artisan Shoe Company, Rochester, N. Y. Shoe. 2,472,987, June 14.

Robbins, Rolland S., and C. T. Cochran, Lakewood, Ohio. Switch. 2,473,303, June 14.

Robertson, H. H., Company, assignee: *See*—
Singleton, Fred G., and Jenkins.

Robson, Stanley, Redland, Bristol, assignor to The National Smelting Company Limited, London, England. Condensation of zinc from its vapor in gaseous mixtures. 2,473,304, June 14.

Rochow, Eugene G., Schenectady, N. Y., assignor to General Electric Company. Preparation of tetramethyl silicate. 2,473,260, June 14.

Rockwell, Edward A., Cleveland, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Electrically controlled valve means. 2,473,088, June 14.

Rodeck, Armin H., and A. G. Massey, assignors to Massey Machine Company, Watertown, N. Y. Centrifugal governor. 2,473,449, June 14.

Rogers, Clarence A.: *See*—
Rogers, Louis, and C. A.

Rogers Industries, Inc., assignee: *See*—
Ettl, Joseph.

Rogers, Louis and C. A., Ripon, Calif. Vine cutter. 2,473,450, June 14.

Rohm & Haas Company, assignee: *See*—
Croxall, Willard J., and Neher.
Stallings, James W.

Rosche, John O., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Condition responsive switch. 2,473,075, June 14.

Rose, Albert, East Orange, N. J., assignor to Radio Corporation of America. Manufacturing target electrodes. 2,473,220, June 14.

Rose, Harold J., and M. K. Rowan, Baton Rouge, La., assignors to Standard Oil Development Company. Butadiene emulsion polymerization process, including mercaptan and cyanide modifiers. 2,473,300, June 14.

Roselle, Walter A., New York, N. Y. Container. 2,473,301, June 14.

Rosenthal, Adolph H., assignor to Socophony Corporation of America, New York, N. Y. Apparatus for reproducing electric signals, particularly television reproducers. 2,472,988, June 14.

Rossi, Irving, West Orange, N. J. Method and apparatus for the continuous casting of metal tubes. 2,473,221, June 14.

Rowan, Marian K.: *See*—
Rose, Harold J., and Rowan.

Royle, John & Sons, assignee: *See*—
Van Riper, Jurian W.

Ruben, Louis, and E. J. Zelk, Bayonne, N. J., assignors to L. Greene, New York, N. Y. Chord indicator. 2,473,222, June 14.

Rubin, Isaac, New York, N. Y. Cylindrical handbag having flexible sidewalls. 2,472,859, June 14.

Rudolph, William E., Collingswood, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Multiple record support for phonographs. 2,472,960, June 14.

Ruhl, Guy P., Frostproof, Fla. Transplanter. 2,473,281, June 14.

Russell, John D., Cranberry Township, Venango County, Pa., assignor to Joy Manufacturing Company. Combined cable guide arm and torque control switch. 2,472,860, June 14.

Russell, John T., Oklahoma City, Okla. Lawn mower grinder. 2,472,922, June 14.

Russell, William F., Norwalk, Conn., assignor to R. T. Vanderbilt Company, Inc., New York, N. Y. Drilling mud containing gelatinized starch and monoethanol ammonium 2-benzothiazyl sulfide. 2,473,392, June 14.

Sabins, Rolland C., Seattle, Wash. Composite ship construction. 2,473,039, June 14.

Safway Steel Products Inc., assignee: *See*—
Rambo, Ingar G.

Sanborn, William L., Milwaukee, Wis., assignor, by mesne assignments, to Cleaver-Brooks Company. Air directing means in gun type burners. 2,473,347, June 14.

Sandos Limited, assignee: *See*—
Wehrli, Walter.

Schaefer, William C.: *See*—
Evans, William G., and Schaefer.

Schaich, Wilbur A., Springfield, Mass. Machine gun ammunition feed belt. 2,472,861, June 14.

Schauert, Paul: *See*—
Urbain, Walter M., and Schauert.

Scheibner, Carl, Bay City, Mich. Collapsible structure for ice fishing. 2,473,076, June 14.

Scheiwer, Albert T., Erie, Pa. Combined valve and coupling. 2,473,223, June 14.

Scheldorf, Marvel W., Schenectady, N. Y., assignor to General Electric Company. Wide band high-frequency transmission line. 2,473,262, June 14.

Schernailder, Robert E., Jr., and E. A. Hunter, Baton Rouge, La., assignors to Standard Oil Development Company. Cracking catalyst. 2,472,834, June 14.

Schlegel, Walter L., Jr., assignor to American Steel Foundries, Chicago, Ill. Brake rotor. 2,473,040, June 14.

Schmaus, Emil A., Chicago, Ill. Window shade guide. 2,473,805, June 14.

Schmerber, Raoul J., Uccle, assignor to La Soudure, Electrique Autogene, Societe Anonyme, Brussels, Belgium. Striking the welding arc in automatic electric-arc welding machines. 2,472,923, June 14.

Schneider, Helmuth G., Westfield, and V. F. Mistretta, Fanwood, N. J., assignors, by mesne assignments, to Standard Oil Development Company. Making alcohol. 2,473,224, June 14.

Schneider, Joseph A., Hirsch, Saskatchewan, Canada. Car mover. 2,473,109, June 14.

Schoehusen, Arthur, West Somerville, Mass. Expansible shoe tree. 2,473,170, June 14.

Schreiber, John H., St. Louis, Mo. Tandem spindle lathe. 2,473,806, June 14.

Schwalbe, Emma H., New York, N. Y. Lady's slip. 2,473,393, June 14.

Schwartz, Fernando F., Santiago, Chile. Preparation of colloidal trisulfide of arsenic. 2,473,110, June 14.

Schwendner, Anthony F., Ridley Park, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric drive for gas turbine locomotives. 2,472,924, June 14.

Schwitzer-Cummins Company, assignee: *See*—
Hardy, James A.

Sciancalepore, Vito, assignor of one-half to C. Greene, White Plains, N. Y. Cloth marking and cutting machine. 2,473,451, June 14.

Scophony Corporation of America, assignee: *See*—
Rosenthal, Adolph H.

Scott, Clarence W., Chicago, Ill. Safety headgear for pedestrians and workmen. 2,473,394, June 14.

Scott, Iben L., Mission, Kans. Force cup for cleaning drainpipes and the like. 2,473,452, June 14.

Scott, William M., Jr., Byrn Mawr, assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Circuit breaker mounting means. 2,472,961, June 14.

Scovill Manufacturing Company, assignee: *See*—
Seaver, Donald A.

Seamless Rubber Company, The, assignee: *See*—
Kennedy, Carlton L., and Macdonald.

Seaver, Donald A., West Cheshire, assignor to Scovill Manufacturing Company, Waterbury, Conn. Reversible buckle. 2,473,225, June 14.

Segal, George, Great Neck, N. Y. Hops treatment. 2,473,395, June 14.

Seipt, Richard, Darien, and D. M. Steves, Tuckahoe, N. Y., assignors to Laminated Shim Company, Glenbrook, Conn. Shim. 2,473,307, June 14.

Selas Corporation of America, assignee: *See*—
Hess, Frederic O., Miller, Dietrich, Jr.

Servel, Inc., assignee: *See*—
McNeely, Lowell.
Reid, John G., Jr.
Whitlow, Eugene P.

Shaback, Andrew J.: *See*—
Magoon, Harry Y., and Shaback.

Shaheen, John, West Roxbury, assignor to Sylvania Electric Products Inc., Salem, Mass. Discharge lamp ballast assembly. 2,473,034, June 14.

Sharpe, George J., assignor to Pachner & Koller, Inc., Chicago, Ill. Fish stringer. 2,473,346, June 14.

Sheldon, Lillian, Chicago, Ill. Wrist band. 2,473,226, June 14.

Shell Development Company, assignee: *See*—
Adelson, David E., and Evans.
Blott, John F. T.
Kooijman, Eduard C., and Overhoff.

Shellmar Products Corporation, assignee: *See*—
Pardee, Edward A.

Sherwood, Henry A., New York, N. Y. Bicycle coaster brake. 2,473,177, June 14.

Shina, Frank C., Thomson, N. Y., assignor to United Board & Carton Corporation. Reclosable carton. 2,473,492, June 14.

Shlafrock, Max, assignee: *See*—
Shuflin, Frank H.

Shoobert, George W.: *See*—
Carington, Charles M., and Shoobert.

Short, Wallace F., and P. Oxley, assignors to Boots Pure Drug Company Limited, Nottingham, England. Production of 2-amino pyrimidines and 2-amino glyoxalines. 2,473,111, June 14.

Short, Wallace F., G. I. Hobday, and P. Oxley, assignors to Boots Pure Drug Company Limited, Nottingham, England. Preparation of sulfonic acid salts of diguanides. 2,473,112, June 14.

Shropshire, Ralph F., Cambridge, assignor to Submarine Signal Company, Boston, Mass. Extracting oils from fish material. 2,473,458, June 14.

Shuflin, Frank H., Miami Shores, assignor of one-third to M. Shlafrock and one-third to L. Touby, Miami, Fla. Collapsible table or the like. 2,472,962, June 14.

Sichak, William, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by Secretary of War. Antenna. 2,473,454, June 14.

Siebigteroth, Maximilian, Detroit, assignor to C. B. Kemp, Grosse Pointe, Mich. Ice tray. 2,473,178, June 14.

Siekmann, Harold J.: *See*—
Meyer, Walter R., and Siekmann.

Sigoda, Victor J., Great Neck, assignor to Man-Sew Corporation, New York, N. Y. Cutting attachment for sewing machines. 2,472,862, June 14.

Singer Manufacturing Company, The, assignee: *See*—
Graham, Joseph P., and Church.
Graham, Joseph P., and Lowry.

Singleton, Fred G., and P. W. Jenkins, assignors to H. H. Robertson Company, Pittsburgh, Pa. Protected metal article. 2,472,963, June 14.

Sinnett, George J.: *See*—
Emerson, John H., and Sinnet.

Skipper, James, H. Marble, and E. Frisell, Omaha, Nebr. Portable truck. 2,472,989, June 14.

Sklar, David F., Brooklyn, assignor to Wilson Mechanical Instrument Co., Inc., New York, N. Y. Bridge-type hardness tester. 2,473,179, June 14.

Slavin, Harry, Detroit, Mich. Retarding mechanism. 2,473,397, June 14.

Slavin, Sidney, Brooklyn, N. Y. Reinforced plastic tooth. 2,473,396, June 14.

Smith, Charles G.: *See*—
Watkinson, Eric, Storm, and Smith.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Magnetic induction device. 2,473,477, June 14.

Smith, Kline & French Laboratories, assignee: *See*—
Ullyot, Glenn E.

Smith, Robert E., Bridgeport, Conn., assignor to General Electric Company. Electric switch. 2,473,263, June 14.

Smith, S., & Sons (England), Limited, assignee: *See*—
Moss, Eric B.

Smylie, Avie F., Houston, Tex. Needle for sewing braided rugs. 2,472,990, June 14.

Snowden Chemical Company, assignee: *See*—
Snowden, Ward E.

Snowden, Ward E., assignor to Snowden Chemical Company, Modesto, Calif. Dry chemical fire extinguisher. 2,473,349, June 14.

Societe Anonyme Andre Citroen, assignee: *See*—
Levresque du Roatu, Georges.

Societe d'Etudes et de Partecipations, Eau, Gas, Electricite Energie S. A., assignee: *See*—
Huber, Robert.

Societe dite: Saint Freres (Societe Anonyme), assignee: *See*—
Pelce, Henri.

Societe "Rhodioceta," assignee: *See*—
Mouchirond, Antoine F. G., and Trillat.

Socke, John E., Pelham Manor, assignor to American Can Company, New York, N. Y. Apparatus for perforating metallic strips. 2,472,863, June 14.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Dahm, Cornelius G.
Gorin, Everett, and Oblad.

Sohm, Alfred L., Van Nuys, Calif. Smoking pipe cleaner. 2,473,180, June 14.

Solomon, Nathan L., Englewood, N. J. Hairdressing device. 2,473,227, June 14.

Sonneborn, L., Sons, Inc., assignee: *See*—
Beverino, Angelo J.

Sorg, Leonard V., Kansas City, Mo., assignor to Standard Oil Company, Chicago, Ill. Transporting petroleum distillates. 2,473,405, June 14.

Spackman, Bernard C. W., Auckland, Auckland, New Zealand. Folding push chair. 2,473,350, June 14.

Spaeth, Irvin J.: *See*—
Walker, Samuel J., and Spaeth.

Spano, Frank, Union City, N. J. Device on which to form miniature ladders, etc. 2,473,398, June 14.

Spase, Charles B., Nedrow, assignor to Lipe-Rollway Corporation, Syracuse, N. Y. Overload or fixed load clutch. 2,472,925, June 14.

Specialties, Inc., assignee: *See*—
Alkan, Robert.

Speedtype, Inc., assignee: *See*—
Pifer, George N.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device of the magnetron type. 2,473,399, June 14.

Spendelow, Howard R., Jr., Kenmore, and H. de W. Erasmus, Lewiston, N. Y., assignors, by mesne assignments, to Union Carbide and Carbon Corporation. Production of low carbon ferrochromium. 2,473,021, June 14.

Sperry Corporation, The, assignee: *See*—
Hays, Robert F., Jr.
Webber, Hugh E.

Sperry Products, Inc., assignee: *See*—
Hebel, Carl G., and Wallace.

Speth, Leonard S.: *See*—
Bronson, Adelbert E., and Speth.

Springfield Leather Products Co., The, assignee: *See*—
Henderson, Roe P.

Sprunance, Frank P., Jr., Ambler, and J. H. Thirsk, Wyncote, assignors to American Chemical Paint Company, Ambler, Pa. Composition for and method of chemically coating aluminum. 2,472,864, June 14.

Staley, A. E., Manufacturing Company, assignee: *See*—
Casey, James P.
Hansen, Donald W.

Stallings, James W., Atlanta, Ga., assignor to Röhm & Haas Company, Philadelphia, Pa. Treatment of cellulosic textiles with strong hydroxide and acrylonitrile. 2,473,308, June 14.

Standard Oil Company, assignee: *See*—
Sorg, Leonard V.

Standard Oil Development Company, assignee: *See*—
Haskin, Charles M., and McLeod.
Cohen, Charles A.
Howe, Ralph F.
Hunter, Edward A.
Hunter, Edward A., and Kimberlin, Jr.
Jones, Minor C. K., and Brandon.
Munday, John C., and Nicholson.
Rose, Harold J., and Rowan.
Schernailder, Robert E., Jr., and Hunter.
Schneider, Helmuth G., and Mistretta.

Stanley, Richard B.: *See*—
Conn, Alfred J., and Stanley.

Starbuck, Robert M., Jr., Hartford, Conn. Trepanning tool. 2,473,077, June 14.

Steen, Harry B.: *See*—
Brown, Frank L., and Steen.

Steers, Raymond J., Rockwood, Tenn. Hosiery support or garter. 2,473,112, June 14.

Stephens, William T., Painesville, Ohio. Rotary balanced vane pump. 2,473,309, June 14.

Sterner, Anna V., assignee: *See*—
Cipyak, John.

Sterner, Francis E., assignee: *See*—
Cipyak, John.

Stevens, Arthur H. and G. A., assignors to The Power Centre Company Limited, Wednesbury, England. Support for electric conductors. 2,473,264, June 14.

Stevens, Earle A., assignor to Glenwood Range Company, Taunton, Mass. Utensil support for gas ranges. 2,473,478, June 14.

Stevens, Geoffrey A.: *See*—
Stevens, Arthur H. and G. A.

Steves, Douglas M.: *See*—
Seipt, Richard, and Steves.

Stone, Roy A., assignor to National Lock Company, Rockford, Ill. Catch. 2,473,131, June 14.

Storm, Andre W.: *See*—
Watkinson, Eric, Storm, and Smith.

Strange, John P., Wilkinsburg, and W. P. Yant, Murraysville, assignors to Mine Safety Appliances Company, Pittsburgh, Pa. Valve. 2,473,078, June 14.

Streta, Ernest A., Compton, Calif. Adjustable flue or chimney damper for fireplaces, furnaces, and the like. 2,473,182, June 14.

Stromberg-Carlson Company, assignee: *See*—
Chou, Ching-Ih.
Larsen, Merwin J.

Stratt, Maximilaan J. O., and J. M. van Hofwegen, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustees. Tunable electrical circuits. 2,473,310, June 14.

Stutsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Gaseous discharge device. 2,472,865, June 14.

Submarine Signal Company, assignee: *See*—
Beechlyn, John T.
Benioff, Hugo.
Gorton, William G.
Grabau, William C.
Shropshire, Ralph F.

Sukmanyn, Thomas W., Los Angeles, Calif. Optical light wedge. 2,472,991, June 14.

Sullivan, Michael, Youngstown, Ohio. Tethering post. 2,472,926, June 14.

Suwa, Ignaz, Jackson Heights, assignor to National Electric Instrument Co., Inc., Elmhurst, N. Y. Lamp for endoscopic instruments. 2,473,479, June 14.

Sveda, Michael: *See*—
Beachell, Harold C., and Sveda.

Svenson, Agnes B., administratrix, assignee: *See*—
Svenson, Henry.

Svenson, Henry, New York, N. Y.; A. B. Svenson, administratrix of said H. Svenson, deceased, assignor, by mesne assignments, to A. B. Svenson, New York, N. Y. Log impregnating device. 2,473,480, June 14.

Swift & Company, assignee: *See*—
Urbain, Walter M., and Schauert.

Sylvania Electric Products Inc., assignee: *See*—
Bowerman, Edwin R., Jr.
Shaheen, John.

Szekely, George, Tel Aviv, Palestine. Evaporator for therapeutic, sterilising, and insecticidal liquids. 2,472,992, June 14.

Tama, Manuel and M., Morrisville, Pa., and J. L. Hoff, Pennington, assignors to Ajax Engineering Corporation, Trenton, N. J. Producing metal alloys in a submerged resistor type induction furnace. 2,473,311, June 14.

Tama, Mario: *See*—
Tama, Manuel and M., and Hoff.

Taylor, David, Princeton, W. Va., and E. R. Ward, Narrows, Va., assignors to Celanese Corporation of America. Testing device for filamentary material. 2,472,927, June 14.

Taylor Instrument Companies, assignee: *See*—
Hanna, Edward J.
Miller, Carlton W., and Nichols.
Olson, Raymond E.
Wilder, Cecil L., and Klumb.
Ziegler, John G.

Taylor, Newell E.: *See*—
Meade, Reginald E., Taylor, and Crews.

Tebb, Bernard, Holl, assignor to Mastaber Belt Fastener Company Limited, Cleckheaton, England. Tool for inserting fasteners in machine belting. 2,473,226, June 14.

Tecalemit Limited, assignee: *See*—
Le Clair, Camille C. S.

Tennessee Eastman Corporation, assignee: *See*—
Hasche, Rudolph L.

Texas Company, The, assignee: *See*—
Atwell, Harold V.
Thermoid Company, assignee: *See*—
Muller, John A.

Thirsk, James H.: *See*—
Sprunance, Frank P., Jr., and Thirsk.

Thomas, Gerald C.: *See*—
Hutchinson, Alton E., and Thomas.

Thomas, Robert W., Larchmont, assignor to Quality Bakers of America Cooperative, Inc., New York, N. Y. Delivering bread. 2,472,993, June 14.

Thompson, Albert C., Fountain City, Tenn. Lawn mower grinder. 2,473,313, June 14.

Thompson, Clair P., Lansing, Mich., assignor, by mesne assignments, to The Tot Traveler Corporation, Toledo, Ohio. Traveling bag. 2,473,079, June 14.

Thompson, John I., Edgewater Park, N. J., and D. E. Marlowe, Takoma Park, Md. Marine mine. 2,472,866, June 14.

Thompson, Leonard J., Wichita, Kans. Bench cushion. 2,473,312, June 14.

Thompson, Luke, Downsview, Ontario, and D. T. Wilson, Toronto, Ontario, Canada. Locking device for telescopic connections. 2,473,351, June 14.

Thompson Products, Inc., assignee: *See*—
Tobener, William H., Jr.
Tobener, William H., Jr., and Anderson.

Thorndike, Herbert A., Oshkosh, Wis., assignor, by mesne assignments, to Vulcan Manufacturing Co., Inc., Winona, Minn. Hydraulic jack. 2,473,807, June 14.

Thurber, Elmer A., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Passivation of ferrous metals. 2,473,458, June 14.

Tide Water Associated Oil Company, assignee: *See*—
Hawes, Russell J., Behrman, and Campbell.
Zellner, Carl N., and Granholm.

Tien, Hsin-Ya, Singapore, Straits Settlements. Piston for use in internal-combustion engines. 2,472,928, June 14.

Tillitson, Edward W., Grosse Pointe, assignor to Parke, Davis & Company, Detroit, Mich. Stabilized aromatic compounds and obtaining the same. 2,472,868, June 14.

Tobener, William H., Jr., assignor to Thompson Products, Inc., Cleveland, Ohio. Casting machine for lining bearings. 2,473,481, June 14.

Tobener, William H., Jr., assignor to Thompson Products, Inc., Cleveland, Ohio. Casting machine for lining bearings. 2,473,482, June 14.

Tobener, William H., Jr., Cleveland, Ohio, and C. V. Anderson, Portland, Oreg., assignors to Thompson Products, Inc., Cleveland, Ohio. Mold for lining bearings. 2,473,483, June 14.

Todd, Edwin T., Pontiac, Mich., assignor to the United States of America as represented by the Secretary of War. Harness. 2,473,114, June 14.

Toledo Scale Company, assignee: *See*—
Williams, Lawrence S.

Tot Traveler Corporation, The, assignee: *See*—
Thompson, Clair P.

Touhy, Louis, assignee: *See*—
Shuflin, Frank H.

Toulon, Pierre M. G., Neuilly sur Seine, assignor to Compagnie Francaise du Signum, Paris, France. Supervisory signaling device. 2,473,314, June 14.

Travers, William J., Jr., assignor to Richfield Oil Corporation, Los Angeles, Calif. Island for well drilling. 2,472,869, June 14.

Trillat, Joseph A.: *See*—
Mouchiroud, Antoine F. G., and Trillat.

Turbo Engineering Corporation, assignee: *See*—
Birmann, Rudolph.

Tyson, Owen A., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Potential comparator. 2,473,457, June 14.

Ullyot, Glenn E., assignor to Smith, Kline & French Laboratories, Philadelphia, Pa. Preparation of aminophthalidylalkanes. 2,473,484, June 14.

Union Asbestos & Rubber Company, assignee: *See*—
Moorman, Charles L.

Union Carbide and Carbon Corporation, assignee: *See*—
Erasmus, Hendrik de W.
Koopman, Kenneth H.
Spendelow, Howard R., Jr., and Erasmus.

United Aircraft Corporation, assignee: *See*—
Bennett, Horace W.
Dickerman, Fred N.
Jensen, Harry T.

United Board & Carton Corporation, assignee: *See*—
Shima, Frank C.

United Shoe Machinery Corporation, assignee: *See*—
Foose, Joseph.

U. S. Electrical Motors, Inc., assignee: *See*—
Luenberger, Frederick O.

United States Rubber Company, assignee: *See*—
Hart, Edwin J., and Matheson.

U. S. Slicing Machine Company, assignee: *See*—
Ahrndt, Arthur H.
Ahrndt, Arthur H., and Meyer.

Universal Oil Products Company, assignee: *See*—
Linn, Carl B.

Universal Winding Company, assignee: *See*—
Winslow, Albert E., and Eppler.

University of Illinois, The Board of Trustee, assignee: *See*—
Adams, Gail D., Jr.

Upjohn Company, The, assignee: *See*—
Zienty, Mitchell F.

Urbain, Walter M., Western Springs, and P. Schanert, assignors to Swift & Company, Chicago, Ill. High-frequency electrostatic field apparatus for egg pasteurization. 2,473,041, June 14.

Van Beurden, Franciscus F., Amsterdam, Netherlands. Apparatus for stretching and straightening shoes. 2,473,229, June 14.

Van Boven, Cornelius J.: *See*—
Brooks, Desmond B., and Van Boven.

Vanderbilt, R. T., Company, Inc., assignee: *See*—
Russell, William F.

Vander Horst, Abraham, assignor to National Brass Company, Grand Rapids, Mich. Bathroom locking latch. 2,473,080, June 14.

Van Hofweegen, Johannes M.: *See*—
Strutt, Maximiliaan J. O., and van Hofweegen.

Van Riper, Jurian W., Fair Lawn, assignor to John Royle & Sons, Paterson, N. J. Extrusion apparatus. 2,473,230, June 14.

Vara, Ethan W., assignor, by mesne assignments, to The Alden Products Company, Duncannon, Pa. Knife sharpness tester. 2,472,904, June 14.

Vaughan, Victor G., assignor to Metals & Controls Corporation, Attleboro, Mass. Thermostatic switch and sealed adjusting control. 2,473,081, June 14.

Vaughn, Albert E., Orange, N. J. Hair curler. 2,473,115, June 14.

Vertifilte, Inc., assignee: *See*—
Douley, Carson O.

Vickers, Samuel E., assignor to Eureka Williams Corporation, Bloomington, Ill. Thermal overload device. 2,473,486, June 14.

Victaulic Company of America, assignee: *See*—
Krooss, John H.

Vulcan Manufacturing Co., Inc., assignee: *See*—
Thorndike, Herbert A.

Waara, David H., Detroit, assignor to R. L. Brown, Ferndale, Mich. Molding clip. 2,473,400, June 14.

Wager, Robert H., Maplewood, N. J. Adjustable mirror observation unit for smoke indicators. 2,473,231, June 14.

Wagner Electric Corporation, assignee: *See*—
Joos, August G.
Milster, Arthur N.

Waldorf Paper Products Company, assignee: *See*—
Guyer, Reynolds.

Walker, Allen V., Nashville, Tenn. Portable outdoor cooking stove. 2,473,458, June 14.

Walker, Harold, Meadowbrook, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Multiple record support for phonographs. 2,472,964, June 14.

Walker, Samuel J., Lake Forest, and I. J. Spaeth, assignors to Chicago Railway Equipment Company, Chicago, Ill. Railway brake beam. 2,473,316, June 14.

Wallace, Robert H.: *See*—
Hebel, Carl O., and Wallace.

Wallace, Jeffrey J., Amite, La., assignor to Gullett Gin Company. Cotton harvester. 2,473,315, June 14.

Walter, Henry A., Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. 3,5-dihydroxy-4-dihydro-thiadiazine-1-dioxide and its preparation. 2,473,042, June 14.

Wannamaker, William H., Jr., Flourtown, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electric motor control apparatus. 2,473,494, June 14.

War, United States of America as represented by the Secretary of, assignee: *See*—
Barfield, Morris L., and Gurtowski.
Fubini, Eugene, and Hamermesh.
Glador, Alonso P.
Halpern, Julius.
Johnston, Lawrence H.
Ragan, George L.
Riblet, Henry J.
Rieke, Foster F.
Slobak, William.
Todd, Edwin T.
Tyson, Owen A.

Ward, Ernest R.: *See*—
Taylor, David, and Ward.

Warmoltz, Nicolaas, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Discharge tube having a fluid or solid cathode and a capacitative igniter. 2,473,232, June 14.

Warner, Robert B., Los Angeles, Calif. Toilet seat lifter. 2,473,082, June 14.

Warner & Swasey Company, The, assignee: *See*—
Bogart, Fred H.
Darash, Nicholas P.

Warsaw Elevator Co., assignee: *See*—
Pettengill, George D., Jarvis, and Fader.

Washburn, Harold W., assignor to Consolidated Engineering Corporation, Pasadena, Calif. Mass spectrometry. 2,472,870, June 14.

Watkinson, Eric, Hinders Park, South Australia, Australia, A. W. Storm, Eindhoven, Netherlands, and C. O. Smith, Sydney, New South Wales, Australia, assignors to Hartford National Bank & Trust Company, Hartford, Conn., as trustee. Audio-frequency amplifier. 2,473,265, June 14.

Watson, John E., Westport, Conn., and C. B. McBride, Port Chester, N. Y., assignors to The Aerotec Corporation, Greenwich, Conn. Apparatus for separating suspended particles from gases. 2,472,995, June 14.

Watson, William, Auburn, Maine, assignor to Bates Manufacturing Company. Electrically conductive fabric. 2,473,183, June 14.

Weatherhead Company, The, assignee: *See*—
Knagge, Harold J.

Webb, Wells A., San Jose, Calif. Preparation of dehydrated food products. 2,473,184, June 14.

Webber, Harry R., Norwood, Pa. Spark plug. 2,473,317, June 14.

Webber, Hugh E., Williston Park, N. Y., assignor to The Sperry Corporation. Microwave wattmeter. 2,473,495, June 14.

Wegman, Jules G., assignor to Bastian Brothers Company, Rochester, N. Y. Pin-forming and button-pinning machine. 2,473,116, June 14.

Wehrli, Walter, assignor to Sandoz Limited, Basel, Switzerland. Metallised tetrakisazo dyes. 2,472,965, June 14.

Weighton, Donald, assignor to Pye Limited, Cambridge, England. Phase or frequency modulation. 2,473,316, June 14.

Weimann, Henry: *See*—
Perami, Edmund, and Weimann.

Weinberger, Jan V., Truro, Nova Scotia, Canada. Double condenser high draft mechanism for roving and spinning frames. 2,472,929, June 14.

Weise, Carl A., Los Angeles, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Quick detachable coupling. 2,473,459, June 14.

Weiss, Erwin A., assignor to Packard Motor Car Company, Detroit, Mich. Fluid coupling with unitary die cast vane structure. 2,473,185, June 14.

Wernix, James H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Condensation products of citric acid with long chain aliphatic monohydric alcohols. 2,473,460, June 14.

West, Howard K.: *See*—
Berger, Emil J., and West.

Western Condensing Company, assignee: *See*—
Meade, Reginald E., Taylor, and Crews.

Western Electric Company, Incorporated, assignee: *See*—
Wilkes, Donald P.

Westinghouse Electric Corporation, assignee: *See*—
Bentley, Oliver D. H.
Conrad, Joseph D., and Lloyd.
Gottlieb, Mantous, and Meyer.
Kramer, Fred S.
Quimper, Anthony A.
Schwendner, Anthony F.
Yoxsimer, Orland H.

Westland Aircraft Limited, assignee: *See*—
Widgery, William M.

Wexler, David J., Islip Terrace, N. Y. Self-retaining abdominal retractor. 2,473,266, June 14.

Whisler, Ralph H., Jr., assignor to Monroe Auto Equipment Company, Monroe, Mich. Shock absorber structure. 2,473,043, June 14.

White, Frank O., Edmundston, New Brunswick, Canada. Hydraulic barking machine. 2,473,461, June 14.

Whitfield, Joseph E., Hamilton, Ohio. Rotor generating. 2,473,233, June 14.

Whitfield, Joseph E., Hamilton, Ohio. Helical asymmetrical thread forms for fluid devices. 2,473,234, June 14.

Whitlow, Eugene P., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Absorption refrigeration method and system having provision for the return of purged gas. 2,473,385, June 14.

Widgery, William M., assignor to Westland Aircraft Limited, Yeovil, England. System for controlling the pressure in the cabin of an aircraft or the like. 2,473,117, June 14.

Wightman, Lawrence W., Fort Wayne, Ind., assignor to General Electric Company. Bearing mounting. 2,473,267, June 14.

Wild-Barfield Electric Furnaces, Limited, assignee: *See*—
Orene, George H. S.

Wild, Rudolf F., Philadelphia, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Sensitivity equalizing circuit for control apparatus. 2,473,401, June 14.

Wilder, Cecil L., and H. A. Klumb, assignors to Taylor Instrument Companies, Rochester, N. Y. Thermometer. 2,472,996, June 14.

Wilkes, Donald P., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical heating unit. 2,472,930, June 14.

Williams, Jerry D., Chickasha, Okla. Firing line catcher. 2,472,997, June 14.

Williams, Lawrence S., assignor to Toledo Scale Company, Toledo, Ohio. Hydraulic weighing scale. 2,473,083, June 14.

Williams, Lawrence S., assignor to Toledo Scale Company, Toledo, Ohio. Weighing scale poise. 2,473,084, June 14.

Williamson, Marshall I., New Haven, Conn. Dispensing container. 2,472,871, June 14.

Wilson, David T.: *See*—
Thompson, Luke, and Wilson.

Wilson Mechanical Instrument Co., Inc., assignee: *See*—
Sklar, David F.

Wingfoot Corporation, assignee: *See*—
Emberson, Keith L.
Wise, Paul H.
Young, Foster J.

Winkelmann, Herbert A., assignor to Dryden Rubber Company, Chicago, Ill. Gasket and gasket composition. 2,473,319, June 14.

Winkler, Robert H.: *See*—
Hastings, Donald F., and Winkler.

Winslow, Albert E., Norwich, and E. Eppler, Stonington, Conn., assignors, by mesne assignments, to Universal Winding Company, Cranston, R. I. Stop means for feed roll units. 2,472,966, June 14.

Winters, Harold W., San Francisco, Calif. Cover clamp for pressing machines. 2,473,085, June 14.

Wise, Paul H., Rocky River, assignor to Wingfoot Corporation, Akron, Ohio. Preparation of 1-cyano-1,3-butadiene. 2,473,486, June 14.

Wittman, Alma, Petersburg, Mich. Hair curl holder pin. 2,473,186, June 14.

Wolfers, Philip, Valley Stream, assignor to Powdermaster Products Inc., New York, N. Y. Lady's portable powder dispenser. 2,472,874, June 14.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,473,118, June 14.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for flareless tubes. 2,473,119, June 14.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,473,120, June 14.

Wood, Milton E., Staten Island, N. Y. Electrical baking mold. 2,473,402, June 14.

Woodling, George V., Cleveland, Ohio. Flareless tube coupling. 2,472,872, June 14.

Woodrum, Myrtle A., Forest Hills, N. Y. Hair drier. 2,472,873, June 14.

Woodward, David W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydrophilic dye intermediates. 2,473,403, June 14.

Woodward, Oakley M., Jr.: *See*—
Brown, George H., and Woodward, Jr.

Wortman, Robert, assignor to J. E. Berger Corporatoin, Detroit, Mich. Metering means for a bottle having a lock to ensure the tipping of the bottle to dispense. 2,473,462, June 14.

Wynn, Arthur H. A., and R. A. Hill, assignors to A. C. Cossor Limited, London, England. Cathode-ray tube. 2,473,320, June 14.

Yanko, Michael, Masury, Ohio. Plug-in clip. 2,473,321, June 14.

Yant, William P.: *See*—
Strange, John P., and Yant.

Yasnor, Morton, Brooklyn, N. Y. Self-locking safety catch. 2,473,044, June 14.

Yohn, Fred C., Norwalk, Conn., assignor to Microstat Corporation. Flow camera document-copying machines. 2,472,931, June 14.

Young, Foster J., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Apparatus for stretching. 2,473,404, June 14.

Yoxsimer, Orland H., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Refrigerator having means for minimizing condensation. 2,473,322, June 14.

Zack, Samuel L., Paitang, Pa. Method and apparatus for treating sewage. 2,473,323, June 14.

Zarembe Company, assignee: *See*—
Hughes, Burton S.

Zebree, David T., Kingston, N. Y., assignor to Hercules Powder Company, Wilmington, Del. Delay electric initiator. 2,473,405, June 14.

Zelk, E. Jack: *See*—
Ruben, Louis, and Zelk.

Zelk, George S., Vallejo, Calif. Automobile disappearing warning signal. 2,473,187, June 14.

Zellner, Carl N., New Providence, and H. B. Granholm, Westfield, assignors to Tide Water Associated Oil Company, Bayonne, N. J. Diol compounds and esters thereof. 2,473,406, June 14.

Zellweger A. G., Apparate-und Maschinenfabriken Uster, assignee: *See*—
Meier, Heinrich.

Ziegler, John G., Walnut Creek, Calif., assignor to Taylor Instrument Companies, Rochester, N. Y. Method and apparatus for heat-treating liquids. 2,472,995, June 14.

Zienty, Mitchell F., Elkhart, Ind., assignor to The Upjohn Company, Kalamazoo, Mich. 3-alkylsulfonamidopyridinium salts. 2,473,121, June 14.

Zimmerman, Sol M., Detroit, Mich., assignor to Plastikpil Laboratories, Inc., Chicago, Ill. Folder. 2,473,352, June 14.

Zweidler, Reinhard: *See*—
Keller, Ernst, and Zweidler.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Coupling. C. E. Earle and C. A. Covington. Re. 23,120, June 14.
Double-acting pump. J. T. Leonard. Re. 23,122, June 14.
Idler system for phonograph turntable drives. E. V. Schneider. Re. 23,123, June 14.
Measuring and control apparatus, Antibunting electrical. T. R. Harrison and W. P. Wills. Re. 23,121, June 14.

LIST OF PLANT INVENTIONS

Flowering quince plant. W. B. Clarke. 847, June 14.

LIST OF DESIGN INVENTIONS

Automobile. P. T. Tucker. 154,102, June 14.
Bag or similar article, Knitting. P. R. Peak. 154,140, June 14.
Band, Wrist. A. Pinson. 154,142, June 14.
Bank, Coin. A. F. Klingberg. 154,127, June 14.
Base, Lamp. J. Rosner. 154,145, June 14.
Brooch or similar article. M. Boucher. 154,095–6, June 14.
Cabinet for automotive lubrication equipment. A. P. Fox and A. D. Reisert. 154,115, June 14.
Comb, Round. R. Humphreys. 154,126, June 14.
Container, Lipstick. E. Donati. 154,106, June 14.
Curtain. L. Singer. 154,190, June 14.
Dispenser, Portable beverage. B. O. Smith. 154,191, June 14.
Display box. S. H. Geffner. 154,116, June 14.
Display rack and color selector, Combined. R. L. Falkenberg. 154,111, June 14.
Fish lure. W. H. Carr. 154,098, June 14.
Fish lure, Novelty. D. O. Le Moine. 154,130, June 14.
Fishing lure. G. B. Espey and G. D. Waite. 154,109, June 14.
Fishing spinner or similar article. S. A. Pilblad. 154,141, June 14.
Floor, Tile, and wall covering. J. E. Ryan. 154,146–85, June 14.
Frame, Spectacle. M. Davis. 154,102, June 14.
Frame, Spectacle. A. E. Mangold. 154,133, June 14.
Handbag. E. F. Gumbrill. 154,119, June 14.
Handbag. R. Lobel. 154,131, June 14.
Handle, Knife. W. McMillen. 154,134, June 14.
Handle, Tap. F. C. Fisher. 154,114, June 14.
Hinge. H. J. Lounsbury. 154,132, June 14.
Inflator, Tire. A. R. Moffett. 154,135, June 14.
Lamp, Nursery. E. Brenner. 154,097, June 14.
Lamp, Planter. J. E. Everett. 154,110, June 14.
Lamp, Table. V. Cassara. 154,099, June 14.
Lighter, Cigarette. J. T. Adams. 154,090, June 14.
Locomotive body. D. L. Hadley, C. B. Ryder and N. F. Pedersen. 154,120, June 14.
Locomotive body or the like. B. Patten. 154,139, June 14.
Mower, Electric driven lawn. A. E. Emmons. 154,108, June 14.
Opener, Can. J. B. Donnelly. 154,107, June 14.
Panel unit, Cooking range control. M. Ferar. 154,112, June 14.
Panel unit for stoves, Indicator control. E. A. Fink, 154,113, June 14.
Plane. E. G. Simon. 154,189, June 14.
Projector or similar article, Microfilm. J. T. Armbruster. 154,093, June 14.
Pull for zippers and the like, Finger. D. I. Reiter. 154,144, June 14.
Rack, Earring. K. R. Armstrong. 154,094, June 14.
Rack or the like for billiard cues. D. Deskey. 154,103–5, June 14.
Ramp, Passenger loading. P. W. Nichols. 154,137, June 14.
Refrigerator. R. C. Sandin. 154,186–8, June 14.
Scarf. R. Gottschalk. 154,118, June 14.
Showcase fitting, Extruded metal. T. C. Cowdroy. 154,101, June 14.
Spoon or similar article. G. N. Allen and W. H. Gerth. 154,091, June 14.
Spoon or similar article. W. H. Gerth. 154,117, June 14.
Stand and trellis, Combined flower. T. S. Morris. 154,136, June 14.
Standard or similar article, Lamp. F. Lascow. 154,128, June 14.
Table, radio and phonograph cabinet, Combination cocktail. T. C. Reed. 154,143, June 14.
Tablecloth, Lace. F. P. Castorani. 154,100, June 14.
Tablecloth, Lace. H. Hooven. 154,122–5, June 14.
Tablecloth, Lace. F. P. Otto. 154,138, June 14.
Tablecloth, Lace. W. Wolf. 154,193, June 14.
Toy turtle or similar article. L. Leaf. 154,129, June 14.
Valise or similar article. R. N. Arbib. 154,092, June 14.
Watch and bracelet, Combined. A. A. Harman. 154,121, June 14.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accelerator apparatus and method, Electronic induction. G. D. Adams, Jr. 2,473,123, June 14.
Accelerometer, Peak. W. H. Hoppmann. 2,472,829, June 14.
Acid salts of diguanides, Preparation of sulfonic. W. F. Short, G. I. Hobday, and P. Oxley. 2,473,112, June 14.
Acid treatment of heterocyclic imide and imidazole vat dyestuffs. J. F. Cullinan and L. D. Lytle. 2,473,015, June 14.
Adapter. L. C. Carlson. 2,473,061, June 14.
Air conditioning system. W. F. Mayer. 2,473,496, June 14.
Air conditioning unit for mounting in windows. I. H. Cohler. 2,472,792, June 14.
Aircraft bank and turn control system. C. G. Nyman. 2,472,918, June 14.
Aircraft control, Rotative winged. H. F. Pitcairn. 2,473,299, June 14.
Aircraft, Universal cargo. J. S. J. Hlobil. 2,472,947, June 14.
Air directing means in gun type burners. W. L. Sanborn. 2,473,347, June 14.
Airplane. H. A. Manookian. 2,472,856, June 14.
Album, Article holding. L. Geis and R. E. Pope. 2,473,333, June 14.
Alcohol, Making. H. G. Schneider and V. F. Mistretta. 2,473,224, June 14.
Alcohols and production thereof, Polyallyl type. D. E. Adelson and T. W. Evans. 2,473,124, June 14.
Alcohols, Drying. W. S. W. McCarter. 2,472,912, June 14.
Alighting gear. A. P. Fail. 2,473,470, June 14.
Alkali-metal salts of triorgano-silanols, Production of. J. F. Hyde. 2,472,799, June 14.
Alkylated melamine-formaldehyde liquid compositions. P. Adams. 2,473,463, June 14.
Alloy: *See*—
Bearing alloy.
Copper base alloy.
Alloys in a submerged resistor type induction furnace, Producing metal. Manuel and Mario Tama, and J. L. Hoff. 2,473,311, June 14.
Amino-phthalidylalkanes, Preparation of. G. E. Ullyot. 2,473,464, June 14.
Amplifier, Audio-frequency. E. Watkinson, A. W. Storm, and C. G. Smith. 2,473,265, June 14.
Anchor leader. J. Barone. 2,473,089, June 14.
Anchor, Rail. F. A. Preston. 2,473,345, June 14.
Anode rod for plating tanks. W. G. Evans and W. C. Schaefer. 2,472,796, June 14.
Antenna. H. J. Riblet. 2,473,446, June 14.
Antenna. W. Sichak. 2,473,454, June 14.
Antenna array, Search. E. Fubini and M. Hamermesh. 2,473,421, June 14.
Antenna, Outside mounted automobile. M. R. Friedberg. 2,473,143, June 14.
Antenna with automatic tuning, particularly for aircraft wireless, Transmitting. H. Kappeler. 2,472,904, June 14.
Anti-icing means for aircraft. E. H. Peters, L. F. Engelhardt, and J. L. Brierton. 2,473,387, June 14.
Apparatus and method of dry spinning vinyl compounds. A. F. G. Mouchiroud and J. A. Trillat. 2,472,842, June 14.
Apparatus for adding powdered dye to liquids. C. C. Keane. 2,473,474, June 14.
Apparatus for and method of returning purged inert gas to an absorption refrigerating system. L. McNeely. 2,473,384, June 14.
Apparatus for clarifying liquors. H. C. Parker. 2,473,297, June 14.
Apparatus for detecting uncapped bottles. C. C. Gingrich. 2,472,945, June 14.
Apparatus for electrically welding container seams. H. J. Paynter. 2,472,849, June 14.
Apparatus for electromagnetically controlling welding arms. G. G. Landis and N. J. Hoenie. 2,472,851, June 14.
Apparatus for improving the operation of oxygen cutting torches. P. L. Betz. 2,473,465, June 14.
Apparatus for linearizing saw-tooth waves. M. J. Larsen. 2,473,208, June 14.
Apparatus for manufacture of paper. N. J. Nike. 2,473,069, June 14.
Apparatus for molding sealing rings. H. J. Knaggs. 2,473,284, June 14.
Apparatus for perforating metallic strips. J. E. Socke. 2,472,863, June 14.
Apparatus for plating journals of crankshafts. G. E. Millard. 2,473,290, June 14.
Apparatus for reproducing electric signals, particularly television reproducers. A. H. Rosenthal. 2,472,988, June 14.
Apparatus for separating suspended particles from gases. J. E. Watson and C. B. McBride. 2,472,995, June 14.
Apparatus for stretching. F. J. Young. 2,473,404, June 14.
Apparatus for stretching and straightening shoes. F. F. van Buerden. 2,473,229, June 14.
Apparatus for the heat processing of canned products. E. J. Hanna. 2,472,910, June 14.
Apparatus for training pilots and other aircraft personnel. J. M. Cunningham. 2,472,888, June 14.
Apparatus for treating motion-picture film. E. Meschter. 2,473,382, June 14.
Aromatic compounds and obtaining the same, Stabilized. E. W. Tillitson. 2,472,868, June 14.
Arrangement for sawing stones. M. A. Lefevre. 2,273,104, June 14.
Article of furniture, Reclining. A. Lorens. 2,472,854–5, June 14.
Assembly for filtering oil or liquids, Multifilter. C. C. S. Le Clair. 2,473,032, June 14.
Attachment for button sewing machines, Snap fastener. F. Berube. 2,473,132, June 14.
Attachment for drawers in ovens of stoves or ranges. J. P. Burt. 2,473,467, June 14.
Attachment for game tables, Cushioning. L. Colaluca. 2,472,884, June 14.
Attachment for sewing machines, Cutting. V. J. Sigoda. 2,472,862, June 14.
Attachment for telescopes, Illuminated reticle. J. R. Decker. 2,472,809, June 14.
Automatic electric animal trap. A. G. Burns. 2,472,806, June 14.
Automatic spark advance mechanism. W. Ostling. 2,473,171, June 14.
Automobile disappearing warning signal. G. S. Zelk. 2,473,187, June 14.
Awning bracket. M. Hoeldtke. 2,473,058, June 14.
Azomethine dyes from acylacetamidobenzaldehyde acetals. D. M. McQueen. 2,472,913, June 14.
Bag: *See*—
Traveling bag.
Bag with metal gusset, Flexible. M. Kaplan. 2,473,489, June 14.
Ballast assembly, Discharge lamp. J. Shabeen. 2,473,034, June 14.
Band, Wrist. L. Sheldon. 2,473,226, June 14.
Bandage, Surgical. C. L. Kennedy and K. W. Macdonald. 2,473,062, June 14.
Barking machine, Hydraulic. F. O. White. 2,473,461, June 14.
Bathroom locking latch. A. Vander Henst. 2,473,080, June 14.
Beam for looms, Warp. F. D. Lindquist. 2,473,155, June 14.
Bearing alloy. H. Y. Hunsicker and L. W. Kempf. 2,473,059–60, June 14.
Bearing mounting. L. W. Wightman. 2,473,267, June 14.
Bicycle coaster brake. H. A. Sherwood. 2,473,177, June 14.
Billfold with gusset pocket. R. P. Henderson. 2,473,056, June 14.
Binder, Loose-leaf. J. P. Guinane. 2,472,969, June 14.
